Between 1730 and 1740 at least 1429 slaves were brought to the city. By 1741 the ratio of men to women had become imbalanced: because of the growing use of slaves in business, the number of men for every 100 women rose from 99 in 1731 to 120 in 1741. On 18 March 1741 a slave uprising began that lasted more than six months and resulted in massive property damage. The seat of royal government was destroyed by fire, including the governor's residence and the rest of Fort George on the southwestern tip of Manhattan; other homes and businesses burned during the following three weeks. The only death was that of a soldier at the fort. An investigation led by Justice Daniel Horsmanden of the supreme court blamed a conspiracy of slaves aided by white accomplices for the fires, and trials on various charges resulted in the execution of 30 black men, two white men, and two white women, as well as the deportation of 72 blacks. Misgivings arose almost immediately that the punishments had exceeded the crimes, and the episode remained controversial. In the 1740s the proportion of slaves in the population peaked at 20.9 percent.

Just before the American Revolution New York City was second only to Charleston, South Carolina, among urban centers of slavery. There were 3137 African Americans in Manhattan, about 14.3 percent of the population, and the number grew during the war as thousands of runaways and Loyalists' slaves flooded Manhattan, hopeful for freedom that had been promised by the British. Many bore arms against patriots who owned slaves. The local Black Brigade was housed at several sites, including 18 Broadway and 10 Church Street, and distinguished itself variously as the Royal African Regiment and the Ethiopian Regiment in battles in New York State and New Jersey. Many slaves won their freedom from one side or the other during the war. Nearly 5000 blacks sailed away from the United States with the British in the evacuation of the city in November 1783.

In the decades after the Revolution the effects of national liberty eventually eroded slavery in New York City. Large numbers of white workers who moved to the city forced gradual emancipation, but like many others they refused to extend civil rights to blacks, who were omitted from legislation passed by the state in 1785. There were 2369 slaves in the city in 1790.

The first step toward ending slavery in New York City was an act of 1799 that declared free the children of slaves born on or after 4 July but required that these children remain servants to their mother's owner until they reached the age of 25 for women and 28 for men. The law also called for granted freedom to slaves born before that date at the age of 24 for women and 28 for men and required the registration of children indentured to their masters until the age of manumission. A law passed in 1809 recognized the legality of marriages between slaves and prohibited for the first time the forced separation of slave families. In 1817 the state legislature and Governor Daniel D. Tompkins agreed to abolish slavery in New York on 4 July 1827, a date followed by two days of singing, parades, and fireworks. Complete abolition was not achieved until 1841, when the state rescinded provisions allowing nonresidents to hold slaves for as long as nine months. Slavery nonetheless remained a part of the economy in New York City until the Civil War. The slave states had strong economic ties to the city, which the *New York Times* described as "the spot most tainted by Southern poison." Blacks lived in fear of the notorious "blackbirders," who until the war seized victims from the streets for sale in the South. Other hardships also persisted for former slaves, who had to eke out a living amid racial hostility that flared into such violent incidents as the draft riots of 1863.

Thomas J. Davis

sliver buildings. Term used in New York City during the late 1970s and early 1980s to describe tall, slender apartment buildings on small parcels in mid-block, built by real estate developers when the city's residential housing market was at its peak. The structures rose as high as 30 stories, usually contained only one apartment on each floor, and could be as narrow as 22 feet (7 meters). They were especially common on the Upper East Side. Sliver buildings were criticized for disrupting the visual harmony of low-rise residential streets, and after a campaign by activists the city's zoning laws were amended in 1983 to prohibit their construction in designated areas of the city, including the Upper East Side. Some examples of sliver buildings are 350 East 86th Street, 344 East 63rd Street, and 266 East 78th Street.

Rebecca Read Shanor

Sloan, John (French) (*b* Lock Haven, Pa., 2 Aug 1871; *d* Hanover, N.H., 7 Sept 1951). Painter. Brought up in Philadelphia, he studied with Robert Henri, who encouraged him to paint in a realist style. He joined Henri in New York City in 1904 and worked for several magazines as a freelance illustrator while completing a series of etchings depicting life in the city (including *New York City Life,* 1905–6) and various paintings. With Henri in 1908 he organized an exhibition at the Macbeth Galleries of eight realist and independent painters; he also helped to organize the Exhibition of Independent Artists in 1910. He took part in the Armory Show of 1913 and in the first exhibition of the Society of Independent Artists in 1917 and was also a president of the society. Sloan was a socialist candidate for the state assembly in 1910, and in 1912 he joined the staff of the radical publication *The Masses,* edited by Max Eastman. He did his best illustrations for the magazine but resigned in 1916 over a policy dispute and eventually left the Socialist Party. During the 1920s and into the 1930s he was an influential teacher at the Art Students League. The Whitney Museum of American Art held a retrospective exhibition of Sloan's work in 1952.

Sloane. See W. and J. Sloane.

Sloppy Louie's. Fish restaurant. Louis Morino opened it in 1930 on South Street by the Fulton Fish Market. Fishers and fishmongers made up the restaurant's earliest clientele.

Workers and executives from the financial district soon joined them, creating something of a cross-class lunchtime utopia. When Joseph Mitchell published his famous profile of the restaurant, "Up in the Old Hotel," in the *New Yorker* in 1952, tourists began to seek out the place for its fresh fish and cantankerous servers. As the restaurant's fame and popularity grew, some complained that its sloppiness had become contrived for the benefit of out-of-towners and that the rudeness of the servers had become inauthentic. The restaurant closed in 1998.

Slovaks. The first Slovaks in New York City were immigrants from the Austro-Hungarian Empire who settled around 14th Street and Second Avenue in 1848. In the 1880s Slovak communities took shape in the 70s and 80s between York and Third Avenues and in Long Island City, Astoria, and Sunnyside in Queens, and in Greenpoint in Brooklyn, particularly the section bounded by Newtown Creek, the East River, Grand Street, and McGuinness Boulevard. The first Slovak organization in the city, Živena (1883), was absorbed in 1887 by the St. John the Baptist Society. A large number of organizations soon followed, by the early 1890s including the Catholic Ženská Jednota (Women's Union, 1892), St. Catherine's Society for Slovak Women, the Social Society of St. Francis, St. Peter's Society, and the St. Matthew's and St. Joseph's Society. These were joined in 1905 by the Central Slovak National Council and in 1915 by the Slovenská Telovičná Jednota Sokol (Slovak Gymnastic Union Falcon). National Slovak organizations also opened branches in the city, among them the Prvý Bednársky Výpomocný Spolok (First Cooper's Benefit Society, 1888), the Slovak Evangelical Union (a Lutheran organization, 1893), the Slovak Calvinist Union (1894), Národný Slovenský Spolok (National Slovak Society), Jednota (Union), and the American Fund for Czechoslovak Relief (founded 1948). A Slovak American Cultural Center was formed in the city in 1968.

Religious institutions included the St. Elias Greek Catholic parish (1883) and three Roman Catholic churches: the Church of St. Elizabeth of Hungary (1891), the Church of St. John Nepomucene (1895), and the Church of the Holy Family (1895). The Holy Trinity Evangelical Lutheran parish began in lower Manhattan in 1902. Slovaks also launched a number of local newspapers, notably *Slovák v Amerike* (1889–), *Newyorský denník* (New York Daily, 1895–1974), and *Slobodný orol* (Free Eagle, 1900–1904), published by Jozef Kossalko. The Slovak population in the city exceeded 10,000 by 1910 and increased sharply after the formation of Czechoslovakia in 1918.

The issue of Slovak independence sharply divided the local community, with one group supporting Tomáš Masaryk and the ideal of one democratic Czechoslovak state, while others argued that only through independence could the Slovaks avoid being taken advantage of by the Czechs. By 1970 Slovaks in the city accounted for more than 1 percent of the total population, and in 1977 they numbered 85,000. Among the prominent members of the Slovak community were the writer Thomas Bel, the journalist John Sciranka, the social leader Daniel Sustek, the actress Pauline Novomeská, and the editor and political leader Andrew J. Valusek.

Slovenes. The Slovenes, a southern Slavic people, first emigrated from the Austro-Hungarian Empire and settled in Greater New York at the end of the nineteenth century. Because they were typically of peasant background, their earliest occupations were in the straw-hat industry in New York City. During the 1920s and 1930s some Slovenes were successful in establishing hat-manufacturing firms in the city. Other entrepreneurs opened groceries, bars, bakeries, craft shops, travel agencies, and shipping companies. Some of these firms evolved into banks. Community life focused on the Slovenian parish of St. Cyril (Franciscan Fathers), formed in July 1916. Mutual assistance organizations included the League of Slovenian Americans, founded in the early 1970s, and singing and dramatic societies. The Society for Slovene Studies was established in 1973 at Columbia University as a national association of American scholars, devotees, and supporters. In 1979 it began sponsoring the journal *Slovene Studies.* Among the notable Slovenian leaders who have lived or worked in New York City are the writer and political activist Louis Adamic (1899–1951), the musician Anton Schubel (1899–1965), and the editor and community leader Frank Sakser (1859–1937). Sakser was also the founder and publisher of *Glas naroda* (the People's Voice), published between 1893 and 1963.

smallpox. Viral infectious disease that is easily transmitted from person to person. Epidemics of smallpox have wreaked havoc from the colonial period well into the nineteenth century. The disease had a high mortality rate and left its survivors with disfiguring scars along the exposed parts of the body. One of the most devastating smallpox epidemics of the colonial period was one lasting three months in the late summer and autumn of 1731 when 5 to 8 percent of New York's 10,000 inhabitants were killed. During this epidemic a smallpox inoculation was first used in Manhattan, beginning a debate between proponents and opponents of vaccination that lasted in some fashion into the late twentieth century. By the mid-eighteenth century smallpox visited the city almost annually. Lazarettos or quarantine hospitals were established by the city during the nineteenth century on remote Blackwell's Island (1828) and North Brother Island (1880) to care for smallpox patients and more importantly to remove them from the healthy population. By 1850 smallpox accounted for 25.4 of every 1000 deaths in New York City. The settlement in the city of immigrants from countries such as Ireland, Great Britain, and Germany in the early to mid-nineteenth century, followed by eastern Europeans and Italians between 1880 and 1924, became the most frequent vector of smallpox. Many immigrants and anti-vaccinationists distrustful of American medicine avoided the inoculations sponsored by the Public Health Department, creating a susceptible reservoir for the continued spread of the disease. Mandatory vaccination laws during the late nineteenth century, better screening methods, and educational programs that explained the importance of smallpox prevention helped bring about the decline of the disease by the beginning of the twentieth century. It was eventually eradicated by vaccination programs from the 1920s to the 1940s aimed at children entering the public schools, as well as efforts by the World Health Organization from the 1950s to the 1980s.

Howard Markel

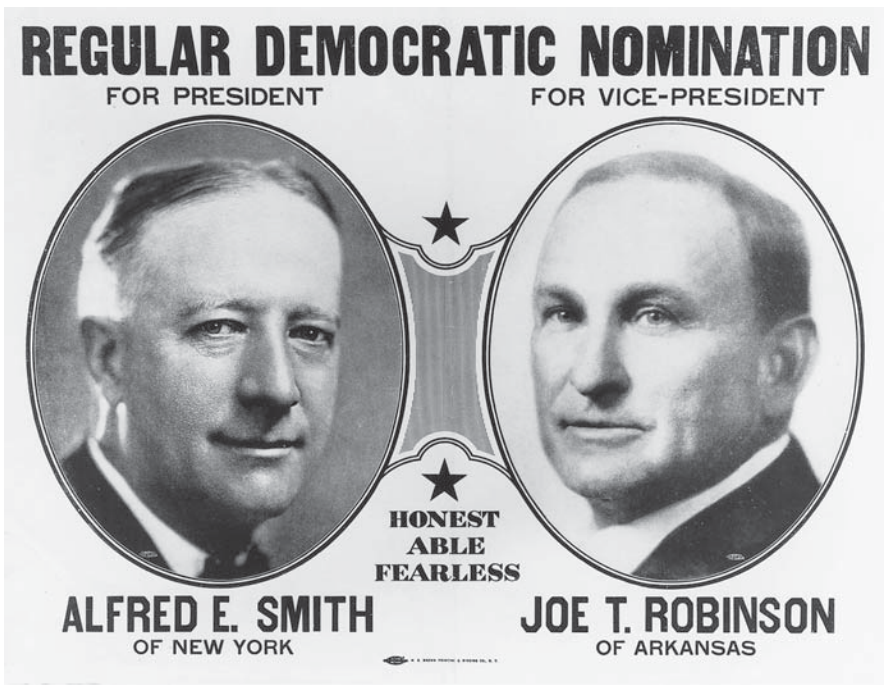
Smalls' Paradise. Harlem jazz club, opened in 1925 on Seventh Avenue and 135th Street by Ed Smalls. It seated about 1500 and was famous for its Sunday night after-hours jazz sessions. The club featured performances by such musicians as Willie "the Lion" Smith, Fletcher Henderson, and James P. Johnson, as well as elaborate floor shows and singing waiters. It attracted leading figures of the Harlem Renaissance, including Countee Cullen and Carl Van Vechten. Smalls' operated under the same name until 1986, when it closed.

Marc Ferris

Smith, Alfred E(manuel) (*b* New York City, 30 Dec 1873; *d* New York City, 4 Oct 1944). Four-term New York governor and presidential candidate. The son of second-generation immigrants, Smith was born at 174 South Street and attended St. James Parochial School but left shortly before graduation following his father's death. If he had not been forced to support his mother and sister, Smith might have become an actor. He possessed a nearly photographic memory and a quick wit. He worked at the Fulton Fish Market and other blue-collar jobs before he entered politics as a protégé of saloonkeeper Thomas F. Foley, a Tammany Hall district leader who sent Smith to the New York Assembly in 1904. During these years he lived at 83 Madison Street (1900–1901, now the site of the St. James Convent) and 28 Oliver Street (1904–9) before moving to 25 Oliver Street (1909–24).

In Albany, Smith discovered that the legislature was dominated by the Republican Party, a result of an 1894 change in the state constitution that denied New York City the representation to which it was entitled. The legislature also refused to grant home rule to the city, depriving city officials of the right to decide the most basic issues of local government and imposing the social mores of upstate Protestants on the Catholic and Jewish majority by banning baseball and closing bars on Sundays. The split between upstate and downstate also divided the Democrats in the legislature between upstate reformers like Franklin D. Roosevelt and Tammany men who followed the leadership of Charles F. "Silent Charlie" Murphy. Smith became a Tammany leader in the assembly and helped impeach and remove Democratic governor William Sulzer after he had broken with Murphy.

While he was publicly reviled as a "machine" man by both Republicans and upstate Democrats, Smith was personally very popular with members of both parties. He had an open mind about social and economic reforms and made friends with reformers like Frances Perkins. In the aftermath of the Triangle Shirtwaist fire in 1911, he helped persuade the reformers to support the appointment of a legislative commission to investigate working conditions in the state's factories. Co-chaired by Smith and State Senator Robert F. Wagner, the Factory Investigating Commission held hearings throughout the state and later helped pass dozens of laws that dramatically increased government protection for workers, including restrictions on child labor and a 54-hour week for female workers.



Smith was elected sheriff of New York County in 1915 and president of the Board of Aldermen in 1917. He was narrowly elected as governor in 1918, helped by the influenza epidemic that held down the upstate vote. Although the legislature considered Smith an "accidental" governor, he acted vigorously. He opposed the legislature's plan to ratify the federal prohibition amendment, demanding that it be submitted to a popular vote. Smith appointed a Reconstruction Commission to recommend changes to achieve "a full realization of democracy." One of the major recommendations was a government reorganization program that expanded the power of the governor, giving him control of a streamlined bureaucracy, power to set the state's fiscal priorities through an executive budget, and a longer term. Social worker Belle Moskowitz, who had recommended the commission, became its secretary; Robert Moses was chief of staff. Moskowitz would become Smith's closest political adviser. Smith appointed Perkins to the State Industrial Commission, the highest state office that had been held by a woman. Smith also spoke out strongly on civil liberties, condemning the assembly's expulsion of its four socialist members during the Red Scare in 1919–20 and vetoing legislation that gave the state broad power to curb dissent. Smith was narrowly defeated for reelection in the Warren Harding landslide of 1920.

Smith was reelected governor in 1922, but Republicans succeeded in thwarting many of his proposals, including public ownership and development of water power and the construction of public housing. By appealing directly to the public, however, he won approval for a series of bond issues to undertake an extensive public works program that included the construction of new state hospitals and psychiatric facilities and the expansion of the state park system. State education spending multiplied and made up almost half of the budget by the time he left office in 1928.

In 1928 Smith became the first Catholic to be nominated for president on a major party ticket. Four years earlier his religion had been an issue during the Democratic convention at Madison Square Garden, and he and William Gibbs McAdoo had struggled fruitlessly for the nomination for 103 ballots. Smith chose Franklin Roosevelt to run for governor in an effort to bolster his support among New York Protestants, but he lost in a landslide to Herbert Hoover following a campaign that included many ugly attacks on his religion.

Soon after Smith's defeat he returned to the city and took up residence on Fifth Avenue. He became president of the corporation that built the Empire State Building. Although Smith initially supported Roosevelt's candidacy for the 1932 Democratic presidential nomination, the two men disagreed over strategy, and Smith made a last-minute bid for the nomination. Four years later Smith attacked the New Deal and endorsed the Republican nominee for president; however, he was an early critic of Adolf Hitler and publicly supported Roosevelt against the isolationists as the country prepared for war.

During his final decades Smith undertook many charitable projects, gave lectures, and was active in the Catholic Church; he also gave his name to a public housing development, the Alfred E. Smith Houses, which was built near his birthplace. His statue stands in one of the courtyards of the Smith Houses.

Smith, Bessie [Elizabeth] (*b* Chattanooga, Tenn., 15 April 1895; *d* Clarksdale, Miss., 26 Sept 1937). Singer. She began her career in 1912 as a dancer with Moses Stokes's traveling show and toured with the Theatre Owners Booking Agency and the Liberty Belles. She sang with Charlie Taylor's Band in New York City in 1920 and with the revue "How Come?" in 1923. Her recording career began when Clarence Williams and Frank Walker of Columbia Records persuaded her to record "Down Hearted Blues" (1923); her subsequent collaborations with Louis Armstrong, Fletcher Henderson, and Tommy Ladnier sold millions of copies. She achieved a level of popularity unusual for a jazz and blues singer; Carl Van Vechten, a white patron of the Harlem Renaissance, promoted her work among white intellectuals and leaders in entertainment. She made her debut on Broadway in *Pansy* (1929) and performed in the revue "League of Rhythm" in 1936 at the Apollo Theater. Smith is remembered for her rich, expressive voice and her dramatic stage presence. Many of her songs describe the experiences of southern African American migrants, especially the struggles of African American women to adjust to urban life in the North. Langston Hughes considered her songs exemplars of the creativity inherent in African American vernacular culture.

Kathy J. Ogren

Smith [née Keogh]**, Betty** [Elizabeth] **(Wehner)** (*b* Brooklyn, 15 Dec 1896; *d* Shelton, Conn., 17 Jan 1972). Novelist. She grew up in Williamsburg, Brooklyn, and in 1921 moved to Ann Arbor, Michigan, where she studied journalism and literature and husband George Smith pursued his law degree. She also studied playwriting at the Yale School of Drama (1931–34). During the Depression, she worked for the Federal Theatre Project in New York City while living at 63 Richmond Street in Brooklyn. She relocated with the project to Chapel Hill, North Carolina, in 1936. Though she wrote more than 40 plays, she is best known for her novel *A Tree Grows in Brooklyn* (1943; film version, 1945), a coming-of-age story set in Williamsburg, Brooklyn, that had sold more than 2.5 million copies into the twenty-first century. Her later works include *Tomorrow Will Be Better* (1948), *Maggie Now* (1958), and *Joy in the Morning* (1963).

Irina Ikonsky

Smith, David (Roland) (*b* Decatur, Ind., 6 March 1906; *d* near Bennington, Vt., 23 May 1965). Sculptor. He arrived in New York City in 1926, studied painting at the Art Students League during 1927–32, and began welding metal sculptures in his studio at the Brooklyn Terminal Iron Works in 1933. In 1938 he moved to Bolton Landing in upstate New York. His *Hudson River Landscape* (1951, welded steel), inspired by frequent train trips along the Hudson into New York City, is at the Whitney Museum of American Art. His last works, in stainless steel, are characterized by an unusual finish, first polished and then abraded, creating abstract marks that reflect the light around them. His work is usually discussed in the context of abstract expressionism. Major retrospectives of his work were held at the Museum of Modern Art (1957) and at the Solomon R. Guggenheim Museum (1969, 2006).

Harriet F. Senie

Smith, Red [Walter Wellesley] (*b* Green Bay, Wis., 25 Sept 1905; *d* Stamford, Conn., 15 Jan 1982). Sportswriter. He studied journalism at the University of Notre Dame (graduated 1927) and began his career at the *Milwaukee Sentinel,* the *St. Louis Star,* and the *Philadelphia Record.* In 1945 he moved to New York City to write a sports column for the *New York Herald Tribune* that was soon syndicated in 90 newspapers. After the dissolution of the *Herald Tribune* and its successor, the *World Journal–Tribune,* Smith in 1971 joined the *New York Times,* for which he wrote a column until the end of his life. Smith strove for simplicity in his writing and disdained hyperbole, sentimentality, and cliché. He avoided both the tendency to lionize athletes and the "wiseguy" style affected by many urban sportswriters. Although he wrote about virtually all sports, he was especially fond of baseball, football, boxing, and horse racing and disliked basketball. He won a Pulitzer Prize for commentary in 1976. Collections of his writings include *Out of the Red* (1950), *Views of Sport* (1954), *The Best of Red Smith* (1963), and *The Red Smith Reader* (1982).

Ira Berkow, *Red: A Biography of Red Smith* (New York: Times Books, 1986)

Smith, Stephen (*b* near Skaneateles, N.Y., 19 Feb 1823; *d* Montour Falls, N.Y., 26 Aug 1922). Surgeon and public health official. A graduate of the College of Physicians and Surgeons (1850), he was an attending surgeon at Bellevue Hospital from 1854 to 1896, and from 1861 to 1872 he taught surgery and anatomy at Bellevue Hospital Medical College. His leadership of the campaign to establish the Metropolitan Board of Health (1866) is regarded as one of the most notable achievements in the history of public health in New York City and the United States; he was a member of the board from 1868 to 1875. Smith designed the plan for Roosevelt Hospital (1866) and promoted improvements at Bellevue Hospital. He edited the *New York Journal of Medicine* and founded the American Public Health Association. His book *The City That Was* (1911) describes his numerous battles to improve public health in New York City. He lived for many years at 300 Central Park West.

Allen J. Share

Smith, Tony (*b* South Orange, N.J., 23 Sept 1912; *d* New York City, 26 Dec 1980). Architect, painter, and sculptor. He studied at the Art Students League during 1933–36 and worked briefly as an apprentice to Frank Lloyd Wright before pursuing a 20-year career as an architect and painter. From 1960 he worked as a sculptor and became an important figure in the development of minimalist sculpture. From 1962 on Smith taught at Hunter College, which in his honor installed *Tau* (1965–80, welded steel painted black) at the southwest corner of 68th Street and Lexington Avenue. In 1998 the Museum of Modern Art mounted a career retrospective of his work.

Harriet F. Senie

Smith, William, Jr. (*b* New York City, 25 June 1728; *d* Quebec, 3 Dec 1793). Loyalist lawyer and historian. After attending Yale College he was admitted to the bar and with William Livingston in 1752 published a digest of colonial laws enacted between 1691 and 1751. A central figure among lawyers, he was an influential contributor to the *Independent Reflector* and the *Occasional Reverberator*. He became known for *The History of the Province* (1757), the first published history of the province of New York. Appointed chief justice of the province in 1763, he became a member of the provincial council in 1767 and helped to organize the Whig Club. Smith moved to England during the evacuation of the British in 1783; he was later the chief justice of Canada.

Leslie F. S. Upton, *The Loyal Whig: William Smith of New York* (Toronto: University of Toronto Press, 1969)

James E. Mooney

Smith, Willie "the Lion" [William Henry Joseph Bonaparte Bertholoff] (*b* Goshen, N.Y., 25 Nov 1897; *d* New York City, 18 April 1973). Pianist and composer. He grew up in Newark, New Jersey, and began playing the piano at the age of six. In his teens he played professionally in the saloons of New York City and Atlantic City, New Jersey; took part in many "cutting contests" in Harlem; performed at various Harlem venues, including

Leroy's, the Rhythm Club, Pod's and Jerry's, and the Hoofer's Club; and worked occasionally as a cantor. A decorated veteran of the 350th field artillery serving in World War I in France, he earned his nickname "the Lion" for bravery. He was called a "musician's musician," but his popularity with the general public increased when Artie Shaw and Tommy Dorsey performed his arrangements and compositions. He recorded for Decca in 1935; among his recordings for Commodore in 1939 was "Echoes of Spring," a work inspired by a park in New York City. He toured Europe in 1949 and played as a soloist and accompanist and with bands in nightclubs, revues, and theaters across the United States until the end of his career. A pioneer of ragtime, Harlem stride (along with James P. Johnson and Fats Waller), and jazz and blues piano, Smith was one of the most distinctive figures in the music of the Harlem Renaissance. With George Hoefer he wrote *Music on My Mind: The Memoirs of an American Pianist* (1964).

Kathy J. Ogren

Snider, Duke [Edwin Donald] (*b* Los Angeles, Calif., 19 Sept 1926). Baseball player. Known as the "Duke of Flatbush," he was the star home-run hitter for the Brooklyn Dodgers during the team's heyday from 1947 to 1957 when it frequently played and lost to the New York Yankees in the World Series. He played center field and batted third in a lineup that included Jackie Robinson, Pee Wee Reese, and Roy Campanella and helped lead Brooklyn to its only championship in 1955 against the Yankees. Snider moved with the team to Los Angeles after the 1957 season and they won the World Series in 1959. He returned east to play for the New York Mets for one season in 1963 before finishing the final year of his career in San Francisco. He was elected to the National Baseball Hall of Fame in 1980.

Joshua Robinson, David White

Snook, John Butler (*b* London, 16 July 1815; *d* Brooklyn, 1 Nov 1901). Architect. His most innovative building was the department store of A. T. Stewart at Broadway and Chambers Street (1845–46, with Joseph Trench), the first of its kind in the world. Intended as an elegant palace for the consumer, it had an exterior of marble and plate glass. He also designed hotels, among them the Metropolitan (1850–52), that had elaborate decorations and superior heating and ventilating systems; their lavish interiors inspired the construction of luxury hotels throughout the country. By 1855 he used cast iron for the facade of a building (examples of his cast-iron buildings still stand at 65 Greene Street and 287 Broadway). Well-known buildings by Snook include the Grand Central Depot (1869–71, demolished in 1903 for the construction of Grand Central Terminal) at 42nd Street and Park Avenue and the William H. Vanderbilt Houses (1879–82) on Fifth Avenue between 51st and 52nd streets.

Mary Beth Betts

Snug Harbor Cultural Center. Center for the performing and visual arts at 1000 Richmond Terrace in Staten Island. It opened in 1976 on a site of 83 acres (34 hectares) formerly occupied by Sailors' Snug Harbor and now New York City parkland. The site contains 28 historic buildings (dormitories, residences, a chapel, a library, and a music hall) that were constructed between 1831 and 1917 by such prominent architects as Minard Lafever, Robert W. Gibson, William Jallade, and the firm of Carrère and Hastings and offer fine examples of Greek Revival, Italianate, Second Empire, and beaux-arts architecture; two of the buildings retain their High Victorian interior decoration. The cultural center houses numerous cultural organizations, including the Staten Island Children's Museum, the Staten Island Botanic Garden, the Art Lab, the Noble Maritime Collection, and many community arts organizations. The Samuel I. Newhouse Center for Contemporary Art exhibits work by artists from the region. Private artists' studios are provided, and musical, dramatic, and dance performances take place throughout the year. The site is listed on the National Register of Historic Places.

Barnett Shepherd

Snyder, Ruth (*b* 1895; *d* Ossining, N.Y., 22 Jan 1928). Murderer. In the hope of collecting a life insurance policy worth $95,000 she tried seven times to kill her husband, Albert Snyder, the art editor of the magazine *Motor Boating,* by methods that included gassing him in his sleep and poisoning his whiskey. She succeeded on 20 March 1927 by hitting him with a sash weight, muzzling him with chloroform, and strangling him with picture wire. Both she and her companion, a traveling corset salesman named Henry Judd Gray, confessed to the crime during the police investigation, although each sought to assign most of the blame to the other. The two were executed at Sing Sing Prison. A photograph of Snyder's electrocution taken surreptitiously and published on the front page of the *Daily News* became legendary in tabloid photojournalism.

soap and toiletries. In its early history New York City became a leading manufacturing and distribution center for soaps and toiletry products. As the major Atlantic port and largest U.S. city, Manhattan combined ready access to basic and specialized raw materials with a huge consumer market.

Soap making is a branch of the chemical industry traditionally connected with candle manufacture. During the colonial period a few artisans established shops in Manhattan, and in rural districts people made soap at home; fine soaps were imported from Europe. Since tallow rending and other aspects of the process often produced unpleasant odors, from 1796 the city restricted soap and candle manufacturing to the residential outskirts; workshop production also required substantial space for boiling and presented fire and chemical hazards.

Larger-scale, scientific soap manufacture took root in New York City in the first decade of the nineteenth century, primarily along the lower West Side. In 1806 William Colgate established a small factory on Dutch and John streets, and in 1809 David Williams opened a factory on Greenwich Street near Barclay Street that later became known as Enoch Morgan's Sons. Other soap and candle firms of the time included J. C. Hull's Sons (1780); Benjamin T. Babbitt (1836); James Buchan; Johnson, Vroom and Fowler; D. S. and J. Ward; J. D. and W. Lee; Holt and Horn; Patrick Clendenen; John Alsop; C. W. Smith and Company; John Taylor and Sons; W. G. Browning and Company; Lee A. Comstock; John Buchanan; George F. Penrose; John Ramsey; John Kirkman; and John Sexton.

By 1845 the introduction of steam power, an expanded knowledge of chemistry, and the discovery of new vegetable and animal oils helped the industry to grow and diversify. One distinct branch that developed was the manufacture of "fancy toilet soaps," an industry that bore some relation to cosmetics. Soaps of this kind were made in the United States from imported oils, perfumes, and coloring agents and competed successfully with similar products from Europe before 1850. Noted makers of fancy soaps at mid-century included Thomas Jones, John Lindmark, Levi Beals, John Wyeth, James Mackey, John Ramsey, William White and Company, Robert Reed, John B. Breed, J. M. de Ciphlet, F. F. Gouraud, August Grandjean, and Eugene Roussel. Other specialized products included laundry and shaving soaps and scouring soaps and powders.

In 1847 the firm of Colgate moved its manufacturing operations to Jersey City, New Jersey, where it maintained an important industrial presence (eventually as Colgate–Palmolive) until 1988; it continued to maintain offices on John Street in Manhattan. Despite this departure and others like it, soap factories in New York City continued to increase in size and number to the end of the nineteenth century. The number of people employed in the industry in Manhattan grew from 229 in 1840 to 1371 in 1900. Eighty to 90 firms were engaged in the soap business in the 1890s, of which about 20 were important

manufacturers, such as Enoch Morgan's Sons, Benjamin T. Babbitt, James S. Kirk and Company, Charles S. Higgins, and D. S. Brown and Company. Many of their products became nationally known, among them Enoch Morgan's Sapolio soap and two products made by Babbitt: Babbitt's Best Soap and, later, Bab-O.

After consolidation in 1898, the chemical industries expanded to the outer boroughs and the metropolitan region. Firms in the New York City area accounted for one-sixth of all the soap production in the United States in 1900 and for nearly one-quarter by 1919. The share of manufacturing in Manhattan, however, decreased. By 1922 there were 207 soap factories in the region employing 10,231 workers. The largest factories were on the western bank of the Hudson River and on Staten Island, where Procter and Gamble built a huge facility at Port Ivory in 1907. Others operated in Brooklyn and Long Island City.

Several trends contributed to the departure of many soap manufacturers from Greater New York after the late 1920s. New forms of technology had created additional demands for space and equipment, and the cost of land, labor, energy, and taxes in the region had risen. The industry became concentrated in a few large national and international firms that produced not only soap and toiletries but foods, paper goods, chemicals, cosmetics, and other items. Although there were more than 30 soap manufacturers in the metropolitan region as late as 1956, from that time the number and production of soap firms declined sharply. By 1991 both Colgate–Palmolive and Procter and Gamble had shut down their local operations.

soccer. Soccer in New York City has been especially popular among college students and immigrants. In 1873 Columbia University adopted English soccer rules for collegiate play, and the school was a founding member of the first Intercollegiate Soccer Association, formed in 1905. Van Cortlandt Park in the Bronx was an early venue for soccer matches. The United States Soccer Association (formed 1913) staged its first tournament for the U.S. Challenge Cup in Brooklyn between two local teams composed of Irish immigrants. New York City had a team in the first professional soccer league in the United States, the American Soccer League (1923), which during the 1950s broadcast some of its games on television. The formation in 1971 of the New York Cosmos of the North American Soccer League marked the return of professional soccer to the city; in the same year the league moved its headquarters to Manhattan. The team played its home games at Downing Stadium on Randalls Island and had on its roster the most popular player in American soccer, Randy Horton. It won the league championship in 1972 and in 1975 signed the famed Brazilian soccer star Pelé, who drew huge crowds and made the Cosmos the most important franchise in U.S. soccer. The team moved to Yankee Stadium in 1976 and then to Giants Stadium at the Meadowlands in New Jersey. Pelé retired in 1977, but the Cosmos continued to dominate the league, qualifying for the playoffs every year between 1975 and 1984. The Cosmos left the league in 1985, and both the team and the league disbanded soon after. Columbia remained a force in intercollegiate soccer: it won several Ivy League championships and finished fourth in the tournament of the National Collegiate Athletic Association in 1979 and second in 1983. The center of amateur soccer in New York City is the Metropolitan Oval in Maspeth; founded in the 1920s by immigrants from central Europe, later it also became the site of spirited competition between teams from other parts of the world, notably South America. In 1994 the New York and New Jersey area was named as the site for a Major League Soccer team. Initially known as the Empire Soccer Club, the MetroStars, as they were later named, was one of the first 10 teams in the league. In 2006 an Austrian energy drink producer bought the team, renaming it Red Bull New York (the Red Bulls); they played in Giants Stadium in East Rutherford, New Jersey. The state-of-the-art, soccer-specific Red Bull Arena is slated to open in 2010 in Harrison, New Jersey.

social clubs. Usually groups with regular meeting places, or clubhouses, that admit new members on the basis of nomination and election by existing members. Although there were political, fraternal, artistic, literary, and athletic groups in New York City during the colonial and early Federal periods, social clubs were not formed until later, and they numbered only three by the late 1830s: the Union Club (1836), which represented the city's oldest families; the Hone Club (1836); and the Kent Club (1838), which was for lawyers. The number increased markedly during the following decades with the formation of the Century Association (1846), the Lotos Club (1870), the Salmagundi Club (1871), and the Lambs (1874). The Knickerbocker Club was formed in 1871 by 18 members of the Union Club dissatisfied with its new, more liberal admissions policy: they sought to associate with "men of good will and common aspirations," by which they meant members of established Dutch and English families (the founders of the Knickerbocker nevertheless included two Jews: Moses Lazarus and August Belmont). In some cases what motivated the formation of a new club was a political orientation (the Hone Club supported the Whigs between the 1830s and the Civil War, the Manhattan Club the Democrats, and the Union League the Republicans); ethnicity, especially among the city's large German population (which founded the Allemania Club, the German Club, and the Harmonie Club); or a common interest in literature, theater, the arts, or sports such as rowing, sailing, and tennis. Virtually all the clubs modeled themselves after the English gentleman's club and were governed in similar fashion, with an executive committee and subordinate committees concerned with finance, membership, the clubhouse, and the library. By the last quarter of the nineteenth century New York City was second only to London in the number of its clubs (more than 100) and club memberships (about 50,000). All the members were white men, three-quarters were married, and half were bankers or businessmen. A study of club life in 1871 found that half the members descended from only about 20 families and that each man usually held several memberships, perhaps belonging to a university club, a tennis or yachting club, and a literary club. Prominent clubs formed about the turn of the twentieth century include the Players (1888), the Montauk Club in Brooklyn (1889), the Metropolitan Club (1891), the Brook (1903), and the Friars Club (1904).

Social clubs in New York City declined in number after the 1920s, as the automobile became increasingly important, members moved to the suburbs, and social patterns changed. Clubs such as the Athenaeum and the New York Club disappeared. By the late twentieth century social clubs came to adopt a defensive posture, often fearful of lawsuits over such matters as sexual and ethnic discrimination and challenges to their tax-exempt status. Some clubs sought to avoid publicity at any cost: perhaps the most reticent was the Knickerbocker.

After World War II the term social club took on a new meaning, as immigrants from Cuba, the Dominican Republic, Honduras, and other Latin American countries opened informal clubs, generally unlicensed, that served alcohol and provided musical entertainment. Nevertheless, early in the twenty-first century New York City had the most social, literary, and university clubs of any U.S. city.

James E. Mooney

Social Gospel. Christian doctrine seeking to address social ills, also known as social Christianity and Christian socialism. It developed during the late nineteenth century and became especially popular in New York City. Adherents emphasized the doctrine of the kingdom of God and called for the conversion to Christianity of both individuals and social institutions. The many theorists and practitioners of the doctrine included Washington Gladden, Josiah Strong, Richard T. Ely, Charles M. Sheldon, Jane Addams, and Reverdy C. Ransom. The best-known advocate in the city was Walter Rauschenbusch, a pastor of the Second German Baptist Church at the edge of Hell's Kitchen who became a passionate defender of the poor; his book *Christianity and the Social Crisis* (1907) was central to the Social Gospel movement.

socialism. New York City became a national center of socialism during the nineteenth century. Between the late 1820s and the 1840s utopian socialism became a tenet of the city's labor movement. Drawing on the ideas of the Welsh reformer Robert Owen, his son Robert Dale Owen, Frances Wright, and Thomas Skidmore, radical workers sought to abolish inheritance, distribute property more equitably, and educate children in state boarding schools. A small group of German immigrants, some of whom had worked with Karl Marx and Friedrich Engels, introduced Marxist socialism in New York City during the 1840s; after the Civil War they joined with such radical reformers as Victoria Woodhull and Tennessee Claflin to form a branch of the International Workingmen's Association (IWA), which collapsed in 1876 owing largely to German members' strong sympathy for trade unions and discomfort with radical reformers. The Socialist Labor Party, the first socialist party in the United States, was formed in 1877. In the city it appealed to German workers and conducted nearly all its business in German. With the IWA it introduced Marx's ideas to important trade unionists in the city, including Samuel Gompers.

During the 1890s Daniel DeLeon became the leader of the Socialist Labor Party and steered it toward an uncompromising and revolutionary brand of socialism. Tension arose in the party over his dogmatism and his hostility toward trade unions (the leaders of which he condemned as "labor lieutenants of capitalism"). Jewish workers led by Morris Hillquit and Abraham Cahan, editor of the *Jewish Daily Forward,* were especially opposed to DeLeon's policies and joined with trade unionists in 1901 to form the Socialist Party of America (SPA). Soon after, socialism reached its peak strength in both the city and the rest of the nation. Under Hillquit's leadership the branch of the party in the city stressed immediate reforms and allied itself closely with trade unionism. It built firm ties to the garment workers who supported socialist political candidates. Socialism also attracted leading artists and intellectuals, who saw it as an effective challenge to stultifying Victorian conventions and hypocrisies; among those who joined the party were the painter John Sloan, the novelist Theodore Dreiser, the intellectual Max Eastman, the journalists Walter Lippmann and John Reed, and the reformers Florence Kelley, Frances Perkins, and W. E. B. Du Bois. Intellectuals in Greenwich Village published the magazine *The Masses;* the local branch of the SPA published the *Call,* a daily newspaper with a large circulation. The party offered adult education at its own school, the Rand School of Social Science. Meyer London, a member of the SPA, was elected to the U.S. House of Representatives in 1914 from the Lower East Side and won reelection in 1916 and 1920. In 1917 voters there and in the Bronx and Brooklyn supported Hillquit in the mayoral election and helped to elect 10 socialists to the state assembly, five to the city's Board of Aldermen, and one to a municipal judgeship.

The party was crippled by its opposition to the country's entrance into World War I. Members split into factions supporting and opposing the war, and *The Masses* was shut down by the federal government. The party became divided after the Bolshevik Revolution of 1917 caused some members to abandon socialism for communism; the division was deep and bitter in the city, where Hillquit led socialists opposed to communists. Between 1918 and 1921 socialist candidates continued to win strong support among Jewish workers. Norman Thomas, the best-known American socialist of the 1920s and 1930s, was a candidate for mayor of New York City in 1925 and 1929 and a member of Mayor Fiorello H. La Guardia's charter revision committee in 1934. Another leading socialist in the city was Max Shachtman (1904–72), editor of the Trotskyist journals the *Militant* and *New International.*

Competition between socialists and communists nearly destroyed the International Ladies' Garment Workers' Union during the 1920s and the Fur and Leather Workers' Union during the 1930s, and by the end of the 1920s socialism seemed a spent force in the city. It revived during the Depression, and in 1933 Hillquit won more than 100,000 votes as the mayoral candidate of the SPA. In 1936 a faction that refused to embrace communism formed the Social Democratic Federation (SDF) after splitting off from a faction of the SPA that sought to form a revolutionary front with communists; the SDF launched a journal, the *New Leader.* Socialism became a fringe movement after trade unions and Jewish workers left the SPA to support the New Deal and join the American Labor Party.

After World War II those who remained loyal to the SPA devoted themselves to fighting communism, and the journal *Dissent* was launched in 1955 by a small group of intellectuals in the city to preserve socialist ideas, remaining in operation into the 1990s. The emergence of the New Left in the 1960s caused much division among socialists. The League for Industrial Democracy, a group concentrated in New York City, helped to form Students for a Democratic Society in 1962. Social Democrats USA, organized in 1972, soon adopted conservative positions on many issues. One of few remaining socialist groups in the city in the early twenty-first century was the Democratic Socialists of America, formed in 1982 by Michael Harrington.

Socialist Labor Party [SLP]. Political party formed in 1877, largely by German-speaking immigrants. It was the first party in the United States to advocate Marxist socialism. The party was especially strong in New York City, where there was a large community of German immigrants. In 1886 it took an active part in Henry George's mayoral campaign. Under the leadership of Daniel DeLeon, after 1890 the branch in the city adopted English as its official language. The party split in 1901 after DeLeon alienated many supporters, including German Americans, Jewish immigrants, and members of trade unions. Ruled with an iron hand by DeLeon until his death in 1914, the party moved increasingly toward the political fringe in the city. It nevertheless remained active into the twenty-first century, with members idolizing DeLeon and nominating candidates for local, state, and national office.

Socialist Party of America [SPA]. Political party formed in Indianapolis in 1901 that built a large following in New York City among eastern European Jewish workers. The party's most prominent leaders in the city, Morris Hillquit and Meyer London, were engaged as attorneys by the garment workers' unions, which endorsed the party and aggressively sought votes for its candidates. London was elected to the U.S. House of Representatives from the Lower East Side in 1914, 1916,

and 1920; Hillquit won more than 22 percent of the vote in the mayoral election of 1917. Largely Jewish districts elected five socialists to the Board of Aldermen, one to a municipal judgeship, and several to the state assembly. In April 1920 five socialists from the city were expelled from the state assembly; two were reelected in November but denied their seats after the election, marking the decline of the party's influence. Throughout the 1920s the garment workers' unions continued to endorse the party, which maintained support among Jewish voters but was severely weakened by opposition from conservatives and competition from the Communist Party. The party during the 1930s was reduced to a small faction, as members joined the Democratic and American Labor parties to support the New Deal. It survived in the city largely through the efforts of such leaders as Norman Thomas, Michael Harrington, and Irving Howe and journals such as the *New Leader* and *Dissent.*

Social Science Research Council. Independent association of scholars that conducts interdisciplinary research in the social sciences and on public policy. It was formed in New York City in 1923 by professors from the University of Chicago and occupied offices in the tower of Grand Central Terminal. In the early 1970s it moved to 605 Third Avenue at 40th Street. The council has a rotating membership of some 300 social scientists who are assisted by a professional staff of 15. They study such diverse subjects as the urban underclass, the learning process, the Latino community, international relations, and research methods. The council sponsors workshops, seminars, conferences, and summer training institutes: one series of meetings held during 1982–85 led to the formation of the Committee on New York City, dedicated to scholarly study of the city and its culture, politics, and economy. In the early twenty-first century the council continued to develop new initiatives on major issues of public concern, including the social effect of AIDS and the structure of humanitarian emergencies.

Marjorie Harrison

social work. New York City became a center for the development of professional social work during the nineteenth century. The Association for Improving the Condition of the Poor was formed in 1843, and in 1882 Josephine Shaw Lowell and others formed the Charity Organization Society, a federation of private relief organizations. Under Lowell the society practiced what it called scientific philanthropy: it developed a central listing of relief recipients and a network of "friendly visitors" who investigated and counseled relief applicants. Although the society originally relied on volunteers, it increasingly turned to paid caseworkers, who were seen as more reliable and better qualified. Out of its Summer School of Philanthropy (1898), a program to train social workers, evolved the New York School of Social Work (later renamed the Columbia University School of Social Work), the first such school in the nation. From 1891 the society also published the *Charities Review,* which later became the leading social work periodical the *Survey.*

While the Charity Organization Society emphasized the role of casework in social work, SETTLEMENT HOUSES emphasized the role of social reform. The Lower East Side was the site of the first settlement house in the United States, opened in 1886 and later named University Settlement. In the early twentieth century the Russell Sage Foundation sought to promote the new profession of social work and to develop practical applications of social welfare theories. During 1909–28 Mary Richmond wrote case histories for use as teaching guides, organized summer institutes for caseworkers and supervisors, and published the influential books *Social Diagnosis* (1917) and *What Is Social Casework?* (1922), which defined the skills involved in casework and helped to elevate professional standards. The foundation also provided office space for a number of emerging national professional organizations such as the American Association of Social Workers. Francis H. McLean, another employee of the foundation, encouraged cities to form councils of private welfare agencies that could coordinate their activities; in 1925 the Welfare Council was organized as such an agency, partially supplanting the Charity Organization Society, which soon experienced overwhelming competition from public welfare programs.

Both public and private local social agencies were inadequate to face the problems of the Depression, leading the federal government to assume responsibility. Many New Yorkers contributed to the development of federal welfare programs under President Franklin D. Roosevelt, and as the field of social work expanded, many of the leading activists, schools, and professional associations emerged in the city. In 1939 the Charity Organization Society and the Association for Improving the Condition of the Poor merged to form the Community Service Society. Neva Deardorff worked for the Research Bureau of the Welfare Council of Greater New York during 1927–46, demonstrating the value of statistical analysis and sociological data for social work planning. She then helped to form and direct the Health Insurance Plan of Greater New York, a precursor of health maintenance organizations. The American Association of Social Workers was founded in 1922 by Deardorff, David Holbrook, William Hodson, and Dorothy Kahn. In 1920 Holbrook became the head of the American Association for Organizing Family Social Work (based in the city), and in 1925 he joined the National Social Work Council, an organization that provided a forum for other national social work agencies (he remained there for more than 20 years). In 1922 Hodson became the head of the Division of Child Welfare Legislation at the Russell Sage Foundation and later of its Division of Social Legislation; he led the private Welfare Council (1925) and the first state-level public assistance program (1931) and campaigned for federal relief programs, which he also helped to formulate. In 1934 he became the city's commissioner of public welfare. Walter Mott West led the American Association of Social Workers from 1927 to 1942, during which time the organization shaped federal welfare policies; in 1938 Kahn became an assistant to West. As the associate editor from 1930 of the *Survey,* Gertrude Springer called attention to the growing role of the federal government in social welfare. Jane Hoey, Hodson's assistant at the Welfare Council, became the head of the Bureau of Public Assistance of the Social Security Administration in 1935. After World War II Kahn directed the Health and Welfare Council (also in New York City), and during 1950–55 she led the Social Welfare Section of the Department of Social Affairs at the United Nations.

Because of the growing importance of the federal government in financing social programs, many national social welfare organizations moved to Washington, D.C., but in the early twenty-first century New York City remains a center for innovation and education in social work. Social work programs are offered at Columbia University (1898), Fordham University (1929), New York University (1955), Hunter College (1958), and Yeshiva University (1959).

society. More than in Boston, Philadelphia, or Charleston, the upper class in New York City has been based on wealth. The legitimacy and longevity of elite society depended

on a delicate balance between on one hand exclusiveness and isolation, and on the other hand a willingness to defer to the elite on the part of the community at large. Within society a sense of kinship was important, traditionally determining the choice of school, camp, dancing class, and college, as well as admission to clubs, membership in charity and cultural boards, and invitations to social events. All these distinctions were based originally on success in business and government, the two areas that saw the first changes for the declining old families of the establishment. Later came the disturbance in the careful balance between community leadership and the once-acceptable separation of classes into enclaves.

The group that dominated New Amsterdam consisted of old Dutch families. Their sense of aristocracy was based on wealth held in land originally granted by the Dutch West India Company and later by the colonial governments in which the leadership group was powerfully well represented. The manorial system of land ownership along the Hudson River and on Long Island was as close as the northern colonies came to an aristocracy. Another source of early strength among these leaders was wealth earned from mercantile trade, usually wholesale and seldom retail, to which a social stigma was long attached. When the British gained control in 1664 they did not displace the social leaders, whom they joined in business partnerships, church congregations, and marriages. Cadwallader Colden, a colonial governor of New York, described this society as based first on the landed gentry of the large baronial holdings, second on the lawyers, and last on the merchants, but there was mixing of these categories. They held the major royal government offices in the legislative and judicial branches and were close allies of both British- and American-born members of the executive branch. They also controlled land grants, military contracts, and lucrative franchises. Although there were internal competitions for leadership, as among the Livingston, De Lancey, and other factions, the upper class continued to exercise power no matter which of the contending groups prevailed. The class became a cosmopolitan one of great ethnic variety, with the great Dutch families joined by French Huguenots (the Jays and De Lanceys), English and Scots (the Barclays and Waltons), and Germans (the Beekmans). Together they founded the New York Chamber of Commerce (1768), the Society of New York Hospital, Trinity Church, King's College, and similar institutions.

This group faced difficulties with the coming of the American Revolution, during which the British army occupied the city from 1776 to 1783. When the troops left, so did many Loyalists for maritime Canada and for England. Many new fortunes were built and new families replaced the departing Loyalists, but they still faced the task of fitting in among the great social families that had remained in New York City or returned there from exile. The social sovereignty of these colonial families was ended by 1810, when their withdrawal from commerce and government had become apparent and many of the great manorial estates had been broken up. It was about this time, at the beginning of the new nation and the end of the brief tenure of the Federalists, that the old patrician group in its confusion turned toward exclusivity for the first time.

The new patrician society was a combination of old New Yorkers and people from New England. Many members of the new families were merchant bankers who became active in public affairs because they appreciated the need for close ties between finance and government. They often held local political office, first as Federalists and then as Republicans (notably the Clintons, Lewises, and Livingstons). The aristocrats had been superseded by the bourgeoisie of the marketplace, whose standards for admission were more flexible, and the tension between the old families and the new gave vitality to the social life of New York City.

The amalgam of families that led the city supported its existing charities and founded new ones, as the city attracted new residents from the countryside and immigrants from Ireland and Germany. In the years preceding the Civil War society managed to assimilate the new fortunes without changing its accustomed patterns. Social events and other functions were largely the province of men, who looked after their business interests during the day and established ancillary clubs and hereditary societies. The pace of change at mid-century featured the emergence of the social arbiter: Isaac Brown was the first in a series that came to include Ward McAllister and Harry Lehr.

During the Civil War fortunes were made by such entrepreneurs as J. P. Morgan, John D. Rockefeller, Jim Fisk, and Jay Gould, and after the war the change in society was dramatic. The old guard was pushed aside by the new, and the latest old guard sought solace in clubs and in the creation of yet more hereditary societies where family lines remained important. In such clubs members could meet, dine, and do business with the new elite.

New millionaires who did not have the properly matured credentials and were thus unwelcome in more established society were attracted to the idea of the "Four Hundred," a guest list prepared by McAllister for Mrs. William Astor. (The number of names was in fact 273, said to be the number of guests that could be accommodated in her ballroom.) This inner circle of society included only half a dozen people with intellectual or artistic interests, and the Four Hundred were rarely involved in cultural gatherings. One member of the group, Mrs. Winthrop Chanler, who had been brought up in Rome in an artistic family and found New York City to be prim and dull, wrote that the Four Hundred "would have fled in a body from a painter, a musician, or a clever Frenchman." The Four Hundred was a group dominated by determined women seeking newspaper publicity for the Rockefellers, Dodges, Morgans, and Schiffs. But because its membership was continually changing, it did provide an entrée into society for those with manners, patience, and money.

Social events and functions in New York City took place in what newspapers called the "Magic Parallelogram" (between 14th and 59th streets and between Third and Sixth avenues) during a period called the Gilded Age, after an 1875 novel by Mark Twain and Charles Dudley Warner. It was Twain who published the joke "In Boston they ask, How much does he know? in Philadelphia, Who were his parents? in New York, How much is he worth?" The period lasted for half a century, during which fashionable society drew the attention of an avid public fed by society writers and gossips. In 1887 this group was given a sort of codification when the *Social Register* appeared with fewer than 2000 New Yorkers listed. In an age of excesses, few were as outrageous as the costume ball given by Bradley Martin during the winter of 1896–97, an expensive event described in five pages of agonizing detail in the Hearst newspapers. Criticism of the party for its ostentation was widespread and fierce, driving the stunned Martins into permanent exile in England. The incident seemed to confirm Henry Adams's remark that American society was the first to go from barbarism to decadence without passing through civilization.

The Four Hundred was succeeded between the world wars by café society, a vacuous collection of poseurs, playboys, heiresses, and party-givers from Hollywood, Paris, and London. It was the sort of crowd that could appreciate Oscar Wilde's comment about society that "to be in it is merely a bore, but to be out of it is simply a tragedy." The man who named café society, Maury Henry Biddle Paul, known as Cholly Knickerbocker, was from Philadelphia, where his critics said that he came from the wrong branch of each of the four distinguished families that constituted his name. In 1921 he divided society into two lists, distinguishing café society from the old guard. Each list had 50 names, and only two families were represented in both: the Drexels, with mother in the old guard and son in café society; and the Vanderbilts, with three older ladies including "the Dowager Mrs. Vanderbilt" on the old list and an alcoholic man and a divorced woman on the new. Knickerbocker lived long enough to see the celebrities whom

he disdained replace the members of café society whom he had celebrated in his lists and newspaper columns, never realizing that they were all celebrities in the first place and that he had helped make them so.

After World War II society in New York City was in tatters. Social secretaries had a difficult time finding eligible escorts for the few remaining assemblies and balls. The survival of society was also threatened by divorce, indifference to cultural and charitable affairs, and the move to the suburbs and beyond. Public attention focused on music and sports instead of society names. In his novels Tom Wolfe epitomized a time when the scramble for wealth and power was not only accepted but revered. The new members of the elite held lavish parties in such grand institutions as the Metropolitan Museum of Art, which some facetiously called "Club Met." Any relation between this group and what used to be thought of as class was purely coincidental.

James E. Mooney

Society for the Prevention of Crime. Reform organization formed in 1878. In its early years it was led by Howard Crosby and focused on helping the police arrest gamblers and prostitutes, as well as saloonkeepers who violated the Sunday closing laws. After Crosby's death in 1891 leadership of the society was assumed by Charles H. Parkhurst, pastor of the Madison Square Presbyterian Church, who adopted a more provocative style, touring saloons and brothels in disguise to prove that vice flourished in New York City under police protection. During his tenure the society was widely known as the "Parkhurst society." Detectives employed by it uncovered evidence of protected vice in the city, which led to the appointment of a committee of the state senate to investigate police blackmail and corruption in Tammany Hall; the committee was known as the Lexow Committee, after its chairman, Clarence Lexow of Nyack, New York. The resulting scandal led to the defeat of Tammany Hall and the election of a reform administration in 1894. The society declined in power and influence after Parkhurst resigned as its president in 1908, and it disbanded after the repeal of Prohibition.

Warren Sloat

Society for the Prevention of Cruelty to Children. Children's advocacy organization formed in New York City in December 1874 (incorporated in 1875 as the New York Society for the Prevention of Cruelty to Children) by Elbridge T. Gerry (1837–1927) and John D. Wright. With Henry Bergh (1811–88) of the American Society for the Prevention of Cruelty to Animals, Gerry prosecuted the adoptive parents of Mary Ellen MacCormack (or Wilson) for having severely beaten her; this was the first case of child abuse brought before the city's courts. The society, also known during its founder's lifetime as the Gerry Society, sought out and rescued abused children and was given law enforcement powers in 1881. In the early twenty-first century it has offices at 161 William Street in Manhattan and runs programs that include parenting classes, counseling services for abused children, and training in how to recognize and report child abuse.

Alana Erickson Coble

Society for the Propagation of the Gospel. Religious organization incorporated by royal charter in 1701 with the aim of settling ministers of the Church of England in America. Because of the multidenominational character of New York City, the city and its environs were an important focus for the society, and missionaries in the area established churches in Manhattan, Queens, Westchester, and Staten Island. The society sought to endow churches, set parish boundaries, provide rectories and glebes (plots of farmland controlled by parishes), and secure public support for the Church of England. The society supplemented the salaries of the clergy until the American Revolution; it also aggressively pursued the conversion of blacks and American Indians. Elias Neau, a missionary from France, operated an innovative school for catechizing slaves in New York City from 1704 until his death in 1722. From 1706 the society supported charity schools in the city to provide rudimentary religious and literary instruction, and in 1754 it was instrumental in founding King's College (later Columbia University), from which the church hoped to obtain a supply of well-educated young men eager to enter the ministry. Throughout the colonial period the society remained controversial; non-Anglicans especially were wary of its missionary program and of its political and social influence. The withdrawal of the Society for the Propagation of the Gospel from the colonies during the Revolution was followed by the establishment of the American Episcopal Church as an independent entity in 1783.

Klingberg, *Anglican Humanitarianism in Colonial New York* (Philadelphia: Church Historical Society, 1940); Henry Paget Thompson, *Into All Lands: The History of the Society for the Propagation of the Gospel in Foreign Parts, 1701–1950* (London: Society for Promoting Christian Knowledge, 1951)

Peter J. Wosh

Society of the Friendly Sons of St. Patrick in the City of New York. Charitable and fraternal body formed in 1784 to assist needy Irish immigrants; it is the oldest continuously functioning Irish organization in New York City. In its early years the society had both well-to-do Catholics and Protestants as members and later became predominantly Catholic, although its charitable activities remained ecumenical. Its annual St. Patrick's Day Dinner remained an important social event for prominent local residents of Irish descent through 2008. Its offices are at 80 Wall Street.

Richard C. Murphy and Lawrence J. Mannion, *The History of the Society of the Friendly Sons of St. Patrick in the City of New York, 1784–1955* (New York: Society of the Friendly Sons of St. Patrick in the City of New York, 1962)

William D. Griffin

Society of Umbra. Group of writers that formed in 1962 on the Lower East Side. As one of the founders, Tom Dent, put it, Umbra was "a vehicle for the expression of the bitterness and the beauties of being Afro-American." Major members included Dent, Steve Cannon, Al Haynes, David Henderson, Calvin C. Hernton, Joe Johnson, Norman Pritchard, Lenox Raphael, Ishmael Reed, Lorenzo Thomas, James Thompson, and Brenda Walcott. They conducted writing workshops, gave poetry readings, and published *Umbra* magazine, with Dent, Henderson, and Hernton as editors. The workshops met Friday evenings and often ended at Stanley's Bar on East 12th Street and Avenue B, an informal center of the Harlem artistic and jazz community. The group splintered after only two years and two issues of *Umbra,* partly because of disagreement between members who saw themselves primarily as activists and those whose main concern was writing. Umbra has been called "the first post–civil rights Black literary group" that established "their own voice distinct from, and sometimes at odds with, the prevailing white literary establishment" and a forerunner to the Black Arts literary movement of the mid-1960s and early 1970s started in Harlem by LeRoi Jones (Amiri Baraka) and others.

Calvin Hernton, "Umbra: A Personal Recounting—A Lower East Side Cultural Group of the 1960s," *African American Review*, "Lower East Side Retrospective" (Winter 1993); Aldon Lynn Nielsen, *Black Chant: Languages of African-American Postmodernism* (Cambridge: Cambridge University Press, 1997)

Advertisement for Blakely's Blizzard Soda

soft drinks. The manufacture of soft drinks in New York City began in 1809, when chemist Noyes Darling brought soda water to the popular Tontine Coffee House on Wall Street. Flavored soda water came to prominence after the Civil War. Dr. Brown's Cel-Ray Tonic (named for its celery flavor) was introduced in 1869; eventually distributed nationwide, it continued to be made into the early twenty-first century. During the 1870s soda fountains drew customers to drugstores and department stores, and such establishments as Hudnut's in the Herald Building were known for their marble soda fountains. Bottled soft drinks became popular in the last quarter of the nineteenth century, and the city became the site of more than 100 soft drink factories producing such brands as Imperial Inca Cola, John Morgan ginger ale, Golden Key mint sodas, and Centennial root beer. Cream, celery, and coffee sodas were developed and widely sold in the city. The firms of Pepsi-Cola, Seven-Up, and Coca-Cola made and distributed their products in the city from the 1930s, and for a time Canada Dry and Pepsi-Cola had their headquarters there. The city ceased to dominate the industry after several large soft drink companies were formed elsewhere between 1900 and 1950; nonetheless, by the mid-1950s the city had 250 soda factories and soft drink sales exceeding $70 million. In 1988 more than 120 million cases of soft drinks were consumed in the city. The American Natural Beverage Corporation achieved success with Soho Natural Soda, and in addition to its own products the Canada Dry Bottling Company in College Point distributed such local brands as Best Health Natural Soda and Dr. Brown's. Pepsi-Cola headquarters is now in suburban Westchester County.

James Bradley

SoHo. Neighborhood in lower Manhattan, bounded to the north by Houston Street, to the east by Crosby Street, to the south by Canal Street, and to the west by Sixth Avenue; the name stands for "south of Houston." The hilly area originally contained a path used by the Weckquasgeek Indians to travel the length of Manhattan; this later became Broadway. Slaves granted their freedom by the Dutch West India Company in 1644 moved to the area and formed the first settlement of free blacks in Manhattan; there were also some white settlers. The land was used mostly for farming until the end of the eighteenth century. At that time city planners decided to cover the polluted and foul-smelling canal that formed the southern boundary of the neighborhood, using local hills as landfill. The leveled countryside soon became suitable for development, and by 1825 the neighborhood was the most densely populated in Manhattan. Its streets were lined with shops and elegant three- and four-story houses, mostly built of red brick in the Greek Revival and Federal styles. John Jacob Astor owned much of the land around Canal Street, and the residents were among the wealthiest and most renowned in the city.

In the mid-nineteenth century many large retail and wholesale firms moved in, including Lord and Taylor, Tiffany, and E. V. Haughwout. Broadway was dominated by expensive hotels, as well as stores built of marble, brownstone, and cast iron; casinos, theaters, music halls, and brothels lined the side streets. An influx of businesses caused the residential population to decline by a quarter between 1860 and 1865, as buildings were demolished to make way for factories, warehouses, and offices. The neighborhood became known for dry goods, china, glass, silks, satin, lace, ribbons, furs, and tobacco. To glorify their enterprises, ambitious business leaders commissioned four- to six-story buildings with elaborate ornamentation. Most of these structures were made from cast iron, which was favored for its strength and versatility and became incorporated into a unique architectural technique developed in the neighborhood (see CAST-IRON ARCHITECTURE). Stores and factories (including some that housed sweatshops) had facades in the Victorian Gothic, neo-Grec, Italianate, and Second Empire styles and were carefully painted and decorated with colorful striped awnings. The ground floor often had high windows and a vast interior for displays; upper stories contained offices, storage, and manufacturing areas.

SoHo, 2009

A thriving commercial center until 1890, the neighborhood became depressed after the turn of the century as fashionable businesses moved uptown to Fifth Avenue. Local buildings were ill suited to modern industry, and by 1959 the neighborhood was a commercial slum known as "hell's hundred acres." With the proposed Lower Manhattan Expressway, many businesses left the area. Between 1960 and 1970 artists seeking low rents and space for large works defied zoning laws and converted vacant warehouses into studios, galleries, and living quarters. There was a large colony of artists in the neighborhood by 1971, and with other residents they persuaded the city to change the zoning laws governing warehouses. An area of 26 blocks was designated a historic district by the New York City Landmarks Preservation Commission in 1973. After it was revitalized in the 1970s and 1980s, the neighborhood became the newly fashionable site of boutiques, performance centers, galleries, restaurants, bars, and shops. Many artists who had reclaimed the neighborhood from its former state of neglect found themselves unable to afford the increasing rents brought about by gentrification. After the terrorist attack on the World Trade Center on 11 September 2001, many shops, museums, and galleries left the district, but in 2004 Bloomingdale's opened a branch in the neighborhood, and many other upscale shops followed. In the early twenty-first century SoHo remains one of the most commercially vibrant neighborhoods in the city. Many cast-iron buildings house small publishing, graphic design, and manufacturing firms; some artists continue to inhabit spacious lofts with high ceilings.

Joyce Gold

SoHo News. Alternative weekly newspaper launched by Michael Goldstein in 1973 and published until 1982. Described as the "alternative to alternative papers," it was inspired by an alternative art movement in SoHo in the mid-1970s. The newspaper focused on the arts but also offered news and opinion pieces as well as reviews and listings in a format similar to that of the *Village Voice.* It distinguished itself from other newspapers by publishing articles from a range of political perspectives. Between 1978 and 1980 it was owned by the Associated News Group of London, publishers of the *Daily Mail.* The *SoHo News* ceased publication in 1982 after incurring cumulative losses of $6 million.

Amanda Aaron

Soldiers' and Sailors' Monument. Monument at 89th Street and Riverside Drive in Riverside Park, standing 100 feet (30 meters) tall in the center of an esplanade 100 feet wide lined with cannons. The first step toward erecting the monument was taken in 1893 when the city established a board of commissioners to propose a means of honoring fallen soldiers. The original proposal was for a monument at Grand Army Plaza at 59th Street and Fifth Avenue, but because of objections from the Municipal Art Commission the present site was chosen instead. The cornerstone was laid on 15 December 1900, with Governor Theodore Roosevelt officiating. Work was completed in 1902 although the monument never received its finishing touch: bronze statues intended to sit in five niches in the polished marble interior chamber. In 1976 the monument was declared a city landmark.

For illustration see Riverside Park.

Kenneth T. Jackson

Solomon R. Guggenheim Museum. Museum opened in 1939 by the mining tycoon Solomon R. Guggenheim. It began as a collection of works by such modern artists as Wassily Kandinsky, László Moholy-Nagy, Paul Klee, and Amedeo Modigliani amassed between 1929 and 1937 for Guggenheim by the baroness Hilla Rebay von Ehrenwiesen. By 1937 Rebay became the curator of the collection, which was held by the Solomon R. Guggenheim Foundation and placed on public display as the Museum of Non-Objective Painting on East 54th Street. Under Rebay's direction the museum became a forum for young artists and exhibited the work of modern artists including Kandinsky and Moholy-Nagy. At her urging Guggenheim commissioned a new building from Frank Lloyd Wright in 1943. A site was acquired on Fifth Avenue between 88th and 89th streets, and in 1948 the collection was moved temporarily into a town house at 1071 Fifth Avenue. After Guggenheim's death in 1949 his nephew Harry F. Guggenheim became the chairman of the foundation; in 1952 the museum took its current name and Guggenheim replaced Rebay with James Johnson Sweeney, a former curator at the Museum of Modern Art, who added sculpture to the collection and documented it more systematically. The new building, opened in October 1959, was Wright's only important commission in the city. It is shaped like a spiral that is narrowest at its base and is built entirely of hand-plastered concrete, inside and outside, over a steel frame. Inside the building, around a large, central space, a curved ramp leads upward from street level through the height of the building, allowing exhibitions to be mounted in one virtually continuous line; Wright intended for visitors to begin at the top and move downward. Thomas Messer, appointed director in 1960, continued Sweeney's policies and secured the Justin K. Thannhauser Collection, which was housed in separate galleries adjacent to the original building and opened in 1972. In 1992 a controversial new 10-story wing opened adjacent to the original building: designed by Gwathmey Siegel and Associates, it incorporates gallery, storage, and office space. In the same year the museum opened a branch in SoHo, in a building constructed for John Jacob Astor in 1881–82 at 575 Broadway near Prince Street; it closed in 2001. Director Thomas Krens, appointed in 1988, generated controversy by reinterpreting the exhibition program beyond traditional art-historical boundaries with shows such as *The Art of the Motorcycle* (1998), *Giorgio Armani* (2001), and *Brazil: Body and Soul* (2002). Krens also oversaw the expansion of the museum abroad, most notably to Bilbao, Spain, in a celebrated building designed by Frank Gehry (1997). Krens left as director in 2006 but remained head of the museum's parent institution, the Guggenheim Foundation.

Peter L. Donhauser

Soloveitchik, Joseph [Dov] (*b* Pruzhany [now in Belarus], 27 Feb 1903; *d* Brookline, Mass., 8 April 1993). Rabbi and philosopher. The son of a rabbi, he moved to Boston in 1932 with his wife, where he founded the Maimonides School, the first Jewish day school in New England. In 1941 he joined the faculty of Yeshiva University in Manhattan, where he became the preeminent teacher of the Talmud in North America and ordained about 2000 rabbis, more than any other seminary teacher in the United States. Orthodox leaders around the world queried him about how to apply Jewish law to modern problems. His annual lectures, which lasted two to five hours, attracted thousands of listeners and were regarded as the major annual academic event for American Orthodoxy.

Kenneth T. Jackson

Sondheim, Stephen (Joshua) (*b* New York City, 22 March 1930). Lyricist and composer. He lived in the San Remo apartment building on Central Park West between 74th and 75th streets in Manhattan until his parents divorced when he was 10 years old. Sondheim then moved to Bucks County, Pennsylvania, with his mother. While living there he met producer, playwright, and lyricist Oscar Hammerstein II, who would become his mentor. Hammerstein tutored and instructed him in the ways of musical composition until Sondheim left to attend Williams College and later Princeton University. After having difficulty finding work Sondheim made his Broadway debut as a lyricist for the Leonard Bernstein musical *West Side Story* (1957). He next wrote lyrics for the musical *Gypsy* (1959) and received billing for the first time as a composer and a lyricist in *A Funny Thing Happened on the Way to the Forum* (1962), starring Zero Mostel. The success and royalties of these three shows, which all became films, gained Sondheim the freedom to choose his endeavors, and from 1965 onward he insisted on both composing and writing lyrics for his projects. For a year in the late 1960s he created a series of word puzzles in *New York* magazine with cryptic clues, such as anagrams, involving humor and cleverness to hide the true meaning of the clue and its answer. Some critics believed his love of word games related to the intricacy and complexity of his lyrics. By the mid-1970s he established himself as one of the most daring and imaginative composers at that time with his next three productions: *Company* (1971), *Follies* (1972), and *A Little Night Music* (1973) showed Sondheim's ability to break with and honor tradition as well as utilize multiple musical styles. All three shows won Tony Awards for best score in their respective years. His song "Send in the Clowns" from *A Little Night Music* eventually made its way into the mainstream and won a Grammy Award for song of the year. From 1973 to 1981 he served as president of the Dramatists Guild during which time he produced *Pacific Overtures* (1976) and *Sweeney Todd* (1979), the latter winning Sondheim another Tony Award. *A Little Night Music* and *Sweeney Todd* are performed in opera houses around the world. In 1985 his musical *Sunday in the Park with George (*1984) won a Pulitzer Prize for drama. He continued to produce works through the 1990s and 2000s, and in 2008 *Gypsy* and *Sunday in the Park with George* enjoyed successful Broadway revivals. That same year Sondheim received a special Tony Award for lifetime achievement.

Frank Nestor

songs. The first song to feature New York City in its title was probably the "New York Patriotic Song," written by Charles Dibdin and published about 1799. The "Castle Garden March (circa 1820) and "New York, Oh What a Charming City" (1831) were other early songs published as sheet music. After the Civil War, songs about the city began to appear in larger numbers. Many paid tribute to specific places (notably Broadway and the Bowery), such as "Walking down Broadway" (1868), "The Broadway Opera and the Bowery Crawl" (1871), "Strolling on the Brooklyn Bridge" (1883), and "The Bowery" (1892). In 1894 Charles B. Lawlor and James W. Blake wrote the first enduring song about the city, "The Sidewalks of New York," which portrayed its flourishing Irish population. Many laudatory "anthems" were written in the late nineteenth and early twentieth centuries in praise of the city's vitality and diversity, including "In Good Old New York Town" (1899), Victor Herbert's "In Old New York" (1906), "Take Me Back to New York Town" (1907), and the best-known of the time, George M. Cohan's "Give My Regards to Broadway" (1904). By contrast Charles K. Harris's "The City Where Nobody Cares" (1908) and H. Altman's "Die Nyu-Yorker Tiern" (New York Tears, 1910) portrayed the city as a cruel place.

During the first half of the twentieth century a number of songs appeared about neighborhoods in New York City, such as "Chinatown, My Chinatown" (1905), "Nestin' Time in Flatbush" (1917), and "(We'll Have) Manhattan" (Richard Rodgers and Lorenz Hart, 1925) as well as Irving Berlin's "Easter Parade" (1933) and "Slumming on Park Avenue" (1937), about the wealthy enclaves of midtown and Fifth Avenue. The Yiddish theater and its English-language equivalents offered songs about life in the tenements, notably "Second Hand Rose (from Second Avenue)" (1921) and "My Yiddisha Mama" (1925). Broadway and Times Square were featured in the lachrymose "There's a Broken Heart for Every Light on Broadway" (1915) and the exuberant "42nd Street" (1932) and "Lullaby of Broadway" (1935). The neighborhood most often treated in songs of the 1920s and 1930s was Harlem, which like the Bowery and Broadway before it came to symbolize the effervescence of the city. There were quasi-operatic and extended orchestral works, such as George Gershwin's *opera scena 121st Street* (1925) and William Grant Still's ballet *Lenox Avenue* (1937), and popular songs such as Berlin's "Puttin' on the Ritz" (1929) and "Harlem on My Mind" (1936). The Savoy Ballroom, the best-known dance hall in Harlem, was immortalized in "Stompin' at the Savoy" (1934) and "The Joint Is Jumpin'" (1937). Duke Ellington, a resident of Harlem, wrote the songs "Drop Me Off in Harlem" (1933), "Harlem Speaks" (1935), "Harlem Air Shaft" (1940), and "Take the 'A' Train" (in collaboration with his partner Billy Strayhorn, 1941) as well as the extended orchestral work *Harlem (A Tone Parallel to Harlem)* (1952).

Songs about New York City continued to be written in great numbers during the middle decades of the twentieth century, including Vernon Duke's "Autumn in New York" (1934), "New York, New York" (Betty Comden, Adolph Green, and Leonard Bernstein, 1945), "52nd Street Theme" (1948), "I Love a New Yorker" (1950), and "Manhattan Spiritual" (1958). After 1960 compositions ranged from the lighthearted "59th Street Bridge Song" (1966) by Paul Simon and Art Garfunkel and "Boy from New York City" (1964) to the wistful "On Broadway" (1962) and "Spanish Harlem" (1960) and the fierce rap song "New York, New York" (1984) by Grandmaster Flash and the Furious Five. Several country musicians wrote vitriolic songs such as "I Wouldn't Live in New York City (If They Gave Me the Whole Damn Place)" (1970) and "I Hate New York" (1983). The theme song (John Kander and Fred Ebb) from Martin Scorsese's film *New York, New York* (1977) attained a popularity that transcended the usual limitations of the genre and was made the city's official song by Mayor Edward I. Koch in 1983. As the birthplace and primary home of hip-hop, New York City also became the subject of countless rap songs from the 1980s onward.

Until the dawn of hip-hop, the outer boroughs have been a much more infrequent subject of songs. John Philip Sousa wrote a well-known march about a resort in Brooklyn, "Manhattan Beach March" (1893), and depicted Luna Park in his song "I've Made My Plans for the Summer" (1907). Songs about the Bronx included "On the Banks of the Bronx" (1919) and "Bronx Express" (1922). Many hip-hop artists have made songs about their neighborhoods, often becoming identified with a particular borough, such as the Notorious B.I.G. and Jay-Z with Brooklyn, Afrika Bambaataa and Grandmaster Flash with the Bronx, and Run-D.M.C. and Nas with Queens.

Floyd M. Henderson

Cover for New York Mud, *sheet music by Will L. Randolph, 1874*

Songs and Compositions Inspired by New York City (selective list)

GENERAL

The Aldermanic Board (1885), Edward Harrigan, David Braham
Alice (1990), Ian Hunter
All Alone on Christmas (1990), Steve Van Zandt
All the Critics Love U in New York (1983), Prince

Son of Sam. Nickname of serial killer David (Richard) Berkowitz (*b* 1 June 1953). He was also referred to as the .44 caliber killer. Berkowitz was born in Brooklyn and adopted by two hardware store owners, Nathan and Pearl Berkowitz. He was raised at 1105 Stratford Avenue in the Bronx. Between July 1976 and August 1977, Berkowitz terrorized New York City as he fatally shot five women and one man and wounded seven others in eight incidents across the Bronx, Brooklyn, and Queens. He targeted young women sitting in parked cars with male companions, and police mounted a massive manhunt. Berkowitz left notes at crime scenes and sent an open letter to *New York Daily News* columnist Jimmy Breslin signed "Son of Sam." On 10 August 1977 police arrested Berkowitz outside of his apartment at what was then known as Pine Hill Towers at 35 Pine Street in Yonkers (a building now identified as Horizon Hill at 42 Pine Street). Berkowitz admitted to having committed all of the shootings; his defense lawyers claimed that he was told to commit the acts by his neighbor's demon-possessed Labrador retriever. He was found guilty and sentenced to six consecutive life terms. The

"Son of Sam law," passed by the state legislature of New York to limit the ability of convicted criminals to profit from accounts of their crimes, was declared unconstitutional by the U.S. Supreme Court in 1991.

Anne Epstein

Sontag, Susan (*b* New York City, 16 Jan 1933; *d* New York City, 28 Dec 2004). Writer, critic, and film and theater director. She attended the University of California, Berkeley, and the University of Chicago (BA 1951); Harvard University (MA 1954, English; MA 1955, philosophy); Oxford University; and the Sorbonne. In 1959, after arriving in New York City, where she would live for the rest of her life, she began to write and publish her first essays and works of fiction. She gained fame in 1966 with the publication of *Against Interpretation,* a collection of provocative analyses of art and culture. The book broadcast her abiding interest in popular culture and her willingness to address it with the same seriousness she gave to high art. Throughout her career Sontag explored the ways in which new cultural realities influence our ability to address human suffering, in such books as *On Photography* (1977), *Illness as Metaphor* (1978), *AIDS and Its Metaphors* (1989), and *Regarding the Pain of Others* (2003). Her works of fiction included *In America* (2000), winner of the National Book Award.

Sontag expressed her convictions through lifelong activism. From 1987 to 1989 she served as president of the American Center of PEN, the international writers' organization dedicated to freedom of expression. Her focus on human rights led to clashes with both left-wing and right-wing critics. She opposed the Vietnam War; she also opposed the Soviet Union's domination of Eastern Europe and, later, Serbia's invasion of Bosnia. Sontag published 17 books, including fiction, plays, monographs, and essays, and directed four films and numerous theater pieces. Her penthouse apartment in the Chelsea neighborhood of Manhattan, where she lived until her death, contained a library of more than 15,000 books.

Helen Graves

Sony Corporation of America. Technology company. Based in New York City, it is a U.S. subsidiary of Sony Corporation that is headquartered in Tokyo. Located at 550 Madison Avenue, the company employed about 120 people locally and more than 33,000 worldwide in 2009.

Jessica Montesano

Sorge, Friedrich A(dolf) (*b* Bethau, near Torgau [now in Germany], 9 Nov 1828; *d* Hoboken, N.J., 26 Oct 1906). Communist activist. After taking part in the German Revolution of 1848, he moved to New York City in 1852 and became the leading proponent of Marxism in the United States. In the city he helped to form the Kommunisten Klub (1857), which drew its members from among well-educated German radicals who sought to abolish private property, and the Socialist Party for New York City and Vicinity (1868), a forerunner of the Socialist Party of America. With other German exiles he played a prominent role in the International Workingmen's Association and was the leader of its general council when it was transferred to the city in 1872. In 1877 he moved to suburban Hoboken, New Jersey, where he promoted the eight-hour workday and organized textile workers. Sorge gradually turned away from the American socialist movement and came to favor a more moderate approach to workers' issues.

Kevin Kenny

Sorosis. Club for women formed in New York City in 1868 by Jane Cunningham Croly; it was one of the first women's clubs in the United States. The impetus behind its formation was the decision by the New York Press Club, which was mostly male, to bar women reporters from a function honoring Charles Dickens's visit to Manhattan. Croly invited several distinguished women to meet for social and intellectual companionship. During lunches held twice a month from September to June at Delmonico's restaurant, the poets Alice Cary and Phoebe Cary, the businesswoman Madame Demorest, the reporter Anne Field, and the novelist Sara "Fanny Fern" Willis Parton discussed contemporary issues. The group soon attracted other ambitious women, including the physician Anna Manning Comfort and the Universalist minister Phebe Hanford, and became one of the most influential women's clubs in the country. It regularly entertained guests from outside the city, among them Louisa May Alcott, Maria Mitchell, and the anthropologist Alice Fletcher; it also pressed for scholarships, better opportunities for women (such as admission to Columbia University), the reform of women's fashion, and the establishment of other women's clubs. It continues to assert a collective concern about social inequities.

Karen J. Blair

Sotheby's. Auction house. Its forerunner was the firm of Samuel Baker, a bookseller in London who first held an auction of rare books in 1744. At his death in 1778 the business was taken over by his partner George Leigh and his nephew John Sotheby and renamed Leigh and Sotheby. Under Sotheby's son Samuel Sotheby the firm became the leading auctioneer of books in London by the 1840s; it often acquired art objects in estate sales but passed them on to Christie's. Eventually renamed Sotheby, Wilkinson and Hodge, the firm was sold in 1908 to a group of investors led by Montague Barlow, who in 1913 held the first auction of paintings. By 1924 the firm took the name Sotheby and rivaled Christie's in importance. It opened a branch in New York City in 1954, which it merged in 1964 with the Parke–Bernet Galleries, the most important art auctioneer in the city until after World War II, to form Sotheby Parke Bernet. In 1983 the firm, including its branches, took its current name. New York City Sotheby's operates a real estate business dealing in expensive properties as well as an auction house at 1334 York Avenue specializing in art and antiques. In 2000 Sotheby's bought the auction house where it had been a tenant for 20 years for $11 million and launched a $140 million expansion; two years later, after a price-fixing scandal that landed its chair in jail, it sold the auction house for $175 million to a real estate developer who agreed to lease it back to the company. In 2008, after tussles with the developer, Sotheby's repurchased the building for $468 million.

Frank Herriman, *Sotheby's: Portrait of an Auction House* (New York: W. W. Norton, 1981); Thomas E. Norton, *100 Years of Collecting in America: The Story of Sotheby Parke Bernet* (New York: Harry N. Abrams, 1984)

Eric Wm. Allison

Sothern, E(dward) H(ugh) (*b* New Orleans, 6 Dec 1859; *d* New York City, 28 Oct 1933). Actor. He built a distinguished career as the leading actor at the Lyceum Theatre in New York City before marrying the actress Julia Marlowe (1866–1950) in 1904; the two formed an acting company and won acclaim for their performances of Shakespeare, to which they brought a light, modern approach that placed them among the most popular Shakespearean actors of their time. After Marlowe's retirement in 1924, Sothern continued to perform until 1927.

David J. Weiner

Sotomayor, Sonia (*b* Bronx, N.Y., 25 June 1954). Lawyer. She was the first Latina and the third woman to serve on the U.S. Supreme Court. Her parents came to New York City from Puerto Rico, and Sotomayor was raised in the Bronxdale Houses, a public housing project in the east Bronx, and then in Co-op City in the northeast Bronx. Her mother, a nurse, became the sole breadwinner of the family after Sotomayor's father died. She was educated in Catholic schools, Blessed Sacrament in the Soundview section of the Bronx and Cardinal Spellman High School, and was valedictorian at both. In 1976 she graduated from Princeton University, where she became a student activist promoting issues of concern to Latinos, including the hiring of Latino professors. She graduated in 1979 from Yale Law School and was admitted to the New York bar in 1980. She was first a prosecutor in the Manhattan district attorney's office and then entered private practice in the law firm of Pavia and Harcourt. In 1991 President George H. W. Bush nominated her to the U.S. District Court for the Southern District of New York, where she served from 1992 to

1998. In 1998 she joined the Court of Appeals for the Second Circuit, a position that she held from 1998. In May 2009 she was nominated to the Supreme Court by President Barack Obama to replace retiring justice Daniel H. Souter; the Senate confirmed her nomination and she assumed office in August.

Karen E. Markoe

Soundview. Neighborhood in the southeastern Bronx, bounded to the north by Westchester Avenue, to the east by Soundview Avenue, to the south by Soundview Park, and to the west by the Bronx River. Despite the name it is closer to the East River than to the Long Island Sound (at the time the neighborhood was developed, maps showed the upper East River as part of Long Island Sound). The area was mostly farmland until the Lexington Avenue subway was completed along Westchester Avenue in 1920; later one- and two-family houses were built. In 1937 the City of New York took title to 93 acres (38 hectares) along the Bronx River that was later designated Soundview Park but remained swampy and mostly undeveloped. Before World War II the population was largely Jewish. The construction of the Bruckner Expressway in the 1960s spurred the development of middle-income high-rise housing and low-income housing projects, including the Soundview Houses. In the 1970s Robert Moses proposed that the entire population of the southern Bronx should be moved to new housing in Soundview Park and the most dilapidated housing in the southern Bronx demolished; his plan was never carried out. By the 1980s the population of Soundview was largely black and Latin American. Among immigrant groups moving to the area in the 1980s more than a quarter were from the Dominican Republic; others were from Jamaica, Guyana, and Ecuador. In 1999 the area gained notoriety as the site of the Amadou Diallo shooting at 1157 Wheeler Avenue.

Gary D. Hermalyn

Sousa, John Philip (*b* Washington, D.C., 6 Nov 1854; *d* Reading, Pa., 6 March 1932). Bandmaster. After leaving the U.S. Marine Band to form his own ensemble in 1892, he recruited 19 musicians from the defunct Gilmore Band and moved his operations to New York City, where his band maintained its offices and usually ended its rigorous tours. He lived with his family in several hotels in the city and occupied a suite on the top story of Carnegie Hall from 1892 until 1914, when he bought a house on Long Island. For many years associated with Coney Island, he played several summer engagements at Manhattan Beach, and in 1907 he wrote and dedicated to Luna Park the words and music for the song "I've Made My Plans for the Summer," which concerns a young woman who declines a proposal of marriage so that she can instead spend her vacation at Coney Island. At least two of Sousa's marches were inspired by New York City: "Manhattan Beach March" (1893) and "New York Hippodrome" (1915). In 1933 American Legion Post no. 1112 in the city renamed its chapter after Sousa, and in 1959 John Philip Sousa Junior High School opened at 3750 Baychester Avenue in the Bronx.

Marc Ferris

South Beach. Neighborhood in northeastern Staten Island, bounded to the north by the Staten Island Expressway, to the east and south by Lower New York Bay, and to the west by Dongan Hills. It is on the site of Oude Dorp, a Dutch community built in 1661 near the foot of Ocean Avenue. Although no trace of the community remains, seventeenth-century reports of the Dutch West India Company mention 12 to 14 families and a blockhouse. From the 1880s to the 1920s the beach was a resort, with hotels, beer gardens, bathing pavilions, shooting galleries, Ferris wheels, theaters, and dance halls. On weekends during the summer as many as 100,000 visitors would travel to the beach by boat or train. By 1891 there at least 25 hotels. The Bachmann Hotel had a theater that in 1906 became the Happyland Amusement Park; in 1917 bathing was declared unsafe and the amusement park was destroyed by fire. The beachfront was renovated by the Works Progress Administration in 1935; the 2.5-mile-long (4-kilometer-long) South Beach–Franklin Delano Roosevelt boardwalk is the fourth largest in the world. Recreation facilities have since replaced the amusement parks. A roller hockey rink was installed in 1995, and a new playground in 1996. The elaborate *Fountain of the Dolphins* sculpture, featuring fiber-optic cables that illuminate water jets, was added in 1998. In 2006, 4 acres (1.6 hectares) of wet woods and marshland were designated as a South Beach Blue Belt by the New York City Department of Environmental Protection.

Long known as an Italian neighborhood, South Beach is characterized by a high rate of homeownership, carefully tended gardens, and well-attended churches, especially the Church of the Holy Rosary on South Lane. In the 1960s a number of blacks and Latinos moved into the neighborhood, which has become increasingly diverse. Important local institutions include the South Beach Psychiatric Center (dedicated in 1973), the North Campus of the Staten Island University Hospital, and the Giuseppe Mazzini Senior Citizens' Center.

Howard R. Weiner

South Bronx. Imprecise term used after 1950 to designate an area of shifting boundaries in the southwestern Bronx. At first applied only to Mott Haven and Melrose, by 1975 it came to include the area along the Cross Bronx Expressway and later Fordham Road as well. The widespread use of the name has done much to obscure the diversity of the neighborhoods making up the South Bronx, which many local residents do not regard as being a neighborhood itself.

South Brooklyn. Obsolete and imprecise term applied to the southern parts of the city of Brooklyn about 1855 and including what are now known as Red Hook, Carroll Gardens, and Park Slope.

South Brooklyn Railway. Freight railway subsidiary of the Metropolitan Transit Authority, operating between Second Avenue and Fort Hamilton Parkway in Sunset Park. Brooklyn Rapid Transit opened the line on 13 January 1900 for freight services between Bush Terminal and Coney Island. On 28 February 1907 the railway acquired the lease for the tracks on McDonald Avenue from the Brooklyn Heights Railroad, which had in turn acquired the rights in 1899 from the Long Island Rail Road. The line interchanged freight with the Long Island Rail Road and the New Haven Rail Road at Parkville (Avenue I and McDonald Avenue) and with the New York Dock Railway at Second Avenue and 37th Street. The cessation of freight interchange at Parkville after Conrail was formed in 1976, along with the poor condition of track along McDonald Avenue, prompted the railway on 1 February 1978 to abandon all track south of Fort Hamilton Parkway.

Jay Bendersky, *Brooklyn's Waterfront Railways* (Uniondale, N.Y.: Meatball, 1988)

John Fink

South Brother Island. Island in the western arm of the East River, at the entrance to Long Island Sound. Comprising 7 acres (3 hectares), it is officially part of Bronx County. The island and its neighbor, North Brother Island,

(located one-third of a mile, or half a kilometer, to the east), were originally called the *Gezellen*, the Companions, by the Dutch. South Brother Island was once the property of brewer Jacob Ruppert, who was also the owner of the New York Yankees. He built his summer home on the island in 1894, but in 1907 it was destroyed by fire. The island remained in Ruppert's hands until the late 1930s. It then passed through several owners until acquired by the City of New York. It was sold in 1975 for a mere $10 to Hampton Scows, Inc., a sand company, but little was done to develop the island. In the fall of 2007 the city repurchased it for approximately $2 million for development as a wildlife sanctuary. The acquisition of the island was supported by several preservation organizations, including the Wildlife Conservation Society, the Point Community Development Corporation, the Public Land Trust, and the federal government. The now uninhabited and densely overgrown island has long been home to a variety of nesting bird colonies, including herons, egrets, and cormorants.

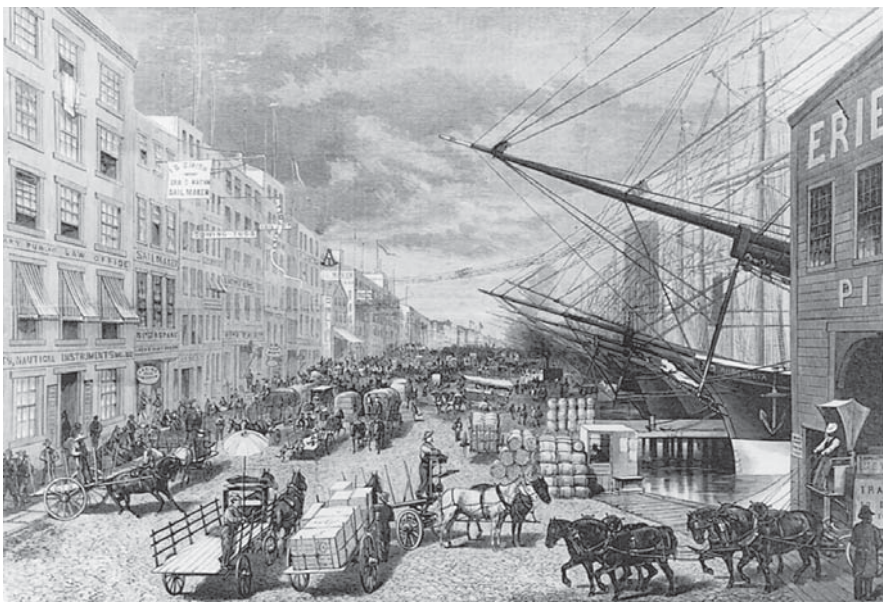
Gerard R. Wolfe

South East Bronx Community Organization [SEBCO]. Group founded in the autumn of 1968 by community leaders in Hunts Point and Longwood North to halt their neighborhood's decline. Their leader was Father Louis R. Gigante, a Roman Catholic priest then assigned to St. Athanasius Church, which is at the center of the redevelopment area. Using a combination of public and private funds, SEBCO concentrated on the rehabilitation of existing housing. By 2009 SEBCO Development Inc., as it became known, had developed more than 6000 units of affordable and low-income housing, including condominiums, cooperatives, and private houses, and managed more than 3000 units of low-income and senior citizen housing; it employed more than 300 people. It also provided supportive community services such as senior citizen meals, after-school tutoring, and computer training. Peter Cantillo, an expert in affordable urban housing, succeeded Gigante in 2007.

Kenneth T. Jackson

Southfield. Former administrative district in southeastern Staten Island, bounded to the north by Arthur Kill Road and Richmond Road, to the east by the Narrows and Lower New York Bay, to the south by the Atlantic Ocean, and to the west by Gifford's Lane; it comprised Stapleton, Clifton, Rosebank, Old Town, South Beach, Dongan Hills, Midland Beach, New Dorp, Oakwood, Richmondtown (the seat), and parts of Great Kills and Eltingville. The area was variously known as South Division and South Quarter; the area encompassing it and Westfield was sometimes called Southside. In 1860 Middletown was formed from a part of the northwestern section along with a bordering part of the town of Castleton. The district was abolished when New York City was consolidated in 1898.

Marjorie Johnson



South Jamaica. Name sometimes applied to an area in southern Queens bounded to the north by the Long Island Railroad, to the east by Merrick Boulevard, to the south by the Belt Parkway, and to the west by the Van Wyck Expressway. In colonial times a race course ran around Beaver Pond (Beaver Road and 158th Street). For most of the nineteenth century the area was covered by vast farms and isolated farmhouses. St. Monica's Roman Catholic Church opened in 1857 (160th Street); abandoned in 1973 and landmarked in 1979, it collapsed in 1998. Prospect Cemetery on 159th Street had burials from 1668; the chapel was built in 1857. The Jamaica Racetrack opened in 1894 on a large tract south of Baisley Boulevard and east of New York Boulevard. Several small developments grew up after 1900, including Talfourd Lawn, Jamaica Heights, Jamaica Park, and Jamaica Falls. Streets opened in the 1920s and hundreds of modest one-family houses were built; by World War II there was no vacant land, and the population was largely African American. The South Jamaica Houses, 440 units in 11 buildings, opened in 1940; an additional 598 units in 16 buildings were completed in 1954 (South Road to 109th Avenue, 159th to 168th Streets). The racetrack closed in August 1959, after Aqueduct Raceway was renovated, and was demolished in 1960; in December 1963 Rochdale Village was built on the site. With 5860 units it was the largest middle-income cooperative in the nation. Two smaller apartment complexes are Baisley Park Houses and Cedar Manor Houses. The rest of the housing consists of detached frame houses of two and a half stories each on lots measuring 25 by 100 feet (8 by 30 meters). In the 1980s the neighborhood attracted many immigrants from Jamaica and Guyana, and to a lesser extent from Haiti, Trinidad and Tobago, the Dominican Republic, and Colombia. South Jamaica is the largest African American neighborhood in Queens. Many residents are public employees. The York College (founded in 1966) campus on 160th Street south of the railroad was designed by Gruzen Partnerships in 1973 and completed in 1986. Baisley Pond (originally a collection pond of the Brooklyn Water Works) and Baisley Park remain the most attractive natural features.

Vincent Seyfried

South Ozone Park. Neighborhood in south central Queens, bounded to the north by Rockaway Boulevard, to the east by the Van Wyck Expressway, to the south by the Belt Parkway, and to the west by Aqueduct Racetrack. Aqueduct, named for the Brooklyn water system's conduit, opened in 1894; it was renovated in 1959. Until 1908 the area was occupied mostly by truck farms and there were few roads. David P. Leahy, a real estate agent from Brooklyn, built a development south of Rockaway Turnpike between 131st and 140th streets that he named South Ozone Park in 1909 and promoted so successfully that by 1913 there were almost 100 houses. Initially, sole access to the neighborhood was provided by a trolley on Rockaway Turnpike. Eventually, hundreds of detached one-family houses were built along new streets, especially during the 1920s. The neighborhood became largely Italian and Irish. By 2009 immigrants from Guyana accounted for almost 30 percent of all the population. Others came from Jamaica (20 percent), Haiti, the Dominican Republic, and Trinidad and Tobago.

South Street Seaport. District on the Lower East Side of Manhattan between Maiden Lane

South Street Seaport, 1878

South Street Seaport, ca *1897*

and Dover Street that was the center of the port from 1815 to 1860. The area was favored by sea captains because it was sheltered from the prevailing westerly winds and from ice that floated down the Hudson River; winds blowing off the shore also facilitated departure from berths there. The original shorefront road was Pearl Street, apparently named for its oyster-shell surface. During the eighteenth century the shoreline was extended with landfill, and a new shorefront road was built (later named Water Street), followed by Front Street and later by South Street in the early nineteenth century. South Street became known worldwide for its proximity to moorings in the harbor: bowsprits and jib booms projected nearly to the buildings across the street that housed the businesses of merchants, ship chandlers, sailmakers, and figurehead carvers, as well as boarding houses, saloons, and brothels. Evangelical organizations attempted to restore respectability and propriety to the often rowdy neighborhood. After 1880 the area began to decline, in part because adequate space to develop facilities was lacking and in part because the water was too shallow to accommodate steam-powered vessels. By the 1930s most of the open piers were covered, as large ships calling at New York City berthed on the West Side of Manhattan and in Hoboken, New Jersey. In 1966 a citizens' group led by Peter and Norma Stanford formed the Friends of the South Street Maritime Museum. Inspired by the restoration of the waterfront in San Francisco, they gathered a fleet of historic ships and obtained landmark designation for the buildings in the area; the South Street Seaport Museum opened in 1967. In 1973 two blocks were condemned by the city and leased to the museum, and another block was acquired for a state maritime museum that was eventually abandoned.

In 1979 development of the South Street Historic District was undertaken by the Rouse Company of Columbia, Maryland, which had rebuilt the historic Quincy Market District in Boston. The project required major investment by the firm, support from the city and the state, the surrender of some properties by the museum, and federal funding in the form of an Urban Development Action Grant. The first section of the district, opened in 1983, consisted of a modern market building on the site of the Fulton markets and two restored blocks of historic buildings; the second, opened in 1985, was a three-story shopping mall pier called Pier 17 built into the East River on the former site of the slip used by the Fulton Fish Market. By the 1990s the South Street Seaport Museum had assembled one of the world's largest collections of historic ships, renovated a large area of landmark buildings south of Fulton Street for exhibit space and storage of collections, and supplemented its own collection of ship models and marine art by purchasing the extensive former holdings of the Seamen's Bank for Savings.

After two expansions the South Street Seaport District extends from the south side of Burling Slip at the foot of John Street north to the Brooklyn Bridge and from the East River west to Pearl Street. The Rouse Company development of 1979–1983 involved three blocks between Burling Slip and Beekman Street. Development of the remaining blocks to the north between Beekman Street and the bridge proceeded more slowly, in part because of the presence of Fulton Fish Market dealers in many of the landmark buildings. Vacant lots in these blocks were largely replaced by modern sympathetic construction, beginning with new headquarters for the Seamen's Church Institute of the Port of New York, which opened on Water Street in May 1991. The move of the Fulton Fish Market to Hunts Point in the Bronx in November 2005 opened the way for renovation and reuse of the remaining landmark buildings in the district.

The Rouse Company properties in the South Street Seaport were acquired in 2004 by the real estate investment trust General Growth Holdings, which published plans for extensive changes to the district's riverfront. Piers 15 and 16 to the south continued to serve as berthing for the museum's historic ships and visiting vessels, the latter also providing pedestrian access to Pier 17. The original wooden Pier 15 dating from the late 1800s fell into disrepair and was eventually condemned by the city and removed; the museum installed a temporary floating pier, with plans for building a permanent replacement. The city's parks department also plans to use the inland open spaces lately serving as parking lots at Burling Slip and Peck Slip: the former to provide a playground for children from the growing residential community, and the latter to be repaved with granite paving stones centering on a maritime-related sculpture and landscaping.

Norman J. Brouwer

South Street Seaport, 2009

South Woodhaven. Obsolete name for the neighborhood in Queens now known as Aqueduct.

Soyer, Moses (*b* Borisoglebsk, Russia, 25 Dec 1899; *d* New York City, 4 Sept 1974). Painter, twin brother of Raphael Soyer. After immigrating to the United States in 1912, he studied at Cooper Union, the National Academy of Design, the Ferrer Art School, and the Educational Alliance. His first solo exhibition was held in 1929, and during the 1930s he taught at several art schools in New York City and was employed by the Federal Art Project of the Works Progress Administration. Primarily a painter of portraits and figures, he worked in the naturalistic style of his brother but never received as much critical acclaim.

Patricia Hills

Soyer, Raphael (*b* Borisoglebsk, Russia, 25 Dec 1899; *d* New York City, 4 Nov 1987). Painter, twin brother of Moses Soyer. After immigrating to the United States in 1912, he studied at Cooper Union, the National Academy of Design, and the Art Students League. He had his first exhibition in New York City in 1929 and during the Depression taught classes at the John Reed Club, to which he belonged; he also taught at the Art Students League, the New School for Social Research, and the National Academy of Design. In the late 1930s he was a member of the American Artists' Congress. His compassionate, naturalistic paintings of homeless men in the Depression were critically acclaimed; the Metropolitan Museum of Art and the Whitney Museum of American Art bought many of these works, including *Office Girls* (1936). During the 1950s he was an important member of a group of realists who published the periodical *Reality: A Journal of Artists' Opinions,* which defended realism and figurative painting. He later painted subdued portraits of street people and of his friends, including the poet Allen Ginsberg. The Whitney Museum of American Art held a retrospective exhibition of Soyer's work in 1967.

Lloyd Goodrich, *Raphael Soyer* (New York: Harry N. Abrams, 1972)

Patricia Hills

SPA. See Socialist Party of America.

Spanish–American War. Military conflict from April to December 1898 between the United States and Spain over Pacific and Caribbean islands, including the Philippines, Guam, Cuba, and Puerto Rico. In February 1898 the USS *Maine* battleship, which had been constructed at the Brooklyn Navy Yard in 1888, blew up off the coast of Cuba. While the cause of the explosion was unknown, New York City newspaper editors, particularly William Randolph Hearst of the *New York Journal* and Joseph Pulitzer of the *New York World,* readily blamed the Spanish government and sensationalized the event in order to outsell their competitors, giving birth to a style of investigative reporting later known as yellow journalism. New York State provided more than 12,000 soldiers from 12 regiments to meet President William McKinley's call for troops in April.

David White

Spanish Harlem. Name commonly used for El Barrio.

Spanish-language press. Spanish-language publications in New York City fall into three categories: the exile press, the immigrant press, and the native press. The first Spanish or bilingual newspapers appeared in the early nineteenth century published by anticolonials agitating for Cuban and Puerto Rican separation from Spain through annexation to the United States or independence. Antillean liberation and other concerns of the exile community were promoted by some 25 newspapers—beginning with *El Mensajero* (1828) and *El Mercurio de Nueva York* (1828) and ending with the official organ of the Cuban Revolutionary party, *Patria* (1892), launched by José Martí and Sotero Figueroa. *La Aurora*, *Cultura Proletaria,* and *El Porvenir* emerged out of workers' organizations connected to the cigar industry. The immigrant and native presses appeared in the early twentieth century. Connecting the homeland with emerging barrios in the city, in 1901 the Puerto Rican political leader Luis Muñoz Rivera published the bilingual newspaper *Puerto Rican Herald*. The general-interest newspaper *La Prensa* appeared weekly from 1913 and daily from 1918; other important newspapers included the radical *Grafico* (weekly, 1926–31) and the literary *Revista de Artes y Letras* (monthly, 1933–45). Newspapers published by the sociocultural, professional, and political organizations that structured the Latino neighborhoods, such as the *Boletín de la Liga Puertorriqueña e Hispana* (1927), emphasized the community's civic role. The large-scale influx to New York City from Puerto Rico in the late 1940s and later from the Dominican Republic, Cuba, and other Latin American countries gave rise to several mass-circulation newspapers, including the tabloid *El Diario* (1948), which merged with *La Prensa* to form *El Diario–La Prensa* (1963); this achieved a circulation of more than 100,000 and was the largest of the papers in the twenty-first century. *Noticias del Mundo* was launched as a daily newspaper in 1980. By this time Spanish-language newspapers tended to be published by firms not owned by Latin Americans: *El Diario–La Prensa* was published by Gannett Newspapers from 1981 to 1989 and *Noticias del Mundo* by a branch of the Unification Church.

sparrows. See House Sparrow.

Spartan Association. Political gang in the Bowery. It was organized in 1840 by the radi-

cal Democrat Mike Walsh and was the first gang to become active in local politics. The gang joined with the insurgent "shirtless" Democrats who banded together after a depression and the collapse of the Workingmen's Party and used violent tactics to wrest power from the party's leadership. Its exploits included taking over the nominating conventions of Tammany Hall and invading Whig campaign headquarters.

Joshua Brown

Spartan Braves and Spartan Hornets. African American amateur basketball teams formed by Robert L. Douglass in Harlem in 1919. The teams competed locally until 1923 and were the predecessors of the Harlem Renaissance.

speech. The speech of New York City is regarded as distinctive by both phoneticians and nonspecialists. The first trained phonetician to study it was E. H. Babbitt (1896), who taught at Columbia University. C. K. Thomas, who taught at Cornell, and Allen F. Hubbell (1950), a lifelong resident of the city, relied on speech samples elicited in controlled circumstances. For his pivotal 1966 study William Labov asked questions of sales clerks in department stores. A number of conclusions may be drawn from the work of these linguists. First, although in the nineteenth century the accent characteristic of New York City was called a "Bowery accent" and in the twentieth it became associated with Brooklyn, in fact it arises from social class and not from a neighborhood, even though the two are closely allied. Most New Yorkers show some trace of the local accent, except for those isolated by their wealth and social status from the rest of the city. Second, some New York City elements have been discerned elsewhere. A. J. Liebling remarked on similarities with the common speech of New Orleans; the word *spoil* has been transcribed as *spile* in several other American regions, and it is not known to what extent the speech of New York City before the advent of phonetic transcription and sound recording was heard to differ from the speech of other parts of the country. Third, linguists regard as unprovable and unlikely the common surmise that the speech of New York City is an amalgam of elements from several foreign accents (for example that the devoicing of dentals may be traced to Irish, the slurring together of words to Italian, and the so-called hard [g] to Yiddish).

Like many distinctive local accents the speech of New York City has low prestige in the estimation of those who hear it and those who speak it, and providing speech therapy to New Yorkers to eliminate their local accent has long been a profitable line of work. By the early twenty-first century the speech traditionally associated with New York City was infrequently heard, not because it was being assimilated to a general American accent or because of speech therapists, but because it was evolving into a new but still distinctive form.

George A. Thompson, Jr.

Spellman, Francis (Joseph) (*b* Whitman, Mass., 4 May 1889; *d* New York City, 2 Dec 1967). Cardinal. A graduate of Fordham College and of the North American College in Rome, he was ordained a priest of the Archdiocese of Boston on 14 May 1916 and became auxiliary bishop of Boston in 1932. On 15 April 1939 he was appointed the sixth archbishop of New York by the newly elected Pope Pius XII, a close friend. During his 28 years as archbishop, Spellman showed himself to be a skillful administrator. He modernized and centralized the structure of the archdiocese, refinanced its debt, formed 45 new parishes, created a system of diocesan high schools, and spent almost $600 million on expanding Catholic educational and charitable facilities. He was made a cardinal on 18 February 1946.

Spellman played a significant role on both the national and international scenes. In October 1939 he was instrumental in persuading President Franklin D. Roosevelt to appoint a "personal representative" to the Vatican. As the Catholic vicar for the armed forces during World War II he became the best-known Catholic prelate in the country and was recognized as a symbol of Catholic patriotism. His visits to the troops overseas attracted much media attention, especially a mystery-shrouded trip to Rome through neutral Spain in 1943. In 1949 he confronted Eleanor Roosevelt over her opposition to federal aid for parochial schools and accused her of anti-Catholic bigotry. He cultivated strong ties to the Jewish community and supported the establishment of the state of Israel. In 1945 he inaugurated the annual Alfred E. Smith Dinner (a major event in the political calendar of the city) and maintained a close relationship with its chairman, the Jewish philanthropist Charles H. Silver. He created the Spanish Apostolate to provide Puerto Ricans and others with Spanish-speaking priests.

Spellman was, however, also a controversial figure. During the cold war he was an outspoken critic of communism. In 1949 he blamed a strike at Calvary Cemetery on communists and employed seminarians as gravediggers to break the strike, an action that appalled many trade unionists. His presence at an address by Senator Joseph R. McCarthy in New York City on 4 April 1953 was widely interpreted as a gesture of support. On the other hand he sheltered progressive biblical scholars in his seminary from reactionary theological critics. He was responsible for the presence at the Second Vatican Council of Father John Courtney Murray, S.J., who was a principal architect of the *Declaration on Religious Freedom* and *Nostra Aetate,* the decree regarding Judaism and other non-Christian religions. Both documents received Spellman's strong support. In his last years Spellman was often an uncritical proponent of American intervention in Vietnam, equating it with World War II. A conservative churchman, he represented a synthesis of Catholic orthodoxy and American patriotism that had eluded liberal American Catholic leaders in the late nineteenth century.

Spence–Chapin Adoption Agency. An agency formed in 1943 by the merger of the Spence and Chapin nurseries for children. The Spence nursery was formed in 1895 by Clara Spence as an organization for crippled and tubercular children, and by 1915 it had evolved into an adoption agency called the Spence Alumnae Society; the Chapin nursery began in 1910 when Alice Chapin and her husband, a pediatrician, first took in abandoned infants. Spence–Chapin was an innovator in using the techniques of social work in the adoption process. It began placing children from racial minority groups in 1946, an effort that led to the formation of the Harlem–Dowling Children's Service in 1969.

Stephen Weinstein

Spencer Estate. Neighborhood in the eastern Bronx. The land once belonged to an estate of 129 acres (52 hectares) owned by Robert Morris, who sold it in 1856 to William Spencer. The original estate extended over parts of what are now Country Club and Pelham Bay Park. Palmer Cove, a small inlet nearby in Eastchester Bay, is widely described in records dating from the American Revolution as a point of reference, a boundary marker, and a place for mooring boats.

John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

Gary D. Hermalyn

Spence School. All-girls' independent school. Clara B. Spence, one of whose many sponsors was the Carnegie family, opened

Miss Spence's School for Girls in 1892 on West 48th Street for 10 young women. For 31 years Spence developed an all-encompassing and progressive curriculum for girls, which included studies ranging from politics to the arts and emphasized the importance of charity and etiquette. In 1932 the school merged with the Chandor School. In the twenty-first century the Spence School enrolls approximately 680 students at its two campuses: grades 5 through 12 are located at 22 East 91st Street on Manhattan's Upper East Side (opened 1929), and kindergarten through grade 4 are at 56 East 93rd Street (opened 2003).

Richard Schwartz, Cecilia Magnusson

Sperry, Elmer (Ambrose) (*b* Cortland, N.Y., 12 Oct 1860; *d* Brooklyn, 16 June 1930). Inventor and manufacturer of modern navigation technology. At the age of 20 he formed the Sperry Electrical Illuminating and Power Company in Chicago, and while living in Brooklyn he formed Sperry Products (precursor of modern-day organizations such as Sperry Rand and Sperry Univac). He was responsible for a number of gyroscope-based inventions used in aviation and marine navigation, including the Gyrocompass, the Gyrostabilizer, and the Gyro Automatic Pilot. His instrument for finding defective rails improved safety on the New York Central Railroad between New York City and Chicago. Sperry bequeathed $1 million to local branches in Brooklyn and Queens of the Young Men's Christian Association, which sponsored a visit that he made as a teenager to the 1876 Philadelphia Exposition and which determined the direction of his career. He is buried in Green-Wood Cemetery in Brooklyn.

Val Ginter

Spingarn, Joel E(lias) (*b* New York City, 17 May 1875; *d* New York City, 26 July 1939). Literary critic and civil rights activist. Born to Viennese and English immigrant parents, he was one of four sons raised in New York City where his father, who had built a successful wholesale tobacco business, was a senior member of the New York State Chamber of Commerce. Spingarn attended the Collegiate Institute of New York City and City College before earning a BA in literature from Columbia University in 1895, where, after a year at Harvard University, he also earned his doctorate in 1899; he was the youngest in his class at age 24. That same year, Spingarn accepted a position as a professor of comparative literature at Columbia that lasted until 1911. He was dismissed that year by the university after drafting a resolution of support for longtime professor Harry Thurston Peck, who had been released by the university in a breach-of-promise suit. The controversy at Columbia marked the end of his engagement in the academic field. A few years later Spingarn was elected as a member on the Executive Committee for the recently formed National Association for the Advancement of Colored People (NAACP). He became the group's second president and served as chairman of its board until his death. In 1914 he established the Spingarn Medal to be awarded annually to an African American of outstanding achievement; some notable winners include W. E. B. Du Bois, Ernest Just, George Washington Carver, Paul Robeson, Jackie Robinson, Martin Luther King, Jr., Langston Hughes, Rosa Parks, Jesse Jackson, Maya Angelou, and Oprah Winfrey. His brother Arthur Spingarn also served as legal counsel for the NAACP and was its president until 1966.

Garrett Felber

Spirit of the Times. Weekly newspaper founded by William T. Porter in New York City on 10 December 1831. It was the first comprehensive sporting journal in the United States and helped to mark the city as a national center for sport. The newspaper soon merged with the *Traveller* but was reestablished independently in 1835. Financial troubles compelled Porter to relinquish ownership in 1842; he remained the editor until 1856. In its first years of publication the newspaper reprinted many articles from British periodicals but increasingly published contributions of sporting news, essays, and fiction from American writers. It focused on horse racing and also covered swimming, rowing, baseball, boxing, cricket, field sports, foot racing, and winter sports. In his editorials Porter wrote tirelessly of the value of recreation and exercise for men, women, and children. With George Wilkes in 1856 he launched *Porter's Spirit of the Times;* after Porter's death in 1858 Wilkes parted with the new editors and founded *Wilkes' Spirit of the Times* on 10 September 1859. *Porter's Spirit of the Times* lasted until late 1859, the *Spirit of the Times* until 1861, and *Wilkes' Spirit of the Times* until 1902.

George B. Kirsch

Spitzer, Eliot Laurence (*b* New York City, 10 June 1959). Lawyer and politician. Born and raised in the Riverdale section of the Bronx, he attended the Horace Mann School and graduated from Harvard Law School in 1984. Spitzer joined the Manhattan district attorney's office in 1986 and became chief of the labor racketeering unit, where he investigated organized crime. A Democrat, in 1998 he was elected state attorney general in New York and served for eight years, aggressively investigating Wall Street; in 2004 he sued New York Stock Exchange chairman Richard Grasso over Grasso's $190 million compensation package. Spitzer successfully ran for governor in 2006; in March 2008 he was implicated as a client of a prostitution ring and resigned his office. Spitzer lived at 985 Fifth Avenue, in a building owned by his father, real estate developer Bernard Spitzer.

Kate Lauber

Spofford Juvenile Center. Secure youth detention facility in the Bronx, at 1221 Spofford Avenue in Hunts Point. Designed by the firm of Kahn and Jacobs, it opened in 1957 as the Bronx Youth House for Boys. In its early years the center suffered from such severe problems as drug dealing on the premises, sex offenses, suicides, and assaults, but the situation improved after 1979 when the newly created Department of Juvenile Justice instituted better case management, the provision of social services after release, improved medical programs, and extended school days. Spofford, however, continued to deteriorate physically and was vacated in 1998 while detainees were divided among the Horizon Juvenile Center in Mott Haven (Bronx), the Crossroads Juvenile Center in Brownsville (Brooklyn), and the Vernon C. Bain prison barge, which was temporarily leased from the Department of Correction. The Spofford building was reopened in 1999 as the Bridges Juvenile Center, an intake and admissions facility for boys and girls.

Mishi Faruqee, *Rethinking Juvenile Detention in New York City* (New York: Correctional Association Juvenile Justice Project, 2002); Malikah J. Kelly, *10 Reasons New York City Should Close the Spofford Youth Jail* (New York: Correctional Association Juvenile Justice Project, 2004)

Val Ginter

sport fishing. The Hudson River estuary and the ocean waters off Sandy Hook became known as superb fishing grounds during colonial times. The largest fish ever taken in the waters of Manhattan with rod and reel was a drum weighing more than 70 pounds (31.7 kilograms) pulled from the Harlem River in 1844 near Macomb's Dam; anglers in rowboats took striped bass weighing up to 50 pounds (23.7 kilograms) from the shoals and tide rips of Hell Gate. The waters off Liberty Island and Robbins Reef provided bluefish, striped bass, weakfish, and blackfish (tautog). Weakfish were plentiful in the Narrows and Gravesend Bay; the Kill van Kull and the Arthur Kill were also prime fishing grounds for striped bass and weakfish.

Children, the old, and the poor fished off the docks of Manhattan for porgies, flounder, and small striped bass. Only the hardy fished for sharks measuring up to 14 feet (4.2 meters) that frequented the waters of Manhattan until the late 1890s. The development of steam-powered vessels brought easy access to the rich Atlantic fishing grounds between Long Island and New Jersey, and the ocean-fishing steamboat excursion, introduced in 1819, quickly became popular as an inexpensive family outing.

Water pollution caused by industrialization during the nineteenth century diminished the aesthetic pleasure of angling and contributed to a decline in the number and variety of fish in the waters off Manhattan. Small ports along the cleaner waters of Sheepshead Bay, Canarsie, Great Kills, and towns in New Jersey around Sandy Hook eventually attracted most of the city's anglers. These areas gained a decisive advantage with the advent of powerboats, which were cheaper to operate, required smaller docking facilities, and were capable of traveling to local bays, inlets, and even ocean grounds. By the 1920s powerboats dominated charter-boat and party-boat operations in the metropolitan area. After World War II such services declined as a growing number of anglers bought their own boats. Fishing around Manhattan improved somewhat after mid-century, owing partly to major efforts at reducing industrial and sewage pollution. In the early twenty-first century fine catches of striped bass could be made in the East River near the United Nations, and schools of feeding bluefish occasionally drew charter boats and party boats into the harbor; freshwater lakes and rivers in the outer boroughs also attracted anglers.

William Zeisel

sports. Sports in New York City are as dynamic, cosmopolitan, and ever changing as their surroundings. They have helped to shape the economy of the city, its social arrangements, its architecture, and even its politics.

1. Colonial Period and Early Nineteenth Century

The Dutch settlers of New Amsterdam indulged their love of physical activity by pursuing a variety of outdoor amusements, including tavern sports, ICE SKATING, and LAWN BOWLING, which from the seventeenth century was played on Bowling Green at the foot of Broadway. The English introduced new sports to the city; the most important was HORSE RACING, which began in 1665 when the first English governor, Richard Nicolls, offered a silver cup for a race to be held each spring and autumn. The growth of sport in the eighteenth century was stimulated by the cosmopolitan nature of the city and the emergence of a wealthy aristocracy. During the American Revolution and its aftermath sporting activities declined, largely because of their association with the colonial aristocracy, gambling, and violations of the Sabbath. A low point for sport was reached in 1802, when thoroughbred horse racing was banned in New York State; harness races were nevertheless held on Third Avenue from the early nineteenth century. The return of legalized thoroughbred racing in 1820 marked the beginning of a period of renewed growth in sporting activity, one different from those that preceded it in that the complexity of urban life now made it difficult for New Yorkers to engage in sport informally and spontaneously; instead they relied on voluntary associations and entrepreneurs.

Thoroughbred racing was the first sport to benefit from this trend. In 1821 wealthy New Yorkers formed a jockey club and built the Union Course in Jamaica, and during the next quarter-century New York City and its environs became the national center of the sport. The growing popularity of harness racing led to the formation in 1825 of the New York Trotting Club and the building of a racecourse at Centerville on Long Island. One of the reasons for the emergence of harness racing as the leading spectator sport in antebellum New York City was the ability of those who controlled the sport to appeal to the growing middle class in the city, which the wealthy traditionalists who controlled thoroughbred racing were unable to do. There were also clubs for ROWING, CRICKET, racquet sports, gymnastics, SAILING, and shooting by 1850, and for 21 sports in all by 1870.

The first organized BASEBALL club in the city, the Knickerbockers, was formed in 1845. Other teams followed in the 1850s; there were a dozen in Manhattan and Brooklyn by 1855 and about 100 several years later. The explosion in the number of clubs led residents of Manhattan and Brooklyn in 1857 to form the National Association of Base Ball Players to clarify and codify the rules of the game. Although the association did not allow ballclubs to pay their players, the Brooklyn Excelsiors paid their star pitcher James Creighton as early as 1860 and other clubs soon followed. Baseball was now being described as the "national pastime" and in the 1860s became a competitive, commercialized, professional spectator sport. Entrepreneurs were quick to capitalize on the desire of the public to attend the contests of leading teams. In 1862 William Cammayer built the first enclosed baseball park, the Union Grounds, at Lee Avenue and Rutledge Street in Brooklyn, and his success led in 1864 to a similar venture, the Capitoline Grounds, at Halsey Street and Marcy, Putnam, and Nostrand avenues; the cost of admission, at first fixed at 10 cents, rose to 50 cents by 1870. By 1867 Brooklyn and New York City had three professional teams. Baseball remained popular as a participatory sport, but games between the best professional clubs attracted the attention of both spectators and the press.

2. Late Nineteenth Century and Early Twentieth: Sport, Politics, and Society

Interest in sports in New York City increased dramatically after the Civil War. New Yorkers became acquainted with TENNIS and formed organizations such as the NEW YORK ATHLETIC CLUB (1868) to promote sports with which they were already familiar. Athletic clubs made it easy for their members to practice a variety of sports, especially track and field.

College FOOTBALL enjoyed popularity in the city during the late nineteenth century, although games between local schools attracted less attention than those between schools from out of town that staged their games in the city to attract more fans. These included the annual Thanksgiving Day game between Yale and Princeton, which drew crowds of more than 30,000 in the 1890s, and that between Army and Notre Dame in the second decade of the twentieth century.

Baseball remained the most popular middle-class sport. At least one major league team was based in Manhattan or Brooklyn throughout the late nineteenth century, except for the years 1878–82. At the same time the dominant position of local teams eroded as the sport became popular throughout the country, and only a few teams from Greater New York won the championships of the National League and the American Association during the nineteenth century. After John McGraw became the manager of the New York Giants in 1902 the city regained its advantage, and in the next 88 years there was no period longer than five years during which at least one team from the city did not play in the World Series.

In the late nineteenth century a common thread linked baseball, thoroughbred racing, and BOXING, which became popular for the first time: politicians played an important role in all of them. Almost all the owners of baseball clubs in the city had connections with the Democratic Party and Tammany Hall. They were therefore able to secure preferential treatment from the city for their teams, to receive proprietary information on developments in mass transit, and to protect themselves against competitors. Boxing, a product of the boisterous masculine culture of the saloon and the political club, had an even stronger political element: it was the emergence of the professional politician before the Civil War that had enabled it to grow in the first place. John L. Sullivan, the last of the bareknuckle champions, fought several of his most memorable bouts in Manhattan and Brooklyn between 1881 and 1884, during which the local area became a center for boxing both with and without gloves. In the

1890s political bosses like John Y. McKane and Big Tim Sullivan sponsored fights and used their political influence to ensure that the police would cooperate at a time when boxing was subject to severe legal restraints. Politicians were also engaged in horse racing: some like Richard Croker of Tammany Hall raced thoroughbreds, others owned racetracks. The strange alliance between politicians and wealthy owners of racehorses was based on mutual interest. Both groups favored the legalization of on-track betting and bitterly opposed off-track betting, which they believed would lower attendance at the racetrack and tarnish the image of the sport.

The growth of sport in the nineteenth century was aided by the increasingly accepted view that athletics contributed to individual health, morality, and character. This position, first articulated before the Civil War by sportswriters and other journalists, was drawn on by the end of the century by reformers who infused it with the rhetoric of evolutionary theory and progressive education. The result was the formation of organized youth sport programs directed by adults, the most important of which was the Public School Athletic League (1903). Aided by prominent business, education, and sports leaders, the league provided sports programs for about 100,000 students annually. After 1900 an increasing number of working-class, ethnic, and black athletic clubs were formed in New York City. Most lacked financial resources and athletic facilities and consequently relied on public parks. Although many were short-lived and all had problems, there were reportedly 700 small athletic clubs in the city in 1914 that catered largely to underprivileged youths.

3. Between the World Wars: The Growth of Sport as a Business

The economic prosperity that followed World War I gave a renewed impetus to sport and especially to baseball. Attendance at baseball games was also helped by the legalization in 1919 of Sunday baseball, which for two decades local ballclubs had sought and Sabbatarians had successfully opposed. The legislation affected both the size and composition of baseball crowds: games played on Sunday regularly drew more than 20,000 spectators, which for the first time included large numbers of working-class fans. All three local teams prospered during the 1920s. The Brooklyn Dodgers were financially sound although for the most part their play was mediocre; the Giants remained the dominant team in the National League; and the New York Yankees began a period of remarkable success when they purchased the contract of Babe Ruth from the Boston Red Sox in 1920 for $125,000, one of several transactions by the Yankees and the Giants that illustrated how teams playing in the largest market in the country could strengthen their positions by buying players from poorer clubs. The presence of Ruth was soon felt at the gate, as the Yankees attracted nearly 1.3 million spectators in 1920, a new record and more than twice the attendance of the preceding year. Ruth's home runs and his appeal continued to draw fans, and from 1921 to 1930 the Yankees made more than $3 million in profit. Sunday baseball combined with the popularity of Ruth led to the construction of Yankee Stadium, which opened in 1923. The Yankees had been evicted in 1922 from the Polo Grounds, which they had shared since 1913 with the Giants, by the Giants' owner Charles Stoneham (1876–1936), who wanted to keep for himself the lucrative Sunday dates and feared that Ruth's presence would make his team a secondary attraction at its own park. The spacious new ballpark testified to the growth and prosperity of professional sport, and its steel and concrete were a symbol of permanence.

The interwar years were the high point for college football in New York City, which nonetheless failed to generate the enthusiasm or draw the crowds that it did elsewhere. New Yorkers also showed little interest in professional football until the formation in 1925 of the New York Giants by Tim Mara. The team was not an immediate financial success, but in December of its first season more than 70,000 spectators at the Polo Grounds saw the Giants play against Red Grange and the Chicago Bears. In the following year Grange and his agent, Charles Pyle, asked permission from Mara and the National Football League (NFL) to form another team in New York City; when the request was denied they formed the American Football League, which ceased operations after one year. Other attempts in the next 20 years to challenge the NFL were all based on the assumption that a successful franchise in New York City was a necessity, and each new league sought to put a team in Yankee Stadium that would be identified with the baseball Yankees. Although Mara resisted efforts by entrepreneurs to challenge his team in its own market, he did allow the NFL to establish teams in Brooklyn and Staten Island. These teams posed no threat to Mara, who dominated football in the city and by the 1930s had built a solid foundation for both the Giants and the sport in general.

The popularity of boxing rose dramatically in New York City about this time. The sport won a new respectability after having been used to train soldiers during World War I, and professional boxing, which had been made illegal in 1900, was legalized by the Walker Act in 1920. Although boxing remained centered in ethnic and working-class neighborhoods and clubs, it now attracted the interest of the middle and upper classes as well. Championship fights took place sometimes in large ballparks but more often in indoor arenas, such as St. Nicholas Garden and especially Madison Square Garden, which became profitable for the first time after it was leased in 1920 to Tex Rickard. An important venue for sport since the late nineteenth century, when it was the site of racewalking competitions and six-day bicycle races, Madison Square Garden now attracted a new clientele as Rickard presented fights with such popular boxers as Jack Dempsey. It was somewhat paradoxical that as boxing gained respectability and championship fights became as much social events as athletic events, the sport came increasingly under the control of organized crime. A particularly strong hold on the sport was exerted by Frankie Carbo, who for two decades from the mid-1930s used force and intimidation to determine who fought and at times even who won.

Another sport strongly identified with Madison Square Garden was basketball, a sport popular since the turn of the century with youth groups in immigrant neighborhoods. By the 1920s some of these groups had evolved into professional teams, although they remained based in their communities and had an ethnic focus. College basketball had a wider appeal, as was made clear in 1931 when a crowd filled Madison Square Garden for a program of three college games organized by local sportswriters at the behest of Mayor James J. Walker for the benefit of the city relief fund. In 1934 the sportswriter Ned Irish (1905–82) began promoting college games at Madison Square Garden in which local teams often faced powerful opponents from other parts of the country, and in 1938 a group of sportswriters organized the National Invitation Tournament (NIT). Madison Square Garden also became the home of the professional basketball team the New York Knickerbockers (formed 1946) and of two professional ice hockey teams, the New York Americans (1925–42) and the New York Rangers (formed 1926).

4. After World War II: Increased Mobility and the Spread of the Suburbs

The decade between 1947 and 1956 was a high point for baseball in New York City, during which local clubs won 16 pennants. The city was also the focus during the struggle for racial integration of the game: Jackie Robinson, signed by the Brooklyn Dodgers to a minor league contract in October 1945, in 1947 became the first African American player in the major leagues since 1884 and in the next 10 years was the most visible symbol of the success that the Dodgers enjoyed. In the following years the team remained in the forefront of racial integration and had the most black players. The Giants became integrated when they signed Monte Irvin and Hank Thomp-

son in 1949, followed by Willie Mays in 1951; the Yankees drew criticism for not having an African American player until Elston Howard joined the team in 1955. Most residents of the city and especially of Brooklyn approved of integration and were proud of the role that their teams played in bringing it about.

Madison Square Garden in 1950 was a leading center for college basketball: games there drew more than 600,000 fans, and City College of New York won the championships of the NIT and the National Collegiate Athletic Association. There were nevertheless persistent rumors that college games were rigged, and in 1951 investigations by the district attorney of Manhattan, Frank Hogan, found them to be true. Thirty-two players from seven schools in Greater New York were arrested for "point shaving," or deliberately reducing the margin of victory in their games to accommodate bettors. The country found the fact that college sports could be corrupted to be shocking and distasteful, and the scandal fueled a climate of suspicion and mistrust that was only worsened by the onset of McCarthyism. New York City came under heavy criticism, which, owing to the ethnic background of some of the players connected with the scandal, was often expressed in anti-Semitic terms. When players from other parts of the country were eventually implicated, the image of a uniquely sinful New York City was belied, but by then the revelations had done irreversible damage: the powerful college basketball programs in the metropolitan area were destroyed, Madison Square Garden was no longer a financial force in the sport, and the NIT became a tournament of secondary importance.

The heyday of baseball in the city was abruptly brought to an end in 1958, when the president of the Dodgers, Walter O'Malley (1903–79), moved his team to Los Angeles after the City of New York refused his request to replace Ebbets Field with a new ballpark. With the encouragement of O'Malley the owner of the Giants, Horace Stoneham (1903–90), moved his team to San Francisco. The departure of the Dodgers and the Giants quickly disabused their fans of the idea that the owners of teams were civic-minded philanthropists more concerned about their cities than about their pocketbooks.

Professional football was at the same time gaining in popularity. The football Giants moved in 1956 from the Polo Grounds to Yankee Stadium and in the same year won the NFL championship for the first time in a decade. Football in general and the Giants in particular were the greatest beneficiaries of the departure from the city of two of its baseball teams; the Giants won a divisional title in each of the next two years (losing an exciting championship game to the Baltimore Colts in overtime in 1958), and their performance along with the colorful personalities of such players as Sam Huff and Frank Gifford made them popular among those who worked in advertising. This new affinity between a leading team and the advertising business was instrumental in strengthening the link between television and professional football. In 1960 a new organization called the American Football League established a franchise in New York City known first as the New York Titans and from 1963 as the New York Jets. The team played in the Polo Grounds until 1964, when it moved to Shea Stadium.

New Yorkers moved quickly to replace the baseball teams they had lost. There was some discussion of having an existing team move to New York City; a more serious effort was that of Branch Rickey and the lawyer William A. Shea in 1959 to form not only a new team but an entire new league. The owners of existing ballclubs were fearful that this venture, the Continental Baseball League, might offer serious competition and that the U.S. Congress might revoke an exemption from the antitrust laws that organized baseball had long enjoyed. To avert these possibilities they voted to expand their own leagues and to award a franchise to New York City beginning in 1962. The new team, the New York Mets, played for two years in the Polo Grounds before moving in 1964 to Shea Stadium in Flushing Meadow, where the city had proposed several years earlier to build a stadium for the Dodgers. The site had the advantages of being accessible both by subway and by automobile, which had become the mode of transportation fans most often used to get to sporting events. The Mets became popular in the 1960s despite their fabled ineptitude.

The formation of new leagues in various sports brought a number of new clubs to the metropolitan area. The New York Nets (basketball) and the New York Islanders (ice hockey) both chose to play not in the city but at Nassau County Coliseum in Uniondale, on Long Island. There were several reasons for this: it would have been difficult to find an existing venue in the city and economically unfeasible to build a new one; it was unlikely that the teams could have found enough fans in the city to be financially successful, given the entrenchment of the Rangers and of the Knickerbockers (who owing to their success in the late 1960s and early 1970s had become one of the most popular teams in the history of the city); the Nets and the Islanders were offered generous financial incentives to locate in Uniondale, much as teams in earlier years had been offered similar incentives by cities; and Nassau Coliseum was easily accessible to the well-off residents of the suburbs who had come to constitute the majority of spectators at indoor sporting events.

Although Long Island was a challenge to the city, a more formidable one was presented by New Jersey. In 1976 work was completed in East Rutherford, only 5 miles (8 kilometers) from midtown Manhattan, on the Meadowlands Complex, which eventually included a racetrack, a basketball arena, and a football stadium. In the same year the stadium was occupied by the Giants, after whom it was named. In 1984 the Jets also moved to the Meadowlands: their president, Leon Hess, had long been dissatisfied by having to share Shea Stadium with the Mets and was drawn by the larger seating capacity at Giants Stadium. Even after the Giants and the Jets left for New Jersey, most of their fans continued to perceive them as representing the city, and the name of the city remained a part of the team names. During the following decades the Meadowlands became an important venue for basketball (after the Nets moved there) and especially for horse racing, and the New York Cosmos of the North American Soccer League, a short-lived attempt at a professional soccer league, played their home games at Giants Stadium between 1977 and 1984 (see Soccer).

Several important athletic facilities were built in New York City during the 1960s and 1970s. A new Madison Square Garden opened in 1968 atop Pennsylvania Station. The National Tennis Center, near Shea Stadium, replaced the Forest Hills Tennis Stadium in 1978 as the site of the US Open Tennis Championship, better known as the US Open, which had been held in Forest Hills since 1915. In the early 1970s the City of New York agreed to refurbish Yankee Stadium, which was deteriorating. The cost of the renovation was originally estimated at $24 million but in the end rose to more than $100 million; this was a financial disaster at a time when the city could ill afford one, and it was compounded by an unfavorable lease negotiated in 1973 with the owner of the Yankees, George Steinbrenner, according to which the team paid only a small portion of its large revenue to the city as rent.

5. Participatory Sports

Public parks, playgrounds, and gymnasiums have long made New York City a center of participatory sports, although the demand for athletic facilities has continually exceeded the supply. It was in the playgrounds of the city that a number of leading basketball players learned to play, and the sport became influenced in its evolution by the "city game," a leaping, athletic style of play favored by African American youths in the 1950s and 1960s.

Running became widely popular in the city in the 1970s and 1980s. The New York City Marathon, first staged in Central Park in 1970 with 127 entrants, by 2008 had nearly

40,000, as well as prize money for the leading finishers, corporate sponsorship, and a television contract. The major impetus underlying the growth of the marathon was the decision in 1976 to have its route run through all five boroughs; this made it the only sporting event linking the entire city and brought it enormous popularity. The best-known participant during the first two decades of the marathon was the Norwegian runner Grete Waitz, who between 1978 and 1988 won the women's division of the race nine times.

New York City is the site of the main offices of Major League Baseball (as well as the offices of both its leagues), the National Football League, the National Basketball Association, and the National Hockey League.

Sports Illustrated. Weekly magazine launched in 1954 by Henry R. Luce. At the outset it was directed at an affluent, adult, mostly white male readership and featured stories on hunting, sailing, skiing, skin diving, and swimming. Over the years its coverage expanded to include team sports and its readership became more diverse. Circulation increased between 1954 and 1990 from 450,000 to 3.8 million, and the regular cover price increased from 25 cents to $2.69. *Sports Illustrated* has consistently crusaded to clean up abuses in sports: it attacked the role of organized crime in boxing during the 1950s and gambling and the use of steroids during the 1980s. In 1989 the magazine launched an offshoot called *Sports Illustrated for Kids.* The annual swimsuit issue, first published in 1964, became the most popular issue. In 2009 the magazine was owned by Time Warner and was read by more than 23 million people every week.

sportswriting. New York City became the hub of sportswriting early in the nineteenth century. Journalists in the city both capitalized on the growing popularity of sports and helped to accelerate and stimulate it. Such weekly and monthly journals as the *Spirit of the Times, Porter's Spirit of the Times, Wilkes' Spirit of the Times,* and the *New York Clipper* were instrumental in promoting horse racing, prizefighting, and baseball in the city. Other publications important to the growth of commercialized sports were the *New York Sporting Magazine,* the *United States Sporting Magazine,* the *National Police Gazette,* and such newspapers as the *New York Herald,* the *Brooklyn Eagle,* the *New York American,* the *New York Post,* and the *New York Times.* A daily newspaper launched in 1839 as the *Sunday Morning Visitor* and later that year renamed the *Sunday Morning Weekly* covered horse racing extensively; in 1897 it became the *Morning Telegraph.* Richard Kyle Fox of the *National Police Gazette* and James Gordon Bennett, Jr., of the *Herald* used sports coverage to increase circulation, and their success led other daily newspapers in New York City to follow.

By the 1880s and 1890s most daily newspapers in New York City assigned a reporter exclusively to sports and set aside a page for sports coverage. The space allotted more than doubled between 1890 and 1920, and the sports page grew into a sports section. Journalists such as Grantland Rice, Paul Gallico, Ring Lardner, Damon Runyon, Westbrook Pegler, Heywood Hale Broun, Arch Ward, and Frank Graham generated interest in sports by promoting their virtues. In the 1920s the *New York Times* carried news about the World Series and major prizefights on its front page, and Captain Joseph Medill Patterson, a publisher of the *Chicago Tribune* and later the publisher of the *Daily News,* began a national amateur boxing tournament known as the Golden Gloves. After World War II one of the best-known sportswriters in the city was Red Smith, who wrote for the *New York Herald Tribune* (1945–67) and the *New York Times* (1971–82). In 1954 the publisher Henry R. Luce launched *Sports Illustrated* in New York City as a weekly magazine that also emphasized participatory sports such as hunting, sailing, skiing, skin diving, and swimming. Longer essays appeared in the *New Yorker,* which published the work of A. J. Liebling (on boxing), Roger Angell (on baseball), Audax Minor (on horse racing), and Herbert Warren Wind (on golf). Sportswriting in New York City was affected by the rise of radio and television, which made fans less dependent on print as a source of information about sports. Newspapers and magazines shifted their focus to the events taking place off the field: contract negotiations, disputes between players and owners, labor conflicts, drug problems, and racial strife. Now with the growth of Internet sports coverage and blogs, up-to-the-minute information and updates are available with videos and instant alerts.

Randy Roberts

Sprague, Frank J(ulian) (*b* Milford, Conn., 25 July 1857; *d* New York City, 25 Oct 1934). Inventor and entrepreneur. He studied electrical engineering at the U.S. Naval Academy (1874–78), did electrical work at the Brooklyn Navy Yard, and settled in Manhattan in May 1883, where as an employee of Thomas Edison he studied the new concept of electric traction. He left the firm in the following year to form the Sprague Electric Railway and Motor Company, which produced a successful motor manufactured by the Edison Machine Works. In an effort to apply electric power to the city's elevated railroads, in 1885 he built a short elevated test track at 29th Street and continued his experiments on a larger scale using the branch of the Manhattan Elevated Railroad on 34th Street. Despite promising demonstrations, by the end of 1886 he was unable to convince the officials of the elevated lines (including Jay Gould of the Manhattan Elevated Railway) of the merits of electric traction. But in 1888 he developed a large-scale electrified streetcar system in Richmond, Virginia, the first of its kind in the country, and the advantages of his system for streetcars became obvious. By 1890 there were more than 100 electric street railways either in operation or under construction in the United States, and Sprague supplied the equipment to about half of them. His firm merged with Edison's in 1889 to form the Edison General Electric Company, for which he became a consulting engineer, but he came into conflict with Edison and resigned in 1890. After forming the Sprague Electric Elevator Company in the following year he developed efficient passenger elevators for the city's tall buildings. As early as 1890 he proposed a four-track underground electric railroad for the city, a plan that was rejected. He also continued his efforts to interest the directors of the elevated lines in electric traction, without success until his innovative multiple-unit system of train control was introduced in Chicago; this led to contracts to install his system on other elevated lines, including the Brooklyn Elevated Railway.

Sprague sold his elevator company to the firm of Otis Elevator in 1900 and the Sprague Electric Company to General Electric in 1902. Having taken an interest in automatic railroad signaling, he formed the Sprague Safety Control and Signal Corporation in 1906. He was instrumental in electrifying the city's steam railroad terminals and from 1903 to 1908 was a member of the commission responsible for electrifying Grand Central Terminal. A president of the New York Electrical Soci-

ety, he continued to work as an engineer and entrepreneur until the end of his life.

Allen J. Share

Sprague, Joseph (*b* Leicester, Mass., 25 July 1783; *d* Brooklyn, 12 Dec 1854). Mayor of Brooklyn. He moved to Brooklyn in 1809 to market the textile-mill supplies that his family manufactured in Leicester, Massachusetts. In 1834 he was instrumental in obtaining a city charter for Brooklyn, and he later advocated the annexation of Williamsburgh and Bushwick. Elected mayor of Brooklyn in 1843 and 1844, he introduced municipal street cleaning.

Ellen Fletcher

Spring Creek. Neighborhood in east central Brooklyn, bounded to the north by Linden Boulevard, to the east by Fountain Avenue, to the south by the Belt Parkway, and to the west by Pennsylvania Avenue. It is sometimes said to extend into Canarsie and Howard Beach and to be part of East New York and New Lots. The area saw a period of growth in the 1950s when several large housing projects were built; the best-known, built in the 1970s, is now called Spring Creek Towers (or Starrett City). The neighborhood was given its name in 1973 by Sebastian Leone, borough president of Brooklyn, at the suggestion of several local organizations. In later years development was hampered by large amounts of garbage fill, pollution in the canals of Spring Creek and Jamaica Bay, noise from Kennedy Airport, and the proximity of a sewage treatment plant. In the 1980s a large number of Latin Americans and blacks from the Caribbean settled in Spring Creek and its environs, principally from the Dominican Republic, Jamaica, and Guyana. A small commercial area lies along Pennsylvania Avenue between Linden Boulevard and Flatlands Avenue. At 888 Fountain Avenue stands the Brooklyn Developmental Center, a residential facility for the developmentally delayed run by the Brooklyn Developmental Disabilities Office of the Office of Mental Retardation and Developmental Disabilities. The center is dominated by the Spring Creek Towers in the southeast corner, a public housing project in the northeast corner, and a large industrial park in the east.

Ellen Marie Snyder-Grenier

Spring Creek Towers. Housing development in east central Brooklyn formerly known as Starrett City (and often still referred to as such). Located on a 153-acre (60-hectare) site along Jamaica Bay, the development is bounded to the north by Vandalia and Flatlands avenues, to the east by Schenck Avenue, to the south by the Belt Parkway, and to the west by Louisiana Avenue; it is bisected by Pennsylvania Avenue. It is the largest federally funded housing project in the United States, composed of 46 apartment buildings containing 6000 apartments, and it has its own private police force, post office, and power plant. Construction began in 1972, although the project was first conceived in 1964 by the union group United Housing Foundation, which wanted to create affordable cooperatives. The development was built under the state's Mitchell–Lama limited-profit housing program and was designed by Herman J. Jessor and known as Twin Pines Village until the Starrett Corporation assumed control. When it opened in 1975, quotas were used to fill two-thirds of the apartments with whites; when the National Association for the Advancement of Colored People (NAACP) filed a class-action suit against Spring Creek, the management defended the necessity of quotas to maintain racial integration and prevent white flight. In 1988 the U.S. Supreme Court upheld the decisions of lower courts that the quotas were illegal, and Spring Creek abandoned the system. In the early twenty-first century about 10 percent of the residents were white. During a real estate boom in 2006 Clipper Equity made a $1.3 billion bid for the development, and many feared that its 14,000 residents would be priced out of their apartments by the new owner. City, state, and federal officials blocked the sale, and in 2008 Spring Creek's owners agreed to sell only to a buyer who would keep the development in the Mitchell–Lama program and retain other subsidies for 20 years; the new buyer would be able to build an additional 1000 apartments.

Kate Lauber

Springfield Gardens. Neighborhood in southeastern Queens, bounded to the north by St. Albans, to the east by Laurelton, to the south by John F. Kennedy International Airport, and to the west by Farmers Boulevard. The area was settled about 1660. Farms were built during the eighteenth century southward from what is now Montefiore Cemetery to Rockaway Boulevard by Dutch farmers from Brooklyn, among them the Higbies, the Hendricksons, and the Nostrands, and by British such as the Bedells and the Baylises. A gristmill opened as early as 1750 at the mouth of Springfield Pond and 147th Avenue and was operated successively by millers named Cornell, Abraham Higbie (1815 to about 1855), and D. H. Simonson (1855 to at least 1873). To the south were vast meadows extending to Jamaica Bay. During the American Revolution local farmers were required to provide firewood for the British army, but no troops were stationed there. The City of Brooklyn in 1854 built a conduit along what is now Sunrise Highway to obtain water from the brooks in the area and in Nassau County; this was extended to Springfield in 1858, and a brick pumping station was built in 1885 at the northern edge of the pond. The farm of John W. Decker was put up for sale in December 1910, and his sons formed the Decker Realty Company to develop Springfield Gardens North. Ornamental brick pillars and trellises were erected opposite the railroad station. Dozens of streets and hundreds of houses were built between 1920 and 1930, and the population rose from 3046 to 13,089. William Schabehorn, a builder from Brooklyn, erected more than 1000 one- and two-family houses. About 1932 the construction of the Springfield Boulevard sewer destroyed the pond and its feeder stream; the city filled in the pond during the 1930s for Springfield Park. Lack of funds curtailed efforts in 1985 to designate a historic district of eighteenth-century houses. During the 1980s Springfield Gardens and its environs attracted many immigrants from Caribbean nations, including Jamaica (accounting for almost half of all immigrants at the time), Haiti, and Guyana. In 2007 the population was 42,000, and several rezoning measures were adopted by the City Planning Commission to allow for single-family homes to be converted into or rebuilt as two-family homes. The neighborhood retains much of its original character, and families are known to live in their homes for many years and even for more than one generation. Baisley Pond Park is a favorite of locals, with 110 acres (44.5 hectares) of green space.

Spuyten Duyvil Creek. Narrow tidal channel about 1 mile (1.5 kilometers) long separating Manhattan Island from the Bronx and connecting the Harlem and Hudson Rivers. Before the arrival of the Dutch in the early seventeenth century the area was explored briefly in 1609 by Hendrik (Henry) Hudson and his ship *Halve Maen* (Half Moon). The region had been home to the Lenape Indians, who enjoyed plentiful fishing and hunting along the creek that they called *Shorakapok*. In 1669 Johannes Verveelen began ferry service across the creek at about the point where Broadway and West 231st Street now intersect. Four years later Frederick Philipse built the first bridge over the creek, which he named the Kings Bridge, at the present site of West 230th Street and Marble Hill Avenue, in the area that came to be called Kingsbridge. Another bridge, called the Farmer's Free Bridge because Verveelen's ferry charged a toll, was erected by farmer/landowner Jacob Dyckman in 1759. It was later destroyed by George Washington's retreating Continental Army during the American Revolution. Dyckman's house at Broadway and West 204th Street is a designated landmark and the only surviving eighteenth-century farmhouse in Manhattan.

The Dutch named the creek Spuyten Duyvil in 1647, and the meaning of this name has

been the subject of speculation and discussion ever since. A number of translations have been proposed of the seventeenth-century Dutch *spuitendei duyvil*, the most likely being "spouting devil," which probably referred to the strong spoutlike effect of the currents in the narrow waterway during storms. The once popular "to spite the devil" is no longer accepted (*spuyten* was erroneously thought to mean "to spite"). This interpretation was attributed to Walt Whitman, who in his famous *History of Old New York* recounts the story of a trumpeter who, against local inhabitants' admonitions, insisted on swimming across the rough waters during a violent thunderstorm "to spite the devil."

By the mid-nineteenth century it became clear that the creek, with its turbulent, rocky, and unpredictable waters, needed to be developed into a dependable navigable waterway. In 1876 the New York State Legislature asked the Army Corps of Engineers to begin construction of the Harlem River Shipping Canal, which was completed in 1895. As a result, the Marble Hill section was severed from Manhattan and became an island. In 1914 the creek bed was partially filled in and Marble Hill was then physically attached to the Bronx—a situation that caused confusion and annoyance to the people of Marble Hill, who found themselves unwilling residents of the Bronx. After years of prolonged protest, a compromise was reached when the "orphan" neighborhood was again declared legally part of the borough of Manhattan.

With the completion in 1923 of the Harlem River Ship Canal, the older sections of Spuyten Duyvil Creek were covered over and the western section excavated and straightened, providing a direct, safer, and more navigable waterway. The distance between the Hudson River and Long Island Sound was thus shortened by 14 miles (22.5 kilometers). Spanning the Harlem River Ship Canal near the Hudson River are the Henry Hudson Bridge and a swing bridge used by Amtrak mainly for its long-distance trains to and from Pennsylvania Station.

Spuyten Duyvil neighborhood. Neighborhood in the northwestern Bronx, bounded to the north by Riverdale, to the east by Kingsbridge, to the south by the Harlem River Ship Canal, and to the west by the Hudson River. It began to develop and grow in the second half of the nineteenth century after the completion of the New York and Hudson River Railroad (now the Hudson Division of the Metro-North Commuter Railroad). In the early twenty-first century commuter trains operated by Metro-North stopped regularly at the Spuyten Duyvil station, on the north side of the ship canal. Residential development continued in the 1920s and increased markedly in the 1950s through the 1980s with the construction of high-rise apartment buildings, many of which were converted into cooperatives and condominiums. Affluent families were drawn to the area by its scenic steeply sloped hills and views of the Hudson River and by the proximity to the upscale communities of Riverdale and Fieldston.

In the center of the Spuyten Duyvil neighborhood is Henry Hudson Park, where a 16-foot-tall (5-meter-tall) bronze statue of Henry Hudson (by Karl Gruppe) stands atop the 100-foot-tall (30-meter-tall) Doric-style Henry Hudson Memorial Column (by Walter Cook). The landmark monument was erected in 1912 by public subscription after the Hudson–Fulton Celebration of 1909; the statue, however, was not installed until 1938.

squares. Public spaces that serve as centers for commercial activities; they are important in the formation of civic identity and as places for popular political, commercial, and social expression. Unlike traditional European cities, New York City has numerous tiny squares but few large ones, a reflection of the commonly held belief in Manhattan that land was too valuable to be kept as open space, which was a frequently debated issue.

In the seventeenth century the city gained legal jurisdiction over all unowned land on Manhattan Island; some space was reserved as open, but most was sold to raise revenue. The 1811 Commissioners' Plan made some provision for preserving open land, providing for a market, reservoir, and parade ground but no additional public parks or

squares. It did leave five areas open with no special designation for future use: Bloomingdale Square, Hamilton Square, Manhattan Observatory (Place), Harlem Marsh, and Harlem Square, constituting more than 150 acres (60.7 hectares); by the end of the nineteenth century all had disappeared except for Manhattan Observatory, of which only a small portion remained in 2008. Decisions regarding public space usage were guided by the strong desire of city leaders to promote commercial development, keep real estate values high, and rely on the "large arms of the sea" surrounding Manhattan to provide fresh air.

By the 1830s rising population density, frequent epidemics, increasing prosperity, and the desire for a more beautiful city led officials to create additional open spaces for public enjoyment. In order to do this at a time of soaring real estate prices, officials used the practice of condemning land intended for public use, purchasing it, and then assessing local landholders for the costs of the purchase; they justified this by claiming that property values would increase with squares and parks nearby (which did not always occur). By 1850 there were 29 major squares in the city, of which none existed as squares in 2008: nine were eliminated, and the remainder became parks that were often reduced in size. In the second half of the nineteenth century civic and sanitary improvement groups lobbied intensely to create more open space, which resulted in the conversion of many squares into parks. Unlike traditional squares, parks are subject to specific regulations regarding what activities can occur in them. After 1870 jurisdiction for open spaces including squares was placed under the Department of Public Parks.

The city had few traditional squares in the twenty-first century, as most of the original ones became parks, were absorbed by street improvements, or were sold off for commercial purposes. There were many very small, fractionally sized squares, whose irregular or triangular shapes were a result of the conversion of small slivers of property left over from road widening or development. The commissioners of 1811 foresaw this, referring to them as the "children of necessity." In 2008 there were 89 areas designated by the Department of Parks and Recreation as squares, comprising approximately 20 acres (8 hectares): five in the Bronx, 33 in Queens, 21 in Brooklyn, 29 in Manhattan, and one in Staten Island.

squeegee men. Individuals who solicit money from drivers at red lights or stuck in traffic by cleaning windshields. They became synonymous with petty crime in New York City during the 1980s. In 1994 Mayor Rudolph Giuliani embarked on a major initiative to remove squeegee men from New York City's streets, arguing that their presence created an environment of disorder that allowed more serious crime to flourish. His campaign succeeded in removing most from the streets, although they reemerged in the early twenty-first century during the economic recession.

Anne Epstein

Squibb. Firm of pharmaceutical manufacturers. It was formed in 1858 in Brooklyn as E. R. Squibb and Company by Edward Robinson Squibb (1819–1900), a physician who advocated pure drug formulations and who developed at the Brooklyn Naval Hospital a process for making consistently pure ether. The firm specialized in anesthetics, including ether, chloroform, and cocaine. Taken over by Theodore Weicker and Lowell M. Palmer, it was incorporated in New York City in 1905; it established the Institute for Medical Research in 1938 in New Brunswick, New Jersey, and became a leader in pharmaceutical research. During World War II the firm helped to develop penicillin in a consortium led by the government. After being acquired in 1952 by the Olin, Mathiesin Chemical Corporation, it retained its name but moved its manufacturing operations from Brooklyn to New Jersey in 1956; it became independent in 1968 and then acquired Beech-Nut Life Savers. In 1989 Squibb merged with Bristol–Myers to form Bristol–Myers Squibb, with headquarters at 345 Park Avenue. In 2007 it had global sales of $17.9 billion and more than 43,000 employees.

Sri Lankans. The first major wave of Sri Lankan immigrants to New York City was in the late 1960s. They settled on northern Staten Island, were mainly professionals (many were physicians), and belonged to Sri Lanka's Sinhala ethnic majority. On 2 October 1971 the Sri Lankan Association of New York had its inaugural meeting at 630 Third Avenue, where the Permanent Mission of Sri Lanka to the United Nations remained in the twenty-first century. In 1980 Staten Island was estimated to be home to about 450 Sri Lankans. In the mid-1980s Sri Lankan immigration patterns shifted to the Tamil peoples, a minority

ethnicity, which caused tensions within the Sri Lankan immigrant community when the civil war ended in 2000. The early 1990s saw a wave of undocumented immigrants who found work at the sex shops around Times Square. Of the 488 Sri Lankans who migrated legally to New York City between 1990 and 1994, almost a quarter moved to Staten Island. In 2000 an estimated 3000 Sri Lankans lived in Staten Island. Their community was served by Sri Lankan restaurants, a Buddhist temple, and a cluster of grocery stores centered around Victory Boulevard in the Tompkinsville neighborhood. As an ethnic group, Sri Lankans have focused their efforts on cultural activities and community organizations. In 2009 New York City's Sri Lankan immigrant community was estimated at 5000 people.

Jessica Montesano

SROs [single-room occupancy hotels]. Cheap lodgings with communal bathrooms and sometimes kitchens that became prevalent in New York City after World War II. Along with "flophouses" they were an important form of housing for the poor, especially around the Bowery. A number of hotels were converted to SROs, among them the Endicott Hotel on Columbus Avenue between 81st and 82nd streets, which became the largest SRO in the city. Residents were usually single men, at first mostly transient workers, then pensioners. Eventually SROs became notorious for drug and alcohol abuse among their tenants, and several buildings were demolished because of code violations or were simply abandoned. During the late 1970s and 1980s a large number of SROs were converted to housing for the affluent (including the Endicott); of the 150,000 SRO units in the city, more than 30,000 were lost during 1975–81, and about 100,000 units were lost by 1990. Many of the residents were forced to live in the streets. Under pressure from the courts, the city in 1982 began to use SROs to house families; by 1987 more than 5300 families were housed in 60 hotels, often in deplorable conditions and at high cost. In 1985 the City Council imposed a moratorium on the conversion, alteration, and demolition of SROs, but the state court of appeals overturned the legislation in 1989.

Starting in the late twentieth century the New York City Department of Housing Preservation and Development implemented programs to improve significantly the quality of SROs. They offered financial incentives to not-for-profit organizations to rehabilitate the buildings or construct new ones; these had to meet new minimum standards for rooms and to provide handicapped accessibility. New units included studios with kitchenettes and private bathrooms. Old buildings were renovated and put under new management, which provided supportive services to assist tenants in various ways, such as finding employment. These building also had community spaces for recreation. Two SROs that were converted are the Kenmore (23rd Street) and the Holland (42nd Street).

Robert A. Slayton, Lisa Keller

stables. Stables were common in New York City as long as HORSES were the primary means of transport. In 1896 there were 4649 stables housing 73,746 horses, which were used to pull private carriages, horsecars, omnibuses, firefighting equipment, and delivery wagons. Wealthy families built private stables for their horses and carriages, usually close enough to their residences for convenient access yet far enough away to shield them from noise and odor; the less wealthy boarded their horses and equipment in large commercial stables. Stables were also maintained by riding schools and academies. The five schools in the city in 1887, all near Central Park, together boarded more than 900 saddle horses. At the time an estimated 300 saddle horses were kept in private stables. Large peddler stables for the horses and equipment of delivery and peddler services were also common throughout the city. Soon after the turn of the twentieth century horses gradually gave way to streetcars, automobiles, trucks, and buses. In 1917 the operation of horsecars ended. The disappearance of horses left behind many stable buildings; many were demolished, and some were converted into parking garages and factories. Rows of stables called *mews* were often converted into distinctive and highly sought-after residences, such as Washington Mews in Greenwich Village. The CLAREMONT RIDING ACADEMY in Manhattan closed in 2007 after being the oldest continuously operated stable in the city. By 2008 the remaining working stables included several in Hell's Kitchen for Central Park carriage horses and the police department mounted unit at Pier 76. A handful of riding facilities remained open to the public: Kensington Stables at Prospect Park in Brooklyn, Forest Equine Center at Forest Park in Queens, the Bronx Equestrian Center at Pelham Bay Park and the Riverdale Equestrian Center at Van Cortlandt Park in the Bronx, and the Seguine Equestrian Center in Staten Island.

Craig D. Bida

Stadt Huys. Tavern at Pearl Street and Coenties Alley, converted into the first town hall of New Amsterdam in 1653. The building served as the town hall until 1699 and was eventually demolished. Its site was investigated in 1979 during the city's first large-scale archaeological excavation.

Nan A. Rothschild

stage design. Until the mid-nineteenth century stage designs generally consisted of stock scenery: painted flats and backdrops depicting generic interiors and exteriors were slid on and off the stage in parallel tracks. After the Civil War the emergence of New York City as the theatrical center of the country coincided with the emergence of studios engaged in building and painting scenery. The scene painter became a significant theater artist, especially with the introduction of gas lighting on the stage, which provided a brighter illumination that required more detailed and sophisticated scene painting. Most scenic artists remained obscure until Charles Witham (1842–1926), who created the decor for Edwin Booth's long-running production of *Hamlet* (1864) in the city, as well as for many other productions with Booth, Augustin Daly, Edward Harrigan, and Dion Boucicault. Booth opened his own theater in New York City in

Livery stables on Grand Street, ca *1865*

1868 with *Romeo and Juliet,* and critic William Winter rhapsodized over the "reality and nearness" of the "picturesque Italian streets, luxurious gardens, gay and bright interiors, and the solemn, cypress-shaded precincts of the tomb." Witham was also largely responsible for replacing the painted flats and backdrops with free-standing units and flown scenery and introducing the three-walled box set to depict interiors.

The new approaches to decor necessitated more cumbersome, long, and noisy scene changes, thus prompting innovations in stage technology. The most ambitious were associated with Steele MacKaye (1842–94). His Madison Square Theatre opened in 1880 and included an elevator stage—two stages on top of one another that could be moved up and down, thereby allowing a new scene to be set on the offstage unit while another scene was being played. The trend toward mechanized spectacle was epitomized by the 1899 Broadway production of *Ben Hur* which was complete with a chariot race utilizing real horses on treadmills.

By the turn of the twentieth century painted scenery had largely given way to three-dimensional settings with real props. The most noted exponent of this new approach to stage design, now called *photographic realism,* was the producer and director David Belasco, who became widely known for his attention to detail and fondness for reproducing real environments onstage, most famously for *The Governor's Lady* (1912), for which he purchased fixtures from a popular restaurant to fashion a faithful reproduction of its interior. Belasco was among the first to exploit the new medium of electric light to create realistic effects, as in a four-minute sequence in a production of *Madame Butterfly* (1905) that simulated a sunset and then a sunrise.

A combination of changing aesthetics and economic concerns in the years before World War I drove Belasco's realism from favor. Largely influenced by European designers and the theoreticians Adolph Appia and Edward Gordon Craig, a movement toward simplification and abstraction known as the "new stagecraft" overtook American design. Although the most spectacular forerunner of the trend was a 1912 production by the German director Max Reinhardt of *Sumurun,* the movement is generally dated to the production in 1915 of Anatole France's *The Man Who Married a Dumb Wife,* produced by the New York Stage Society at Wallack's Theater and designed by Robert Edmond Jones (1887–1954). The commercial legitimacy of the simplified, abstracted setting was established by Jones's subsequent work with the Provincetown Players and with the director Arthur Hopkins on a series of plays by Shakespeare on Broadway featuring the Barrymores. The new stagecraft was further developed by Lee Simonson (1888–1967) in productions of the Theatre Guild and in Broadway productions by Norman Bel Geddes (1893–1958), who was largely responsible for eliminating footlights and revamping lighting systems in several Broadway theaters. Still more changes, especially in the use of color, were wrought by the Austrian-born designer Joseph Urban (1872–1933), who began designing sets for Florenz Ziegfeld's *Follies* in 1915 and also designed for the Metropolitan Opera and Broadway. Modern dance played an important role in the development of stage design, and although dance and theater had different scenic and aesthetic needs, many designers worked in both media.

By the end of World War I the stage designer was established as an important artist. Local 829 of the United Scenic Artists joined the American Federation of Labor in 1918, and designers received prominent credit in theater programs. The next few decades saw a struggle between a popular demand for naturalism and the aesthetic pull of abstraction, symbolism, and constructivism. The naturalist school was exemplified by the tenement facade designed by Jo Mielziner (1901–76) for Elmer Rice's *Street Scene* (1929); Bel Geddes's design for Sidney Kingsley's *Dead End* (1935), complete with water in the orchestra pit representing the East River; and the re-creation by Howard Bay (1912–86) of a tenement on the Lower East Side that burst into flames in a production of Arthur Arent's *One Third of a Nation* (1936) by the Living Newspaper of the Federal Theatre Project. At the other extreme such plays as Clifford Odets's *Waiting for Lefty* (1935) and Thornton Wilder's *Our Town* (1938) virtually did away with scenery, using the bare stage and the theater itself as a set (an idea revived in 1975 in the design by Robin Wagner [*b* 1933] for *A Chorus Line*). The musical developed its modern form during the 1920s and 1930s, and lavish, innovative scenery became the norm. Revolving sets, elevators, rolling platforms, and masses of scenery became the trademark of such designers as Albert Johnson (1910–67) and Vincente Minnelli (1910–86). Many later developments in stage design were made possible by innovations in lighting during the 1930s, especially those of Jean Rosenthal (1912–69), who broadened the function of lighting design to encompass not merely illumination but also the subtle evocation of mood and even of rhythm and movement.

In the 1940s there emerged a distinctly American style generally known as poetic realism, most closely associated with the later designs of Mielziner and the plays of Tennessee Williams. Visually the style was characterized by fragmented settings and soft, dreamlike images often enhanced by the use of scrims. Arthur Miller's *Death of a Salesman* (1949) and Williams's *A Streetcar Named Desire* (1947), both designed by Mielziner, are classic examples of this style. Oliver Smith (1918–94) bridged the world of theater and dance while carrying poetic realism and fantasy into the musicals of the 1950s. His works included *Brigadoon* (1947) and *My Fair Lady* (1956), as well as several influential ballets, among them *Rodeo* and *Fall River Legend* (1948). The 1950s saw a move away from realism and toward structural and symbolic designs that emphasized theatricality; the stage regained a sense of being a stage rather than a re-creation of another place. Among the first stage designers to move in this direction was Rouben Ter-Arutunian (1920–92). Another was Isamu Noguchi (1904–88), who worked closely with the choreographer Martha Graham from 1935 and developed a sculptural style of stage design. These innovations culminated in the mid-1960s in the work of Ming Cho Lee (*b* 1930), whose designs for the New York Shakespeare Festival at the Delacorte Theater in Central Park and for the New York City Opera made scaffolding, emblematic scenery, textured materials, and collage the basic vocabulary of American design for the next two decades. At the same time Merce Cunningham and other modern and postmodern choreographers engaged visual artists as stage designers such as Robert Rauschenberg, Jasper Johns, and Andy Warhol. In the 1980s work by the artists David Hockney and David Salle and even the architect Frank Gehry appeared on the stages of the Brooklyn Academy of Music and the Metropolitan Opera House. On the other hand the choreographer Twyla Tharp tended to rely on designers who worked principally in the theater, notably Jennifer Tipton (*b* 1937), who shaped modern lighting practice, and Santo Loquasto (*b* 1944), whose costumes influenced fashion design.

Stage design was strongly influenced by avant-garde theater and in particular by theatrical minimalism. Environmental theater, characterized by stage settings that surround the audience, was made popular with the production in 1968 of *Dionysus in 69* by Richard Schechner's Performance Group in a converted garage in SoHo. This iconoclastic approach influenced Eugene Lee's design in 1974 for the Broadway production of *Candide.* The theater artist Richard Foreman developed idiosyncratic conceptual settings at his loft theater in SoHo in the 1970s as well as for Joseph Papp's revival in 1976 of *The Threepenny Opera* at the Vivian Beaumont Theater. At the same time Robert Wilson conceived grandiose settings for such works as Philip Glass's opera *Einstein on the Beach* (1976), which was staged at the Brooklyn Academy of Music and the Metropolitan Opera.

The 1980s saw a trend toward lavish productions with elaborate settings, as in *Cats* (1983) and *Phantom of the Opera* (1988), both British imports by Andrew Lloyd Webber, and *Miss Saigon* (1990), by Claude-Michel Schönberg and Alain Boublil. Tony Walton (*b* 1934) devised more elegant spectacles for such shows as *Grand Hotel* (1989) and *Guys and Dolls* (1992). The arrival of Disney Theatrical Productions on Broadway with *Beauty and the Beast* (1994) merged the style of Disney animation with Broadway spectacle. Disney's 1998 pro-

duction of *The Lion King* injected the avant-garde aesthetics of director Julie Taymor—particularly an inventive use of puppets—into the visual spectacle. At the same time a postmodern approach to design emerged in opera and Off Broadway, particularly in the work of the designers John Conklin (*b* 1937), George Tsypin (*b* 1954), and Adrianne Lobel (*b* 1955) and also in that of James Clayburgh (*b* 1949) for the avant-garde Wooster Group. The new approach was typified by a multiplicity of incongruous, competing, and conflicting images that made for a historical and stylistic eclecticism. Postmodern designs such as Tsypin's for *Henry IV, Parts 1 and 2* (1992), directed by JoAnne Akalaitis at the Public Theater, made wide-ranging references to diverse periods of art and architecture, to other productions, and to themselves. Others, such as those of the Wooster Group, "deconstruct" the stage by merging onstage and offstage space, often by using video and sound to separate performer, voice, and image and by combining simple and technologically advanced elements and objects in an almost random and unfocused way within the performing space.

The Wooster Group's use of video and digital technology had a profound effect on newer experimental groups such as Elevator Repair Service, Collapsable Giraffe, and Radio Hole, which tend to incorporate such technology into their productions—frequently staged in converted industrial spaces—in almost mundane and offhand ways, reflecting the pervasive presence of technology in twenty-first century life. Meanwhile, digitally projected imagery and large-scale video imagery have become increasingly common on Broadway and in some Off-Broadway productions. Because such decor is projected or exhibited on flat screens behind the actors, it is surprisingly similar to Baroque scenery in its spatial relationships. But the imagery used seems closer to that found in computer games and digital animation. While most new technologies are developed for other media, they ultimately find their way into theater either as part of the scenic spectacle or as a means of controlling scenery, lights, and sound.

Henderson, *The City and the Theatre: The History of New York Playhouses* (New York: Back Stage Books, 2004)

Arnold Aronson

Stagg Town. Seventeenth-century name for an area also known as Little Africa.

stair streets. Streets composed of steep staircases built in areas too hilly for cars. Also known as *step streets,* they are open only to pedestrians and were given names such as Bradley Terrace, 166th Stair Street, and Step Street. About 90 percent of the city's stair streets are in the Bronx, particularly in Riverdale, along the Grand Concourse ridge, and in Highbridge; West 230th Street is a stair street that stretches across several blocks from Irwin Avenue to Netherland Avenue. Stair streets were also built in upper Manhattan, Staten Island, and Bay Ridge and Highland Park in Brooklyn. Apartment buildings abutting these streets often have entrances from a landing to an upper story.

Stair street west of Broadway above 231st Street in the Bronx, early 1990s

Gary D. Hermalyn

stamp and coin dealers. Collectors and dealers of stamps and coins frequent New York City from around the world for its conventions, shops, and auctions. Gimbel's in Herald Square was known for its large stamp and coin department as early as the late 1940s. In the early twenty-first century the major purveyors of stamps were H. R. Harmer and Company and Robert Siegel; coin dealers included Harmer Rooke, Manfred Tardella and Brooks, and Stack's. Important organizations in the city include the Philatelic Foundation (70 West 40th Street) and the American Numismatic Society (96 Fulton Street), which maintains a museum and research library.

Rachel Shor

Standard and Poor's. Firm of financial publishers formed by the merger of Poor's Publishing Company and the Standard Statistics Company in 1941. It is commonly known as S&P. The origins of the firm may be traced to the publications of Henry Varnum Poor (1812–1905), who issued *History of Railroads and Canals of the United States* in 1860 and in 1867 formed a corporation to publish annually a "Manual of the Railroads and Canals of the United States." Poor's *History* was the most valuable financial source of its day and is considered the precursor of financial and investment publications in the United States. Standard Statistics Company was begun in 1913 as Standard Statistics Services by Luther Blake. In 1957 S&P introduced the S&P 500 stock price index, which became the most widely accepted barometer of the market. A subsidiary of McGraw–Hill from 1966, S&P rates bonds and commercial promissory notes and issues more than 50 financial publications. In 1975 the firm suspended ratings of New York City bonds in response to the reluctance of major underwriters to help the city sell or roll over its debts. By 2007 more than $4.8 trillion was benchmarked to the S&P 500. Its offices are located at 55 Water Street in lower Manhattan.

James D. Norris

Standard Oil. Huge multinational trust dissolved by the U.S. Supreme Court in 1911. Incorporated in 1870 in Cleveland as the Standard Oil Company under John D. Rockefeller, it grew to control virtually every aspect of the industry. The activities of the trust, which in 1885 relocated to 26 Broadway in Manhattan (Ebenezer L. Roberts, architect), came increasingly under attack with the passage of the Sherman Antitrust Act (1890), Ida M. Tarbell's exposé in *McClure's Magazine* (1902–4), and the antitrust efforts of Presidents Theodore Roosevelt and William Howard Taft. In 1911 the U.S. Supreme Court ordered it broken into separate entities. The company

remained headquartered at 26 Broadway, which was enlarged in 1895 (Kimball and Thompson), and again in 1920–28 (Carrère and Hastings; and Shreve, Lamb and Blake). Although Standard Oil no longer occupies the building, the main lobby still displays plaques bearing the names of the trust's principal officers.

Margaret Latimer

Stapleton. Neighborhood in northeastern Staten Island bounded to the north by Grant Street, to the east by Upper New York Bay, to the south by Vanderbilt Avenue, and to the west by St. Paul's Avenue and Van Duzer Street. It consisted at first of farmland; Cornelius Vanderbilt spent his youth on a farm facing the bay on a site now occupied by the Paramount Theatre on Bay Street. In its early years the area was the commercial center of Southfield Township (it became part of the incorporated village of Edgewater in 1866). The Seamen's Retreat, a hospital for sailors, was built in 1831 on a site of 40 acres (16 hectares). In the following year land was acquired from the Vanderbilts and streets were laid out by William J. Staples (1807–83), a merchant and entrepreneur from Manhattan after whom the neighborhood was named, and Minthorne Tompkins (1807–81), a son of Vice President Daniel D. Tompkins. The two established ferry service to Manhattan and advertised their newly created village in 1836. The availability of spring water led several German American breweries to establish themselves in the area in the nineteenth century: the Bachmann Brewery (1851) and the Bechtel Brewery (1853) merged in 1911 to form the Bachmann–Bechtel Brewing Company, which operated until 1920; the Rubsam and Horrmann Atlantic Brewery Company (1871) was bought by Piels in 1953 and closed in 1963. By 1884 Staten Island Rapid Transit extended its tracks along the waterfront from the foot of Vanderbilt Avenue to Tompkinsville Landing and to ferry facilities in St. George; direct passenger ferry service from Stapleton to Manhattan was discontinued in 1886. The Village Hall (1889) in Tappen Park was designed by Paul Kuhne (1850–1903), a resident of Stapleton. Seamen's Retreat became successively the U.S. Marine Hospital, the U.S. Public Health Service Hospital, and the Bayley Seton Hospital, the largest employer in the area. In 2007 the Salvation Army purchased the property and began developing it for residential and community recreational uses. The waterfront was filled in on the east side of Bay Street. Municipal piers built by New York City in the 1920s were never fully exploited: several were used as the first foreign trade zone in the United States (1937–42), as the New York Port of Embarkation by the U.S. Army and the U.S. Navy (1942–45), and again as a foreign trade zone after World War II, but by 1950 only two piers were in use, and in the 1970s these were demolished. Stapleton Houses, a housing project sponsored by New York State, opened in 1962, providing 693 subsidized apartments on land formerly belonging to the Seamen's Retreat. A new and controversial homeport for the U.S. Navy was constructed and opened in 1990; this closed in 1994.

Among the notable buildings in Stapleton are simple Greek Revival houses from the 1830s at 364 and 390 Van Duzer Street, 60 William Street, and 92 Harrison Street; several historic churches, including St. Paul's Episcopal (1870, designed by Edward Tuckerman Potter), First Presbyterian Church (1887, Josiah C. Cady), Immaculate Conception Church (1908), and Trinity Lutheran Church (1913, Upjohn and Conable); and the Staten Island Savings Bank (1925, Delano and Aldrich). In the 1980s Stapleton attracted immigrants from India, Liberia, China, Jamaica, and Trinidad and Tobago, and to a lesser extent the Philippines, Guyana, Korea, and Nigeria. The neighborhood in the early twenty-first century was a residential and commercial center inhabited by urban professionals and blue-collar workers, including blacks, Italians, Armenians, and Latin Americans.

Barnett Shepherd

Stapleton Heights. Neighborhood in northeastern Staten Island near the western boundary of Stapleton along St. Paul's Avenue. It is an area of large houses and lots, and many of the residents have views of the Narrows and the Verrazano–Narrows Bridge. Early efforts to restore the area were promoted by the Mud Lane Society (named after the street that later became St. Paul's Avenue). Notable buildings in the neighborhood include 368 St. Paul's Avenue (designed by Paul Kuhne, a resident of Stapleton, for Adolf Baudenhausen of the Rubsam and Horrmann Brewery) and 387 St. Paul's Avenue, an elaborate Queen Anne house (built for the daughter of George Bechtel, the owner of Bechtel Brewery).

Barnett Shepherd

Starin, John Henry (*b* Sammonsville, N.Y., 27 Aug 1825; *d* New York City, 21 March 1909). Congressman. He was involved in lighterage within the Port of New York and operated freight and passenger boats on the Hudson River and Long Island Sound and ferries to Staten Island and New Jersey. Starin was also active in the excursion trade, developing a number of picnic grounds and amusement areas to which residents of the city were transported by his fleet of steamboats and excursion barges. When his activities were at their peak in the late 1800s, he is believed to have had the largest fleet of boats under private ownership in the world. Starin, a Republican, served in the U.S. House of Representatives from 1877 to 1881. He was well-known for his generosity, organizing giant annual picnic excursions at his own expense for New York City's Civil War veterans and their families, police and firefighters, newsboys and bootblacks, and women and children of the Five Points Mission. In 1893 he agreed to serve on New York City's Transit Commission. When the construction of further elevated railroads above the avenues of Manhattan was put to a vote that required unanimity, Starin cast the only opposing vote, effectively killing the proposal and bringing about the shift to subway construction.

Norman J. Brouwer

Starrett City. See Spring Creek Towers.

Starrett Corporation. Firm of general contractors, incorporated in 1922 as Starrett Brothers and later renamed Starrett Brothers and Eken. One of the most successful firms of its kind in the city, it was directed by Paul Starrett (1866–1957) and William A. Starrett (1877–1932), two of five brothers working as builders, often in bitter competition. In the 1920s it erected many skyscrapers, including the Empire State Building, which was finished 45 days ahead of schedule and $5 million under budget. Starting in the 1930s the firm concentrated on such housing complexes as Parkchester in the Bronx (1938–42), Stuyvesant Town (1943), and Peter Cooper Village (1945–47). Andrew J. Eken (1882–1965), a partner, became president in 1938 and was chairman from 1955 to 1961. As developers the Starrett Corporation built Starrett City (1976, Herman J. Jessor), a community for 6000 families in eastern Brooklyn, now called Spring Creek Towers, and the Jacob K. Javits Center in Manhattan (1986). In 2008 the company owned and managed about 7000 apartments, both market rate and government assisted, in the metropolitan area.

Carol Willis

state attorney general. Elected office possessing broad powers to investigate and prosecute wrongdoing when local authorities cannot or will not act. The office has intervened in a wide range of cases in New York City. In 1894 it investigated charges of cruelty and neglect in the city's insane asylums; its report resulted in their takeover by the state. After prosecuting widespread election fraud in the city in 1899 it supervised elections there for decades and sought to remove Mayor George B. McClellan from office because of electoral fraud in 1905. Under the Donnelly Act (1899) the attorney general prosecuted illegal monopolies and trusts and in 1908 broke up the American Ice Company of New York. It gained sweeping powers of investigation and enforcement in the securities industry through the Martin Act, a "blue sky" law passed in 1921 that in the 1980s was extended to cover the conversion of apartments and lofts into condominiums and cooperatives. During the

1930s the attorney general prosecuted racketeering in construction and among laundries and dry cleaners. The office also gained broad authority to prosecute consumer fraud and regulate charities. After the Knapp Commission presented its report on police corruption to the mayor in 1972, a deputy attorney general was appointed to investigate and prosecute cases of corruption in the city's criminal justice system. In 1986 another special prosecutor investigated the fatal beating of several black men in Howard Beach. When Eliot Spitzer was elected attorney general in 1998, he redefined the office and expanded the definition of consumer fraud, serving two terms and gaining the nickname "the Sheriff of Wall Street" for his hawkish investigation and reform of the city's financial institutions.

James D. Folts

State Communities Aid Association. Private agency formed in New York City in 1872 by Louisa Lee Schuyler as the State Charities Aid Association to monitor and reform asylums, hospitals, almshouses, and other public welfare institutions. It recruited volunteers from the Women's Central Association of Relief and the U.S. Sanitary Commission. Under the leadership of Homer Folks, general secretary from 1893 to 1947, the association won reforms in housing, child and maternal welfare, foster care, juvenile justice, public health, and unemployment benefits. The association surveyed all state institutions, but it focused its efforts on New York City and maintained its headquarters there. It took its current name in 1967 and moved the office of its executive secretary to Albany, New York, in 1985.

state courts. See Courts, §2.

Staten Island. Borough at the juncture of Upper New York Bay and Lower New York Bay, it has long been the most geographically separate, economically homogeneous, and politically self-conscious of the city's five boroughs. It encompasses 60 square miles (155 square kilometers) and resembles an elongated diamond with a length of 13.9 miles (22 kilometers) between St. George and Tottenville and a width of 7.3 miles (12 kilometers) between Fort Wadsworth and Howland Hook. It is the third-largest borough in area but the least populous and least densely populated; in 2008 it contained only 6 percent of the population of New York City. Within its political boundaries are several smaller islands, uninhabited in the early twenty-first century: Prall's Island and the Island of Meadows, which are natural features; Hoffman Island and Swinburne Island, which are man-made; and Shooters Island, which lies partly in Staten Island and partly in New Jersey. Guarding the Atlantic gateway to the metropolitan region, Staten Island (Richmond County, formerly known as the Borough of Richmond) is the southernmost borough of New York City. It is the borough farthest removed from Manhattan, separated at its closest point by a 5-mile (8-kilometer) stretch of water, without direct tunnel, bridge, or subway linkage, traversed only by a world-famous passenger ferry (see Staten Island Ferry) that covers the distance in 25 minutes. Staten Island is connected to Brooklyn by the Verrazano–Narrows Bridge (1964), a suspension bridge with a main span of 4600 feet (1400 meters). The northern shore of Staten Island is separated from the Bayonne Peninsula by the Kill van Kull and the lower expanse of Newark Bay; the eastern shore borders the Upper New York Bay and the Narrows, a waterway 1 mile (1.6 kilometers) wide between Fort Wadsworth and Bay Ridge, the closest part of any other borough; the southern shore runs along Lower New York Bay and the edge of the Atlantic to the head of Raritan Bay; and the western shore runs parallel to the shoreline of New Jersey along the Arthur Kill (Staten Island Sound), at a distance often less than 500 feet (150 meters). Staten Island is connected to New Jersey by four bridges: to Elizabeth by the Goethals Bridge (1928) and an unnamed railroad lift bridge (1959), to Perth Amboy by the Outerbridge Crossing (1928), and to Bayonne by the Bayonne Bridge (1931), which crosses the Kill van Kull from Port Richmond. A ridge of seven rocky hills extending from the ferry landing at St. George diagonally to the center of the island at Richmondtown afforded sites for estates and institutions from the 1830s. Todt Hill, at 409 feet (125 meters), is the highest natural point on the eastern seaboard south of Maine. The marshy western shore of the island is bisected by the broad tidal entrance of the Fresh Kills, which drains the borough's northeastern hills and central Greenbelt, and in 1948 became the setting for the city's principal garbage dump, which from the 1980s until it closed in 2001 was the world's largest sanitary landfill. The borough has long been linked culturally and economically with the northern coast of New Jersey, particularly the industrial centers of Elizabeth, Perth Amboy, Carteret, Woodbridge, and Bayonne. During the Civil War the island's western and northern shores became important parts of the maritime and industrial service corridor for the developing city. Historic features and archaeological remains on Staten Island are abundant: there are more structures dating from the seventeenth century to the early nineteenth than in any other part of the city.

1. To 1860

During the sixteenth century and the early seventeenth the island was inhabited by Raritans and related Algonquin peoples of the Lenape (Delawarean) tribe, who referred to the land as Aquehonga Manacknong and Eghquaons. The first recorded exploration by a European was that of Giovanni da Verrazano, who in 1524 anchored in the Outer Bay and sailed through the Narrows. Henry Hudson's explorations of the North River in 1609 led to the establishment of trade at the mouth of the river by the Dutch, who named the island Staten Eylandt for the States General, the governing body of the Netherlands. In the 1620s Dutch settlement was concentrated at the southern tip of Manhattan. Three attempts were made to settle on Staten Island under the sponsorship of the patroons David Pietersen De Vries (1639–41) and Cornelis Melyn (1642–43; 1650–55, with Baron van der Capellan toe Ryssel). Each became the seat of conflict and was destroyed during the Dutch–Indian Wars waged by Governors Willem Kieft and Peter Stuyvesant. The first permanent settlement was made in 1661 by a

Amboy Road in Staten Island, 2009

small group of Dutch Walloon and Huguenot families at Oude Dorp, just south of the Narrows near South Beach. From this beginning and well into the 1750s the island's population retained a distinctive cultural and linguistic mix, which included a strong French Huguenot presence. Throughout the colonial period European settlers were fairly evenly divided among Dutch, Huguenot–Walloon, and English immigrants and descendants, with a substantial, growing minority (10 to 13 percent) of Africans, most of whom were slaves.

After the Dutch surrendered New Netherland to the English in 1664, Staten Island became part of the province of New York and was initially incorporated along with Westchester and all of Long Island (including Brooklyn and Queens) into the county of Yorkshire. In 1670 the provincial governor made a renewed treaty and final purchase agreement for the island with the local Indians, most of whom left soon after. To encourage colonial settlement, the English resurveyed the 18 lots of Oude Dorp (which they also called Dover or Old Town) and added 22 new lots along the beach to the south, which became known as the "New Lots of the Old Town," or New Dorp.

When the colony of New York was divided into 10 counties in 1683, Staten Island, Shooters Island, and the Island of Meadows were designated the county of Richmond, named for the residence and dukedom of James, brother of Charles II, in Yorkshire. Land patents were granted in multiples or portions of 80 acres (32 hectares), usually for rectangular lots along the coastline or inland waterways. By 1708 the entire island had been divided into at least 166 modest farmshares and two manorial estates: the Manor of Bentley, belonging to Captain Christopher Billopp, which encompassed 1600 acres (650 hectares) in the southwestern section (opposite the Amboys); and the manor kept by the colonial governors Francis Lovelace and Thomas Dongan, which covered 5100 acres (2065 hectares) and dominated the north-central hills. By 1687–88 the English had divided the county into four administrative precincts that to some extent followed natural features: these were the North, South, and West divisions, and Dongan's estate, known as the "Lordship or Manner of Cassiltown." These divisions in 1788 became the townships of Northfield, Southfield, Westfield, and Castleton.

The population of Staten Island grew from 727 in 1698 to 2847 in 1771. The island supported a productive coastal, agricultural economy that included farming, fishing, shipping, piloting, maritime trade, the milling of flour and lumber, and trades such as blacksmithing and cooperage. In 1729 the county seat was established at Richmond, a hamlet at the crossroads near the island's geographic center at the head of the Fresh Kills. Although it had barely a dozen buildings, it remained the only village on the island until after the War of 1812. During the eighteenth century small settlements arose near ferry landings, meeting places, and other sites of commercial activity, including what later became Port Richmond, New Brighton, and Woodrow. Licenses were granted for about 10 ferry crossings to points in New Jersey, Long Island, and Manhattan, allowing for frequent travel and communication with Manhattan and the towns of northern New Jersey, which served as the market centers for farm and fishery produce and goods from the island.

The strategic position of Staten Island at the entrance to New York Harbor was important in the American Revolution. In July 1776 the island became the primary ground for landing and staging troops for the Battle of Brooklyn in August, the largest battle of the entire war; Staten Island was also the site of a futile peace conference on 11 September. Although predominantly Tory in sentiment, Staten Islanders were hard-pressed to fulfill their obligation to supply and house the troops, who sometimes numbered 30,000, or 10 times the resident population. Staten Island was occupied by the British throughout the war, after which it was virtually deforested; its county government buildings and a number of churches were also destroyed. The island became the point of departure for the British on 25 November 1783.

After the revolution the population rose slowly but steadily, from 3835 in 1790 to 4564 in 1800. Despite local protest the state of New York in 1799 moved the quarantine station, used for isolating passengers and seamen with contagious diseases, from Governors Island to new buildings on the northeastern shore of Staten Island. Between 1807 and the end of the War of 1812 improvements were made to the fortifications in the harbor, and a signal flag system was established between the forts at the Narrows, the Upper Bay, and the Navy Yard in Brooklyn. Development from 1815 to 1820 was spurred by the rise of New York City as the national metropolis and the inception of steam ferry service. Daniel D. Tompkins, the governor of New York from 1807 to 1816 and a longtime resident of Staten Island, promoted several developments, establishing a ferry line linked to a cross-island turnpike and stagecoach system, which provided an improved route between New York City and Philadelphia, and a suburban village planned on a grid surrounded by hillside villas (Tompkinsville, 1814–15). The industrial complex and settlement of Factoryville was built in 1819. During the 1820s the population grew at a rate almost twice that of each of the three preceding decades. In response to a declining extractive shell fishery, the island's watermen initiated a system of oyster cultivation and trade, which became the basis of a major metropolitan food industry.

The island's population increased by 54 percent during the 1830s, to 10,960, and by 69 percent during the 1850s, to 25,492, as many sought out the island for summer retreats away from the dangers and discomforts of Manhattan, especially after the epidemics of yellow fever and cholera during the 1820s and 1830s and the Great Fire of 1835. A romantic suburb and hotel resort was founded in New Brighton in 1834–35; other development included Stapleton (1833–34), Elliotville (1836), Clifton and Rossville (1837), and Port Richmond (*ca* 1838). The island also became the setting for institutions, particularly maritime philanthropies and health care facilities: Sailors' Snug Harbor (1831–33) and Seamen's Retreat (Clifton, 1834–37) were monumental complexes; Mariners' Family Asylum (Stapleton, 1854) and the Society for Seamen's Children (Port Richmond, 1849) were more modest in conception and design. On the southern

shore wealthy residents of New York City and New England such as Frederick Law Olmsted made experimental farms. Oystering and shipping along the eastern seaboard linked Staten Island closely with the southern states, especially Maryland and Virginia, where the island's mariners introduced methods of shellfish cultivation and distinctive vessel types. White merchants and planters with business interests in Manhattan also patronized the island's fashionable hotels and hillside villas. About 1840 free black watermen from Snowhill, Maryland, moved to Staten Island with their families to escape restrictive laws and established the community of Sandy Ground near Prince's Bay.

Many Irish and German immigrants who sailed across the North Atlantic in the late 1840s settled on Staten Island. Stapleton, Castleton Corners, and Kreischerville (1854) became a prominent center of German-language culture and industries. The majority of Irish immigrants settled in Factoryville and other areas of manufacturing on the northern shore; lesser numbers took up small-scale farming and village trades near Richmond, Rossville, and Graniteville. Staten Islanders in 1857–58 opposed the expansion of the state quarantine station, which they burned to the ground after their protests were ignored. The station was eventually transferred to an offshore floating hospital and then to Hoffman and Swinburne islands (1873).

2. After 1860

In 1860 a railroad between Clifton and Tottenville opened and hamlets formed near railroad depots (later Dongan Hills, Oakwood, Eltingville, Annadale, Huguenot, and Richmond Valley); that year a new township, Middletown, was created in the northeastern section of the island from parts of Castleton and Southfield. During the Civil War, Staten Island became a major military encampment and training ground, and influential abolitionists lived in Elliotville and New Brighton. Riots against the draft broke out in Tompkinsville, Stapleton, New Brighton, and Factoryville between 14 and 20 July 1863, coinciding with similar riots in Manhattan.

In 1866 Edgewater (including Tompkinsville, Stapleton, and Clifton), Port Richmond, and New Brighton became the first villages to be formally incorporated, followed by Tottenville in 1869. By 1870 there were only 33,029 inhabitants, making Staten Island smaller than the section of Westchester later designated the Bronx. An 1871 committee led by Olmsted reported that the lack of development in Richmond County was due to poor ferry service and a belief that malaria was prevalent. The committee recommended stricter supervision of the ferries, a system for managing natural watersheds, and improvements to highways and parks, including a central public common 4 miles (6.4 kilometers) long. Most of these proposals were ignored, but improvements made to utilities and transportation by the developer Erastus Wiman (1834–1904) spurred growth in the 1880s and 1890s. Rail and ferry services were consolidated and unified in 1880. The Staten Island Railway (1860) was expanded to double tracks and extended in 1884 to St. George, where a combined rail and ferry terminal was constructed in 1886. Two new branch lines were added, one along the northern shore in 1887 that crossed the first permanent bridge to New Jersey (1889), the other along the eastern shore to South Beach (1892). Wiman and his associates sought to establish suburbs, estates, heavy industry, popular resorts, and mass entertainment. Staten Island gained telephone service in 1882 and electric trolley lines between 1892 and 1896. Housing developments were built at St. George, Arlington, Elm Park, Livingston, Fort Wadsworth, Arrochar, Rosebank, Giffords, and Meiers Corners. Suburban temperance communities at Westerleigh (Prohibition Park) and New Dorp met with immense success. Large amusement parks were built at Midland Beach and South Beach. The city's industrial and business elite continue to build mansions on the hills and organize private clubs, schools, and sporting associations. Manufacturing expanded in the north and east at Port Richmond, Mariners Harbor, Elm Park, West Brighton, and Stapleton. The company villages of Linoleumville and Kreischerville dominated the sparsely populated shore of the Arthur Kill, and major factories appeared as far south as Prince's Bay and Tottenville. Several institutions for aiding poor children were established, among them Mount Loretto, a mission for homeless newsboys in Prince's Bay (1882); St. Michael's Home, a large Catholic orphanage in Greenridge (1884); and Seaside Hospital in New Dorp Beach (1886).

Most residents of Staten Island favored closer connections with New York City. In a nonbinding referendum in 1894 they voted four to one in favor of consolidation with the city. When the new charter took effect in 1898 George Cromwell became the first president of the borough of Richmond, the four village and five town governments were disbanded, and the townships became designated as wards. Consolidation accelerated development on Staten Island: between 1880 and 1930 the population rose from 12,702 to 41,815. By 1900 immigrants had moved in: Italians in Rosebank, South Beach, and West Brighton; Hungarians, Poles, and Slavs in factory villages on the western shore, including Linoleumville and Kreischerville; and Scandinavians near the shipyards of Mariners Harbor and at Great Kills. Small Jewish communities developed in parts of Port Richmond, New Brighton, and Tompkinsville; Greeks took up truck farming in Bull's Head, Greenridge, and New Springville; and southern blacks joined the small local African American communities in Tompkinsville and Stapleton, West Brighton, and Sandy Ground.

A new borough hall was constructed between 1904 and 1906 and a civic center in St. George. By 1905 the ferry system, schools, police, fire protection for the northern and eastern shores, and most other primary services were

Last pair of working oxen in New York City, La Tourette Farm in Staten Island, 1904. Photograph by Edward Wenzel

run by the city, which also took over and expanded the old County Almshouse (renamed the New York City Farm Colony) in the south central hills, and erected Sea View Hospital (1913), for many years the largest tuberculosis sanitarium in the world. A pipeline laid under the Narrows brought pure water from the Catskill Mountains to the island's Silver Lake Reservoir in 1917. By 1921, when virtually every government facility had been transferred out of Richmondtown (except the county jail), 67 percent of the 116,531 inhabitants of the borough were concentrated in a belt 2 miles (3 kilometers) wide across the eastern and northern shores, about one-sixth of the total land area. An aggressive program of road construction improved internal circulation and opened new areas for subdivision. Between 1907 and 1919, Sunnyside, Giffords, and parts of Tottenville were developed. This served as a prelude to the bigger boom of the 1920s, which swept the island in anticipation of a planned system of bridges to New Jersey and a promised direct subway connection with the city, for which ground was broken in St. George and Brooklyn in 1923. Groups of modest, detached one-family houses were built at Randall Manor and Shore Acres, on Lighthouse, Todt, and Emerson hills, and along Hylan Boulevard (1924–27), the broad artery along the southern shore between Dongan Hills and Great Kills. Staten Island was promoted as a "borough of homes," much like Queens. By the end of the decade the borough had its first four-family duplexes and apartment buildings, concentrated in St. George, New Brighton, and Silver Lake.

As the volume and scale of activity in the port of New York swelled, industry expanded along the shores of the Arthur Kill and the Kill van Kull. Procter and Gamble established its manufacturing and distribution center for the East Coast of the United States at Port Ivory in 1907. The shipyards at Mariners Harbor and Shooters Island became known nationally during World War I. Local factories produced chemicals, paint, metals, textiles, tools, and building materials. After the war the federal government converted the estate of William H. Vanderbilt at New Dorp Beach into Miller Field, an air defense station and training ground (1919).

Industrialization of the lower harbor and the spread of bungalow and immigrant working-class development diminished the island's desirability for the wealthy. The last of the great resort hotels closed before World War I, and during the 1920s most estates were sold to institutions or developers for subdivision. In 1918 Wagner College moved from Rochester, New York, to Bellevue, the former estate of Sir Edward Cunard, and later absorbed into its campus the estate of William Greene Ward and a tract previously owned by Jacob Vanderbilt.

The opening of three bridges (the Goethals Bridge and the Outerbridge Crossing in 1928, and the Bayonne Bridge in 1931) and a new local span over the Fresh Kills (1931) improved commercial access to the island, just as the onset of the Depression devastated local manufacturing and ended work on the subway tunnel to Brooklyn. The failure to complete the tunnel under the Narrows or a bridge in its place delayed development for a generation, and the population rose slowly during the 1930s and 1940s; only after 1964, when the Verrazano–Narrows Bridge opened, did the growth rate equal the level achieved during the 1920s. The Depression brought hardship to the island. For many, relief was provided by massive public works projects, which left a legacy of parks, schools, and amenities. Important projects built on Staten Island by the Temporary Emergency Relief Administration and the Works Progress Administration included many parks, schools, cultural institutions, and public facilities, among them the Staten Island Zoo (Barrett Park, 1930s), the museum of the Staten Island Historical Society (1950s), La Tourette Golf Course (1920s), Clove Lake Park (1930s), Silver Lake Golf Course (1920s), the George Cromwell Recreation Center (1930s), the Goodhue playground and pool, the Franklin D. Roosevelt Boardwalk (1930s), an addition to the hospital of the U.S. Public Health Service (1930s), murals for Borough Hall, the high schools at Tottenville and New Dorp, and an addition to Curtis High School. To stimulate commerce the city established a foreign trade zone at the piers in Stapleton (1937–38). The Great Kills Wetlands were used for landfill (1938), on which Great Kills Park was later built.

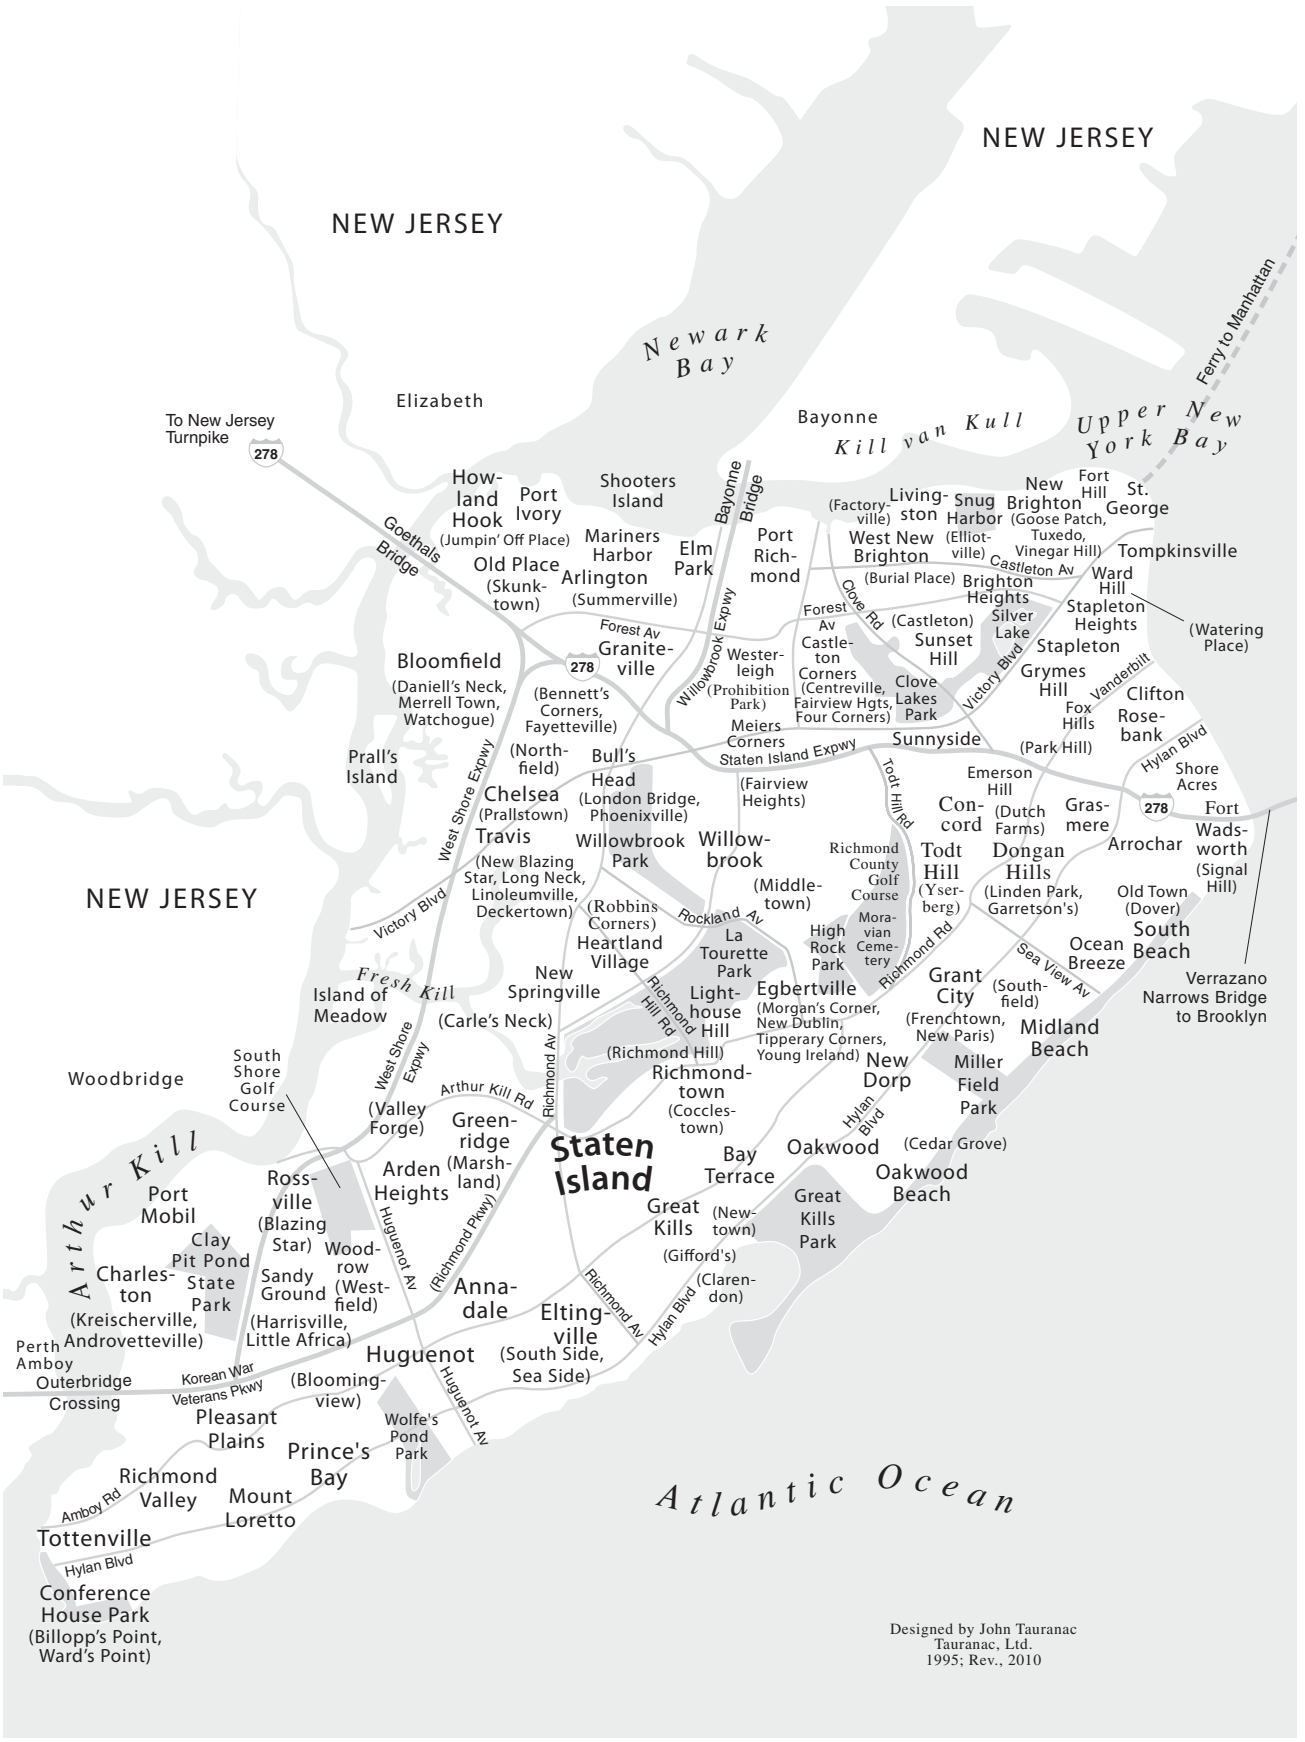
In 1940 the population of the borough, 174,441, still had the highest proportion of native-born residents in the city (74 percent). World War II renewed military activity on Staten Island and invigorated the shipyards and other industries. The U.S. Army took over the piers in Stapleton, established the Staten Island Area Station Hospital in New Dorp Beach and Halloran General Hospital (converted in 1947 into Willowbrook State School), and built barracks in Fox Hills. A few residential developments also went up, including the island's first public housing project (in Port Richmond, 1943). The population grew after the war, and in 1946 Robert Moses revived and modified a plan for arterial parkways and bridges that was approved between 1954 and 1958. Development during the 1950s and early 1960s reflected the increasing prominence of the automobile and the growing divergence between the older, densely settled northern shore, and the southernmost 70 percent of the island. Seven public housing projects were built in Stapleton, West New Brighton, Mariners Harbor, South Beach, Castleton Corners, Dongan Hills, and New Brighton between 1950 and 1964. A section of Fresh Kills was first used as a city landfill in 1948; the project site was greatly expanded in 1951. Passenger rail lines on the northern and eastern shores were abandoned in 1953. The village business districts along the main streets of small towns were replaced by supermarkets and shopping centers along Hylan

Staten Island Borough Hall (left) and Richmond County Courthouse (both designed by Carrère and Hastings), Richmond Terrace, ca *1957*

Boulevard and near the center of the island. The College of Staten Island, now a branch of the City University of New York, opened in 1956.

The opening of the Verrazano–Narrows Bridge on 21 November 1964 allowed for "quick and easy access" to the rest of the city, with 19,000 unbuilt acres (7700 hectares) for development. Planners forecast a doubling of population, to 500,000, within 20 years. During the 1970s, when population declined in every other borough, Staten Island was among the fastest-growing counties in the state. The population according to the census of 1980 was 352,029, a gain of almost 20 percent for the decade; the figure 10 years later, 378,977, which local officials criticized as an undercount, indicated a growth rate of 7.7 percent, still by far the highest in the city. There was a net growth of more than 22,000 housing units on the island between 1980 and 1990, and this trend accelerated over the next decade: by 2000, 23,000 more new housing units had been added (up 14 percent) as the population reached 443,728—a gain of 17.1 percent, higher than any other borough in the city.

The apportionment of municipal costs and services became matters of intense public debate in the 1970s. A comprehensive development plan sponsored by the city for South Richmond (1971) was opposed by residents of the island and rejected by the state assembly in 1973. More traditional zoning was adopted by the City Planning Commission in the same year. The spread of semidetached housing, garden apartments, townhouses, and multistory condominiums across the interior and southern sections of the island redistributed the population toward its geographic center. During the 1970s the last privately owned truck farms were sold, and many factories and institutional complexes were abandoned or moved. The year 1975 marked the end of the five-cent ferry fare to Manhattan (increased to 25 cents), the partitioning of the island into three community districts along new east–west lines, and the official renaming of the borough from Richmond to Staten Island.



From the 1970s into the twenty-first century, the population remained predominantly white (about 77.6 percent, according to the census of 2000), even as increasing numbers of blacks (9.7 percent of the population in 2000), Hispanics (12.1 percent), and Asians (5.7 percent) became apparent. In 2000, 16.4 percent of the population was foreign born, with the largest immigrant groups from Italy, Mexico, China, the Philippines, and India. In the early twenty-first century Staten Island remained a residential borough with the highest proportion of owner-occupied housing (more than 64 percent in 2000), single family owner-occupied housing (47 percent), and car ownership in the city. The economy was service-oriented, directed to local market needs; health services and social assistance were the largest sector, followed by retail trade. Only 39 percent of the labor force was employed on the island. Many residents commuted to Manhattan, often to work for the uniformed city services and municipal government. Manufacturing continued to decline (Procter and Gamble closed its factory at Port Ivory in 1991; Sun Chemical in 2007), but maritime industries survived along the northern, eastern, and western shores. In 1990 the U.S. Navy opened Homeport–Stapleton, but in 1993 a presidential review committee found the facility unnecessary; the naval station was decommissioned and closed the following year. Plans to reactivate the Howland Hook Marine Terminal, a 187-acre (76-hectare) facility of the Port Authority of New York and New Jersey largely vacant since 1986 and unoccupied since 1991, were finally realized in 1996; it then became the fastest-growing marine terminal in New York Harbor. The Port Authority purchased Procter and Gamble's former Port Ivory property in 2001, adding 124 acres (50 hectares) to the terminal site. In April 2007 the Arthur Kill Bridge, closed since 1991, was reopened to freight rail line service, providing direct rail access to the container terminal, Pratt Industries' Visy Paper recycling plant in Travis (opened in 1996), and other industrial businesses on the west shore.

Residents became increasingly concerned with issues of development, land use, and the environment: pollution from refineries and other industries in New Jersey, traffic congestion, inadequate transportation and sewerage, high transit fares and tolls, and the continuing operation at Fresh Kills of the only active landfill in New York City, more than a decade after the city had agreed to close it. The abolition of the city's Board of Estimate in 1990 and the concomitant reduction in power of the borough presidency intensified feelings of resentment toward the city, and in November 1990 residents voted overwhelmingly in a referendum to create a special commission to examine the feasibility of seceding from New York City and establishing Staten Island as a separate municipality. In 1993 the Charter Commission on Staten Island Secession presented a favorable report on the issue and prepared a draft charter for an independent city of Staten Island, which was approved by 65 percent of the borough's voters in November 1993. The matter was opposed by city officials and, although approved by the state senate, remained blocked by the assembly, which refused to permit a vote without a home-rule message from the city. The call for secession brought attention to Staten Island concerns from new city and state government administrations that had benefited from island voter support in the mid-1990s. Local elected officials introduced legislation in the City Council and the state legislature to close the Fresh Kills landfill by 2002, an effort actively supported by the governor, mayor, and borough president. The landfill received the last barge of trash on 22 March 2001, but it was temporarily reopened six months later, until June 2002, to process the debris from Ground Zero during the recovery effort after the September 11 terrorist attacks. Master planning to transform the 2200-acre (890-hectare) Fresh Kills site into a world-class park began in 2003, and a park administrator was appointed in 2006. When completed in about 30 years, the result of one of the world's largest reclamation projects, the new park will double the size of the Greenbelt and increase the borough's public open space to more than 30 percent of its land mass.

In 1997 the ferry fare, raised from 25 to 50 cents per round trip in 1990, was eliminated altogether, to coincide with the introduction of the gold MetroCard, permitting free transfers between all transit buses and subways in the city. As part of the effort to revitalize the St. George waterfront and civic center, a 7171-seat baseball stadium was built on the former railroad site next to the Staten Island Ferry terminal for the Staten Island Yankees, a Minor League Baseball team brought to the island in 1999; the stadium opened in June 2001. Major rehabilitation of the island's beaches and restoration of the South Beach boardwalk began in 1994. More dramatically, concern with overdevelopment led to significant downzoning to reduce the density of new construction and preserve the traditional residential character of island neighborhoods by limiting construction of multifamily or semidetached housing. Between 1987 and 2002, more than 16,000 acres (6475 hectares), predominantly on the south shore, were downzoned through the efforts of community groups and the borough president. In July 2003 the mayor established the Staten Island Growth Management Task Force, co-chaired by the borough president and director of city planning, which issued a comprehensive report at the end of the year. At the same time, the borough president introduced six related downzoning initiatives covering 4554 acres (1843 hectares) in mid-island and the north shore. The task force's recommendations for lower-density growth management were adopted by the City Council in August 2004.

Staten Island lost nearly 270 residents in the 11 September 2001 terrorist attacks on the World Trade Center. Of the more than 1200 victims who were city residents, 16 percent lived on Staten Island. On the third anniversary of the attacks, the Staten Island 9/11 Memorial, designed by Masayuki Sono, was dedicated, located next to the ferry terminal, overlooking the harbor and lower Manhattan.

Staten Island is served by three colleges: Wagner College (1929), the College of Staten

Island (1976), and a campus of St. John's University (1971). It is also the site of many parks, museums, historic houses, a zoo, a botanical garden, two highly ambitious landmark historic cultural facilities (Historic Richmond Town and Snug Harbor Cultural Center), a section of the Gateway National Recreation Area, and three major environmental preserves: the Greenbelt (1984), the largest park in New York City at 2500 acres (1012 hectares), operated by the city; Clay Pit Ponds State Park; and Mount Loretto State Preserve (2006).

Charles L. Sachs

Staten Island Academy. Private, coeducational primary and secondary school opened in 1862 as the Methfessel Institute by Anion Methfessel, a German-educated teacher of language education who sought to establish a boys' boarding school with a strong emphasis on language training. In 1864 the school became Staten Island Academy and Latin School. After a series of mergers with other schools during the 1930s it moved to its present location on Todt Hill and in 1951 took its current name.

Richard Schwartz

Staten Island Advance. Daily newspaper, launched in 1886 as the *Richmond County Advance* (published weekly) by the printer John J. Crawford and the businessman James C. Kennedy. It later became the *Daily Advance* before taking its current name. The *Advance* was one of the first business establishments on Staten Island to use electricity and commercial telephones. It surpassed nine early competitors as its circulation rose from 4500 in 1910 to 80,000 on weekdays and 92,000 on Sundays in the mid-1990s. In 1922 the *Advance* was bought by S. I. Newhouse; between 1924 and 1958 Newhouse acquired 11 newspapers, with the *Advance* becoming the flagship of the Newhouse Group. After many years at two locations in West Brighton, the newspaper moved to its present site in Grasmere in 1960. Richard E. Diamond, Newhouse's nephew, became publisher in 1979. A 1986 "Centennial Edition" was the largest weekday paper ever published in New York City and an important chronicle of Staten Island history. Another special edition, "Guide 2001," examined every aspect of Staten Island life, including its new diversity. In 2002 the *Advance* launched a redesigned newspaper printed on a state-of-the-art German press. Caroline Diamond Harrison succeeded her father as publisher in 2004. The *Advance* continues as a community newspaper and a sponsor of special events for athletes, women, volunteers, and firefighters. Its stories about neighborhoods, ethnic groups, transportation, and the environment record and mirror the concerns of Staten Islanders.

Howard Weiner

Staten Island Ferry. Ferry route connecting Battery Park, Manhattan, with St. George, Staten Island, over a distance of 6.2 miles (10 kilometers). The earliest charters for sail service between Manhattan and Staten Island date from 1713; the first steamboat was used in 1817. In 1884 the Baltimore and Ohio Railroad acquired a number of existing lines and operated the ferry until 1905, when it was taken over by the city government. Large steamboat double-enders were used between 1857 and 1981 to accommodate passengers and vehicles. These were replaced by diesel-powered ships that could carry as many as 6000 passengers; boats that took automobiles were reduced to a limited schedule. Even after the opening in 1964 of the Verrazano–Narrows Bridge between Brooklyn and Staten Island the ferry remained a lifeline for a large commuting population, operating 365 days a year, 24 hours a day. The ferry trip became a favorite with tourists for its unsurpassed views of the harbor, the Statue of Liberty, and lower Manhattan. It also remained popular because of its low fare: until 1974 a one-way ride cost five cents. From that time only round-trip tickets were sold, successively for 10 cents (to 1976), 25 cents (to 1989), and 50 cents until the fare

Staten Island Ferry Terminal, 2009

Staten Island Ferry approaching the Staten Island Ferry Terminal, ca *1937*

was eliminated altogether in 1997. On 8 September 1991 a fire severely damaged the Whitehall terminal in Manhattan, and a terminal nearby maintained by the U.S. Coast Guard was temporarily used as a substitute. A ferry accident in October 2003 horrified the city: the *Andrew J. Barberi* crashed into a concrete pier at the St. George terminal at full speed, killing 11 people and injuring scores of others; the pilot had fallen asleep and was later convicted of manslaughter. Three new boats were launched in 2005–6, and in 2005 a new Whitehall terminal was constructed, while the St. George terminal underwent extensive renovation and expansion. Increased security after the terrorist attacks of 11 September 2001 and new ferry and terminal expenditures led operating costs for the system to more than double in the early twenty-first century. In 2008 the ferry carried more than 19 million passengers, or 65,000 passengers per weekday. Cars were prohibited after 9/11.

Theodore Scull, *Staten Island Ferry* (New York: Quadrant, 1982)

Arthur G. Adams

Staten Island Historical Society. Organization chartered by New York State in 1856. It sponsored meetings and lectures in its first decade but then lay dormant until 1900, when another charter was drawn up focusing on the preservation of historic landmarks. In 1920 the society was reorganized and in 1922 absorbed the Staten Island Antiquarian Society (formed in 1915), acquiring in the process the Billiou–Stillwell–Perine House (circa 1660) at 1476 Richmond Road in Dongan Hills, the oldest house on Staten Island and the second-oldest in New York City. Under the direction of Loring McMillen (1908–91) and with the assistance of the Works Progress Administration, the society opened the Historical Museum at Richmondtown in 1935 and launched a campaign to save artifacts and records of daily life and culture in the area. It purchased Voorlezer's House in 1939 and other buildings nearby in the hopes of restoring the entire village as a museum. Government support for this purpose was first sought in the 1950s; in 1958 the society deeded its property at Richmondtown to the City of New York in exchange for partial operating support. Historic Richmond Town is now administered on behalf of the city by the society, which maintains its headquarters there. In addition the society owns the Sylvanus Decker Farm in New Springville (10 acres [4 hectares]), the last remaining farm on Staten Island, acquired by bequest in 1955; the Judge Jacob Tysen House, purchased from the trustees of Sailors' Snug Harbor in 1970; a library and archive of local history; a photography collection of more than 50,000 images, including the Alice Austen Collection; and about 80,000 artifacts.

Barnett Shepherd

Staten Island Museum. Founded in 1881 as the Natural Science Association of Staten Island, it is New York City's only general-interest museum housing the arts, natural sciences, and local history. Each year more than 65,000 visitors go to the museum and participate in its programs. It has been instrumental in the founding of many other cultural organizations on Staten Island such as the Staten Island Botanical Garden and the Staten Island Zoo. As of 2009 it has secured almost $16 million in City Capital funds for opening the first major art museum in Staten Island. It is located at 75 Stuyvesant Place.

Jessica Montesano

Staten Island Railway [SIR]. Electrified rapid transit line operating exclusively on Staten Island, connecting the St. George Ferry Terminal to Tottenville at the island's southern end. The 14-mile (23-kilometer), double-tracked route has 22 stations and functions primarily to bring island commuters to and from the ferry terminal. Until the 1980s the SIR also hauled freight between Staten Island and New Jersey.

The SIR began in 1860 when Cornelius "The Commodore" Vanderbilt built a new rail line from Vanderbilt's Landing (now Clifton) to Tottenville. The SIR soon controlled the ferries connecting Staten Island to Manhattan, but an 1871 explosion on a ferry docked in Manhattan killed 68 people and sent the SIR into receivership. In the 1880s the Baltimore and Ohio (B&O) Railroad, looking to gain a railhead in New York City, provided financial backing to the SIR and financed expansions from Clifton to St. George, west along the north shore to Howland Hook, and from Clifton to South Beach. The new venture was named the Staten Island Rapid Transit Railroad Company, the first application of the term *rapid transit.* Ferry service to Manhattan was moved to the present location at St. George in 1898; after financial difficulties in the late 1890s, the B&O bought out the SIR and its Manhattan ferries in 1899. A 1901 ferry accident forced the B&O to relinquish the boat operations (1905) and concentrate on running Staten Island's rail lines, which now included a bridge over Arthur Kill to Cranford, New Jersey, for interchange of freight with mainline railroads.

In 1925 the B&O electrified the entire SIR passenger operation, using third rail and new subway-type cars designed to operate on Brooklyn–Manhattan Transit Corporation (BMT) subway routes as well. That same year construction started on a tunnel under the Narrows to connect the SIR to the BMT's Fourth Avenue subway, but work soon ground to a halt, never to be reinstated. Blame for never building this tunnel has often been placed on New York Mayor John F. Hylan (because of his earlier quarrels with the BMT), on the assumption that Hylan obstructed the work because the BMT stood to benefit from the tunnel. Another theory is that Alfred E. Smith, governor of New York in 1925, had a hand because he owned considerable Pennsylvania Railroad (PRR) stock. (The B&O was PRR's main competitor between New York City and Washington, D.C.) Beginning in the 1930s, the SIR embarked on the elimination of its many street grade crossings; the last one was completed in the 1970s. In 1947 the New York City Board of Transportation bought Staten Island's local bus route operator, cut fares to five cents, and in the process took away 60 percent of the SIR's patronage. In 1953 the SIR dropped passenger trains on its North Shore and South Beach branches, leaving the St. George–Tottenville route as its only passenger line. In 1959 the SIR completed a new lift bridge over Arthur Kill. On 1 July 1971 the B&O sold the SIR to the Metropolitan Transportation Authority, which created a subsidiary, the Staten Island Rapid Transit Operating Authority (SIRTOA), to run the railway. In 1973 a fleet of 52 R-44 subway cars replaced the 1925 fleet; later expanded to 64, the fleet continued to provide rapid transit service on Staten Island in the early twenty-first century. In the 1990s the line reverted to its old name of Staten Island Railway. Since the 1990s fares and transfers have integrated into the New York City Transit Authority's tariffs, and since 1997 the MetroCard system has enabled SIR riders to utilize Staten Island's buses, as well as subway and bus connections in all other boroughs, for no additional fare after riding the ferry from St. George.

Andrew Sparberg

Staten Island Yankees. Baseball team. It is a part of the New York–Penn League and

McNamara Division of Minor League Baseball's Class A (short season). Originally called the Watertown (New York) Indians, a farm team affiliated with the Cleveland Indians, the team moved to Staten Island and became affiliated with the New York Yankees in 1999. The newly named Staten Island Yankees played at the College of Staten Island Baseball Complex from 1999 to 2000 before moving to the new 7171-seat Richmond County Bank Ballpark in 2001. The "Baby Bombers" won division and league titles in 2000, 2002, 2005, 2006, and 2009 and have sent former players to the New York Yankees, including Jason Anderson (2003), Chien-ming Wang (2005), and Robinson Canó (2005).

Mary Elizabeth Brown

Staten Island Zoo. The Staten Island Zoological Society was formed in 1933 to develop a zoo in Clarence T. Barrett Park in northern Staten Island. A Works Progress Administration project, the zoo was completed in 1936 on an 8-acre (3.2-hectare) estate willed to the city by Mrs. Edward E. Hardin; it consisted of one redbrick building. Carl F. Kauffeld, curator of reptiles, led the zoo in exhibiting every kind of rattlesnake known in the United States. The zoo was the first American facility to employ a full-time female veterinarian, Dr. Patricia O'Connor, in 1942. Expanded in 1969 with a children's center, the zoo was modernized throughout the 1980s, winning accreditation from the American Association of Zoological Parks and Aquariums in 1988. The zoo, which is owned by the city and funded by the Department of Cultural Affairs, opened the Carl F. Kauffeld House of Reptiles in 2007. Known for its reptile collection and educational mission, the zoo received more than 300,000 visitors annually early in the twenty-first century.

Kate Lauber

State University of New York [SUNY]. Statewide system of higher education formed in July 1948. Four of its affiliates are in New York City: the Fashion Institute of Technology (227 West 27th Street, Manhattan), the College of Optometry (33 West 42nd Street, Manhattan), the Health Science Center at Brooklyn (Downstate Medical Center, 450 Clarkson Avenue), and the Maritime College (Fort Schuyler, Bronx). Empire State College, which specializes in distance learning, offers specialized programs in New York City, including the Harry Van Arsdale, Jr., School for Labor Studies at 325 Hudson Street, Manhattan; one program in Brooklyn at 177 Livingston Street; one program in Staten Island at 500 Seaview Avenue; and various special and fine arts programs.

Statue of Liberty. Monument in Upper New York Bay. First proposed in 1875 by the French statesman Édouard de Laboulaye as a gift from France to the United States commemorating liberty and friendship between

Liberty Island, 2009

the two nations, it was completed by 1880 at a workshop in France by the sculptor Frédéric-Auguste Bartholdi, who chose Bedloe's Island (from 1956 Liberty Island) as the site of the monument. The American Committee for the Statue, composed largely of members of the Union League Club, solicited contributions to pay for the design and construction of the pedestal and selected an architectural plan submitted by Richard Morris Hunt, who had earlier designed the Tribune Building and the Lenox Library. To supplement the funds raised by the committee, the readers of the *World* contributed more than $100,000 in 1885, which made it possible for the pedestal to be finished and the statue assembled over a metal framework designed by Gustave Eiffel. The statue was dedicated on 28 October 1886 and soon became one of the most widely recognized landmarks in the world. Its symbolic association with New York City and particularly with its immigrants was heightened in 1903 when Emma Lazarus's poem "The New Colossus" was inscribed on a bronze tablet laid in the pedestal.

In 1956 the U.S. Congress approved the plans of several prominent New Yorkers and others to assist the National Park Service (NPS) in enlarging the base of the statue and opening a museum within it. In 1965 President Lyndon B. Johnson administratively joined neighboring Ellis Island to the Statue of Liberty, and the two became known as the Statue of Liberty National Monument. In 1982 President Ronald Reagan appointed Lee Iacocca to head a private-sector effort to raise funds for the restoration of both sites. The resulting Statue of Liberty–Ellis Island Foundation contributed more than $100 million to the statue's repair, which began in 1984; in July 1986 the refurbished statue reopened to the public in a gala celebration of its centennial. In 1984 it was designated by the United Nations as a World Heritage Site.

The statue received more than five million visitors annually in the early twenty-first century. After the destruction of the World Trade Center on 11 September 2001, the NPS closed Liberty Island for 100 days. Visitors were again able to enter the statue's base and museum on 3 August 2004, following a $20 million fire safety and security upgrade, but they were barred from access to the interior of the statue above the pedestal's observation deck. New York congressman Anthony Weiner pushed for years for the crown to be reopened, and on 4 July 2009 the NPS reopened the crown through a ticketing and reservation system that restricts the number of visitors.

Barbara Blumberg

steam. The Common Council of New York City in December 1878 granted a franchise to Francis B. Spinola to lay pipes under the streets of Manhattan and form a company to supply hot air or steam. The franchise was bought in 1879 by Wallace C. Andrews, who formed a company called the Steam Heating and Power Company of New York (incorporated 24 July 1879). The New York Steam Company, formed on 26 July 1880, became a rival and Andrews bought a controlling interest in it. On 19 September 1881 the companies merged to form the New York Steam Company, which opened headquarters at 16 Cortlandt Street and dug its first pipelines under the direction of chief engineer Charles Edward Emery. The American Steam Company offered keen competition until one of its pipes burst and hurled 3 tons (2.7 metric tons) of lampblack onto Maiden Lane. In March 1882 the New York Steam Company provided service for its first customer, the United Bank Building (88–92 Broadway). Steam heat soon became popular because it made heating plants for each building unnecessary. By the end of 1882 the company had 62 customers around Wall Street served by its boiler plant, which stood in the block bounded by Dey, Greenwich, Cortlandt, and Washington streets; in 1886 it had 350 customers and 5 miles (8 kilometers) of mains. A second boiler plant was opened at Madison Avenue and 58th Street, mainly for elegant homes, including those of Seth Low and Frederick Gallatin. The company bought some steam from Consolidated Gas (later Consolidated Edison), which by 1932 had six boiler plants and a network of pipes extending from the Battery to 97th Street. In 1959 the New York Steam Company was absorbed by Consolidated Edison.

In August 1989 a steam pipe burst near Gramercy Park, killing three people, injuring dozens, and spewing asbestos. Consolidated Edison removed asbestos from its 1800 manholes over steam mains, many of which it inspected and refurbished in 1991. More than a dozen smaller explosions have occurred since then, including a severe explosion in July 2007 that killed one person and injured more than 30. About 1800 buildings in the city relied on steam for heat and for power to run air-conditioning compressors in 2007, down from 2200 in 1989. In the early twenty-first century more than 100 miles (160 kilometers) of pipes under Manhattan provided steam for heat and power to hundreds of office and residential buildings.

Alana Erickson Coble

Steffens, (Joseph) Lincoln (*b* San Francisco, 6 April 1866; *d* Carmel, Calif., 6 Aug 1936). Journalist. He settled in New York City in 1892. As a reporter at the *Evening Post* covering the police and finance he was required by his editor E. L. Godkin to suppress his gift for story-telling. He became the city editor in 1897 of the *Commercial Advertiser* and the managing editor in 1901 of *McClure's,* where he made his reputation with the series "The Shame of the Cities" (1902–3), written on the eve of a municipal election. He was disappointed by the outcome of the voting, in which the reformist mayor Seth Low failed to win a second term. In 1906 he left *McClure's* for the *American,* and in 1908 he joined the staff of *Everybody's.* His autobiography (*The Autobiography of Lincoln Steffens,* 1931) includes compelling descriptions of immigrant neighborhoods in the 1890s, accounts of Theodore Roosevelt's frenetic career as president of the Police Board, and recollections of his own friendly rivalry with Jacob A. Riis, whom he once outdid by stealing files from the police. Steffens lived at 42 Washington Square South. He spent his last years in California.

Robert Stinson

Steichen, Edward [Eduard Jean] (*b* Luxembourg, 27 March 1879; *d* West Redding, Conn., 25 March 1973). Photographer. In 1900 he became associated with Alfred Stieglitz, who published his soft-focus photographs in the magazine *Camera Work.* While living in France in 1906–14 he provided drawings by Auguste Rodin and Henri Matisse for exhibit at the Little Galleries of the Photo-Secession in New York City. His experience in aerial photography, acquired in the U.S. Army in 1917–19, helped to give a hard-edged, industrial quality to his work. He was chief photographer for Condé Nast's publications from 1923 to 1937, and he did portraits for the magazines *Vogue* and *Vanity Fair* of Greta Garbo and Paul Robeson. From 1924 he also worked for the J. Walter Thompson agency, which paid him $15,000 a year to advertise commercial products and the services of nonprofit organizations in New York City. He produced a series of skyline photographs during the 1930s that included a low-angle shot of the George Washington Bridge (1931), a montage of Rockefeller Center (1932), and a multiple exposure of the Empire State

Building (1932). During World War II he was placed in command of photography for the U.S. Navy. He returned to New York City after the war and became the director of the photography department at the Museum of Modern Art (1947–62), where he encouraged many photographers with highly acclaimed exhibitions such as *The Family of Man* (1955). He wrote *Edward Steichen: A Life in Photography* (1963).

Barbara L. Michaels

Stein, Clarence S(amuel) (*b* Rochester, N.Y., 19 June 1882; *d* New York City, 7 Feb 1975). Architect and housing reformer. Educated at the École des Beaux-Arts, he began his career in New York City working for Bertram Goodhue. He was a theorist, promoter, and practitioner of regional and community planning, the chairman of the New York State Commission on Housing and Regional Planning (1923–26), and an active member of the Regional Planning Association of America. Stein's most important works in New York City include Sunnyside Gardens in Queens (1924), the Fieldston School (1929), Temple Emanu-El (with Robert Kohn, 1929), the Phipps Garden Apartments I and II (1931, 1935), and Hillside Homes (1932). *Toward New Towns for America* (1951) summarizes his ideas and accomplishments.

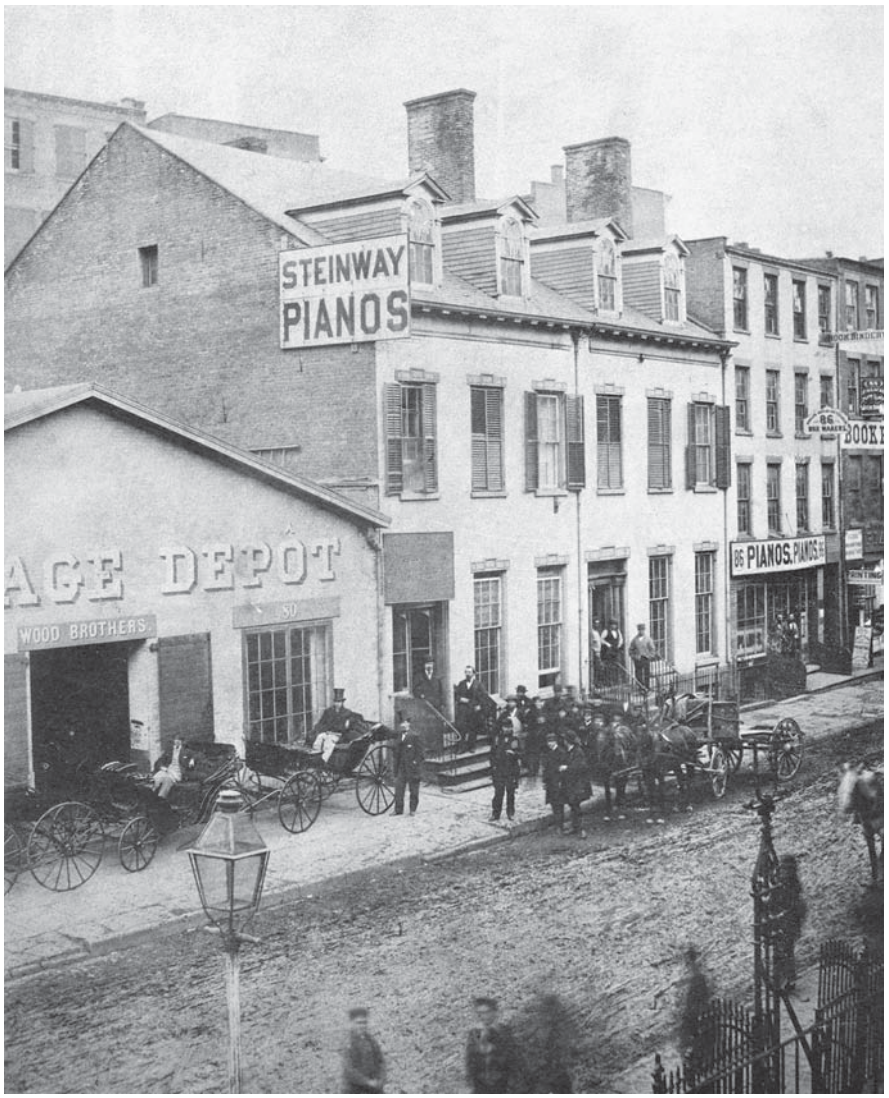
Rosalie Genevro

Steinbeck, John (Ernst) (*b* Salinas, Calif., 27 Feb 1902; *d* New York City, 20 Dec 1968). Novelist. He moved to New York City in 1925 and worked for six weeks as a laborer on the construction of Madison Square Garden and then as a reporter for the *American.* He moved from Brooklyn to the Parkwood Hotel at 38 Gramercy Park North in Manhattan and began work on a book of stories set in New York City, for which he could not find a publisher; surviving stories that may have been written for the book include "East Third Street" and "The White Sister of Fourteenth Street." After returning to California in 1926 he began to write seriously and had his first success with *Tortilla Flat* (1935), followed by *Of Mice and Men* (1937), a novella about the friendship between two migrant workers, and *The Grapes of Wrath* (1939), about the mass migration of poor farmers from the Dust Bowl to California during the Depression (Pulitzer Prize 1940). In 1941 he returned to New York City and lived in the Bedford Hotel on East 40th Street; he moved in 1943 to 330 East 51st Street. After working for the federal government as a writer during World War II, he lived at East 37th Street (1945), 175–77 East 78th Street (1946–48), East 52nd Street (1949), and 206 East 72nd Street, where he remained for 13 years. His best-known later works include *Cannery Row* (1945), a biting critique of the greed of modern civilization, and *East of Eden* (1952), a partly autobiographical novel reflecting his newfound faith in humanity's ability to choose good over evil. He also wrote the scripts for the film versions of several of his stories, as well as scripts intended expressly for films, including *The Forgotten Village* (1941) and *Viva Zapata!* (1952). In 1962 he received the Nobel Prize for literature.

Jackson J. Benson, *The True Adventures of John Steinbeck, Writer* (New York: Viking, 1984)

Anthony Gronowicz

Steinbrenner, George (*b* Rocky River, Ohio, 4 July 1930; *d* Tampa, Fla., 13 July 2010). Owner of the New York Yankees. During his ownership the team grew from a $10 million franchise to the first professional sports team valued at more than $1 billion. After failing in a bid to buy the Cleveland Indians for a reported $9 million in 1971, Steinbrenner bought the Yankees two years later with a group of investors for $8.7 million. Between 1973 and 2008 he changed managers 20 times and general managers 11 times, feuded with players and the media, and became known as "the Boss" on account of his hands-on approach to managing the franchise. He pled guilty to making illegal contributions to Richard M. Nixon's reelection campaign in 1974 and was suspended by Baseball Commissioner Bowie Kuhn for nine months (reduced from two years); he was later pardoned by President Ronald Reagan. In 1990 he was banned from baseball for life on account of financial contractual issues with player Dave Winfield but was reinstated in 1993 and returned to the franchise less involved with day-to-day operations of the team.



Steinbrenner is also known for "spending money to make money," driving up player salaries, and setting a new precedent for competitive contracts. This philosophy helped turn the Yankees into a winning franchise in the late 1970s when they won the 1977 and 1978 World Series with such high-paid stars as Jim "Catfish" Hunter and Reggie Jackson. With the largest payroll in baseball the team again won the World Series in 1996, 1998, 1999, and 2000, and in the early twenty-first century Steinbrenner continued to pay high prices for the game's best players. He was the first baseball team owner to sell cable television rights and oversaw the creation of the Yankees Entertainment and Sports (YES) Network, which began broadcasting in 2002. Outside of baseball he invested in six Broadway shows between 1967 and 1988, hosted the New York City–based television show *Saturday Night Live* in 1990, was characterized in several seasons of the iconic New York television series *Seinfeld,* and appeared in Visa commercials with Yankee shortstop Derek Jeter and manager Joe Torre in the early twenty-first century. After 2006 Steinbrenner lived in Florida, and his sons Hal and Hank took responsibility for running the franchise. Nonetheless, he returned to the Bronx for the 2008 All-Star Game and spearheaded the construction of a new Yankee Stadium, which opened in 2009.

Frank Dyer

Steinem, Gloria (*b* Toledo, Ohio, 25 March 1934). Writer and activist. After graduating from Smith College in 1956 she moved to New York City to write for the satirical political magazine *Help!* "I Was a Playboy Bunny," an article she wrote for *Esquire* in 1963 based on her "undercover" assignment as a waitress at the Playboy Club in Manhattan, brought her to national attention. After attending a meeting in 1968 of the radical women's group the Redstockings she became an outspoken advocate of the women's movement. She wrote a political column for the magazine *New York* and took part in the presidential campaign of Eugene J. McCarthy (1968) and the mayoral campaign of Norman Mailer (1969). In January 1972 she launched the feminist magazine *Ms.,* which initially appeared as an insert in *New York;* her affiliation with *Ms.* continued after it changed ownership in 1987. She also remained active in the National Organization for Women and Voters for Choice. Steinem's published writings include *Outrageous Acts and Everyday Rebellions* (1983) and *Revolution from Within: A Book of Self-Esteem* (1992), a best seller that aroused controversy in the women's movement for what some saw as its equivocal commitment to feminism. By 2009 she had lived in New York City for more than half a century.

Marjorie Harrison

Steinway and Sons. Firm of piano makers, formed in New York City in 1853 by Henry Steinweg, who had been a piano maker in Seesen, Germany, since the 1830s, and his children, Theodore, Doretta, Charles, Henry, Jr., William, and Albert; the family changed its name to Steinway in 1866. In 1860 the firm opened an enormous, modern piano factory on 53rd Street and Fourth Avenue (now Park Avenue) in Manhattan. The master builders behind the extraordinary Steinway piano were Henry Steinway, Jr., and Theodore Steinway: they combined the techniques in piano building then current with many of their own innovations, improving the cast-iron plate, the fan-shaped overstrung pattern, and the action. Their younger brother William Steinway set out to establish for the Steinway piano a reputation as the finest piano ever made, a symbol of

Steinway and Sons, ca *1862*

success and refinement for the middle class. The piano was entered in several international exhibitions and won prizes throughout Europe. William sponsored the debuts in New York City of Anton Rubinstein at Steinway Hall on 14th Street in 1872 and Jan Ignace Paderewski in 1892. He advertised his instrument as the "standard piano of the world." Between 1870 and 1873 William bought a tract of 400 acres (160 hectares) along the northwestern shore of Queens, and during the next decade he built a spacious factory and a town with a church, a library, a kindergarten, and a public trolley line. He became so affluent and influential in fashionable society that when he died in 1896 the mayor ordered the flags on all city buildings flown at half staff, and his funeral oration was delivered at Liederkranz Hall by Carl Schurz. After his death the business continued under the control of three nephews: Charles H. Steinway, aged 39, the head of the firm; Frederick Steinway; and Henry Ziegler. Frederick took charge of the firm in 1919 and during the 1920s expanded production in Queens and Hamburg. In its peak year, 1926, the firm manufactured 6000 grand pianos; it also continued to assemble cases for Duo-Art player pianos under contract to the Aeolian Piano Company. A new Steinway Hall was built on West 17th Street in Manhattan in 1925 at a cost of $3 million.

Sales of pianos in the United States collapsed in 1927, owing to a troubled economy and competition from the radio and the phonograph. Frederick Steinway died during the summer; the new president of the firm was William's youngest son, Theodore E. Steinway. Devastated by the Depression and heavily in debt, the firm interrupted production from 1931 to 1933. In 1939 the employees voted to join Local 102 of the United Furniture Workers. Wood and metal were scarce during World War II and could not be spared for luxury items like pianos. Instead the firm manufactured CG-4A troop-carrying gliders, employing 1200 people, mostly older men and young women working in shifts. In Hamburg the Steinway factory was seized as enemy property by the Nazis to manufacture beds for air-raid shelters and wooden aircraft decoys.

Exhausted by the Depression and the war, Theodore E. Steinway in 1955 relinquished control of Steinway and Sons to his 40-year-old son, Henry Z. Steinway, who consolidated dispersed factory buildings into one site on Riker Avenue in Queens and worked with the union leadership to avoid costly strikes. The firm was successful during his tenure, and in 1972 he sold it to the Columbia Broadcasting System (CBS). In 1985 CBS, short of cash because of an attempted corporate takeover, sold the firm to Robert and John Birmingham, private investors

Interior of the Steinway factory, 2009

from Boston, thus making Steinway again a family business. In 1985 Steinway was purchased by Kyle Kirkland and Dana Messina, and in 1996 it became a public company traded on the New York Stock Exchange. In 2006, 550 factory employees made 2000 grand pianos and 500 uprights. Henry Z. Steinway, the last Steinway family president, died in 2008.

Steinway Hall. Concert hall, built by the piano makers Steinway and Sons in 1866 as a promotional adjunct to their showroom at 71–73 East 14th Street. A lavish auditorium that had superb acoustics and seated 2000, it was the site of readings by Charles Dickens in 1867, of concerts in 1867 honoring the 25th anniversary of the New York Philharmonic, and of Anton Rubinstein's American debut in 1872. After the hall was sold in 1923, Steinway and Sons opened a new concert hall at 109 West 17th Street in 1925 that looked more like a museum than a piano showroom, with a small 240-seat concert hall. The building was sold in 1955 to the Manhattan Life Insurance Company. Steinway bought the building back in 1999.

Stella, Frank (Philip) (*b* Malden, Mass., 12 May 1936). Artist. He became interested in abstract art while in his teens, attended Princeton University (BA in history 1958), and moved to New York City to become a painter. Inspired by the innovative work of Jasper Johns, he executed a series of austere paintings composed of solid-colored symmetrical stripes. In December 1959 four of his paintings were included in an exhibition at the Museum of Modern Art entitled *Sixteen Americans.* His works *Coney Island* (1958) and *The Marriage of Reason and Squalor* (1959), and his renowned black-stripe paintings, marked a transition from abstract expressionism to minimalism. He had his first retrospective exhibition at the Museum of Modern Art at a remarkably young age, in 1970. His *Exotic Bird* series then helped inspire the advent of pattern and decoration painting and graffiti art. He also created three-dimensional art forms, including freestanding sculptures for public spaces and architectural works such as band shells and pavilions. In 2007 the Metropolitan Museum of Art presented an outdoor rooftop exhibition of Stella's sculptural work. He worked out of a studio in Manhattan's East Village at 126–128 East 13th Street until 2005.

Robert Sanger Steel

Stella, Joseph [Giuseppe] (*b* Muro Lucano, Italy, 13 June 1877; *d* Queens, 5 Nov 1947). Painter. He immigrated to the United States in 1896 and settled in New York City, where he studied at the Art Students League and the New York School of Art. In an early series of realist drawings he recorded immigrant life on the Lower East Side. After a trip to Paris in 1911–12 he used color abstraction to depict such symbols of the modern city as Coney Island, the Brooklyn Bridge, skyscrapers, and subways. Stella lived in Williamsburg in Brooklyn from 1916 to 1917, and between travels to Europe he maintained studios at 451 West 24th Street in Manhattan (1923), 2431 Southern Boulevard in the Bronx (1935), 33-15 Crescent Boulevard in Astoria (1942), and 104 West 16th Street in Manhattan (1943). His paintings are held at the Museum of Modern Art and the Whitney Museum of American Art.

Barbara Haskell, *Joseph Stella* (New York: Whitney Museum of American Art, 1994)

Judith Zilczer

Stella D'Oro Biscuit Company. Firm of bakers formed in 1930 by the Italian immigrants Joseph Kresevich and his wife Angela. It began as a bakery on Bailey Avenue in the Bronx offering authentic Italian anisette toast cookies, breadsticks, and egg biscuits and within a year took its current name. After struggling through the Depression and World War II it enjoyed prosperity as its products became popular in the city, particularly in Italian neighborhoods. The headquarters were moved to 237th Street in Kingsbridge in 1947, and a factory was opened on the same street. During the late 1950s the firm became one of the country's most prominent bakers. It remained family-owned until it was acquired by Kraft in 1992. In late 2005 the company was sold to Brynwood Partners, a private equity firm. In 2009 it was closed.

James Bradley

Stengel, Casey [Charles Dillon] (*b* Kansas City, Mo., 30 July 1890; *d* Glendale, Calif., 29 Sept 1975). Baseball player and manager. As an outfielder for the Brooklyn Dodgers (1912–17), the Pittsburgh Pirates (1917, 1919), and the New York Giants (1921–23), he achieved a lifetime batting average of .284. He then worked for the Dodgers as a coach (1932–34) and manager (1934–36). Between 1948 and 1960 he managed the New York Yankees, winning 10 pennants and seven World Series. He became the first manager in 1962 of the New York Mets, which over the next four seasons finished last each year in the National League and compiled an overall record of 194 wins and 452 losses. Stengel was a consummate showman: while playing for the Pirates he tipped his cap to a hostile crowd, revealing a bird that flew out from under it, and as the manager of the Mets he used colorful malapropisms to divert the attention of the fans and the press from the ineptness of his players. He was elected to the National Baseball Hall of Fame in 1966.

Robert W. Creamer, *Stengel* (New York: Dell, 1985)

Harold S. Wechsler

Stern, Isaac (*b* Kremenets, Ukraine, 21 July 1920; *d* New York City, 22 September 2001). Violinist. After growing up and receiving musical training in San Francisco, he first performed in New York City in 1937. His third appearance in the city, at Carnegie Hall in January 1943, brought him recognition as a musician of the first rank. He performed around the world and made many recordings of both concertos and chamber music from the classic and modern repertories. In 1944 he played with the New York Philharmonic Orchestra, directed by Artur Rodzinski. In 1960 he became president of the Carnegie Hall Corporation and served in the office for more than 30 years. He led the campaign to save the hall from demolition and helped the city to purchase it and turn it into a landmark. The main concert hall was renamed the Isaac Stern Auditorium in 1997.

George A. Thompson, Jr.

Stern College for Women. Four-year college opened in 1954 at 245 Lexington Avenue in Murray Hill as a division of Yeshiva University, and the first Jewish liberal arts college for women in the United States. The school has a core curriculum that includes both the liberal arts and Jewish studies. Most of its more than 1000 students study for one year in Israel.

Erica Judge

Stern's. Department store. It began in 1867 as a small dry-goods shop selling dress material, laces, and silk, opened at 367 Sixth Avenue in Manhattan by four German immigrant brothers: Isaac, Louis, Bernard, and Benjamin Stern. They moved in 1877 to larger quarters along "Ladies' Mile" at 110 West 23rd Street; their store was the largest department store in the city until 1910. It employed uniformed doormen to greet members of the carriage trade and it also priced some of its merchandise for working-class customers. It moved in 1911 to a building at 42nd Street and Fifth Avenue with an elegant cast-iron facade, where it remained until the firm ceased its operations in the city in 1969.

Leslie Gourse

Stettheimer, Florine (*b* Rochester, N.Y., 19 Aug 1871; *d* New York City, 11 May 1944). Painter. She studied in New York City at the Art Students League and in Germany during an eight-year stay in Europe. On returning to the city in 1914 she established with her sisters Ettie and Carrie a salon attended by avant-garde artists such as Marcel Duchamp. While living at Alwyn Court on 57th Street in 1932 she designed the sets and costumes for the opera *Four Saints in Three Acts* by Virgil Thomson and Gertrude Stein. She later moved to Sixth Avenue and 40th Street. Stettheimer's richly ornamented, colorful paintings satirize art and society in New York City in the 1920s and 1930s.

Steuben Society. Organization formed in New York City in 1919 to honor the Prussian military leader Baron Friedrich Wilhelm von Steuben (1730–94). Its formation was intended to improve German American relations and emphasize the loyalty of German Americans in the aftermath of World War I. During the early 1930s the society took a forthright stance against Nazism in both Germany and the United States. After World War II Steuben societies were formed in Germany. Steuben parades modeled after those on St. Patrick's Day and Pulaski Day were held annually on Fifth Avenue after 1958, the year considered by many to be the 275th anniversary of the first immigration by Germans to the United States. The Steuben Society of America maintains its headquarters at 6705 Fresh Pond Road in Ridgewood, Queens.

Kevin Kenny

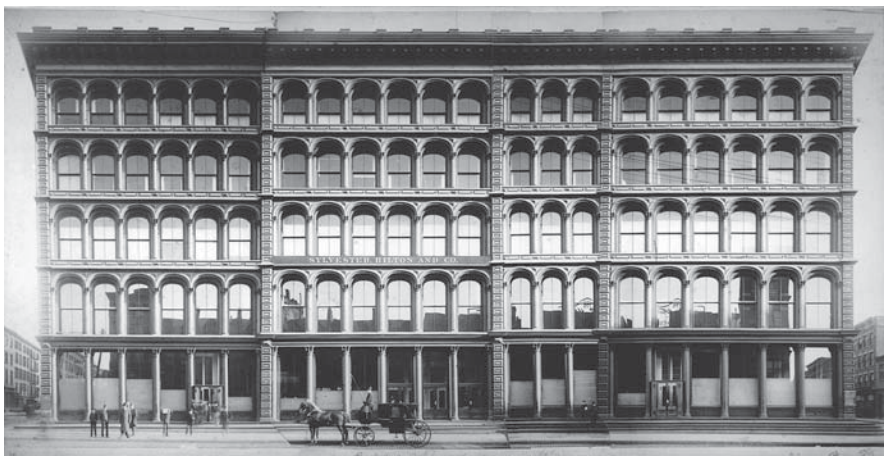
Steuer, Max David (*b* Humenné [now in Slovakia], 6 Sept 1870; *d* Jackson, N.H., 21 Aug 1940). Lawyer. With his family in 1876 he moved from Austria to New York City, where his father found work in the garment trade. After winning academic honors at Public School 15 and City College of New York, he earned a degree from Columbia Law School in 1903. As attorney general of the city court he became known for his extraordinary memory and fierce style in conducting cross examinations; he was widely considered a peerless trial lawyer for successfully defending politician Harry Daugherty, banker Charles Mitchell, the owners of the Triangle Shirtwaist factory, and such organized-crime figures as Johnny Torrio. Steuer helped to negotiate the first industry-wide contract for female garment workers and was a delegate to the state constitutional convention of 1938.

George J. Lankevich

Stevens, Harry M(ozley) (*b* Derby, England, 14 June 1855; *d* New York City, 3 May 1934). Sports concessionaire and caterer. After attending a baseball game in Columbus, Ohio, in early 1887 he was inspired by the idea of scorecards with advertising printed on the back. Within four years he was selling such cards at major and minor league parks across the country. In 1894 he moved to New York City and obtained exclusive rights for a concession at the Polo Grounds, where he expanded his sales to include snack foods. He also began catering large events at hotels, exhibitions, and outdoor events and eventually acquired the rights for the dining room in Madison Square Garden. His business nevertheless continued to focus on serving food at outdoor sporting events. In 1901 he introduced what soon became standard fare for such venues: peanuts, soda, and hot dogs, earning him the title "Hot Dog King." In 1925 he incorporated his business under his name and had concessions at the five major league baseball parks in New York City and Boston.

Edward T. O'Donnell

Susan Smith McKinney Steward



Steward, Susan McKinney [Susan Maria Smith] (*b* Brooklyn, 18 March 1847; *d* Brooklyn, 7 March 1918). Born in Crown Heights, Susan Maria Smith became the first African American woman to earn a medical degree in New York State. Trained as an organist as a child, Steward taught music in Washington, D.C., and New York in order to pay for her medical studies. She attended New York Medical College for Women from 1867 to 1870, specializing in homeopathic medicine and pediatrics, and graduated as class valedictorian. In 1871 she married William G. McKinney, a Methodist minister who died in 1894. In 1896 she married Theophilus Gould Stewart, an army chaplin. She is buried in Green-Wood Cemetery in Brooklyn.

Sherrill D. Wilson

Stewart, A(lexander) T(urney) (*b* Ireland, *ca* 1802; *d* New York City, 10 April 1876). Retailer. Brought up in Ireland by his maternal grandfather, he studied for the ministry and moved to New York City where he taught school. On 1 September 1823 he opened a small dry-goods shop at 283 Broadway, later marrying the landlord's daughter Cornelia Clinch, and on 21 September 1846 he opened a lavish building designed by John Snook at 280 Broadway between Reade and Chambers streets. Known as the Marble Palace (a term first used in the *New York Herald,* 18 September 1846), this was the first commercial building with a marble facade; it had a domed atrium, mahogany cabinets, and lavish fixtures, and the store offered "free entrance" (allowing customers to browse rather than be attended to constantly by a patron), low markups, and set prices on a large variety of goods. In 1862 Stewart built the larger Iron Palace, on Broadway between Ninth and 10th streets, believed to be the first building in the city with a cast-iron front; it eventually occupied the entire block and became one of the largest iron structures in the world. During the 1860s Stewart was the wealthiest resident of the city and the most prominent importer, taxpayer, and home owner in the United States, living in a marble mansion at Fifth Avenue and 34th Street. His business had gross sales of $50 million in 1865 (primarily from wholesale trade), with domestic and European offices, warehouses, and factories. He avidly collected art and real estate in Manhattan, founded and planned suburban Garden City (Long Island), and maintained ties with the Tweed Ring and the administration of President Ulysses S. Grant. He died childless, and his estate was mismanaged by his attorney Henry Hilton. In 1878 Stewart's body was exhumed and ransomed (it remains unclear whether the body was recovered), and in 1884 the Marble Palace was converted to offices.

David B. Sicilia

Stewart, Ellen (*b* Alexandria, La., 7 Nov 1918). Founder of La MaMa Experimental Theatre Club, one of the oldest and most influential Off-Off-Broadway theaters. Stewart came to New York from Chicago in 1950 and began working as a clothing designer at Saks Fifth Avenue, though racial tensions and health problems eventually forced her to resign. She went on to work as a freelance designer for firms such as Bergdorf Goodman and Lord and Taylor. She lived in Morocco for a time before returning to New York and founding La MaMa in a basement at 321 East Ninth Street. Pushed from building to building by unfriendly neighbors and city zoning officials (Stewart got into trouble with the city more than once for staging performances without a license), in 1961 she moved La MaMa to its current location at 74A East Fourth Street.

Under Stewart's direction, La MaMa was instrumental in fostering the development of new playwrights, presenting original works by Sam Shepard and Lanford Wilson and staging the U.S. premiere of Harold Pinter with a production of *The Room* in 1962. Stewart also toured La MaMa plays throughout Europe and the Middle East.

Patrick Barrett

stickball. A form of baseball that developed in the early twentieth century in the streets of New York City. Each neighborhood had its own rules and traditions; many had teams of nine players and used parked cars or "sewers" (manhole covers) as bases. In different versions of the game, the pitcher threw the ball to the batter on one bounce, the batter hit the ball after tossing it in the air himself, or the pitcher would try to hit a strike zone drawn on a wall behind the batter. Equipment usually consisted of an old broomstick and a "spaldeen," a pink rubber ball made by the Spalding Company. An increase in playgrounds, organized sports, and vehicular traffic led to a post–World War II decline in stickball's popularity; interest in the game revived in the 1960s and 1970s, especially among adults who remembered the game from their childhood. In 1968 residents of East 111th Street in Manhattan held a stickball reunion in memory of a neighbor, a gathering that became an annual event. Sponsored by Budweiser beginning in 1975, it became known as the Budweiser Old Timers Stickball Reunion and drew people from across the nation who had grown up in the neighborhood. For a few summers in the mid-1970s three-sewer stickball was featured in a festival of street games sponsored by the Parks Department to celebrate the sporting heritage of the city. In 1983 and 1984 Spalding sponsored a stickball exhibition on West 60th

Street in Manhattan, in which baseball stars, celebrities, and members of the Police Athletic League took part. Newman Avenue in Clason Point was renamed Stickball Boulevard in 1987. In the early twenty-first century stickball remained popular with adults, as organizations like the Major Stick Ball League, the East Harlem Stickball League, and the New York Emperors Stickball League continued to schedule games and crown champions.

Joseph S. Lieber, Ben Silk

Stickley, Gustav [Gustave] (*b* Osceola, Wis., 9 March 1858; *d* Syracuse, N.Y., 20 April 1942). Furniture manufacturer, home designer, and publisher. He entered the furniture business at age 18 and started a furniture company in 1883 with his younger brothers; the Stickley Brothers Company, in Susquehanna, Pennsylvania, produced reproductions of colonial, Windsor, and other styles of chairs. In 1898 Stickley formed the Gustave Stickley Company (later dropping the "e" from his first name) and introduced his first Arts and Crafts furniture, which was characterized by straight lines, plain surfaces, and sturdy construction. He was strongly influenced by the work of William Morris and other members of the British Arts and Crafts movement. In 1901 he began publishing the *Craftsman,* a magazine devoted to the ideals of the Arts and Crafts movement and to publicizing his furniture and home designs; he dedicated the first issue to William Morris.

In 1905 Stickley moved his furniture showrooms and publishing business from Syracuse, N.Y., to 29 West 34th Street in New York City, expanding to 41 West 34th Street in 1908. That year he began purchasing land in suburban Morris Plains, N.J., and in 1909 he started construction of Craftsman Farms, which he intended as a working farm and school for boys that would offer both academic and manual training. In 1913 he leased a 12-story building at 6 East 39th Street, which he called the Craftsman Building. It housed his furniture showroom, the offices of the *Craftsman,* and a restaurant that served produce grown on Craftsman Farms. Financial problems arose, however, as Stickley expanded his business, tastes changed, and the war began in Europe. In 1915 he filed for bankruptcy; the *Craftsman* ceased publication in 1916.

Catherine Mathis

Stieglitz, Alfred (*b* Hoboken, N.J., 1 Jan 1864; *d* New York City, 13 July 1946). Photographer. He was educated in New York City before going to Berlin to study engineering, which he soon abandoned for photography. After returning to New York City in 1890, he worked briefly in a photoengraving business and eagerly pursued amateur photography. During the next two decades he produced a group of atmospheric street and waterfront scenes, one of the best known being *The Hand of Man* (1902). He was active in the Camera Club of New York and became the editor of *Camera Notes.* Soon after, he formed the Photo-Secession, a group of photographers dissatisfied with the dominant styles in pictorial photography. Members exhibited their work in "291," a gallery on Fifth Avenue that he directed. He also published the elegant journal *Camera Work* with the hope of introducing advanced European photography in the United States and encouraging the development of American photographic art. With the help of Edward Steichen he exhibited and published the work of Picasso, Matisse, and Constantin Brancuşi. Eventually he promoted the work of a group of American modernist painters, first at An Intimate Gallery and then at An American Place. After 1915 he resumed making photographs, producing portraits of several friends who were artists; these included many images of Georgia O'Keeffe, whom he later married. *Equivalents,* a series of photographs of the sky near his summer home on Lake George, New York, and photographs of skyscrapers taken from his rooms in suite 3003 of the Hotel Shelton (525 Lexington Avenue) attest to his contradictory feelings toward New York City, which he both hated and loved. He lived from 1898 to 1918 at 1111 Madison Avenue, from July 1918 to the end of 1922 at 114 East 59th Street, for 10 years beginning in 1924 at the Hotel Shelton, from the autumn of 1936 to October 1942 at 405 East 54th Street, and from October 1942 to the end of his life at 59 East 54th Street.

Naomi Rosenblum

Still, Clyfford (*b* Grandin, N.D., 30 Nov 1904; *d* Baltimore, 23 June 1980). Artist. In 1945 he was introduced to Peggy Guggenheim, who gave him a solo exhibit at her Art of This Century gallery in 1946. He had solo exhibits in 1947, 1950, and 1951 at the Betty Parsons Gallery in Manhattan. In New York City in 1948 he and other artists including Mark Rothko developed the school known as the Subjects of the Artist. Still lived in the city for most of the 1950s. In 1980 he had an exhibition at the Metropolitan Museum of Art. After his death the Metropolitan Museum continued to maintain a collection of his work. He was known for his abstract expressionist style.

Jessica Montesano

Stimson, Henry L(ewis) (*b* New York City, 21 Sept 1867; *d* Huntington, N.Y., 20 Oct 1950). Secretary of state. He passed the bar in New York State in 1891 and spent his early career in New York City. In 1906 he was appointed U.S. attorney of the Southern District of New York by President Theodore Roosevelt, who supported him when he sought, unsuccessfully, the governorship of New York in 1910. He served from 1911 to 1913 as secretary of war under President William Howard Taft and from 1929 to 1933 as secretary of state under President Herbert Hoover. Although a Republican he was again secretary of war under President Franklin D. Roosevelt from 1940 to 1945. During 1918–27 and 1933–40 Stimson lived and practiced law in New York City.

Stokes, I(saac) N(ewton) Phelps (*b* New York City, 11 April 1867; *d* Charleston, S.C., 18 Dec 1944). Architect, historian, philanthropist, and housing reformer. The eldest of nine children of Helen L. Phelps and Anson Phelps Stokes, Sr., whose families had long been involved in charities and reform in New York City, he graduated from Harvard College (1891) and then studied architecture and housing design at Columbia University and in Paris from 1894 to 1897. With his friend John Mead Howells (1868–1959) he won a competition in 1897 for the design of the University Settlement House (184 Eldridge Street). The two opened a firm that received many New York City commissions, including Horace Mann Hall at Teachers College (1901, Broadway and 120th Street), the former building of the Royal Insurance Company (1906, 84 William Street), St. Paul's Chapel (1907, Columbia University), and the Open-Air Pulpit at St. John the Divine (1916, Amsterdam Avenue and 112th Street). The two men amicably dissolved their partnership in 1917.

Stokes was also known for his work to improve housing for the poor, and as a member of the New York State Tenement House Commission he was the author with Lawrence Veiller of the Tenement House Law of 1901, which raised the standards for multiple dwellings in New York City. In addition he designed two "model tenements for Negroes," the Tuskegee (1902) and the Hampton (1911), both on the West Side of Manhattan. As a director of the Phelps Stokes Fund he supervised its housing activities and gave advice on the development of publicly subsidized hous-

ing programs during the 1920s and 1930s. He was also a pioneer in historic preservation and was instrumental in saving the facade of the Bank of the United States on Wall Street (1823; later the Assay Office), which was later installed at the Metropolitan Museum of Art. A collector of prints and maps documenting the city's history, he produced a monumental illustrated reference work in six volumes, *The Iconography of Manhattan Island* (1915–28), which remains an important research tool.

Deborah S. Gardner

Stokes [née Pastor]**, Rose (Harriet)** (*b* Augustow, Poland, 18 July 1879; *d* Frankfurt, Germany, 20 June 1933). Writer and political activist. She settled in Cleveland with her family in 1890. After moving to New York City in 1903 she became a reporter for the *Jewish Daily News* and married James Graham Phelps Stokes, a resident of the University Settlement House. They became active in the Socialist Party, and she later took part in the hotel and restaurant workers' strike of 1912 and helped organize garment workers. Stokes wrote articles for the *Masses,* the *Century,* and the *Independent* and gave lectures in support of Margaret Sanger, Emma Goldman, and Elizabeth Gurley Flynn. Her play *The Women Who Wouldn't* was produced in 1916. Convicted under the Espionage Act in March 1918, she served two years in prison in Missouri before her case was dismissed on appeal.

Martha Foley

Stone, Harlan Fiske (*b* Chesterfield, N.H., 11 Oct 1872; *d* Washington, D.C., 22 April 1946). Chief justice of the United States. He graduated in 1898 from Columbia Law School, where he was later a professor (from 1902) and dean (1910–23). During his early career his conservative instincts and wariness of government made him sympathetic toward judges who invoked the sacredness of property to nullify state and federal measures regulating business. After serving briefly as attorney general under President Calvin Coolidge he was appointed in 1925 to the U.S. Supreme Court. By this time his skepticism toward regulation was outweighed by his belief in judicial restraint, as a result of which he often found himself aligned with Justices Oliver Wendell Holmes and Louis Brandeis in dissents against a majority inclined to invalidate laws governing the private economic sector. Among his best-known dissents was his opinion in *United States v. Butler* (1936), which overturned the Agricultural Adjustment Act, a law inspired by the New Deal. On this occasion he sarcastically reminded his fellow justices that judges were not the "only agency of government that must be assumed to have the capacity to govern." After becoming chief justice in 1941 he helped move the court toward greater activism in protecting civil liberties.

Frederick S. Voss

Stonewall Riots. Protests widely regarded as having launched the contemporary gay liberation movement. In the early morning hours of 28 June 1969 police raided the Stonewall Inn, which was a dancing bar in Greenwich Village frequented by gay men, lesbians, and transvestites. Since gay bars were illegal, the Stonewall was set up as a "bottle club" where "members" paid to have liquor served to them from their private bottles; in turn, they were free to slow dance with each other undisturbed. To protect his patrons, Mafioso owner Tony Lauria paid a monthly kickback to the police in the Sixth Precinct, who agreed to notify the bar before conducting a raid. In the 1960s raids were frequent at gay bars and were relatively uneventful because they were typically conducted by local precincts that were taking such kickbacks. The raid on the Stonewall, however, was different because it was intended to close down an illegal bond operation that Lauria was running. When the bust took place it involved a federal agent, two undercover detectives from the Fifth Precinct, six Public Morals Officers, and an inspector from the Department of Consumer Affairs. Resistance was fierce largely because there had been no prior notification. People spilled out into Sheridan Square, and patrons and passersby attacked police with bottles, rocks, and even a firebomb. On the first night, 13 people were arrested and 4 patrolmen were injured. During the next two nights similar acts of resistance took place throughout the area. The block of Christopher Street where the bar stands is now named Stonewall Place, and the annual gay pride celebration is dated to coincide with the anniversary of the Stonewall Rebellion.

Paul M. McNeil

Stork Club. Nightclub at 3 East 53rd Street, opened in 1929. Owned by Sherman Billingsley, it was frequented by the gossip columnist Walter Winchell, who sat at table no. 50 in the Cub Room, often with his friend Damon Runyon, and described the club as "the New Yorkiest place in New York." The Stork Club was a well-known venue for celebrity seekers for three decades, hosting, for instance, J. Edgar Hoover, John and Jacqueline Kennedy, the Roosevelts, and the duke and duchess of Windsor. It shut down in 1965.

James E. Mooney

Stover, Charles B(unstein) (*b* Riegelsville, Pa., 14 July 1861; *d* New York City, 25 April 1929). Park commissioner. He was trained as a Presbyterian minister and in the 1890s became known as a reformer on the Lower East Side, working out of University Settlement. A distinguished advocate for parks and playgrounds, he was the city's park commissioner from 1910 to 1914. During his tenure he built 30 playgrounds; planted 250 Lombardy poplars on Delancey Street; reclaimed 10 acres (4 hectares) of land along Riverside Drive (using stones from the boring of the Catskill Aqueduct through Manhattan); was instrumental in establishing Seward Park and Jacob Riis Park; led the opposition to elevated trains; and supported causes as varied as sailors' rights and municipal ownership of the subways. Late in his term he disappeared for more than three months, prompting a nationwide search that ended when he mailed his resignation from Cincinnati. When he reappeared in January 1914, he maintained that he had been touring

The Stonewall Inn, 2009

cities in the South. Stover spent his last years developing a summer camp in Beacon, New York, for University Settlement.

Stranahan, James S(amuel) T(homas) (*b* Peterboro, near Oneida, N.Y., 25 April 1808; *d* Saratoga, N.Y., 3 Sept 1898). Businessman and public official. He settled in Brooklyn in 1844 and made his fortune working as a railroad contractor and building docks in Brooklyn, particularly the Atlantic Basin. As president of the park board of Brooklyn from 1860 to 1882 he led the effort to develop Prospect Park. When a financial discrepancy was discovered, he left the board and reconciled the accounts with his own funds. He also backed the construction of the Brooklyn Bridge and the consolidation of New York City in 1898.

John J. Gallagher

Strand. Largest bookstore in New York City and among the largest used book stores in the world. It is famous for its collection of rare books, publishers' overstock, and review copy books and has more than 2.5 million volumes on its shelves. The Strand was founded in 1927 by Ben Bass, one of 48 bookstores on New York City's "book row" and the only one that survived into 2009. When the founder's son, Fred Bass, took over the store's management in 1956, it moved to its present location at Broadway and 12th Street, where it has grown to occupy 55,000 square feet (5110 square meters) on five floors. The store also operates a 15,000-square-foot (1394-square-meter) annex on Fulton Street in the financial district and two outdoor kiosks: one bordering Central Park at Fifth Avenue and 60th Street and one on the Manhattan side of the tram to Roosevelt Island. Excluding the annex and the kiosks, the Strand boasts 23 miles (37 kilometers) of books measured along its shelves, although it has kept its slogan—"18 miles of books"—for marketing reasons.

Rowan Moore Gerety

Strand Theater [Brooklyn]. Historic movie theater at the northeast corner of Fulton Street and Rockwell Place. Designed by architect Thomas W. Lamb, it was called the Brooklyn Strand to distinguish it from the Strand in Manhattan, which Lamb also designed. After opening 30 August 1919 the Brooklyn Strand became part of a hub including the Majestic, a playhouse, and the Orpheum, a vaudeville venue. Lamb designed the Strand's exterior to resemble a classical temple with two-story Ionic columns topped by a colored frieze and entablature. The lobby, with a 60-foot-high (18-meter-high) ceiling, contained two staircases, furniture, and a fountain, all in marble. Red and yellow walls and columns of black and gold marble graced the lobby. The Strand had a deep stage, space for a 25-piece orchestra, and was used for live performances as well as movies; it could accommodate 3500 patrons. With the advent of sound movies the Strand became the first theater in Brooklyn equipped with Vitaphone projectors and speakers and in 1927 presented Al Jolson's *The Jazz Singer,* one of the early "talkies." In the late 1920s newer movie theaters supplanted the Strand, which became a second-run house and then in 1959 a 52-lane bowling alley. Early in the twenty-first century a variety of businesses and studios occupied the building, which New York City owned and planned to continue developing as a cultural center.

Cathy Alexander

Strasberg, Lee [Strassberg, Israel] (*b* Budzanów [now Budanov, near Terebovlya, Ukraine], 17 Nov 1901; *d* New York City, 17 Feb 1982). Theater director. He studied acting at the American Laboratory Theatre before joining the Theater Guild as a stage manager and actor. In collaboration with Harold Clurman and Cheryl Crawford he formed the Group Theatre in 1931 and directed several productions during the theater's 10 years of operation. In 1948 he joined the faculty of the Actors Studio, located at the Old Labor Stage at 432 West 44th Street, becoming its artistic director in 1951. Over the next 30 years Strasberg taught the Method, his influential and controversial approach to acting based on the teachings of Konstantin Stanislavsky, which stressed the actor's use of life experiences. Among his students were Marlon Brando, Marilyn Monroe, and Paul Newman. Strasberg is buried at Westchester Hills Cemetery in Westchester County, N.Y.

D. S. Moynihan

Stratton, Charles Sherwood. (*b* Bridgeport, Conn., 4 Jan 1838; *d* Middleboro, Mass., 15 Jul 1883). Performer. The diminutive Charles Stratton, better known as "Tom Thumb," came to the attention of P. T. Barnum at the age of four, when he reportedly weighed 25 pounds and was a mere 15 inches tall. The child of average-sized parents, he apparently suffered from an endocrine or pituitary irregularity. Barnum, recognizing Stratton's gift for mimicry and performance, renamed the child Tom Thumb and taught him to sing and impersonate famous characters, claiming to audiences that he was 11 years old.

Stratton's Tom Thumb performances at the American Museum on lower Broadway caught the public fancy. He toured the United States with Barnum and was taken to Europe, where he was granted an audience with Queen Victoria, returning to America as a celebrity. In February 1863, Stratton married Mercy Lavinia Warren Bump (or Bumpus), a woman of his own size. Lavinia's trousseau was displayed in the show windows of Lord and Taylor before the wedding, which took place in Grace Episcopal Church and was attended by thousands. He died of a stroke at the age of 45, having grown by the time of his death into a portly gentleman standing three feet four inches tall. During his adult life he developed a taste for racing yachts and distinguished company.

Barnum, Written by Himself* (1869 and later editions); "The Autobiography of Countess Lavinia Warren [Stratton] Magri," manuscript at the New-York Historical Society

Jean Ashton

Strattonport. Name used for a section of College Point in the early nineteenth century. A grant for 900 acres (365 hectares) near Flushing was given by the Dutch in 1645 to William Lawrence, whose descendants sold 320 acres (130 hectares) of land near what is now College Point Boulevard and 25th Avenue to Eliphalet Stratton in 1789. Half the property was sold to John Flammer in 1851 for development. In 1867 College Point, Strattonport, and Flammersburg became the Village of College Point.

Vincent Seyfried

Straus, Nathan (*b* Otterberg [now in Germany], 31 Jan 1848; *d* New York City, 11 Jan 1931). Merchant and philanthropist, brother of Oscar Straus. The son of a European revolutionary, he immigrated with his family in 1854 to Columbus, Georgia, where his parents became wealthy in the cotton trade. The fam-

Nathan Straus

ily lost its holdings during the Civil War and moved in 1865 to New York City, where Nathan entered Packard Business College (graduated 1866). He joined his father and his brother Isidor Straus in the family china and crockery business, L. Straus and Sons, which eventually became one of the largest of its kind in the country. With his brother he later acquired R. H. Macy and Company and entered into a partnership with the merchant Abraham Abraham to form Abraham and Straus; these two department stores were soon among the largest in the United States.

Nathan's philanthropic activities were wide-ranging. To alleviate illness among immigrants from drinking unprocessed milk, the principal health problem in the city, he formed a pasteurization laboratory in 1892 for distributing milk to poor children in New York and other cities. During the coal strike of 1892–93 he distributed cheap coal to the poor, and in 1894 he provided food and shelter to thousands hurt by the depression. After his brother's death aboard the *Titanic,* Nathan retired from business and devoted himself to philanthropy. During World War I he established a fund for war orphans and distributed free milk, bread, and coffee at Battery Park to returning soldiers. In 1923 he was named the greatest contributor to the city in the 25 years following its incorporation. Straus was the commissioner of parks for the city (1889–92), the president of the Board of Health (1898), and the president of the American Jewish Congress (1918–24). He lived at 27 West 72nd Street. A square is named for him at the intersection of Rutgers Street, Essex Street, East Broadway, and Canal Street on the Lower East Side.

Edward T. O'Donnell

Straus, Oscar S(olomon) (*b* Otterburg, Bavaria, 23 Dec 1850; *d* New York City, 3 May 1926). Lawyer and public official. A member of the German immigrant family that by the 1880s rose to own Macy's and Abraham and Straus, he left the family business to his elder brothers, Isidor Straus and Nathan Straus, and became a lawyer. He was ambassador to Turkey under President William Howard Taft and became the first Jewish member of a presidential cabinet when he was appointed secretary of commerce and labor by President Theodore Roosevelt. In 1912 he ran unsuccessfully for the governorship of New York State. He played an important role in forming the American Jewish Committee, the American Jewish Historical Society, and the Baron de Hirsch Fund.

Jeffrey S. Gurock

Stravinsky, Igor (*b* Oranienbaum, Russia, 17 June 1882; *d* New York City, 6 April 1971). Composer. He first visited New York City in 1925 and conducted the New York Philharmonic in Carnegie Hall. He also recorded some pianola rolls at the Aeolian studios. Later years included tours throughout the United States, during which he conducted his own works, and several more appearances in New York City. He moved to the United States in 1939 and became a citizen in 1945. In 1969 a frail Stravinsky moved to New York City, where he lived in the Essex House on Central Park South. He died in a newly purchased apartment at 920 Fifth Avenue a little over a week after moving in. One funeral service for him in the city was followed by another in Venice, Italy, where he was buried in the island cemetery of San Michele.

Strawberry Fields. Memorial garden in Central Park at 72nd Street and Central Park West dedicated to John Lennon, the former member of the Beatles who was slain in front of his home at the nearby Dakota apartment building on 8 December 1980. The City Council established the memorial in 1985 and named the tear-shaped parcel after the song "Strawberry Fields Forever," written by Lennon and fellow Beatle Paul McCartney. Funded primarily by Lennon's widow, Yoko Ono, the 2.5-acre (1-hectare) memorial was designed by the landscape architect Bruce Kelly, who included donations of plants from nations around the world, symbolizing Lennon's dream of world peace. A circular mosaic inscribed with the word *Imagine*, the title of another Lennon composition, was donated by the city of Naples, Italy, and incorporated into the pavement of the main walkway. Crowds gather there each year on the anniversary of his death. Memorial gatherings have also been held at the site to honor other musicians, as were candlelight vigils after the terrorist attacks of 11 September 2001.

streetcars. Street railways were constructed beginning with the New York and Harlem Railroad in 1832, to replace stagecoach routes. This pioneering railroad followed Fourth and Madison avenues using horses to pull a railroad-like coach on iron tracks, which provided passengers with a smoother ride, and the horses with an easier task, than stagecoaches on bumpy and unpaved streets. Stage companies converted their lines to rail and reincorporated (Sixth Avenue in 1851, Second and Third avenues in 1853, Eighth Avenue in 1855, Ninth Avenue in 1859, and Seventh Avenue in 1864, as well as many crosstown routes); by the 1880s lower Manhattan was a gridiron of street railways. Streetcars used before 1890 were small, slow, and horse-drawn, resulting in slow and crowded service, coupled with the sanitation problem of horse droppings on pavements. The shortcomings of horse traction led to searches for better propulsion. Cable cars, introduced on Amsterdam Avenue north of 125th Street in 1885, were the first forays into mechanical traction—cars were pulled by long cables made of braided iron and hemp ("ropes") that rested

Trolley cars on Nostrand and Atlantic avenues in Brooklyn, ca *1895*

Brooklyn Railroad

on pulleys and moved at a steady speed of 9 miles (14.5 kilometers) an hour. Each car was run by a "gripman" who operated a grip (or "plough") that protruded below the car, passed through a slot between the rails, and gripped the cable. Although cable cars were better than horse traction, they were expensive to build and operate; loose cable strands could snag on the car grip and cause the car to be dragged forward and smash into cars ahead of it, and a cable lasted only a few months. These shortcomings soon gave way to electric streetcars, which first appeared in 1886 in Richmond, Virginia, and Scranton, Pennsylvania. New York City soon embraced this new mode of travel, which was faster than cable cars and safer and cheaper to operate. Electric cars replaced Broadway's cable line in 1901, and the last cable line, in Brooklyn Heights, was discontinued in 1909.

The conversion of the cable rails to electricity was complicated by a municipal ordinance prohibiting overhead wires in Manhattan (only Washington, D.C., had a similar law); the streetcars in that borough used an underground conduit power system in which a buried third rail was connected to the streetcar using a plough that protruded through a slot between the rails, similar in appearance to the older cable cars. Some Manhattan streetcar lines were able to use the former cable slot to install a third rail. Outside of Manhattan, streetcars used the more common overhead wire power system with a trolley pole connecting to the car.

In 1890 there were roughly 24 street railway firms in New York City, which then consisted of Manhattan and the Bronx. Each firm had one main route or a branch, but from that time the Metropolitan Street Railway syndicate consolidated operations; it acquired the large Third Avenue Railway System in 1899 and achieved a virtual monopoly in those two boroughs, controlling a network extending from South Ferry to The Bronx and into Westchester County. Metropolitan bought larger cars, integrated short lines to form long routes, and extended transfer privileges. Until 1904 the volume of traffic was enormous, but business diminished as the subway system developed. In the panic of 1907 Metropolitan declared bankruptcy and was forced to relinquish the Third Avenue system, which controlled the entire Bronx and Upper Manhattan network as well as six key Manhattan routes on and south of 125th Street. In December 1911 the remainder of the old Metropolitan syndicate was reorganized as the New York Railways Company, which controlled most Manhattan routes. In an effort by the firm to maintain the formerly lucrative downtown routes that it could not afford to electrify, it bought battery-operated cars and developed five crosstown lines. One curiosity was a horse-car operation on Bleecker Street that continued until 1917.

When the City of Brooklyn became part of New York City in 1898, an already-large streetcar network was added to the picture. Like Manhattan it had evolved from horsecars to electric power in the 1890s; the Brooklyn Rapid Transit Company (BRT), formed in 1896, soon controlled virtually all elevated railway and surface streetcar systems in its namesake borough, and extended some streetcar routes into adjacent portions of Queens and over the Brooklyn Bridge to a terminal at Park Row. Queens was also home to a group of small and localized streetcar operators—Steinway Railway, Manhattan and Queens Traction, Long Island Electric Railway, New York and Queens County Railway, and New York and North Shore Traction. The BRT and its 1923 successor, the Brooklyn-Manhattan Transit Corporation (BMT) remained firmly committed to streetcars; in 1930 only a handful of buses were found among Brooklyn's huge surface route network. BMT management helped the U.S. streetcar industry develop new streamlined President's Conference Committee (PCC) streetcars in the early 1930s; the first PCC fleet, 100 cars, entered service on the Smith Street–Coney Island Avenue route on 1 October 1936.

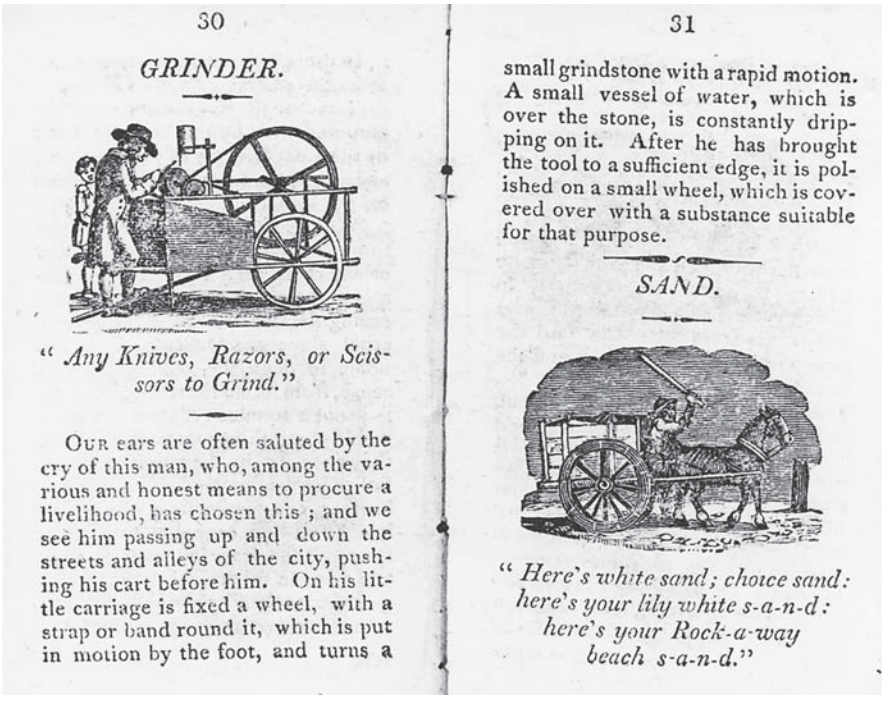
Staten Island had electric streetcars from 1892 until 1934. Richmond Railways was the dominant operator until the 1920s, when buses began running on the island. In January 1934 the last Staten Island streetcar operated, replaced by buses of the Tompkins Bus Corporation and Staten Island Coach Company.

In 1919 the city's streetcar system peaked at 1344 miles (2162 kilometers), and streetcars carried more passengers than both the elevated lines and the subways. Patronage fell in the 1920s with the advent of the automobile and development of buses. After 1934 Mayor La Guardia's administration established a firm pro-bus surface transit policy, which put streetcar lines on borrowed time. Fifth Avenue Coach Company had acquired New York Railways in 1926 and converted the entire system, beginning with the Madison Avenue route, to buses in 1935–36, making Manhattan all-bus except for six Third Avenue Railway lines. The latter company, which also operated all Bronx surface routes, signed a franchise agreement in 1940 requiring bus conversion by 1960; its last Manhattan streetcars, on 125th Street and Amsterdam Avenue, ran 29 June 1947; its last Bronx cars, on Tremont Avenue, Southern Boulevard, and Boston Road, ran 22 August 1948. In 1938 the La Guardia administration stopped the BMT's attempt to use a U.S. government loan to acquire 500 more new PCC streetcars for Brooklyn; in 1940 New York City as part of the subway system unification inherited the BMT's entire Brooklyn bus and streetcar network, which ensured that Brooklyn streetcars would be completely converted to buses. On 31 October 1956 the last Brooklyn streetcar lines operated, on Church and McDonald avenues. In Queens most streetcar routes were converted to bus by 1939; exceptions were the BMT's routes extending from Brooklyn (converted to buses in 1949–50), and Steinway Railway's Queensboro Bridge line, which closed 7 April 1957 and was New York's last streetcar route.

Mark H. Rose, Vincent Seyfried, Andrew Sparberg

street games. For centuries children in New York City have adapted streets, empty lots, fire hydrants, stoops, rooftops, fire escapes, curbs, and walls for use in their games. Ac-

cording to the writer Gene Schermerhorn, in nineteenth-century New York City the game of marbles was played in a large ring 4 to 5 feet (1.3 to 1.5 meters) across, marked out on smooth, hard dirt. As open space disappeared, the ring became smaller, and by the 1880s children had difficulty finding a place in which to play. By the early twentieth century the game was relegated to the strip of earth between the street and sidewalk nicknamed "the boulevard." Marbles were not well adapted to asphalt and concrete and gave way to the game of skelly (also called skelsies, skully, killsies, loadsies, caps, bottle caps, or dead man, depending on the neighborhood), in which players flicked bottle caps (or other kinds of plastic caps weighted with tar, orange peels, wax, or melted crayons) along a board of nine or 13 squares chalked on asphalt or concrete. Games such as boxball used sidewalk squares as boundaries. Stoopball was played by throwing a ball against a stoop and using the dimensions of the curb and street to measure runs; in STICKBALL manhole covers often marked the bases. The ball commonly used in these games was the *spaldeen,* named for its manufacturer, Spalding. Distinctive variations of age-old games also developed in the city. Johnny on the Pony, traceable to ancient Greece and known as buck buck in other cities, may have been named for the fire hydrant, locally known as the Johnny pump. Players divided into two teams; one player, usually the heaviest, leaned against a fire hydrant or lamppost, and the others on the team held on to that player's waist, forming a human chain that the other team sought to break by jumping on their opponents' backs. An elaborate version of tag known as ring-a-leavio had a "jail" and was sometimes played in teams. Hopscotch was often called potsy.



During the Depression street rhymes in Harlem were collected by members of the Federal Writers Project of the Works Progress Administration, including Ralph Ellison. The largest collection of games and rhymes was amassed during the 1930s and 1940s by Esther and Oscar Hirschman, who wrote under the names Ethel and Oliver Hale. They recorded many versions of such activities as ball games, hopscotch, and jump rope (not only double Dutch but double Irish, double Jewish, French Dutch, and French Fried), in addition to documenting favorite rhymes and pranks. Titled "From Sidewalk, Gutter and Stoop," their 1000-page manuscript was acquired by the New York Public Library. About this time the term *pushmobile* became popular for a kind of scooter fashioned from a roller skate and an orange crate. By the turn of the twenty-first century street games were seen less frequently in the city owing to television, video games, and a commercialized toy industry; those that have persisted continue to evolve as the urban environment changes.

Amanda Dargan, Steven Zeitlin

street life. New York City has long been known for the vibrancy of its street life. In colonial times business was often conducted outdoors. Stocks were traded near a buttonwood tree between 68 and 70 Wall Street until 1792, when brokers formed the New York Stock Exchange. Indoor floor traders retained trading conventions from the street, including the use of pits and a system of hand gestures to call bids. The Curb Exchange conducted business alongside Broad Street until 1921, when it moved to a building at 78 Trinity Place. Before 1841 meats and vegetables had to be sold in public MARKETS rather than private shops. STREET VENDORS sold corn, gingerbread, crullers, roasted peanuts, baked pears in syrup, apple cider, mint, kindling, shoelaces and suspenders, brooms, and newspapers; chimney sweeps, ragmen, bootblacks, junkmen, chair and umbrella repairers, and knife sharpeners offered their goods and services. Various merchants and craftspeople used distinctive signs, many of which saw continued use in the early twenty-first century, including striped barber poles, cutouts of oversized keys (used by locksmiths) and pistols (by gun shops), three gilt balls (by pawnshops), and a mortar and pestle (by pharmacies). As late as the 1850s HOGS roamed along Sixth Avenue and were often retrieved by their owners with lassos made of clothesline.

As congestion increased, public peace and safety became serious issues. Ordinances were passed to eliminate public nuisances, among them kite-flying, which was banned south of 14th Street at mid-century. Order was strictly kept on the streets of wealthy sections: in 1898 the writer E. S. Martin noted that a "respectable Murray Hill street" was like "the abode of the departed . . . nobody in the side streets; nothing going on" compared with the "life, action, and social activity everywhere" else in the city. The streets of the Lower East Side, for instance, teemed with activity. Clotheslines were strung between tenements until being banned about 1900. As vacant lots disappeared, children playing STREET GAMES were often fined for disorderly conduct; while absorbed in play many were also killed by traffic. Teenaged boys developed SLANG words to describe interruptions of their games, including *flash* for a slow-moving vehicle, *butcher wagon* for an ambulance, and *stoolie, moose, crab-turtle, hotcakes,* or *gorilla* for a person who chased them or complained about their activities.

Seeking to eliminate "unnecessary noises," the city banned street cries in 1908, a measure that met with little success. In many parts of the city during the 1920s and 1930s old-clothes peddlers still sought their wares by crying out "Buy cash! Buy!" and waving a folded newspaper to attract attention; they then sold their goods to secondhand clothing dealers concentrated in the "market" at the end of Elizabeth Street. On Belmont Avenue in the Bronx Italian vendors sold watermelons and Jewish vendors sold roasted potatoes, taffy apples, knishes, and boiled chickpeas (*arbes*). In an effort to clear the streets of pushcarts, organ grinders, and children at play Mayor Fiorello H. La Guardia built PLAYGROUNDS, PARKS, and indoor markets, over the protests of what he called "penthouse slummers." In the 1920s, as work began on skyscrapers and other tall structures, construction sites attracted many

GRINDER.

" *Any Knives, Razors, or Scissors to Grind.*"

Our ears are often saluted by the cry of this man, who, among the various and honest means to procure a livelihood, has chosen this; and we see him passing up and down the streets and alleys of the city, pushing his cart before him. On his little carriage is fixed a wheel, with a strap or band round it, which is put in motion by the foot, and turns a

31

small grindstone with a rapid motion. A small vessel of water, which is over the stone, is constantly dripping on it. After he has brought the tool to a sufficient edge, it is polished on a small wheel, which is covered over with a substance suitable for that purpose.

SAND.

" *Here's white sand; choice sand: here's your lily white s-a-n-d: here's your Rock-a-way beach s-a-n-d.*"

Pages from The Cries of New York *(1812), engraving by Alexander Anderson*

spectators. The builders of Rockefeller Center were among the first to cut portholes in the fence around the site to accommodate "sidewalk superintendents."

As Chinatown became increasingly congested after 1965, even the smallest spaces along its streets were put to use. Vendors sold traditional foods from carts along Canal Street; shoe repairers, watchmakers, diviners, and fish sellers worked on the sidewalks; crowds stopped to watch candy makers transform discs of sugar into "dragon's moustaches"; greengrocers worked in trucks trimming vegetables. In Columbus Park elderly men met to practice tai chi and play *juk kay,* elderly women to chat and mind young children. Handwritten charms to stop children from crying were sometimes taped to lampposts, and mirrors were mounted over doorways and windows to ward off evil. During the Chinese New Year teams representing martial-arts clubs wore lion costumes and danced along the streets to bring good luck. In the early twenty-first century vendors hawking counterfeit designer purses also lined Canal Street.

The 1970s and 1980s saw renewed efforts to control street activities. About 1972 the *Guide to the New York City Noise Control Code* described the NOISE level in the city as "an aural state of siege"; enforcement of this code was usually selective. During the 1980s and 1990s the city cracked down on book vendors along Cooper Square, St. Mark's Place, Second Avenue, and Sixth Avenue in Greenwich Village. West African vendors were forced from Fifth Avenue in 1988; they moved to 125th Street and were disbanded again by Mayor Rudolph Giuliani in 1994. Many relocated to the Malcolm Shabazz Harlem Market on 116th Street. Street preachers and religious proselytizers gave speeches and solicited funds in the streets, many of them in Times Square. Efforts were also made to discourage sidewalk gambling operations, especially three-card monte and shell games. Some neighborhoods banned clotheslines, satellite dishes, birdbaths, and recreational and commercial vehicles. Attention also focused on the homeless, who collected redeemable cans and bottles from garbage bins and built shantytowns on vacant lots in the East Village. Residents of devastated neighborhoods transformed vacant lots into small estates, sometimes using rubble to build *casitas,* named for a style of country house in Puerto Rico; these often became meeting places for men displaced from social clubs by rising rents. Parks and sidewalks were also popular with players of "speed" chess, checkers, and backgammon.

In the early twenty-first century street performers, leafleters, bicycle messengers, book sellers, and vendors selling a variety of foods continued to crowd the streets and sidewalks of the city's commercial areas, while children played catch or STICKBALL, bicycled, and jumped rope alongside men playing dominoes in residential neighborhoods: what writer Jane Jacobs called the "street ballet" of New York City remained alive and well.

street numbering. See HOUSE NUMBERING AND STREET NAMING.

streets and highways. The original configuration of streets in New Amsterdam (1625) at the southern tip of Manhattan Island closely resembled that of a Dutch medieval city: narrow streets enclosed blocks with solid frontages, and a waterway penetrated the settlement at the Heere Graft (now Broad Street). Originally land extended only as far west as Greenwich Street and as far east as Pearl Street, but landfill was soon added to create building space. Wall Street was the city's northern limit until the city expanded northward during the late seventeenth century.

Streets and blocks were developed haphazardly for the next century. Several roads to agricultural villages and small market towns—such as Heere Straat–Broad Way–Great Georges Road, Kings Way–Great Post Road–Albany Post Road, Kingsbridge Road, Bloomingdale Road, Bowery Lane–Boston Post Road, and Flatbush Road—followed Indian and animal trails. They were progressively enlarged as they became the city's major transportation corridors.

Roads were paved gradually, usually through assessments against the owners of abutting property. Most of the street names of the early settlement had a literal meaning. For example, Stone Street was the first paved street, and Maiden Lane led to a favorite laundry spot in the river. The first commissioners of streets and roads were named in 1798.

Improvised expansion of the road network came to an end in 1811 with the adoption of the Commissioners' Plan, which called for streets to be arranged in a strict gridiron formation and numbered, with standardized block and lot sizes. The width of the east–west cross streets was fixed at 60 feet (18 meters) between building lines, and that of the roadway in the center at about 34 feet (10 meters); the north–south avenues were 100 feet (30 meters) wide. These dimensions were set at a time when there was no mechanical street transportation, few people owned horse carriages, and buildings were not expected to reach beyond a height of two or three stories. It was believed that the heaviest traffic would run east and west between the maritime facilities on both sides of the island, and therefore the cross streets were spaced close together. This prediction proved incorrect, and unlike the avenues the cross streets became regarded as suitable for low-density developments and light traffic.

The grid was extended as the city grew northward, and the natural topography was leveled so that valuable land would not be lost. Streets

were cut through hills, rocks, and marshes by laborers who lived in shantytowns that were pushed forward in advance of the work area; the northern end of Manhattan Island was reached early in the twentieth century. The rectilinear pattern gave New York City its basic urban image, besides satisfying the original intent of creating convenient building lots for development and sale. The north–south avenues proved capable of accommodating ever growing traffic, except at chronic points of flow convergence along the spine of Manhattan, where the columns of the elevated railway obstructed movement below, and until traffic overloads became common in the second half of the twentieth century.

The other boroughs used the same basic grid, developing land in sections without adopting an overall plan; the results at the seams frequently were awkward triangular lots, confusing intersections, and patches of unused land. Most small settlements and farms disappeared with the construction of tenements and one-family housing; however, the larger established centers and the original pattern of their streets remained. Some of the old villages can still be traced in the configuration of street and lot lines.

In 1860 a commission was appointed to decide whether to complete the Commissioners' Plan of 1811 above 155th Street. Its duties were taken over in part by the Central Park Commission, which evaluated future patterns for Fort Tryon, Inwood, and their environs and had jurisdiction over the western half of the Bronx, and in part by the newly created Park Department in 1871. After consolidation of the greater city (1898), the Board of Estimate and Apportionment was given the right to approve street and park plans. Its chief engineer, Nelson P. Lewis (1902–20), was active in advocating orderly circulation systems and planning in advance of development, in contrast to political officials, who thought only in terms of the city's immediate needs. A request to the New York City Improvement Commission (1903) to prepare a comprehensive plan for the city brought no results; the Committee on the City Plan (1914) was the first to conceive the city as part of a region.

The gridiron pattern proved well suited to New York City: when one channel becomes congested, traffic can be diverted to one or more parallel routes, and the grid could accommodate widely differing types of buildings, from private homes to heavy industrial plants, as well as projects like the company town of Steinway (1877), the planned community of Sunnyside Gardens (1924), and Rockefeller Center (1932). In some parts of New York City curvilinear or diagonal streets and special interior networks were built for sizable developments, including villagelike enclaves such as Forest Hills Gardens (1913), Parkchester (1938), Stuyvesant Town (1947), Peter Cooper Village (1947), Fresh Meadows (1949), Co-op City (1968–70), Roosevelt Island (1974), Starrett City (1976), Battery Park City (1982), and Riverside South.

The "superblock," an area with no internal streets to which access is gained from without or underground, is a modification of the grid's scale that found many applications in the city: examples include the campus of Columbia University, the Jacob K. Javits Convention Center, Battery Park City, Rockefeller Center, Lincoln Center, parts of Roosevelt Island, Jamaica Center, and various hospitals, transportation terminals, housing projects, and industrial enclaves.

As traffic increased during the second half of the nineteenth century, better streets and highways needed to be developed. The design of Central Park (1857), for example, was characterized by controlled access, transverse roads beneath the park to carry crosstown traffic, and attention to the aesthetics of movement. Parkways, inspired by the grand boulevards of Paris, were also introduced at this time. Built as extensions of the parks system, they had well-delineated lanes divided by strips landscaped with trees, grass, and other plantings and were intended not for everyday traffic but for strolling and horse carriages, and later for bicycles. Frederick Law Olmsted was one of the leading advocates of parkways, the most prominent example of which in New York City is Eastern Parkway (1871–74). Others include Western Boulevard (now upper Broadway, 1868–1904), Ocean Parkway (1869–76), Riverside Drive (1872–1902), the Mosholu, Pelham, and Crotona parkways (1884), Park Avenue (1888–1927), the Grand Concourse (1892–1909), and Queens and Northern boulevards (1922). The advent of motor vehicles led to the introduction of a new type of parkway, intended primarily to facilitate the enjoyment of fast motion; the foremost early example in New York City and vicinity was the Bronx River Parkway (1906–23).

The Regional Plan of New York and Its Environs (1927–31) provided a comprehensive vision of a modern transportation system: it encompassed an area with a radius of 50 miles (80 kilometers), reflecting the true size of the metropolis. The principal features of its proposed highway system were a squarish metropolitan loop surrounding the core, with principal internal routes (four east–west and four north–south), routes radiating to the periphery, and distant circumferential bypasses. The plan strove to provide efficient paths between the many important centers of the region. A number of facilities were later completed in the plan's approximate locations, but without achieving the clear order envisioned by the original plan.

Between 1924 and 1972 Robert Moses built 17 parkways and 14 expressways in the city and in Nassau, Suffolk, and Westchester counties. He completed virtually the entire city's highway network, except for the Miller Elevated Highway (popularly known as the West Side Highway), the Harlem River Drive, and the FDR Drive. He also built bridges and parks to which his highways provided the best access. The city could not operate within a rubber-tire–dominated region and country without this system. Brooklyn and parts of Queens constitute the largest "island" in terms of urban territory and number of people in the United States that is surrounded but not crossed by expressways and parkways.

Although New York City achieved one of the most extensive networks of urban highways during the 1950s, it was among the first cities to limit highway expansion during the 1960s and 1970s. The only major highway projects completed during these years were the Bruckner interchange (1973) and the Staten Island West Shore Expressway (1976, now also known as Pearl Harbor Memorial Expressway), after which no limited-access highways or any new arterials were constructed, with the exception of West Street (Route 9A), which replaced a part of the elevated Miller Highway that collapsed in 1973 due to neglected maintenance.

Many highways proposed for New York City have generated extensive debate but were never built, such as the Lower Manhattan Expressway (researched from 1940 to 1969), the Richmond Expressway–Parkway (1941–88), the Mid-Manhattan Expressway (1946–69), the Cross-Brooklyn Expressway (1955–69), the Oyster Bay–Rye crossing of Long Island Sound (1967–72), Westway (1972–90), and a number of other local extensions and connections.

Limited-access expressways and parkways tend to surround each borough and connect the city to the regional and national road system. Since many of these are old, in places the pavement has deteriorated, physical elements and geometry are obsolete, and safety features are inadequate. No new construction of this type can be anticipated, however, so a principal task of the city is to gain the maximum utility from these existing alignments. Congestion is chronic on most sections of this network, which suffers from the fact that long-distance motor vehicle traffic along the eastern seaboard is compelled to cross the city via the Verrazano–Narrows and George Washington bridges because of the presence of the Atlantic Ocean.

The middle tier of New York City roadways consists of major and minor arterials. These are the real workhorses of each borough, and they frequently follow historical alignments. Substantial improvements are difficult because the roadways are fronted by intensive development. In Manhattan this middle tier consists of the avenues, Broadway, and certain principal cross streets. In the Bronx some of the principal arteries are Broadway, Jerome Avenue, and the Grand Concourse. Queens has the Queens, Astoria, Northern,

Kissena–Parsons, and Rockaway boulevards, among others. In Brooklyn examples are Flatbush, Atlantic, Fourth, Union, and Pennsylvania; and Staten Island is served by Victory and Hyland boulevards, Forest and Richmond avenues, and Bay Street.

Of the almost 6000 miles (almost 9700 kilometers) of streets and roadways found in New York City, the overwhelming majority are local service and collector streets. The concerns at this level are pavement repairs, adequate drainage, keeping through traffic out of neighborhoods, and efficient trash collection and snow removal. A new program affecting the use and character of local streets is "traffic calming," which aims to improve the livability in neighborhoods by discouraging through traffic and slowing down all vehicular movement through the use of speed humps, changes in street direction, pavement textures, narrowing of roadways, and other restraints. In the early twenty-first century bicycle lanes were added to many streets in Manhattan.

street vendors. People selling a wide variety of items have always found a thriving market on New York City's streets, contributing to the economic vitality of the city. Vendors over the past three centuries have sold everything from food to clothing to household goods. As early as 1691 New York City started to regulate vendors as part of an effort to regulate streets, instituting a rule intended to limit street selling to two hours after public markets closed. That regulation, as well as others intending to limit the practice, was not successful, as the growing population demanded more goods. In the nineteenth century the city began to sell licenses to street vendors (a practice that has continued into the early twenty-first century). In the nineteenth century popular vendors included "hot corn girls," who sold roasted corn on the cob near the Five Points in Manhattan; "Apple Marys," who peddled apples in the financial district; and "ole clothes men," who walked through the city trading clothes from wagons they pulled behind them. In particular, the Lower East Side, which had the densest concentration of people during the second half of the nineteenth century, was especially popular with vendors: Hester, Rivington, and Orchard streets were thronged daily with crowds.

By the early twentieth century the city designated areas especially for street vendors, including spaces under the ramps of the Williamsburg, Manhattan, and Queensboro bridges. City Hall legalized pushcart markets to alleviate food shortages during World War I, even as it decreased the number of licenses for itinerant vendors. In the 1920s pushcarts supplied fresh fruits and vegetables, pickles, soda water, used clothes, and all variety of merchandise and ethnic foods, bringing in approximately $50 million annually. Street markets—totaling about 60 citywide in the 1920s—fanned out across the city and expanded into Brooklyn, Queens, and the Bronx. Throughout the twentieth century businesses increasingly pressured the city to limit or stop street vendors, complaining that they lowered shop sales, created nuisances on streets, and blocked traffic. Mayor Fiorello H. La Guardia made an effort to put an end to pushcart peddling in New York City during the 1930s and 1940s, closing more than 40 street markets and trying unsuccessfully to outlaw itinerant pushcart vending. To replace the outdoor markets he had closed, the city built nine market buildings.

From the late twentieth into the early twenty-first century, New York City tightened the rules for street selling, including issuing strict guidelines regarding the number of licenses it would issue and raising the fees for these licenses. The police routinely issued summons for violations and confiscated goods. Only First Amendment vendors (those selling articles that could be deemed acts of expression) could operate without a license. Nonetheless, vendors remained on city streets, including hundreds of those with hot dog carts—a city icon. The wait for general vending licenses (nonfood) could be as long as 25 years, so the number of unlicensed vendors could be two or three times the number of licensed ones. In the early twenty-first century most street vendors were recent immigrants, predominantly from Latin America, South Asia, West Africa, and the Middle East. As of 2009 there were approximately 3000 permits granted to food vendors, with much public debate about increasing the number of licenses. Increasingly, street fairs, which require closing off large sections of avenues, have become the new home of street vendors. These are well-organized weekend events approved by the city in which hundreds of vendors sell food and goods, paying fees to the city to do so.

Rowan Moore Gerety

Streisand, Barbra [Barbara] **(Joan)** (*b* Brooklyn, 24 April 1942). Singer and actress. She spent her childhood in Williamsburg, Brooklyn, attending Beis Yakov Jewish School. She began her career singing on local television programs and in such nightclubs as the Bon Soir and the Blue Angel in Manhattan. After signing a contract with Columbia Records she made her debut on Broadway in a supporting role in *I Can Get It for You Wholesale* (1962); she became well known in the leading role of *Funny Girl* (1964) and won an Academy Award for her performance in the film version in 1969. In 1978 Streisand and Neil Diamond released their popular duet "You Don't Bring Me Flowers." The two performers had previously sung together in their school choir while students at Brooklyn's Erasmus High School. Streisand produced, directed, and acted in several motion pictures, including *Yentl* (1983) and *The Prince of Tides* (1991). In addition to having released number-one albums in each of the past four decades, Streisand is the only person to have won an Oscar, Tony, Emmy, Grammy, Golden Globe, Cable Ace, and Peabody Award as well as the American Film Institute's Life Achievement Award. One of the highest selling female solo artists of all time, she had released 50 gold records and 30 platinum records as of 2008.

David J. Weiner

Striker's Bay [Stryker's Bay]. Section of the former neighborhood of Bloomingdale, bounded to the north by 99th Street, to the east by Central Park West, to the south by 81st Street, and to the west by the Hudson River. It was named for Jacobus Strijker, a magistrate of the Court of New Amsterdam who in 1764 owned a mansion at what is now 96th Street; his descendants lived there for many years. Throughout the nineteenth century the area attracted such residents as Edgar Allan Poe (during summers in the 1840s) and Valentine Mott, a surgeon who owned a house on a parcel of 11 acres (4.5 hectares) covering what is now the area between 93rd and 96th streets. Like other sections of the Upper West Side, Striker's Bay disappeared during a period of rapid growth in the late nineteenth century when its buildings were razed to make way for new residential development.

James Bradley

strikes. Since 1677, when 12 carters faced criminal prosecution for opposing government-regulated hauling rates, New Yorkers have participated in strikes to win employer concessions and improve their working conditions. In 1741 bakers withheld their services to protest the high price of wheat. After the American Revolution artisans employed the rhetoric of liberty to defuse accusations of conspiracy as they organized. In the 1830s numerous strikes by tailors, dockworkers, construction workers, carpenters, and others gave New York City's working class a reputation for radicalism. In 1853 striking African American waiters won a 25 percent wage in-

crease, inspiring their white colleagues to also fight for better pay. Long Island Rail Road car painters went on strike in Queens in 1886. In many instances strikers were met with violence, as when Brooklyn trolley workers clashed with state militia in 1895. Newsboys won concessions from publishing titans in 1899, overcoming great odds. Ten years later "the uprising of the 20,000" primarily Jewish women disrupted the city's garment industry for months, an example of militant unions organizing immigrants during the Progressive era. Strikes diminished after the 1919 Red Scare but reemerged as organizing won legal protections during the New Deal and gained popularity amidst the Great Depression. After World War II strikes gripped New York City following years of government-controlled wages. With tugboat pilots, teamsters, longshoremen, and others on picket lines, fuel and many other necessities were in short supply. In the face of the city's looming fiscal crisis during the 1970s and 1980s, some public employees, including teachers, police officers, and transport and sanitation workers, walked off their jobs despite the 1967 Taylor Law that prohibited them from striking. Taxi drivers, newspaper staff, theatrical stagehands, nurses, and building service workers are among the many other New Yorkers who have struck in recent decades, as lately as 2009.

Strivers' Row [King Model Houses].

Group of 1891 row houses in Harlem on West 138th and 139th streets between Seventh and Eighth avenues. The 130 houses, which stand in four elegant rows along two blocks, were the brainchild of developer David H. King, Jr., who had gained acclaim as the builder of the Old Times Building, Madison Square Garden, and the base of the Statue of Liberty. King acquired the property to create a residential community. Originally, the houses were called the King Model Houses. The name Strivers' Row was coined to reflect the aspirations of "common folk" and prominent African Americans who moved to Harlem after World War I. Some of New York City's leading architects were commissioned to construct parts of the development, including McKim, Mead and White (north side, West 139th Street), Bruce Price and Clarence S. Luce (south side, West 139th Street; north side, West 138th Street), and James Brown Lord (south side, West 138th Street). The houses incorporated different styles (Georgian and neo-Italian Renaissance) but also contained similar materials and features. A novel feature still in existence is the private alleyway. Now used for parking, these private spaces allowed homeowners to discreetly receive deliveries and stable and care for horses. Strivers' Row has been home to many notable African Americans, including Adam Clayton Powell, Jr., Eubie Blake, W. C. Handy, Lincoln Perry (Stepin Fetchit), Harry Wills, Samuel T. Battle, Scott Joplin, Vertner Tandy, Noble Sissle, and Bill "Bojangles" Robinson.

Strong, George Templeton (*b* New York City, 26 Jan 1820; *d* New York City, 21 July 1875). Lawyer and diarist. His father, George Washington Strong, was a prominent New York City lawyer. Strong graduated from Columbia University in 1838 and in 1844 became a partner in his father's law firm, Strong, Bidwell and Strong, where he specialized in real estate and probate law. He was a trustee of Columbia for 20 years and helped to found its School of Law. During the Civil War he was treasurer of the U.S. Sanitary Commission (a predecessor to the American Red Cross), and he also helped to found the Union League Club. In 1872 he became comptroller of Trinity Church, where he was a member and vestryman from 1847 to 1870. Strong served as president of the Philharmonic Society and the Church Music Association. He is best known for his meticulously kept diary, which he began as a student at Columbia. The 2250-page diary contains detailed accounts of everyday life in the city from 1835 to 1875. Strong died in his home at 113 East 21st Street and is buried at Trinity Church Yard; President Ulysses S. Grant attended his funeral, and John Jacob Astor was a pallbearer. His diary was edited and published in four volumes in 1952; the original diary is held by the New-York Historical Society.

Kate Lauber

Strong, Josiah (*b* Naperville, Ill., 19 Jan 1847; *d* New York City, 28 April 1916). Religious leader and reformer. A leader of several reform organizations based in New York City, he encouraged social involvement as a practical expression of social Christianity. With Washington Gladden, Walter Rauschenbusch, and Lyman Abbott he edited the *Kingdom,* the most influential journal of the Social Gospel movement. He wrote five books on social reform, including *Our Country* (1885), a blending of social Christianity and Darwinian theory that sought to expose urban injustices and attribute corruption to wealth. Strong led the American Evangelical Alliance from 1886 to 1898 and the League for Social Service from 1898 to 1904 and also helped to form the Federal Council of Churches in the city in 1908. He lived in Greenwich, Connecticut.

Eileen W. Lindner

Strong, William L(afayette) (*b* Richland County, Ohio, 22 March 1827; *d* New York City, 2 Nov 1900). Mayor. After becoming a millionaire as a merchant and banker, he was elected mayor as a reform Republican with the backing of independents and the chamber of commerce and the grudging support of the Republican boss, Thomas C. Platt. He took office in 1895 and appointed Theodore Roosevelt police commissioner. Strong's school reforms, nonpartisan distribution of patronage, and enforcement of Sunday blue laws cost him reelection, and he left office in 1897.

Andrew Wiese

Stuart, Robert Leighton (*b* New York City, 21 July 1806; *d* New York City, 12 Dec 1882). Businessman, philanthropist, and art patron. With his brother Alexander Stuart he formed the sugar-refining firm of R. L. and A. Stuart on Greenwich Street in 1828, which by midcentury used innovative steam-based methods to produce more than 40 million pounds of sugar a year. He was a member of the Century Association (1859) and the Union Club (1863) and a president of the American Museum of Natural History (1872–81). A devout Presbyterian, he was president of Presbyterian Hospital (1880–82) and contributed to the construction of two churches on Fifth Avenue. His home at 154 Fifth Avenue housed an extensive collection of American and European art and a library of 15,000 volumes that he bequeathed to the Lenox Library.

Donna Ann Grossman

Studio 54. Discotheque named for its location at 254 West 54th Street in Manhattan. Originally built as the Gallo Opera House in 1927, the theater served as a television and radio stage for the Columbia Broadcasting System (CBS) from the 1950s to 1976. Reopening as Studio 54 in 1977, the club became the center of New York City nightlife, attracting such patrons as Andy Warhol, Truman Capote, Liza Minnelli, Cher, and Halston, and it received extensive press coverage. Known for its decadence and abandon, Studio 54 closed when its owners were convicted of tax evasion and sentenced to prison in 1979. Mark Fleishman owned the club during the 1980s, and it became a venue for rock concerts during the 1990s. The Roundabout Theater acquired the venue in 1998, staging such Broadway revivals as *Cabaret, A Streetcar Named Desire,* and *Threepenny Opera.* The second floor of the theater remained a nightclub.

Irina Ikonsky

Studio Museum in Harlem. Museum at 144 West 125th Street dedicated solely to the art and artifacts of black America and other cultures of African origin. Incorporated in 1967 as a studio for artists, it began a permanent collection that by 2007 numbered more than 10,000 items, including paintings by Romare Bearden and Jacob Lawrence as well as textiles and photographs. The only black museum accredited by the American Association of Museums and the custodian of the collection of black and Latin American art maintained by New York State, it sponsors exhibitions, lectures, and workshops and continues to provide studio space for artists. In 2005 the museum was one of 406 New York City arts institutions to receive part of a $20 million grant from the Carnegie Corporation of New York that helped expand and renovate the museum, including a new auditorium and additional gallery space.

Betty Kaplan Gubert

Sturges, Jonathan (*b* Southport, Conn., 24 March 1802; *d* New York City, 28 Nov 1874). Merchant, art patron, and philanthropist. After moving to New York City in 1821 he joined the mercantile firm of Luman Reed and in 1836 assumed control of the firm of Reed and Sturges at 125–27 Front Street. Known for his comprehensive collection of American art, he helped to form the Century Association (1847); the New-York Gallery of the Fine Arts (1844–58), of which he was president; and the Union League Club (1863), of which he became president in 1864.

Timothy Anglin Burgard

Stuyvesant, Peter [Petrus] (*b* Friesland, the Netherlands, 1610; *d* New York City, February 1672). Director general of New Netherland. The son of a minister, he joined the military and was eventually appointed governor of Curaçao before receiving his commission as director general of New Netherland from the States General. He sailed into New Amsterdam with a fleet of four vessels in 1647 and took up residence in the governor's house in Fort Amsterdam (now the site of the U.S. Custom House). Some of his first ordinances dealt with religious observance and the sale of intoxicants on Sundays. He soon rebuilt

Peter Stuyvesant, ca *1660 (artist unknown)*

the church at Fort Amsterdam and served as a church warden. In this position he forbade all religious observances except those of the Dutch Reformed Church and sought to prevent Jews and Quakers from entering the colony. Both of these attempts failed, however, helping to further the city's reputation for tolerance.

In 1651 he bought a farm bounded by what are now 17th Street, the East River, Fifth Street, and Fourth Avenue. Around 1655, using his salary of 250 guilders a month, he built an elegant home called White Hall (in his day also called Stuyvesant's Great House), at what is now the intersection of Whitehall and State streets; he bought the property in 1658 and made it his official residence. During his tenure he improved relations with English colonies, fostered commerce, regulated internal affairs, allowed the formation of municipal government for New Amsterdam, and removed Swedish settlements from the Delaware River. After surrendering to the English in 1664 he withdrew from public affairs and retired to his farm, where he spent the rest of his life at the manor house (now the site of Stuyvesant Street). He was buried beneath the chapel of the house, now the site of St. Mark's Church in the Bowery.

Anna Crouse and Russel Crouse, *Peter Stuyvesant of Old New York* (New York: Random House, 1954)

James E. Mooney

Stuyvesant Heights. Neighborhood in northwestern Brooklyn covering 12 blocks in the heart of Bedford–Stuyvesant founded in 1640 by Peter Stuyvesant. It is bounded to the north by Macon Street, to the east by Stuyvesant Avenue, to the south by Chauncey Street, and to the west by Tompkins Avenue,

bordering on Weeksville (1838). Dutch farmers owned the land when streets were gridded in 1835, naming them after American heroes. Brick houses rose in 1870 for German and Irish residents. In 1870 Stuyvesant Heights became the first home for St. John's College. Most of the one-family brownstones and row houses lining the streets were built in the 1890s. During the 1930s Depression, African Americans moved into the community and white residents moved out. Designated a historic district in 1971, the area became known for its strong commitment to preservation. Among its many landmarks are the Mount Lebanon Baptist Church and the John and Elizabeth Truslow House. Stuyvesant Heights has always been residential: its population is middle class and overwhelmingly African American, with a large number of immigrants from Guyana, Jamaica, and Barbados. In the early twenty-first century it remained a mixed community of professionals.

Andrew Dolkart, ed., *Guide to New York City Landmarks* (New York: Preservation Press, National Trust for Historic Preservation, 1992)

James Bradley, John Manbeck

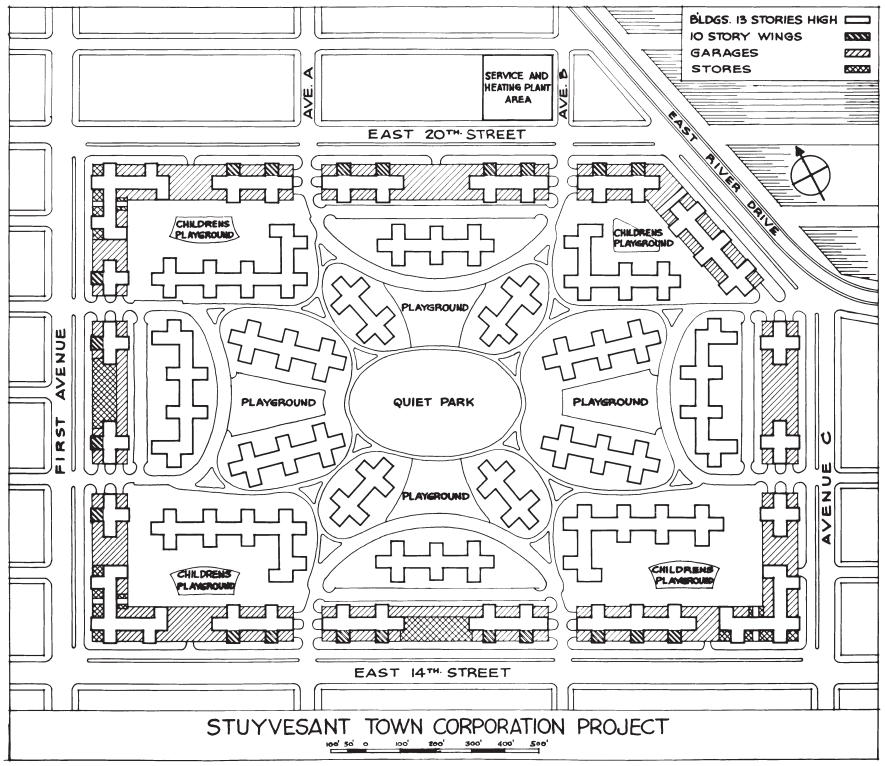
Stuyvesant High School. Public high school, named for Peter Stuyvesant, opened in 1904 on East 23rd Street as a "manual training school for boys"; in 1907 it was destroyed by fire and moved to East 15th Street. Conceived as part of the reform program of Superintendent of Schools William H. Maxwell, the school was intended to prepare children of immigrants for careers in science. Between 1909 and 1934 this goal was reaffirmed by its second principal, the physicist Ernst R. von Nardroff. The school became coeducational in 1969. In September 1992 it moved to a new building in Battery Park City, constructed at a cost of $150 million. At the time it had about 2700 students, of whom 51 percent were Asian, and about 100 teachers. The students at Stuyvesant are admitted by special examination and live throughout the city. Each year many are recipients of the Westinghouse Science Talent Award, which is the focus of an informal competition with the Bronx High School of Science.

During the terrorist attacks of 11 September 2001 the school, which was 400 meters from the World Trade Center site, was evacuated as smoke entered the building, though there was no physical damage to the structure. The building was then used as a base of operations for rescue and recovery workers until 9 October while students attended classes in two shifts at Brooklyn Technical High School.

Many renowned scientists and physicians have attended Stuyvesant High School, including two recipients of the Nobel Prize: Joshua Lederberg (physiology and medicine, 1958) and Roald Hoffmann (chemistry, 1981). Other famous alumni include the architectural critic Lewis Mumford, the film actor James Cagney, the jazz pianist Thelonious Monk, and the screenwriter Joseph Mankiewicz.

Stephan F. Brumberg, *Going to America, Going to School: The Jewish Immigrant Public School Encounter* (New York: Praeger, 1986)

Joshua Lederberg



Stuyvesant Square. Neighborhood on the East Side of Manhattan, bounded to the north by 18th Street, to the east by First Avenue, to the south by 14th Street, and to the west by Third Avenue. The land was sold by Peter Gerard Stuyvesant to New York City in 1836 for five dollars, on the condition that it become a park. Improvements to the 4-acre (1.6-hectare) lot were slow to come: in 1846 an iron railing was erected around it, and in 1847 it was graded and designated a park. It was officially opened in 1850, complete with fountains and landscaping. As German, Irish, Jewish, Italian, and Slavic immigrants moved into the area, it became an important neighborhood gathering place. Over the next century many improvements were made, the most significant in the 1930s and 1980s. St. George's Episcopal Church was built at 209 East 16th Street in 1856; the Friends Meeting House and Seminary was constructed at 15th Street and Rutherford Place in 1860. Other institutions in the neighborhood include Beth Israel Medical Center and the High School for Health Professions and Human Services, which was previously Stuyvesant High School. Area residents included artist Reginald Marsh, attorney Hamilton Fish, Tammany boss Charles Murphy, and Czech composer Antonín Dvořák, who has a monument in the park. Stuyvesant Square was designated a historic district in 1975.

Lisa Keller

Stuyvesant Town. Housing development in Manhattan, covering 18 blocks and bounded to the north by 20th Street, to the east by Avenue C, to the south by 14th Street, and to the west by First Avenue. Built during 1943–47 for $112 million by the Metropolitan Life Insurance Company (along with Peter Cooper Village immediately to the north), it was the beneficiary of a new state law to encourage private firms to rebuild slum districts. Both developments were built to replace tenements in the old Gashouse District and were initiated by Robert Moses under the guidance of Mayor Fiorello H. La Guardia. The architects were Irwin Clavan and Gilmore Clarke, who designed 35 redbrick buildings of 13 to 14 stories each, containing 8756 rent-stabilized apartments; tree-lined walkways complemented the sparse architecture, and a park with a fountain lay at the center of the development. When the first apartments opened in 1947, they attracted more than 11,000 applicants, most of them World War II veterans. All were white, young, and married: single people, unmarried couples, and African Americans were barred during the tenure of Frederick H. Ecker as chairman of Metropolitan Life from 1936 to 1950. Almost 100 organizations and individuals protested these restrictions during a hearing of the City Council before the contract to establish

Stuyvesant Town, 2009

Plan for Stuyvesant Town, ca *1943*

Stuyvesant Town was signed. The courts upheld the rental policy until the company changed it voluntarily in August 1950; in October 1950 three black families moved in. By the end of the twentieth century the population became ethnically more diverse, with growing numbers of Dominican, Puerto Rican, and Chinese residents. Stuyvesant Town has always been considered a desirable address; typically thousands of applicants were on its waiting list in part because rents were lower than comparable buildings elsewhere. In October 2006 Metropolitan Life sold Stuyvesant Town and Peter Cooper Village to the real estate firm Tishman Speyer Properties for $5.4 billion, a record-high price for such a transaction. In 2010 they defaulted on their payments, and creditors took over the property.

B. Kimberly Taylor

Styne, Jule [Stein, Jules] (*b* London, 31 Dec 1905; *d* New York City, 20 Sept 1994). Composer and producer. Educated in the Midwest, he moved to New York City in the mid-1930s. He wrote several successful Broadway shows, including *High Button Shoes* (1947), *Gentlemen Prefer Blondes* (1949), *Gypsy* (1959), and *Funny Girl* (1964), as well as film scores. Among the works inspired by New York City are the show *The Kid from Brooklyn* (1946) and the songs "It Happened in Brooklyn" (1947) and "Ev'ry Street's a Boulevard in Old New York" (1953).

Theodore Taylor, *Jule: The Story of Composer Jule Styne* (New York: Random House, 1979)

Marc Ferris

submarines. The first submarine in New York Harbor probably was one nicknamed "the Intelligent Whale" that sank while it underwent trials in 1872 at the Brooklyn Navy Yard (officially the New York Naval Shipyard). Not long afterward the Irish American submarine pioneer John Holland tested model subs at Coney Island and built several full-sized boats in New York and Brooklyn shipyards. Two were financed by a group of Irish exiles who hoped to use them against the British; one was called the Fenian Ram and was a failure, like others built by him and his peers. In the 1920s and early 1930s the navy yard was charged by the U.S. Navy to develop new types of diesel engines for submarines that were built elsewhere. During the two world wars rescuers brought hundreds of survivors from ships sunk by German submarines to the city; most were put up at the Seamen's Church Institute at 25 South Street. During World War II steel antisubmarine nets were extended across the Narrows from Coney Island to Staten Island to prevent German submarines from invading the harbor. Other than participating in naval revues, U.S. submarines were not often seen in the harbor after 1945. When the Brooklyn Navy Yard was closed down in 1966, one reason given by Defense Secretary Robert McNamara was that it lacked the capability to build modern nuclear submarines.

Weir, *Building American Submarines, 1914–1940* (Washington, D.C.: Naval Historical Center, 1991); Norman Friedman, *U.S. Submarines through 1945* (Annapolis, Md.: Naval Institute Press, 1995); Leah Robinson Rousmaniere, *Anchored within the Vail: A Pictorial History of the Seamen's Church Institute* (New York: Seamen's Church Institute, 1995)

John Rousmaniere

Subtreasury of the United States. Defunct agency for collecting federal taxes. It was an arm of the subtreasury system (formed in 1846 as part of the independent treasury overseen by the assistant treasurer of the United States) and was responsible for collecting and disbursing two-thirds of the nation's revenues; it was also the representative of the U.S. Treasury on Wall Street. From 1862 to 1925 the headquarters were at the Federal Hall National Memorial on the corner of Wall and Nassau streets. Among the well-known heads of the agency were John A. Dix (1798–1879), later governor of New York; John A. Stewart (1822–1926), a banker who formed the U.S. Trust Company; and Thomas C. Acton (1823–1909), later president of the Bank of New Amsterdam. By the mid-1920s the functions of the subtreasury were taken over by the Federal Reserve Bank of New York.

James Bradley

suburbs. Although New York City is the most densely populated municipality in the United States (2009 density of pop. 26,800 per square mile [43,130.4 per square kilometer]), universally symbolized by the towering skyline of Manhattan, the city's suburbs are older, larger, and more sprawling than those of any other city in the world. In 2000 the urbanized region comprised not only 8 million inhabitants in the city itself but an additional 14 million in 27 adjacent counties in New York, New Jersey, and Connecticut, for a metropolitan total of 22 million.

Brooklyn Heights was the world's first commuter suburb, transformed between 1815 and 1835 from a sleepy rural village into a middle-class bedroom community. Regular steam ferry service to New York City (then consisting only of Manhattan) began in 1814, and in the following year the *Brooklyn Star* predicted that Brooklyn Heights would become "a favorite residence for gentlemen of taste and fortune." Additional ferry lines soon expanded the commuting possibilities, and by 1860 the various ferries across the East River were carrying 100,000 passengers every working day.

Railroads had an even greater effect on suburban growth. Commuter travel in the region by steam railroad began in 1832, and by 1837 the New York and Harlem Railroad offered service to 125th Street. Additions to this same line led to White Plains and central Westchester by 1844. Meanwhile, the New York and New Haven Railroad along Long Island Sound reached New Haven, Connecticut, in 1843, and the Harlem River line toward Albany, New York, reached Peekskill in 1849. In the following decade real estate develop-

ments were constructed in Rye, Tarrytown, and New Rochelle. The northbound railroads opened up Westchester County (including what later became the Bronx), largely replacing the steamboats that had run to Yonkers and Peekskill.

At the same time the Long Island Rail Road and the New York and Flushing Railroad enabled former residents of Manhattan to commute from the east. By bringing villages in Queens County within an hour of the business district in the late 1850s, the railroads carried an influx into Newtown, Maspeth, and Flushing. On the other side of the Hudson River, Jersey City was the hub of a combined ferry and rail route that enabled commuters to traverse the 16 miles (25 kilometers) from South Orange, New Jersey, to New York City in less than an hour. Because of this route Llewellyn Park, the world's first picturesque suburb, was developed in the eastern foothills of the Orange Mountains in the decade before the Civil War. Conceived by Llewellyn S. Haskell, a prosperous drug merchant, and planned by Alexander Jackson Davis, the most prolific architect of his generation, the suburb was notable for its use of two features unprecedented in residential development: the curvilinear road and the central open space. The most ambitiously planned suburb of the nineteenth century was Garden City, about 20 miles (30 kilometers) east of Manhattan in Nassau County. The inspiration of the merchant A. T. Stewart and his long-time architect John Kellum, Garden City was unusual for its large lots and wide streets. Because Stewart chose to rent rather than sell the houses, the community did not prosper until the twentieth century.

By 1900 New York City had more suburbs than any other place in the world, as thousands of businesspeople chose opulence over the polyglot ambience of the city. Every morning hundreds of trains from northern and eastern New Jersey pulled into Hoboken, discharging passengers who then embarked on a 10-minute ferry ride to Manhattan. From southern and eastern Brooklyn and from Nassau County steam locomotives brought passengers to Atlantic Avenue in Brooklyn, where they had easy access to the financial district. Meanwhile, Westchester County became the first large suburban area. At the turn of the twentieth century the three major passenger railroads running along the Hudson, the Harlem River Valley, and Long Island Sound were carrying 118,000 commuters a day into Grand Central Terminal. The population of Westchester doubled three times in successive 20-year periods—1850–70, 1870–90, and 1890–1910—by the end of which it had 283,000 residents. Most of the development was actively encouraged by the railroads, which developed communities, promoted the advantages of suburban living, and offered frequent, reliable service. Indeed, commuter service from the city's northern suburbs in the late nineteenth century was almost as good as it would be in the twenty-first century.

The suburban shift accelerated after World War II, aided by a national mania for the automobile and by federal policies that favored private transportation. By 1970 more than 2200 square miles (5700 square kilometers) had been urbanized, about five times the area urbanized in 1920 even though the population had only doubled. Because suburban residents in the twentieth century rejected annexation by New York City, unlike their predecessors in what became the city's outer boroughs, the metropolitan region became highly fragmented: in 1960 the political scientist Robert C. Wood identified within the region more than 1400 separate suburban governments and taxing authorities.

Employment followed the same path as population. As late as 1920 Manhattan, the Bronx, Brooklyn, and Queens and Newark and Jersey City in New Jersey accounted for about 80 percent of the employment in what was later designated the New York–Northern New Jersey–Long Island Consolidated Metropolitan Statistical Area. Most of the rest was in satellite cities that were well served by rail lines, such as Yonkers and White Plains in Westchester, and Paterson and Passaic in New Jersey. By 1970, however, more than half the employment in the region was outside the old urban core. Even so, early in the twenty-first century New York City remained unique in the United States for the dominance of the central city.

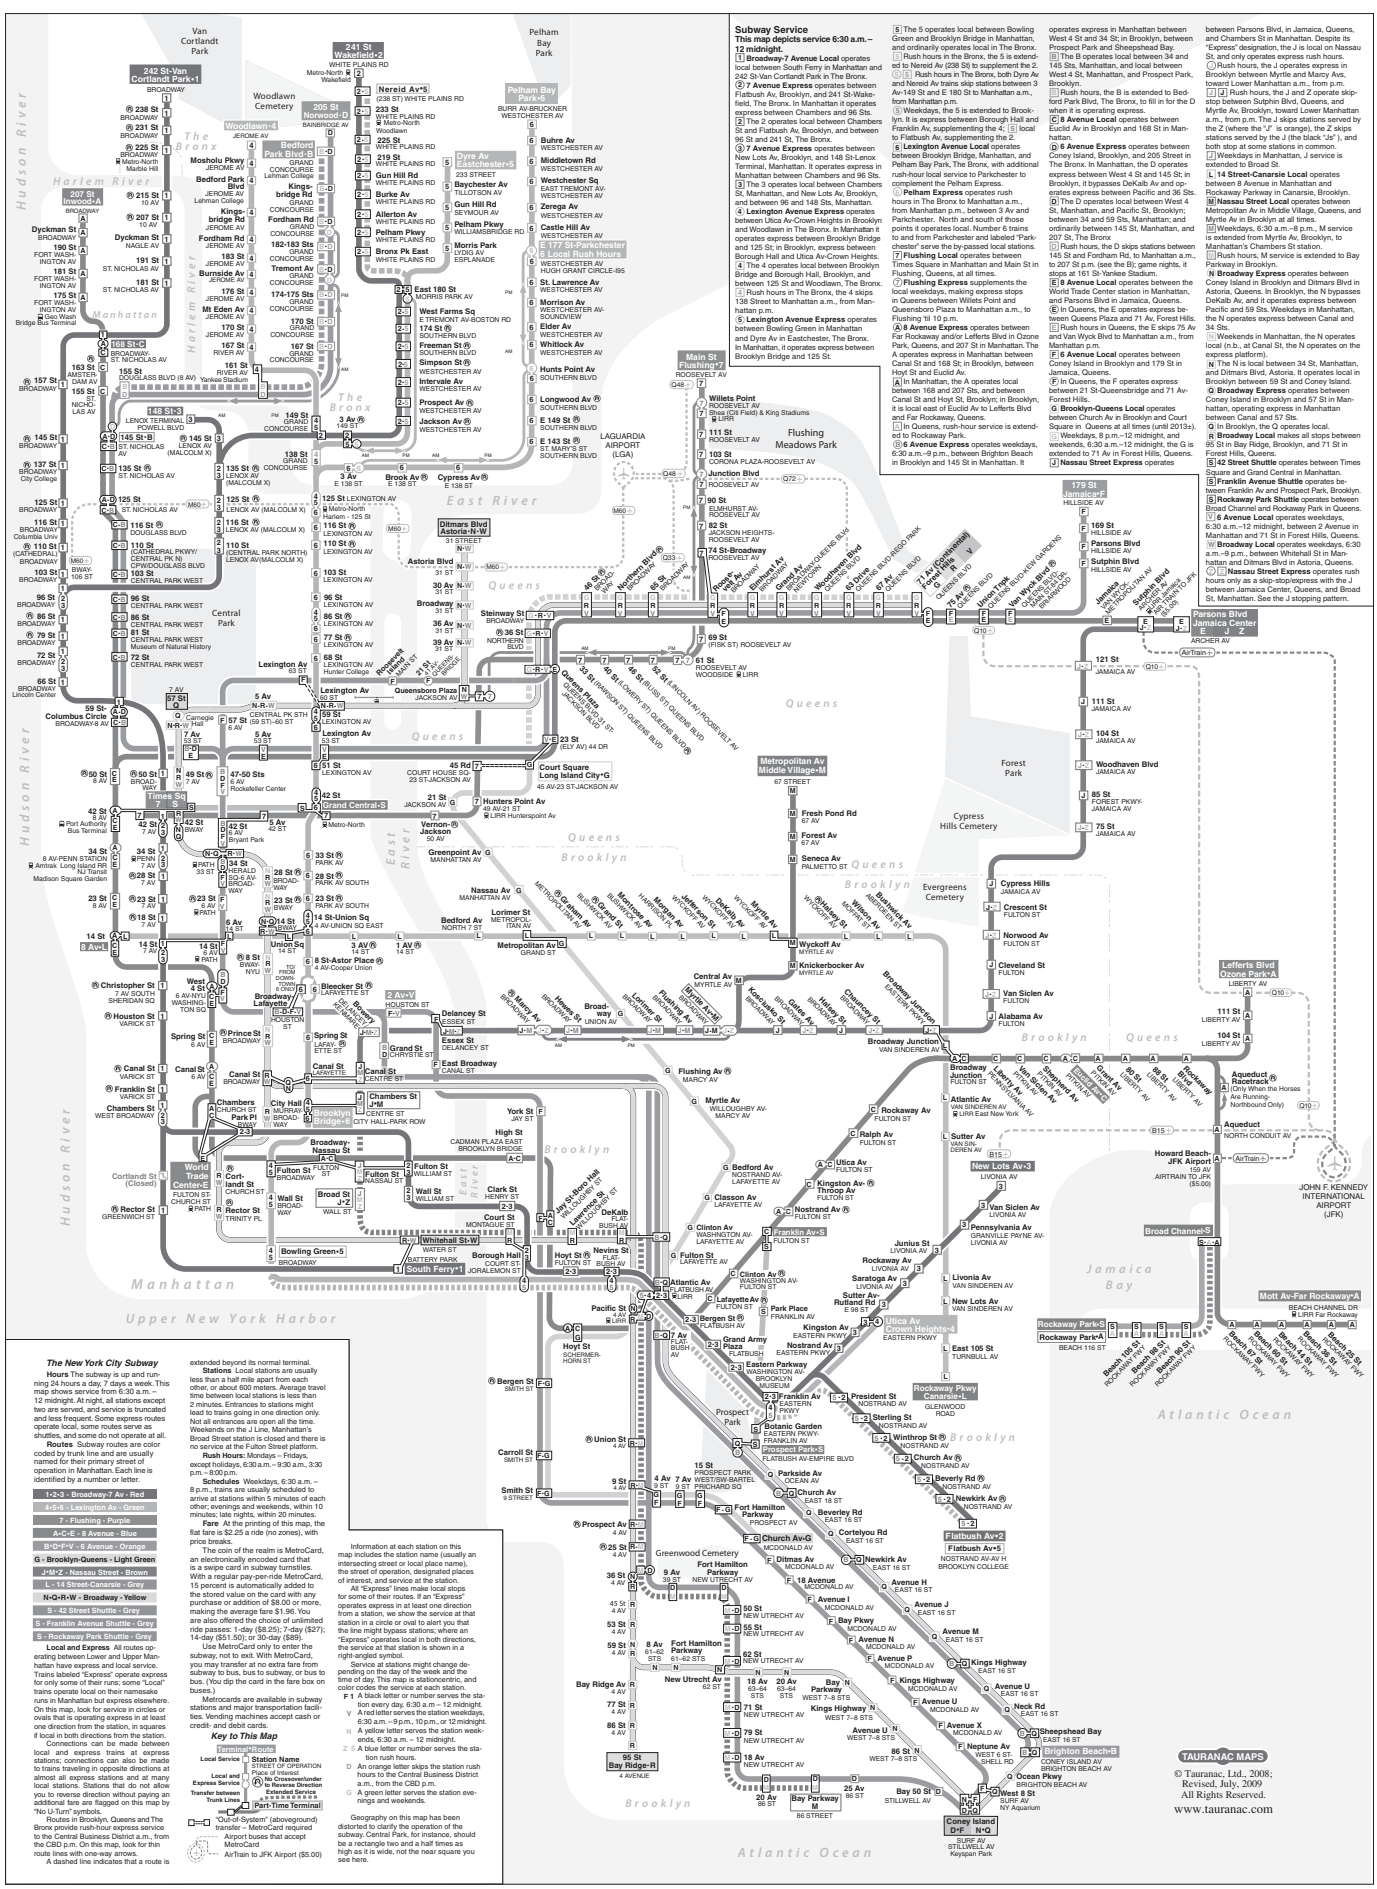
subways. Serious consideration was given to building a rapid transit system in New York City as early as the 1860s, when the streets of Manhattan were choked with slow-moving traffic. Many proposals were made, most inspired by the first subway in the world, which opened in London in 1863. After delays in construction due to expense, political squabbling, and technological obstacles, the first segment of an experimental elevated line along Greenwich and Ninth avenues to 30th Street opened to passengers on 3 July 1868. Its success led elevated lines to be built with private capital and operated under long-term franchises in other parts of Manhattan and in the Bronx and Brooklyn. A pneumatic subway on 312 feet (100 meters) of track built illegally under Broadway near City Hall was demonstrated to the public in 1870 but for lack of legislative and financial support was not expanded. In the early 1890s proposals were made for adding rapid transit lines to keep pace with the city's growth. There was widespread interest in building an underground system using new electric motors, but private companies were unwilling to risk investing in such a project.

A plan allowing a subway to be built with city funds was overwhelmingly approved in a referendum in 1894; a public rapid transit board was formed and laid out the route, which ran from a point near City Hall to 42nd Street, then west to Times Square, and then north along Broadway to 96th Street, where the line divided. One branch continued along Broadway to 242nd Street, the other along Lenox Avenue and under the Harlem River to the central Bronx. Bids were solicited in 1900; the contract, awarded for $35 million to the Rapid Transit Subway Construction Company, leased the subway to the contractor for 50 years. The contractor was required to set the fare at five cents, to pay as annual rent the interest on the municipal bonds as well as a sinking fund of 1 percent to amortize the bonds, and to equip and operate the lines at its own expense. In 1902 the Interborough Rapid Transit Company (IRT) was formed to operate the subway and was awarded a second contract to build a line running south from City Hall under Broadway and the East River to downtown Brooklyn. The first segment opened on 27 October 1904 and was widely praised. The entire system, in operation by 1908, was the first in the world to have four-track service (separate express and local tracks in each direction).

Even before the IRT opened its first line, demands arose to extend routes throughout the metropolitan area, and a bitter struggle ensued over the best way to do so. Trains were overcrowded and the rapid transit companies were unwilling to undertake vast expansion. The city hoped to alleviate overcrowding in older neighborhoods and encourage settlement in less congested ones, and members of the Board of Estimate and the state public service commission led by Manhattan Borough President George McAneny drew up a plan for building as many lines as possible. On 19 March 1913 they approved the "dual system," under which rapid transit lines controlled by the IRT and the Brooklyn Rapid Transit Company (BRT) were expanded and organized as two networks. The two companies added 123 miles (197 kilometers) of routes and more than doubled the capacity of the rapid transit system at a cost of $302 million, more than had been spent on any other public works project in U.S. history at the time. Each company was granted a 49-year lease to operate its new lines and was permitted to charge a five-cent fare. Most track in outlying areas was built on elevated supports to save money.



In 1913 the city's rapid transit system carried 810 million passengers; by 1930, with the addition of the dual-system lines, it carried 2.49 billion. Under the dual-system plan the original subway line in Manhattan grew to

include two north–south lines on the East and West sides joined by a shuttle under 42nd Street. These lines were connected in the Bronx to the Jerome Avenue, White Plains Road, and Pelham lines. In Brooklyn the original subway was connected to the Nostrand Avenue and New Lots lines; and in Queens a line was built to Corona (later extended to Flushing). The BRT was given a lease for a loop under lower Manhattan and a trunk line running under Broadway from lower Manhattan to midtown. Among the lines joined to this trunk were the Astoria line in Queens and the Fourth Avenue, Culver, West End, Sea Beach, and Brighton lines to southern Brooklyn. The BRT and IRT provided joint service on the Astoria and Flushing lines. The Myrtle Avenue line was improved, the BRT received the right to operate a line along 14th Street to Canarsie, and the Broadway elevated line was extended to Jamaica. Despite rising construction and operating costs Mayor John F. Hylan refused to allow an increase in fares, leading the BRT to fall into bankruptcy between 1918 and 1923, when it was reorganized as the Brooklyn–Manhattan Transit Corporation (BMT).

During the 1920s additional plans were discussed. Some proposed to extend the IRT and BMT networks and others to build an independent system. In 1925 Hylan, who fiercely opposed the private operators, won approval for the Independent Subway System (IND), which added 59 miles (94 kilometers) of routes that were entirely underground except for a short stretch in Brooklyn. Trunk lines built under Sixth and Eighth avenues in Manhattan had connections to lower Manhattan and across 53rd Street; feeder lines were built to northern Manhattan and under the Grand Concourse and Queens Boulevard. A line was built to Flatbush, another replaced the old Fulton Street elevated line, and one was also built between Brooklyn and Queens (this was the first in the city that did not cross into Manhattan). The IND, which opened its first line in 1932 and its last in 1940, provided faster, more convenient service than other lines to many areas and encouraged development along Queens Boulevard. Between the world wars there was more development in the areas served by the dual-system and independent system lines than in other parts of the city.

The Transport Workers Union (TWU) successfully fought for salary increases and better working conditions from the 1930s. As the IND lines attracted more passengers, the financial problems of the BMT and IRT intensified. The IRT declared bankruptcy in 1932, and in 1940 the city bought the operating rights, equipment, and some properties from the companies, paying $175 million to the IRT and $161.5 million to the BMT; operation of their networks was assumed by the Board of Transportation, which ran the IND.

Subway Service
This map depicts service 6:30 a.m. – 12 midnight.
1 Broadway-7 Avenue Local operates local between South Ferry in Manhattan and 242 St-Van Cortlandt Park in The Bronx.
2 7 Avenue Express operates between Flatbush Av, Brooklyn, and 241 St-Wakefield, The Bronx. In Manhattan it operates express between Chambers and 96 Sts.
2 The 2 operates local between Chambers St and Flatbush Av, Brooklyn, and between 96 St and 241 St, The Bronx.
3 7 Avenue Express operates between New Lots Av, Brooklyn, and 148 St-Lenox Terminal, Manhattan. It operates express in Manhattan between Chambers and 96 Sts.
3 The 3 operates local between Chambers St, Manhattan, and New Lots Av, Brooklyn, and between 96 and 148 Sts, Manhattan.
4 Lexington Avenue Express operates between Utica Av-Crown Heights in Brooklyn and Woodlawn in The Bronx. In Manhattan it operates express between Brooklyn Bridge and 125 St; in Brooklyn, express between Borough Hall and Utica Av-Crown Heights.
4 The 4 operates local between Brooklyn Bridge and Borough Hall, Brooklyn, and between 125 St and Woodlawn, The Bronx.
4 Rush hours in The Bronx, the 4 skips 138 Street to Manhattan a.m., from Manhattan p.m.
5 Lexington Avenue Express operates between Bowling Green in Manhattan and Dyre Av in Eastchester, The Bronx. In Manhattan, it operates express between Brooklyn Bridge and 125 St.
5 The 5 operates local between Bowling Green and Brooklyn Bridge in Manhattan, and ordinarily operates local in The Bronx.
Rush hours in the Bronx, the 5 is extended to Nereid Av (238 St) to supplement the 2.
5 Rush hours in The Bronx, both Dyre Av and Nereid Av trains skip stations between 3 Av-149 St and E 180 St to Manhattan a.m., from Manhattan p.m.
5 Weekdays, the 5 is extended to Brooklyn. It is express between Borough Hall and Franklin Av, supplementing the 4. 5 local to Flatbush Av, supplementing the 2.
6 Lexington Avenue Local operates between Brooklyn Bridge, Manhattan, and Pelham Bay Park, The Bronx, with additional rush-hour local service to Parkchester to complement the Pelham Express.
6 Pelham Express operates rush hours in The Bronx to Manhattan a.m., from Manhattan p.m., between 3 Av and Parkchester. North and south of those points it operates local. Number 6 trains to and from Parkchester and labeled "Parkchester" serve the by-passed local stations.
7 Flushing Local operates between Times Square in Manhattan and Main St in Flushing, Queens, at all times.
7 Flushing Express supplements the local weekdays, making express stops in Queens between Willets Point and Queensboro Plaza to Manhattan a.m., to Flushing 'til 10 p.m.
A 8 Avenue Express operates between Far Rockaway and/or Lefferts Blvd in Ozone Park, Queens, and 207 St in Manhattan. The A operates express in Manhattan between 168 and 207 Sts, and between Canal St and Hoyt St, Brooklyn; in Brooklyn, it is local east of Euclid Av to Lefferts Blvd and Far Rockaway, Queens.
In Queens, rush-hour service is extended to Rockaway Park.
B 6 Avenue Express operates weekdays, 6:30 a.m.–9 p.m., between Brighton Beach in Brooklyn and 145 St in Manhattan. It operates express in Manhattan between West 4 St and 34 St; in Brooklyn, between Prospect Park and Sheepshead Bay.
The B operates local between 34 and 145 Sts, Manhattan, and local between West 4 St, Manhattan, and Prospect Park, Brooklyn.
Rush hours, the B is extended to Bedford Park Blvd, The Bronx, to fill in for the D when it is operating express.
C E 8 Avenue Local operates between Euclid Av in Brooklyn and 168 St in Manhattan.
D 6 Avenue Express operates between Coney Island, Brooklyn, and 205 Street in The Bronx. In Manhattan, the D operates express between West 4 St and 145 St in Manhattan, it bypasses DeKalb Av and operates express between Pacific and 36 Sts.
The D operates local between West 4 St, Manhattan, and Pacific St, Brooklyn; between 34 and 59 Sts, Manhattan; and ordinarily between 145 St, Manhattan, and 207 St, The Bronx.
Rush hours, the D skips stations between 145 St and Fordham Rd, to Manhattan a.m., to 207 St p.m. (see the B); game nights, it stops at 161 St-Yankee Stadium.
E 8 Avenue Local operates between the World Trade Center station in Manhattan, and Parsons Blvd in Jamaica, Queens.
In Queens, the E operates express between Queens Plaza and 71 Av, Forest Hills.
Rush hours in Queens, the E skips 75 Av and Van Wyck Blvd to Manhattan a.m., from Manhattan p.m.
F 6 Avenue Local operates between Coney Island in Brooklyn and 179 St in Jamaica, Queens.
In Queens, the F operates express between 21 St-Queensbridge and 71 Av-Forest Hills.
G Brooklyn-Queens Local operates between Church Av in Brooklyn and Court Square in Queens at all times (until 2013a).
Weekdays, 6 p.m.–12 midnight, and weekends, 6:30 a.m.–12 midnight, the G is extended to 71 Av in Forest Hills, Queens.
J Nassau Street Express operates between Parsons Blvd, in Jamaica, Queens, and Chambers St in Manhattan. Despite its "Express" designation, the J is local on Nassau St, and only operates express rush hours.
Rush hours, the J operates express in Brooklyn between Myrtle and Marcy Avs, toward Lower Manhattan a.m., from p.m.
J J Rush hours, the J and Z operate skip-stop between Sutphin Blvd, Queens, and Myrtle Av, Brooklyn, toward Lower Manhattan a.m., from p.m. The J skips stations served by the Z (where the "J" is orange), the Z skips stations served by the J (the black "Js"), and both stop at some stations in common.
Weekdays in Manhattan, J service is extended to Broad St.
L 14 Street-Canarsie Local operates between 8 Avenue in Manhattan and Rockaway Parkway in Canarsie, Brooklyn.
M Nassau Street Local operates between Metropolitan Av in Middle Village, Queens, and Myrtle Av in Brooklyn at all times.
Weekdays, 6:30 a.m.–8 p.m., M service is extended from Myrtle Av, Brooklyn, to Manhattan's Chambers St station.
Rush hours, M service is extended to Bay Parkway in Brooklyn.
N Broadway Express operates between Coney Island in Brooklyn and Ditmars Blvd in Astoria, Queens. In Brooklyn, the N bypasses DeKalb Av, and it operates express between Pacific and 59 Sts. Weekdays in Manhattan, the N operates express between Canal and 34 Sts.
Weekends in Manhattan, the N operates local (n.b., at Canal St, the N operates on the express platform).
N The N is local between 34 St, Manhattan, and Ditmars Blvd, Astoria. It operates local in Brooklyn between 59 St and Coney Island.
Q Broadway Express operates between Coney Island in Brooklyn and 57 St in Manhattan, operating express in Manhattan between Canal and 57 Sts.
Q In Brooklyn, the Q operates local.
R Broadway Local makes all stops between 95 St in Bay Ridge, Brooklyn, and 71 St in Forest Hills, Queens.
S 42 Street Shuttle operates between Times Square and Grand Central in Manhattan.
S Franklin Avenue Shuttle operates between Franklin Av and Prospect Park, Brooklyn.
S Rockaway Park Shuttle operates between Broad Channel and Rockaway Park in Queens.
7 6 Avenue Local operates weekdays, 6:30 a.m.–12 midnight, between 2 Avenue in Manhattan and 71 St in Forest Hills, Queens.
W Broadway Local operates weekdays, 6:30 a.m.–9 p.m., between Whitehall St in Manhattan and Ditmars Blvd in Astoria, Queens.
Z J Nassau Street Express operates rush hours only as a skip-stop/express with the J between Jamaica Center, Queens, and Broad St, Manhattan. See the J stopping pattern.

In 1941 the Dyer Avenue railroad line in the Bronx was incorporated into the subway system. The annual number of subway passengers reached 2.5 billion in 1947 and then declined until the 1970s. In 1948 the fare was raised to 10 cents. The New York City Transit Authority was formed by the State of New York in 1953 to operate the subway and the public bus system. The fare was raised to 15 cents on 25 July, requiring the introduction of tokens. By this time sections of the subway, some more than 50 years old, had fallen into disrepair because maintenance and capital renewal were inadequately funded. The transit authority used the proceeds from the sale of bonds approved in 1951 to replace subway cars and improve the physical plant. This plan had been approved by the voters largely because they assumed that it called for building a subway along Second Avenue. In 1956 the subway system absorbed the Long Island Rail Road's Rockaways railroad line in Queens.

Led by Michael J. Quill, the TWU went on strike in 1966 after failing to draw up a new contract with mayor-elect John V. Lindsay. It eventually won wage settlements and provisions for early retirement that inflated the operating costs of the transit authority, and in 1966 the fare was raised to 20 cents to compensate for these costs and for the decreasing number of passengers. The Metropolitan Transportation Authority (MTA) took control of the transit authority in 1968 and made plans to build lines to northeastern and southeastern Queens and under Second Avenue in Manhattan. Ridership continued to decline as people moved to the suburbs and relied on automobiles and as employment in the city fell by more than 600,000 between 1969 and 1977, by which time the number of riders was fewer than one billion for the first time in many years. The system also lost a large amount of revenue to "fare beaters," who entered stations without paying and sometimes inserted into the turnstiles foreign coins that were the same size as tokens, as well as counterfeit tokens known as slugs (a problem that led to the introduction in 1986 of the "bull's-eye" token, which could be counterfeited only with great difficulty; see People's Token). To make up for reduced revenues from fares the transit authority required increases in its operating subsidies, which eventually covered more than 40 percent of operating costs. The fare was raised successively to 30 cents (1970), 35 cents (1972), 50 cents (1975), and 60 cents (1980).

By the 1980s the subway system had seriously deteriorated. As crime became more common, the perception grew that the subways were unsafe. Passengers were also intimidated by graffiti, panhandling, and homeless people. Richard Ravitch, who became chairman of the MTA in 1979, suspended construction of any additional lines and focused on repairing aging facilities and reversing decay. As a result of innovative financial practices and pressure on the state legislature, the transit authority saw its annual capital budget for the subways increased from less than $300 million to more than $1 billion. Between 1982 and 1991 nearly $11 billion was committed to capital improvements. Under this capital program 4168 subway cars were overhauled, as were track, signals, power systems, maintenance facilities, and stations (often with the assistance of MTA Arts for Transit). By the early 1990s all subway cars were air conditioned. The system also bought 1775 new cars (all with air conditioning and surfaces resistant to graffiti). Under David L. Gunn, president of the transit authority, the management of the city's subway and bus system improved. An exhaustive effort to combat graffiti began with the removal from service of the most seriously vandalized cars and the protection of subway yards with barbed wire. During the early 1980s the subways again carried more than one billion passengers a year, and the number rose with improvements in service. In addition the New York City Transit Police Department was expanded and improved, and crime on the subways declined. Although subsidies to the MTA rose, so did operating costs; the fare was raised to 75 cents in 1981, 90 cents in 1984, $1 in 1986, $1.15 in 1990, and $1.25 in 1992.

After two five-year capital programs from 1982 to 1991, the MTA continued to raise capital funds from a variety of sources to continue the rebuilding of the subway system, as well as the bus network operated by MTA New York City Transit (the new name given to the transit authority by MTA in the mid-1990s). More than $45 billion was allocated to the agency's capital program between 1982 and 2009. In addition, in 1994 the MTA introduced the MetroCard to replace tokens; it also introduced free subway–bus transfers in 1997 and provided monthly, weekly, and daily discount MetroCards. The base fare on the system remained the cost of a single ride, and it was increased to $1.50 in 1995 and $2.00 in 2003. In 2008 the farebox operating ratio, that is, the fare's share of the cost of operating the New York City Transit subway and bus systems, was 58 percent (the balance came from subsidies from various levels of government). The improvements in service resulting from the capital program together with the free subway–bus transfers and fare discounts led to large increases in subway (and bus) ridership. In 1991 annual subway ridership had bottomed out at 995 million, but by 2007 it had increased to 1.56 billion.

The terrorist attacks of 11 September 2001 disrupted subway service by destroying the no. 1 station under the World Trade Center complex. The station was rebuilt and reopened ahead of schedule in September 2002. MTA and other agencies implemented a number of efforts to improve transit service to lower Manhattan, including the rebuilding of the Fulton Street station complex near the site of the World Trade Center.

In the early twenty-first century subways remain the most important form of transportation for millions of New Yorkers. In 2008 more than 66 percent of those traveling to Manhattan's central business district during peak hours used subways, and the system continued to run twenty-four hours a day throughout the year. On an average weekday

City Hall Subway Station, ca *1940s*

in 2008 there were 5.1 million subway trips. The city's rapid transit system was the most extensive in the world, with 714 miles (1142 kilometers) of track along 244 miles (390 kilometers) of routes; the longest line, the "A" line, is 32.4 miles (52.1 kilometers) long. The system was also one of the largest in the number of passengers it carried—fourth in the world in 2006 after Tokyo, Moscow, and Seoul; there were 26 lines, 468 stations, and 6241 subway cars in use. Portions of three of the original elevated lines remained, all in Brooklyn (along Myrtle Avenue, Broadway, and Franklin Avenue). Into the twenty-first century improvements to the system continued: in 2007 construction began once again on a subway under Second Avenue, and the Flushing line was being extended from Times Square to Manhattan's far West Side.

Cudahy, *Under the Sidewalks of New York: The Story of the Greatest Subway System in the World* (Brattleboro, Vt.: Stephen Greene, 1979); Clifton Hood, *722 Miles: The Building of the Subways and How They Transformed New York* (New York: Simon and Schuster, 1992); Peter Derrick, *Tunneling to the Future: The Story of the Great Subway Expansion That Saved New York* (New York: New York University Press, 2001)

Peter Derrick

Sudanese. The first Sudanese to come to New York City was the Reverend Sayed (Satti) Magid Mohammed, who arrived in 1903 to spread Islam. He maintained a base on West Street in Little Syria, the city's first Arab neighborhood. Working closely with the Black Muslim Elijah Mohammed, he is said to have been responsible for the conversion to Islam of an estimated 120,000 Americans. Since the 1940s Sudanese immigration to New York City has been steady; some have come to pursue higher education, some to escape the military regime that took power in the coup d'état of 1989, and some to evade the precipitous devaluation of the Sudanese pound. New Sudanese immigrants are educated; they tend to work as livery and taxicab drivers until they can begin practicing their professions. Among Sudanese professionals are doctors, engineers, architects, teachers, college professors, and translators. Sudanese residential and commercial neighborhoods include Coney Island Avenue, Cortelyou Road, and Avenue C, in Brooklyn, and Jamaica, in Queens. Most Sudanese New Yorkers are Muslim, though they rarely associate with the city's larger Arab community except in mosques. Their own mosque, Masjid Al-Ihsan, is on Fulton Street, in Brooklyn. The first local Sudanese club, the Sudanese American Organization, was started by Mohammad Eisa, who arrived in 1942. More recently the Sudanese American Association (SAA) was established in 2006; it seeks to foster an appreciation of popular and traditional Sudanese culture among Sudanese émigrés and other Americans. In 2007 SAA helped produce a day-long festival of Sudanese music and dance on Central Park's Summerstage, a milestone event for the city's 10,000 Sudanese.

Paula Hajar

sugar. The first sugar refinery in New York City was opened on Liberty Street in 1730 by Nicholas Bayard. Most raw sugar was imported to the colonies from overseas, and the city was soon a center of sugar refining, largely because of the port and the high local demand for sugar. The industry attracted such prominent families as the Livingstons, Bayards, Cuylers, Roosevelts, Stewarts, and Van Cortlandts. The Rhinelander family built a sugar refinery near Rose, Duane, and William streets in 1763, and in 1799 the firm of Edmund Seaman and Company began operating the city's first sugar boiler, on Pine Street. William Havemeyer and Frederick C. Havemeyer, former employees of Seaman, opened the refinery of Wm. and F. C. Havemeyer in 1805 on Vandam Street. In 1857 they helped to form Havemeyer, Townsend and Company on South Third Street in Williamsburg, where undeveloped land, a deep-water harbor, and abundant cheap labor soon attracted other refineries. When it opened, Havemeyer's refinery had a daily capacity of 300,000 pounds (more than 136,000 kilograms) of raw sugar—more than all other New York City refineries combined. By the 1870s the figure was more than one million pounds (about 450,000 kilograms) a day, and Havemeyer's firm was employing 1000 workers for each shift.

After the sugar industry in the Gulf states was destroyed during the Civil War, sugar refining became concentrated in New York City, where the port had become the largest in the country, the transportation system was extensive, and banks were numerous. Sugar refining was the city's most profitable manufacturing industry from 1870 until World War I: 59 percent of the country's imported raw sugar was processed there in 1872, and 68 percent in 1887. In addition to the firms of the Havemeyers, several others in the city were successful, among them Wintjen, Dick and Schumacher (led by William Dick), Dick and Meyer, DeCastro and Donner in Brooklyn (with two refineries), the Greenpoint Sugar Refining Company, and Brooklyn Sugar Refining.

Because of intense competition, refineries in the city tried to fix prices in 1882. Their failure to do so led Henry O. Havemeyer in 1887 to form the Sugar Refineries Company (known as the Sugar Trust) to control the price of sugar and the labor pool. The trust consolidated most of the major refiners in Brooklyn, including Havemeyers and Elder, DeCastro and Donner, Brooklyn Sugar Refining, Dick and Meyer, and Moller, Sierck. After being ruled illegal in 1891 by the state supreme court, the Sugar Trust was reorganized by Havemeyer, who incorporated the American Sugar Refining Company in New Jersey and retained headquarters in the city on Wall Street. In 1900 Havemeyer eliminated the little remaining competition in the region by consolidating the surviving refineries in the city into the National Sugar Refining Company of New Jersey. The American Sugar Refining Company was the most important firm of the Sugar Trust, and the loose

Arbuckle's Sugar Company, 1934

network of companies controlled by the Havemeyers dominated the U.S. sugar industry, accounting directly and indirectly for 98 percent of national production by 1907. From that year the American Sugar Refining Company engaged in a protracted legal battle with the federal government over its control of the trust, during which its share of the cane market fell from 53 percent to 32 percent. The struggle ended with a settlement in 1922 that allowed the firm to remain intact but forced it to refrain from unfair business practices; as competition revived, the firm ceased to dominate the industry.

After the Depression the sugar refining industry declined in the city as modern technology and alternatives to sugar were introduced. Most refineries in the area were closed or destroyed by fire. The National Sugar Refining Company maintained its executive offices on Wall Street until 1982. The American Sugar Refining Company dominated the industry; its principal trademark was and is Domino. Ownership of the company, then known as Amstar, changed hands in 1984 and 1986, and in 1988 it was bought by Tate and Lyle. It opened headquarters at 1251 Sixth Avenue and in 1990 had more than $1 billion in sales, the highest among sugar companies in the United States. In 1992 the firm changed its name to Domino Sugar Corporation. In the mid-1990s Domino was one of the 500 largest companies in the country, maintained offices in the city, and made Domino sugar at the original refinery of Havemeyers and Elder. The Domino factory closed in 2004, ending a century of New York City's domination of the sugar industry; it was a victim of changing food tastes, pressure for lower labor costs, high real estate prices, and foreign competition. The neon sign for the factory defines the waterfront site, and in 2007 parts of the site were designated historic landmarks.

Paul A. Vogt, *The Sugar Refining Industry in the United States* (Philadelphia: University of Pennsylvania Press, 1906)

James Bradley, Rowan Moore Gerety

Sugar Hill. Neighborhood in Manhattan, lying within Harlem and bounded to the north by 155th Street, to the east by Edgecombe Avenue, to the south by 145th Street, and to the west by Amsterdam Avenue. Originally rural farmland, the area evolved into a residential enclave with the arrival of the Eighth Avenue Elevated Railway in 1879 and the subsequent construction of the subway in 1904, attracting middle- and upper-class whites. By 1919 wealthy members of the black community had relocated to the neighborhood, which earned the nickname Sugar Hill for the perceived "sweet life" of its new residents. During the first half of the twentieth century many prominent figures lived at 409 Edgecombe Avenue, including the poet and literary critic William Stanley Braithwaite and such leaders of the National Association for the Advancement of Colored People as W. E. B. Du Bois, Walter White, Thurgood Marshall, and Roy Wilkins. Although it is situated a few blocks north of 155th Street, the landmarked 555 Edgecombe Avenue, which housed many prominent jazz musicians, including Count Basie and Coleman Hawkins, is considered an integral part of Sugar Hill's heritage. Like those of many other city neighborhoods, its fortunes declined during the second half of the twentieth century. In the early twenty-first century, however, Sugar Hill became a diverse and vibrant area, with attractive apartment buildings, elegant town houses, and two mansions. The neighborhood is also home to St. Nick's Jazz Pub, formerly Lucky's Rendezvous and one of the oldest continuously operating jazz clubs in Harlem. Much of the area is encompassed within the Hamilton Heights–Sugar Hill Historic District and its northwest and northeast extensions.

Michael C. Repka

Sugar Hill, 2009

sugar houses. As many as half a dozen sugar houses, also known as sugar bakeries or refineries, were erected in lower Manhattan during the eighteenth century to process molasses imported by local merchants from the West Indies. Typically four or five stories high and built of massive granite blocks, they were the most foreboding structures in the city and tangible symbols of its lucrative commerce with distant slave plantations. During the Revolutionary War, two sugar houses were used by the British as prisons for captured Americans: Livingston's, on Crown (now Liberty) Street, and Van Cortlandt's, which stood on the northwest corner of Trinity Church Yard. Hundreds of men at a time were often confined in these buildings, without adequate food, water, ventilation, or sanitation. Typhus and other diseases ran rampant, and as many as 10 bodies a day were reportedly removed for burial. The longest-surviving sugar house was Cuyler's (later Rhinelander's), on Rose Street, which was demolished in 1892. Although two of its windows have been preserved as memorials to the Americans who died in captivity, there is no evidence that the British ever used it as a prison.

Edwin G. Burrows

Sullivan, Big Tim [Timothy D(aniel)] (*b* New York City, 23 July 1863; *d* New York City, 13 Aug 1913). Famed ward boss. Born at 125 Greenwich Street, he grew up from the age of four in the poor Irish tenements of the Five Points, a neighborhood in Manhattan at that time. As an adult he embarked on careers in business and politics, skillfully using each to support the other. From 1904 he was an owner of the Sullivan–Considine vaudeville circuit, which included the Dewey Theater on 14th Street and the Gotham Theater on 125th Street and by 1907 had become a lucrative national chain of more than 40 theaters. He was also a business partner of William Fox and Marcus Loew in the incipient nickelodeon business and made successful investments in entertainments at Coney Island, racetracks (including Metropolitan Racetrack near Jamaica), and athletic clubs.

With the backing of Tammany Hall, Sullivan represented the Bowery in the state assembly (1886–93), the state senate (1893–1902, 1908–12), and the U.S. Congress (1902–6).

One of the most powerful and colorful figures in the city at the turn of the twentieth century, Sullivan assembled a political machine that ruled lower Manhattan for 25 years. He combined the traditional tactics of the machine with his influence in the worlds of commercialized leisure and organized crime. At his huge summer "chowders" he staged theatrical entertainments and amateur athletic contests and gave shoes and food to his constituents; he also offered employment, social services, and legal protection to both ordinary citizens and key figures in the flourishing vice economy of the Lower East Side. He was accused by the police lieutenant Thomas Byrnes and the Episcopal bishop Henry Codman Potter of having profited from prostitution and gambling. Despite this he helped expand the franchise to the poor, the transient, and the homeless and became one of the most powerful individuals in the state. With the young reformer Frances Perkins, in 1911 he fought successfully to limit to 54 hours a week the amount of time women could work in factories in New York State; he also wrote a number of tenement reform bills, as well as the so-called Sullivan Law (1911), the state's first effort at gun control, and was a strong supporter of woman suffrage and organized labor. Sullivan's unique record of legislative achievement in many ways foreshadowed the future direction of the Democratic Party. In 1913 he was declared insane, apparently a victim of tertiary syphilis. He was killed by a train while visiting his brother Patrick in suburban Eastchester; his funeral on the Bowery, which drew as many as 75,000 onlookers, was one of the largest in the city's history.

Proceedings of the Legislature of the State of New York on the Life, Character and Public Service of Timothy D. Sullivan (Albany, N.Y.: J. B. Lyon, 1914)

Daniel Czitrom

Sullivan, Ed(ward Vincent) (*b* New York City, 28 Sept 1901; *d* New York City, 13 Oct 1974). Television host and journalist. Born in Harlem and brought up in Port Chester, New York, he graduated from high school and worked as a sportswriter for the *Port Chester Daily Item.* During the 1920s he reported for several newspapers, including the *New York Evening Mail,* the *Morning Telegraph,* and the *Leader,* and in 1929 he replaced Walter Winchell as the Broadway columnist for the *New York Evening Graphic.* He also worked as a master of ceremonies for a number of vaudeville shows, radio programs, and benefits. During World War II he organized shows in Madison Square Garden for the Army Emergency Relief Fund and the American Red Cross. In 1948 the Columbia Broadcasting System (CBS) made him the host of its weekly television variety program *Toast of the Town,* which eventually became *The Ed Sullivan Show.* For the next 23 years the program made him one of the most powerful people in the entertainment business. An astute judge of talent, he introduced to American television such performers as Humphrey Bogart, Jackie Gleason, Maria Callas, Rudolf Nureyev, Elvis Presley, and the Beatles. He also featured animal acts, magicians, and oddities. In 1959 he led a variety troupe on a tour of the Soviet Union. Sullivan vigorously supported charities and medical causes and spoke out against bigotry and fraud. In honor of his 20th year in television CBS in 1967 renamed its studio on Broadway and 53rd Street in his honor. In 1993 the Ed Sullivan Theater became home to the *Late Show with David Letterman.* Throughout most of his career Sullivan and his wife, Sylvia Weinstein, occupied a suite in Delmonico's Hotel at 59th Street and Park Avenue.

Robert Sanger Steel

Sulzberger, Arthur H(ays) (*b* New York City, 12 Sept 1889; *d* New York City, 11 Dec 1968). Newspaper publisher. He attended Columbia University, served in the U.S. Army, and in 1917 married Iphigene Ochs. In the following year he joined the *New York Times,* owned by his father-in-law, Adolph Simon Ochs, and in 1919 he became a vice president. He was named publisher on Ochs's death in 1935, and in the same year his wife acquired a controlling interest in the newspaper. With the assistance of the general manager, Julius Ochs Adler (Ochs's nephew), he made important changes, naming Anne O'Hare McCormick foreign affairs columnist, modernizing the printing plants, and adding a crossword puzzle and sections on food and fashion. By making a large commitment of money and staff to covering World War II at a time when other newspapers were cutting back on the space they devoted to news, he helped the *Times* to maintain its leadership position. He retired in 1961. Sulzberger lived at 5 East 80th Street from 1928 until 1952 and then at 1115 Fifth Avenue to the end of his life.

B. Kimberly Taylor

Sulzer, William (*b* Elizabeth, N.J., 18 March 1863; *d* New York City, 6 Nov 1941). Governor and legislator. A graduate of Columbia University, he practiced law in New York City before his election to the state assembly as a Democrat in 1888. He became speaker of the assembly in 1893 and in 1894 was elected to the U.S. House of Representatives from the eleventh congressional district of Manhattan (the East Village). During his 17 years in office he chaired several important committees. In 1912 he was elected governor of New York with the support of Tammany Hall, but he turned on boss Charles Francis Murphy and refused to accept Tammany Hall recommendations for patronage appointments. For that offense he was removed from office by the state legislature, technically on the grounds that records of his campaign contributions and expenditures had been falsified, a common offense at the time. Sulzer was the only governor ever to be impeached in New York State. Until the end of his life, Sulzer lived at 118 Washington Place and continued to practice law from his office at 115 Broadway.

James Bradley

Summerville. Disused name for the eastern part of Old Place.

Sunday schools. The Sunday school movement was begun about 1781 by Robert Raikes in Gloucester, England. At first the aim was not to provide religious instruction but rather, more broadly, to better poor children's lives. Many churches initially opposed Sunday schools because they considered teaching a desecration of the Sabbath. Raikes's efforts became known in New York City, Boston, and Philadelphia, and in 1792 an evening Sunday school for adults was opened on Mulberry Street in Manhattan by Isabella Graham (1742–1814), who welcomed blacks and whites. Katy Ferguson's School for the Poor, in New York City, was opened in 1793 for blacks and whites, children and adults, by Catherine Ferguson (?1779–1854), a former slave. Gilbert S. Coutant's Sunday school also began in 1793 in what was then Bowery Village. With her daughter Joanna Graham Bethune and her son-in-law Divie Bethune (1771–1824), Graham opened a school in what is now Chinatown in 1803; in 1814 she and her daughter opened another school, in Greenwich Village, for women and children of all races. On 24 January 1816 a group of women including Joanna Graham Bethune organized the interdenominational Female Union for the Promotion of Sabbath Schools, later known as the New York Female Sunday-School Union. The New York Sunday-School Union was formed under the direction of Eleazer Lord (1788–1871), the clergyman John M. Mason, and the bishop Richard Varick in February 1816; it merged with the New York Female Sunday-School Union in the late 1820s to form the New York Sunday-School Union.

A number of innovations in the curriculum and organization of Sunday schools occurred during that decade. In 1820 advocates in the city urged the formation of a national society, a proposal that was realized when the American Sunday-School Union was organized in Philadelphia in 1824. Because Sunday school teachers were often inexperienced volunteers, training was offered by the New York Sunday-School Union, which inspired similar efforts by the national union. The New York Sunday-School Union also produced the first uniform system of lessons, a year-long series of Bible verses accompanied by "Judson's Questions," written by Albert Judson, a New Yorker, and distributed nationally. The system was adopted by the national union in 1872 and explained in the *American Sunday-School Magazine* by

John Hall (1829–98), a clergyman in New York City. The national union promoted the establishment of free public schools so that Sunday schools could concentrate exclusively on religious training. By the 1870s it won the endorsement of churches after demonstrating that Sunday-school teachings were based on the Bible. Among its supporters were such prominent New Yorkers as Samuel Bradhurst Schieffelin (1811–1900); Robert Lenox Kennedy (1822–87, president of the union, 1873–82); and Morris K. Jesup (president, 1896–1908). The New York Sunday-School Union was renamed the New York Sunday School Association in 1876 and had an office at 1 Madison Avenue until 1923; the national union had a branch at 156 Fifth Avenue until 1958.

Edwin Wilbur Rice, *The Sunday-School Movement, 1780–1917, and the American Sunday-School Union, 1817–1917* (Philadelphia: American Sunday-School Union, 1917); Anne M. Boylan, *Sunday School: The Formation of an American Institution, 1790–1880* (New Haven: Yale University Press, 1988)

Alana Erickson Coble

Sunnyside (i). Neighborhood in northwestern Queens, lying within Long Island City and bounded to the north by the Sunnyside Yards, to the east by Calvary Cemetery and 51st Street, to the south by the Long Island Expressway, and to the west by Van Dam Street. The area is named for a roadhouse built on Jackson Avenue to accommodate visitors to the Fashion Race Course in Corona during the 1850s and 1860s. South of Jackson Avenue the Fitting, Gosman, Heiser, Lowery, and Van Buren families owned farms that were eventually subdivided in the 1880s and 1890s. A small hamlet was built between Northern and Queens Boulevards and became known as Sunnyside. The Pennsylvania Railroad in 1901 adopted a plan to lay out a large railroad yard nearby, connected by tunnels to Manhattan. Most of the land was low-lying and boggy and therefore cheap; from 1902 to 1905 agents of the railroad gradually bought up all the land south of Northern Boulevard between 21st and 43rd streets. The entire area was leveled and the swamps filled in between 1907 and 1908, and the Sunnyside Yards opened in November 1910 (now used by Amtrak, the Long Island Railroad, and New Jersey Transit). The remaining land south of Skillman Avenue was dry but uninhabited. The Queensboro Bridge opened in 1909 and from it was built Queens Boulevard, which ran to the center of the borough through Sunnyside, where streets were built along the boulevard. The population grew rapidly after the elevated line opened in 1917, and many attractive apartment buildings with art deco touches and rows of attached houses were erected in the 1920s. Sunnyside Gardens (1924–28), one of the nation's first planned communities, featured landscaped interior courts and was hailed for its innovative design by such scholars of urban life as Lewis Mumford (a onetime resident). During the following years the neighborhood became middle class and lower middle class, and largely Irish. In the 1940s and 1950s its large apartments enticed many artists and writers and their families to leave their cramped quarters in lower Manhattan, and the area became known as the "maternity ward of Greenwich Village." Sunnyside during the 1980s attracted immigrants from Korea, Turkey, and Romania, and in the 1990s and 2000s Mexicans arrived in growing numbers. The Irish flavor persists, however, evidenced by the annual St. Patrick's Day Parade on Skillman Avenue.

Vincent Seyfried

Sunnyside (ii). Neighborhood in northeastern Staten Island, bounded to the north by Clove Lakes and Silver Lake parks, to the east by Grymes Hill and Fox Hills, and to the west by Castleton Corners. The name is derived from that of a boarding house that stood from 1889 on Clove Road at what is now Richmond Turnpike. Maps from the time of the American Revolution identify houses and gardens, including those of the Vanderbilts. Ice harvesting and the pumping of spring water were important activities in the nineteenth century. The Solheim Swedish Home for the Aged was built in the neighborhood in 1909. During the following decades the intersection of Clove Road and Victory Boulevard became busy and congested, in part because of traffic generated by Wagner College and the College of Staten Island, which moved to Willowbrook in 1993. The Michael J. Petrides School on the old College of Staten Island site is a comprehensive K–12 school and opened in 1995. Two large apartment buildings called the Fountains were built in 1968; a facility of the Health Insurance Plan was built in 1988. The neighborhood was disrupted in the mid-1970s as water mains and sewerage were installed to replace a system of artesian wells and natural drainage. Sunnyside is often cited as an exemplar of the change of Staten Island from an area of goat farms, trolleys, marshes, and two-lane roads to one of houses on small plots and busy traffic. Clove Lakes Park, designated a Forever Wild Nature Preserve by the New York City Department of Parks and Recreation, remains one of the finest open spaces in the city. The borough's first Hindu Temple is located at 1318 Victory Boulevard.

Howard R. Weiner

Sunnyside Gardens. Planned community in northwestern Queens, bounded to the north by 43rd Street and to the south by 51st Street; it covers 77 acres (30 hectares) and about 16 blocks. Influenced by the English garden city movement, the City Housing Corporation built Sunnyside Gardens between 1924 and 1928 for middle-income families under the direction of architects Clarence S. Stein and Henry Wright, who designed it according to ideals of "health, open space, greenery, and idyllic community living for all." One-, two-, and three-family attached brick houses with slate roofs, gables, and porches were constructed around open center courts with tree-lined pathways and private and communal flower gardens designed by Marjorie Cautley, one of the first female landscape architects in the United States. Garages were provided on the edges of the neighborhood near the railroad. A private park opened adjacent to the railroad. In the 1930s the beautiful art deco Phipps Gardens Apartments were built. Well-known residents have included the architectural critic Lewis Mumford, the painter Raphael Soyer, and entertainers Rudy Vallee, Perry Como, and Judy Holliday. During the Depression in the 1930s half the residents lost their homes to foreclosure. Marshals seeking to evict homeowners often met spirited resistance. The community was regulated by 40-year covenants limiting alterations and protecting the open spaces, but when the covenants expired in the 1960s, some residents fenced their rear yards, breaking up the courtyards. In 1974 the Department of City Planning designated Sunnyside Gardens a Special Planned Community Preservation District (together with Fresh Meadows, Parkchester, and the Harlem River Houses) to protect the original design. The Sunnyside Gardens Conservancy was formed in 1981 to restore the neighborhood to its original graciousness, and it had the neighborhood listed on the National Register of Historic Places in 1984. In 2007 the Landmarks Preservation Commission designated Sunnyside Gardens and Phipps Gardens as a historic district.

Patricia A. Doyal

Sunset Hill. Neighborhood in northeastern Staten Island, bounded to the north by West Brighton, to the east by Silver Lake, to the south by Bard Avenue, and to the west by Clove Road. The area was part of West New Brighton until the 1920s, when its streets were laid out in a grid and it was given its present name. The Tyler–Gardiner mansion (circa 1840), a landmark, was the home during the Civil War of Julia Gardiner, widow of President John Tyler; according to local reports youths tore town a Confederate flag that she displayed in the yard. The population is middle class, the housing consists of one-family houses, and there is shopping on Forest Avenue.

Marjorie Johnson

Sunset Park. Neighborhood in southwestern Brooklyn, bound by Bay Ridge to the south, Park Slope to the north, and Borough Park to the east. Until the 1960s the northern section was considered part of Gowanus and the southern section part of Bay Ridge; the area was renamed in the late 1960s for a local park

built by the city in the 1890s. Development began in the 1830s and Green-Wood Cemetery was laid out in 1839 as one of the first rural cemeteries in the nation. Many Irish immigrants settled in the area during the 1840s. Improvements in transport spurred development in a section south of 36th Street, leading to industrial growth. After 1870 brick and brownstone row houses replaced wood houses. Polish, Norwegian, and Finnish immigrants settled in the area during the 1880s and 1890s, followed at the turn of the twentieth century by Italians, many of whom worked along the docks. Bush Terminal, a complex of piers, warehouses, and factory lofts, was built by Irving T. Bush in 1890, and industry expanded immensely during the early twentieth century. The Brooklyn Army Terminal was built in 1919. By the 1930s and 1940s several factors contributed to the decline of the neighborhood: the Depression, the cessation of the Third Avenue elevated line, and the construction (1941) and widening of the Gowanus Expressway, which separated the industrial sections of the neighborhood from its residential sections. After World War II many white residents moved to the suburbs, and many Puerto Ricans moved in and found work on the waterfront and in factories. Decline worsened from the 1950s to the 1970s: the maritime industry moved to New Jersey, and the Brooklyn Army Terminal was deactivated in the 1970s. With local, state, and federal aid the economy improved during the 1970s, and the 1980s saw a commercial revival and an influx of immigrants from Latin America, China, and the rest of Asia. A large number of new immigrants settled in the neighborhood in the 1980s; one-quarter were from China, with roughly an equal number from the Dominican Republic, and smaller numbers from Guyana, Ecuador, India, Vietnam, Colombia, Jordan, and Poland. The Brooklyn Army Terminal reopened as a light industrial center in 1987, and Bush Terminal was converted into an industrial park. Businesses owned by Latin Americans between 35th Street and 60th Street along Fifth Avenue include bodegas, restaurants, and stores selling clothing, records, and jewelry. In the 1990s Eighth Avenue became known as "Brooklyn's Chinatown," as it became home to the city's third largest Chinese community. Sunset Park is also the home of the Basilica of Our Lady of Perpetual Help, the largest church in Brooklyn.

Ellen Marie Snyder-Grenier

SUNY. See State University of New York.

Surdna Foundation. Philanthropic foundation established in 1917 by John Emory Andrus, who was the mayor of Yonkers, the director of the New York Life Insurance Company in the early 1900s, and a four-term congressman. The foundation had several programs in areas including organizational capacity building and the arts. In 1989 the third and fourth generations of the Andrus family board established programs in Environment and Community Revitalization; programs in Effective Citizenry and the Arts were added in 1994 and the Nonprofit Sector Support Program in 1997. In the early twenty-first century its offices were located at 330 Madison Avenue.

Jessica Montesano

surfing. Surfing in New York City was practiced in 1912 by Duke Kahanamoku of Hawaii, winner of a gold medal in swimming at the Olympic Games, and Joe Ruddy of Rockaway, also the winner of an Olympic medal. Surfing was made popular by the local lifeguard Mickey McManamon in the 1950s, as well as by the singing group the Beach Boys and the film *Endless Summer.* By the mid-1960s surfers could be found throughout the Rockaways. Their favorite spots were 92nd Street (known as Chicken Bone Beach), 111th Street, and 72nd Street, where in 1968 surfers protested a ban on the sport at local beaches. Although the ban was lifted, demands that a beach be designated for surfing went unfulfilled. Among the early surfboard builders was Tony Michaels, who produced surfboards in the back room of his father's garment factory. In the early 1980s Tom Sena of the Rockaway Beach Surf Shop began manufacturing and selling surfing equipment of high quality.

James Breslin, Peter Maguire

Surrogate's Court. Municipal building at 31 Chambers Street in Manhattan. Designed in an eclectic French Renaissance style by John R. Thomas, it was built during 1899–1911 and originally known as the Hall of Records. The granite building houses the city archives in addition to the Surrogate's Court and is an impressive monument to civic virtue. The interior lobby, finished in Siena marble, emulates the foyer of Jean-Louis Garnier's Opéra in Paris; the courtrooms on the fifth floor are finished in English oak and mahogany. In 1963 the building took its current name. The exterior was designated a landmark in 1966, the interior in 1976. It became a National Historic Landmark in 1977. The court handles cases involving the affairs of decedents, including the probate of wills and the administration of estates, as well as adoptions.

Brooke J. Barr

Survey Associates. Publisher for charitable causes. It began as the National Publication Committee of the Charity Organization Society in 1891. During the same year it launched *Charities Review* (soon renamed *Charities*), a journal that eventually merged with the publications *Commons,* which issued reports about settlement house activities, and *Jewish Charity* to form *Charities and the Commons;* Paul U. Kellogg (1879–1958) became the editor in 1909. Inspired by his work in cataloguing social conditions for the Pittsburgh Survey, he renamed the journal the *Survey* and with his brother Arthur Kellogg (1878–1934) made it and its illustrated companion, *Survey Graphic,* the most influential publications of their kind. The organization took its current name after becoming independent of the

Surrogate's Court, 1938

Charity Organization Society in 1912. Survey Associates published reports about housing, recreation, renewal, and industrial conditions in the city before ceasing operations in 1952.

Alana Erickson Coble

sustainable design. See GREEN BUILDINGS.

Sutton, Percy E. (*b* San Antonio, Tex., 24 Nov 1920; *d* New York City, 26 Dec 2009). Attorney and civil rights activist. A World War II veteran and member of the Tuskegee Airmen, he attended Brooklyn Law School, opened a Harlem law office with his brother Oliver in 1953, and represented Nation of Islam Minister Malcolm X and other controversial figures. He served as New York City branch president of the National Association for the Advancement of Colored People (NAACP) and cofounded the John F. Kennedy Democratic Club with fellow Harlemite Charles B. Rangel. He served in the New York State Assembly before becoming Manhattan Borough President (1966–77). When the famed Apollo Theater fell into bankruptcy in 1980, Sutton purchased it to return stability to this important institution and the commercial district of West 125th Street. He was instrumental in the successful mayoral campaign of David N. Dinkins and cofounded the information technology company Synematics.

Diane Jones Randall

Sutton, Willie [William Francis, Jr.] (*b* Brooklyn, 30 June 1901; *d* Spring Hill, Fla., 2 Nov 1980). Bank robber. He began robbing banks in 1927 and was soon nicknamed "the actor" because of the elaborate costumes and disguises he used. He escaped from prison in 1932 and again in 1948. In 1952 he was recognized on a subway in New York City and sentenced to 17 years in prison for stealing $64,000 from a bank in Queens. He was paroled from the Attica State Correctional Facility in 1967. Sutton was often quoted for having explained that he robbed banks because "that's where the money is." It is estimated that his thefts amounted to $2 million.

Melissa M. Merritt

Sutton Place. Neighborhood on the East Side of midtown Manhattan, between 53rd and 59th streets east of First Avenue, encompassing Sutton Place South and Sutton Place, respectively, from 53rd to 59th streets, which becomes York Avenue north of 59th Street. The original name for all three streets was Avenue A. It is named after Effingham B. Sutton, the entrepreneur who developed the area about 1875. Before World War I tenements, rundown brownstones, and a brewery covered the area. It was perhaps most famous as the home of the gang known widely through films as the Dead End Kids, but after Mrs. William K. Vanderbilt and Anne Morgan moved there in 1920, the neighborhood was gradually transformed into a secluded cluster of expensive private houses and exclusive apartment buildings; its success led to the development of other expensive residential enclaves along the East River at Beekman Place and East End Avenue. The buildings along the east side of the neighborhood are constructed atop the Franklin D. Roosevelt East River Drive, which runs under two apartment buildings between 54th and 56th streets and under a town house at 58th Street. Residents from 56th to 59th streets have access to landscaped backyards built on the drive by the city as compensation for the loss of access to the river occasioned by the construction of the drive; three vest pocket parks lie between these private yards at the ends of 56th, 57th, and 58th streets.

Owen Gutfreund, Andrew Sparberg

Swamp. An area in lower Manhattan encompassing Gold, Frankfort, Pearl, Water, and Ferry streets. It became the site of tanning pits during colonial times and was soon the center of the city's leather industry, which was attracted by the freshwater that flowed into the area from the Collect and by the proximity of the district to the docks along the East River. Although the pond was covered over by 1811, the Swamp remained the site of the city's leather district.

Swedenborgians. Members of the Church of the New Jerusalem (or New Church); they are Christians who follow the teachings of the Swedish scientist turned theologian Emmanuel Swedenborg (1688–1772) and share his vision of Heaven and Hell and his assertion that a spiritual "last judgment" took place in 1757. Swedenborg, who simply wanted his writings (known to his followers as the "Third Testament") to be studied by university scholars, did not intend to make a separate church, but the novelty of his ideas inevitably created a following that would coalesce into the New Church.

After congregations were formed in England, and then in Philadelphia and Boston in the 1780s, Joseph Russell, an English immigrant, organized a branch in New York City in 1792. Swedenborgianism, as it was called, was avidly promoted during 1795–96 by the Anglican clergyman William Hill, who refused to break with the Anglican Church. A group formed in 1805 by Edward Riley, who settled in the city after emigrating from England, met at 16 Chambers Street before moving to larger quarters on James Street in 1807. Among its members were the bookseller James Chesterman and the poet Samuel Woodworth. In 1816 the city's first affiliated Swedenborgian church, the Association of the City of New York for the Dissemination of the Doctrines of the New Jerusalem Church, was formed by 26 men including Chesterman, who became the treasurer, and Woodworth, who became the secretary. The church met at the Mount Vernon School on Broadway until 1821, when it bought a large building on Pearl Street. One of the first mystical sects that flourished in the United States, the church attracted many intellectuals during the first half of the nineteenth century and was closely connected with such movements as mesmerism, transcendentalism, and spiritualism. In 1838 a schism reduced the congregation to a small group that sold the building on Pearl Street and held services at the Lyceum on Broadway near Prince Street.

The church attracted new members after George Bush, a professor of philosophy at New York University, gave lectures throughout the city and became the pastor in 1847. A larger building was erected on three plots of land at 114 East 35th Street, bequeathed to the church by Chesterman; the church was dedicated in 1859 and became highly influential during the next century. Among those who attended were the editor and writer John Bigelow, Henry James (father of the writer), the statesman William H. Seward, and the writer and lecturer Helen Keller. By 1932 the building was enlarged and the church offered Sunday services, a monthly lecture series, and a Sunday school. During the 1950s there were about 160 members and 75 students enrolled in the school. By the turn of the twenty-first century the Church of the New Jerusalem had declined to a few dozen active members.

Robert Ellwood

Swedes. The first known person of Swedish ancestry in New York City was Jonas Bronck, who was born in Copenhagen to Swedish parents and settled in 1639 in what is now the Bronx. Mons Pieterson, a Swede or Swedish-speaking Finn, helped to lay out Harlem, which was cleared in 1661 by a group of settlers that included Swedes. During English rule few Swedes moved to the city, and most settled in Manhattan. They numbered about 100 in 1835, and in 1836 the country's first Scandinavian mutual-aid society, Svenska Societen, was formed with 22 members. Swedes and other Scandinavians took part in religious services at the Bethel Ship (1845), a German Lutheran church aboard a German ship moored at Pier 11 at the foot of Liberty Street on the Hudson River; the church remained under the leadership of Olof Gustaf Hedstrom (1803–77) for 30 years and received financial assistance from Jenny Lind when she

visited New York City in 1850. The first Swedish newspaper in the country, *Skandinaven,* was published from 1851 to 1853 by Anders Gustaf Obom (1812–81), also known as Napoleon Berger. Land shortages and compulsory military service in Sweden in the mid-nineteenth century led many Swedes to emigrate. Thousands passed through the city before settling elsewhere in the United States; those who remained were often merchants, carpenters, and longshoremen, among them John Ericsson and a crew that included six other Swedes who built the ironclad warship the *Monitor* at a private yard in Greenpoint.

Between 1860 and 1870 the city's Swedish population rose from about 800 to 3000, and Swedish enclaves developed on the East Side and what is now Cobble Hill in Brooklyn. Gustavus Adolphus Church, the city's first Swedish Lutheran church, opened in 1865 at 155 East 22nd Street. In 1872 the Immanuel Swedish Methodist Episcopal Church was formed on Dean Street near Fifth Avenue in Brooklyn by members of the Bethel Ship congregation, and eventually Swedish Congregational and Baptist churches followed. The Swedish-language weekly newspaper *Nordstjernan* (The North Star) began publication in 1872 from offices at 108 Park Row; it later moved to 4 West 22nd Street. The Swedish-American Athletic Society of Brooklyn was organized during the 1880s at 267 Sixth Avenue and lasted until 1974. Among the Swedish singing groups in Brooklyn were the Lyran Singing Society of Brooklyn (143 West 44th Street) and the Swedish Glee Club (142 Schermerhorn Street), which remained well known into the 1930s. Many Swedes worked on the Brooklyn Bridge and after 1900 in the Brooklyn Navy Yard, where they were supervised by Carl J. Mellin, a Swedish engineer. They formed the American Society of Swedish Engineers (1888), which established the annual John Ericsson Award, and the children of Swedish immigrants often became engineers and building contractors. Women found work as domestic servants. Among the social welfare organizations formed toward the end of the century were the Swedish Aid Society of New York (1891–1906), which had offices in Brooklyn and Manhattan and found employment for 20,000 Swedes, and the Kallman Home for Children in Brooklyn (1898–1964). Periodicals included the socialist weekly newspaper *Arbetaren* (1896–1928) and the magazine *Valkyrian* (1897–1909).

In 1900 there were 28,320 Swedes in the city, including 14,695 in Brooklyn and 10,936 in Manhattan. Several institutions were opened in the early twentieth century, among them the Scandinavian Young Women's Home (Fridhem) at 149 Portland Avenue in Brooklyn (1902–50), the Swedish Hospital on Rogers Avenue in Brooklyn (24 June 1906, moved to 1350 Bedford Avenue about 1940, closed in 1979), and the Swedish Augustana Home for the Aged (1908–61) at 1680 60th Street in Brooklyn. The Swedish Chamber of Commerce of the USA (1906) set up offices at Rockefeller Center and published the *American Swedish Monthly;* as the Swedish-American Chamber of Commerce, it remained active into the twenty-first century. The United Swedish Societies of Greater New York (138 Third Avenue in Manhattan) was formed in 1911 to promote awareness of Swedish heritage, and the American Scandinavian Foundation (1911; 127 East 73rd Street in Manhattan), which included among its founders Emil F. Johnson (1864–1953), a public health inspector who devised a means of controlling the quality of the city's milk supply, published the *American Scandinavian Review,* a literary quarterly journal. The cartographer Andrew G. Hagstrom (1890–1957) settled in the city in 1909 and opened a mapmaking business in 1916 that soon became widely known.

In 1930 there were 37,200 Swedish immigrants and 24,500 of their children in the city. Most lived in Sunset Park, southern Brooklyn near Hamilton Avenue, and Bay Ridge, some in the northern Bronx, Forest Hills Gardens, and Sunnyside Gardens, and about a quarter in Manhattan. During the following years the number of Swedish immigrants declined as the Swedish economy improved, and few children of immigrants remained in Swedish neighborhoods. In 1980 about 3000 Swedish immigrants lived in the city, which had the country's second-largest concentration of Swedish Americans, after Chicago. The Swedish Seamen's Church, at 5 East 48th Street, remained in operation into the early twenty-first century. In 1996 the Swedish consulate and New York City Parks Department began sponsoring the Swedish Midsummer Celebration in Battery Park City. Scandinavia House (38th Street at Park Avenue) opened in 2000. Well-known Swedes in New York City have included the merchant and banker Svante Magnus Svensson (later Swenson; 1816–96); John A. Johnson (1865–1938), who with his sons operated a construction company that built two-family houses and apartment buildings in Bay Ridge; David L. Lindquist (1874–1944), who helped the Otis Elevator Company to develop its first modern elevator; the tenor Jussi Björling (1911–60), who performed regularly at the Metropolitan Opera for 22 years; the actress Greta Garbo (1905–90), who lived on East 52nd Street until her death; and Marcus Samuelsson (*b* 1970), a chef who operated the restaurant Aquavit (65 East 55th Street).

Alana Erickson Coble

Sweet'N Low Factory (Cumberland Packing Corporation). Artificial sweetener plant. Founder Benjamin Eisenstadt owned a diner across from the Brooklyn Navy Yard on Cumberland Street. After World War II the restaurant business declined, so Eisenstadt converted his diner to the manufacture of teabags. He and his wife had the idea of putting sugar in similar small packets, and in 1957 the firm created a sugar substitute, a combination of saccharin, dextrose, and cream of tartar, also sold in small packages. Recalling a favorite song based on the Tennyson poem "The Princess: Sweet and Low," Eisenstadt named the product Sweet'N Low. The business prospered, occupying additional buildings inside the navy yard industrial park and worldwide. In the twenty-first century the company headquarters are still at 2 Cumberland Street in Brooklyn.

Cathy Alexander

swill milk. Term used in the nineteenth century to describe milk from cows fed on distillery waste that was then adulterated with water, chalk, eggs, flour, and other ingredients that increased the volume and masked the adulteration. Swill-milk dairies were noted for their filthy conditions and overpowering stench, caused by the close confinement of hundreds (sometimes thousands) of cows often standing in their own manure in narrow stalls and suffering from a range of diseases. In the 1850s such conditions proliferated in dairies in and around New York City. Swill milk became the focus of periodic reform crusades in the early 1840s, 1850s, and 1860s. The most notable effort began in May 1858, when *Frank Leslie's Illustrated Newspaper* did a landmark exposé of regional dairies that caused widespread public outrage in the city and nationally. With the advent of refrigeration, low-cost train transportation, and more vigorous pure food laws in the 1860s and later, the dairy industry gradually moved out of the city.

Jared Day

swimming. Swimming became a popular activity in New York City during the nineteenth century, owing partly to the crowded conditions of tenement housing. As early as 1817 two private marine baths were anchored off the Battery. After the Civil War concern about public health and sanitation mounted, and municipal funding was set aside for swimming and bathing facilities. Fifteen free-floating baths were installed in the Hudson and East Rivers in Manhattan, Brooklyn, and the Bronx between 1890 and 1910, and dozens of public bathhouses were built by 1912. The Coney Island Polar Bear Club was formed in 1903 by fitness enthusiast Bernarr Macfadden, and its members began a long-running tradition of swimming in the ocean on the coldest days of the year. The many accidents suffered by swimmers off the piers led bathhouses to open swimming facilities and offer swimming lessons during the early

Astoria Pool, 1936

twentieth century. Indoor pools were built throughout the city after the Croton Aqueduct was completed in 1842, and the construction of the subways provided access to beaches at Coney Island and the Rockaways.

The city's indoor and floating pools had deteriorated by the early twentieth century, and only two outdoor municipal pools existed when Robert Moses became parks commissioner in 1934. As the adjacent rivers became polluted by irresponsible development and waste disposal, Moses transformed the city's swimming facilities when he built 11 municipal pools in 1936. That summer Moses opened one pool a week, to great fanfare, beginning 24 June with Hamilton Fish Park on the Lower East Side. Moses loved to swim, and he made sure that the pools were attractive in their design. Each complex had modern bathhouses, and most contained three pools that were open from 10:00 a.m. to 10:30 p.m.; demand became so great that the hours were extended to midnight. Adults could swim for 20 cents and children for 10; in the mornings, admission was free for children younger than 14. Moses's new pools held a combined capacity of 49,000 people; more than 1.6 million New Yorkers in all five boroughs swam in them that summer, and the Astoria Pool in Queens became the site of the swimming and diving trials for the Olympic Games in Berlin.

Moses also worked to create cleaner beaches that were more accessible for swimming. He reconstructed Orchard Beach in the Bronx in 1938 and built a grand bathhouse; he acquired Manhattan Beach on Coney Island from the federal government, opening it in 1955, and he made improvements at Jacob Riis Park (1936–38) and the Rockaway beaches (1938–39) in Queens and South Beach (1955) in Staten Island. Moses also took control of three existing floating pools in Manhattan and strung them together on the Hudson River off 93rd Street in 1938; they closed in 1942. He launched a program of free swimming lessons called Learn to Swim in 1938; in the early twenty-first century, 7000 children participated in the program each summer. During Mayor John Lindsay's administration (1966–73), underserved neighborhoods gained access to swimming pools in the form of mini-pools and swimmobiles, which were portable. In the early 1970s, 19 new pools were constructed around the city, and the Moses-era pools were renovated during the 1980s. New complexes in Chelsea and Flushing Meadows added to the city's facilities, which in 2008 boasted 34 outdoor pools, 12 indoor pools, and 19 mini-pools.

Competitive swimming in New York was refined as a sport between 1900 and 1925, and such organizations as the New York Athletic Club and the New York Women's Swimming Association assembled large swim teams. Some of the first world records were set by swimmers from the city, including Charles M. Daniels (1907), Gertrude Ederle (1922, 1925), Walter Spence (1926), and Eleanor Holm (1932). A number of swimmers have swum great distances in the waters of New York. Byron Sommers in 1927 swam around Manhattan Island, a distance of 28 miles (45 kilometers), in eight hours and 56 minutes, a record that stood until Diana Nyad completed the swim in seven hours and 57 minutes in 1975. The fastest official time around Manhattan is six hours and 32 minutes, completed by Tobie Smith in 1999. In 1961 Palmer Donnelly became the first person to swim around Staten Island, in 25 hours; he repeated his feat in 1979. The swim around Manhattan became a more popular event during the 1980s, and some swimmers completed a double swim around the island (Julie Ridge in 1983) and even a triple swim (Stacy Chanin in 1984). In 1988 Skip Storch set a distance record by swimming 153 miles (246 kilometers) down the Hudson River from Albany, New York, to the Statue of Liberty.

During the early 1990s interest in the traditional swim around Manhattan declined, and the Manhattan Island Foundation was formed in 1993 to revive interest in swimming in New York City's waters; proceeds from its Manhattan Island Marathon Swim support the parks department's Learn to Swim program. In the twenty-first century the organization also hosted swims around Governor's Island and from Manhattan to Brooklyn underneath the Brooklyn Bridge; new studies were undertaken in 2008 to determine the "swimmability" of the Hudson River, the cleanliness of which improved after the Clean Water Act of 1972. At the city's beaches the Polar Bear Club's annual New Year's Day swim in Coney Island remained a popular

Lasker Pool, Central Park, 2009

event in the early twenty-first century. Hundreds of swimmers charge into the cold waters of the Atlantic Ocean, some dressed in wetsuits, some in sequins, and some in American flags. Amidst calls to connect New Yorkers to the city's long-obscured waterfront and polluted rivers, floating swimming pools have resurfaced, recalling the city's nineteenth-century floating baths. The Floating Pool Lady, a pool constructed on an old barge, was completed in 2007 and moored off of Brooklyn Bridge Park. It moved to Hunts Point in the Bronx during the summer of 2008, where it will remain for three years, serving a community district that does not have a single public pool.

Amanda Aaron, Kate Lauber

Swinburne Island. The smaller of two artificial islands off the eastern shore of Staten Island (the other is Hoffman Island), it has an area of 2.5 acres (1 hectare). Originally named Dix Island, it was renamed to honor John Swinburne, a Civil War military surgeon. In the 1900s the island housed a hospital and quarantine station that treated arriving immigrants suspected of having infectious diseases. During World War II Swinburne Island was the site of a training facility for the U.S. Merchant Marine. Early in the twenty-first century it was managed by the National Park Service and was part of the Gateway National Recreation Area. Closed to visitors, it is home to large colonies of nesting wading birds.

Gerard R. Wolfe

Swingline. Firm of staple and stapler manufacturers, formed in 1925 on the Lower East Side by Jack Linsky as the Parrot Speed Fastener Company. In the late 1920s it began manufacturing staples that were glued together in rows (known as "frozen wire staples"), an innovation at a time when staples were still being inserted into a stapler one at a time or held together with sheet metal. Eventually the firm also introduced the first anti-jam stapler, the Tot 50 automatic stapler, which sold more than 100 million units, and electronic staplers and became a leader in the cartridge stapling technology used in electronic copiers. In 1991 it became part of ACCO USA, a manufacturer of office products and supplies based in Wheeling, Illinois. Swingline is the largest manufacturer of staples and staplers in the world. Its facility in Long Island City, Queens, topped with an enormous neon sign that was visible from Shea Stadium, shut down in 1999 when manufacturing moved to Mexico. The factory was temporarily occupied by the Museum of Modern Art from 2002 to 2004 while it was renovating its Manhattan building.

Rich Scheinin

Swing Street. Popular nickname in the 1930s and 1940s for 52nd Street between Fifth and Sixth avenues and the site of many jazz clubs.

Swinton, John (*b* Edinburgh, 12 Dec 1829; *d* Brooklyn, 15 Dec 1901). Labor activist and editor. With only a modest formal education and an apprenticeship as a printer, he immigrated to Canada in 1843 and in 1850 arrived in New York City; there he worked as a printer and briefly attended New York Medical College. By the mid-1850s his participation in the abolitionist movement drew him to Kansas, where in 1857 he joined John Brown's raid at Osawatomie. On returning to New York City he worked successively for the *New York Times* (chief of the editorial staff, 1860–70) and the *Sun* (1870–75; chief editorial writer, 1875–83). During most of this time he lived at 124 East 38th Street. His career as a labor activist began in January 1874, when he witnessed the Tompkins Square Riot, in which unemployed workingmen who had gathered at a peaceful rally were attacked and beaten by police. That autumn he was the unsuccessful mayoral candidate of the Socialist Labor Party, and he became a regular speaker at labor rallies. In October 1883 he began his own weekly labor organ, *John Swinton's Paper,* published at 21 Park Row and widely recognized as the finest publication of its kind. Refusing to confine himself to any one movement, Swinton called on the nation's workers to work together for economic and social justice in the face of growing corporate power. His newspaper was influential in Henry George's mayoral campaign of 1886. In 1887 he ceased publishing the newspaper because of financial difficulties and rejoined the editorial staff of the *Sun,* where in spite of going blind in 1889 he worked until his death. Swinton's published writings include *John Swinton's Travels* (1880) and *Striking for Life* (1894).

Edward O'Donnell

Swope, Herbert Bayard (*b* St. Louis, 5 Jan 1882; *d* New York City, 20 June 1958). Journalist. As a reporter for the *New York World* in 1912 he investigated police corruption and helped to implicate Lieutenant Charles Becker in the murder of the gambler Herman Rosenthal. He became the city editor in 1916 and in the following year filed reports from Germany that won him the first Pulitzer Prize for reporting. As the executive editor of the *World* (1920–29) he developed the feature later known as the "op-ed" page and led sensational crusades against local slumlords and the Ku Klux Klan. Under his direction the *World* was known for its public-spirited liberalism, support of the progressive elements in the Democratic Party, and often dramatic investigative reporting.

Sylvia's. Restaurant in Harlem. Established in 1962 by Herbert and Sylvia Woods, the

Sylvia's, 2009

location at 328 Lenox Avenue originally seated 35 people. In the early 1980s Sylvia's son Van Woods expanded the restaurant to seat about 450 people. In 1992 he launched Sylvia's Food Products, which were distributed nationally. In 1997 Sylvia's opened a second restaurant in Atlanta, Georgia. In the early twenty-first century Sylvia's occupies most of a city block and features catering and banquet facilities in addition to the restaurant. As of 2008 Sylvia had written three cookbooks and the restaurant remained in the Woods family.

Jessica Montesano

Symphony Space. Performing arts center. Located at 95th Street and Broadway, it sponsors music, dance, film, literature, and theater programs and performances. Founded by Isaiah Sheffer in 1977, since 1980 it has maintained its commitment to art-based educational initiatives for children and adults in New York City and nationally through the distribution of programs via recording, radio broadcastings, and touring. It has a studio room and two theaters, the Peter Jay Sharp Theatre and the Leonard Nimoy Thalia, and annually hosts 125 performances, attracting more than 100,000 patrons.

Stephanie Miller

Symphony Space, 2009

synagogues. Jewish houses of worship. Manhattan alone has more than 150 current and former synagogue structures, and hundreds more dot neighborhoods throughout the five boroughs. New York's first synagogue, the earliest in North America, was established in the late seventeenth century by Shearith Israel, the congregation that emerged from the original settlement of Sephardic Jews in New Amsterdam in 1654. A makeshift "Jews' Synagogue" existed by 1695, and the first synagogue building was erected in 1729 on Mill Street (now South William Street). It served the congregation for more than a century and was the sole synagogue and only Jewish institution of the community until 1825. Shearith Israel later followed the uptown movement of New York Jews, building three successive synagogues, the last in 1897 on Central Park West at 70th Street, where the congregation remains in the twenty-first century. The 1897 building foresaw a Jewish future for the Upper West Side but also looked back to the colonial origins of New York Jewry. In addition to the main sanctuary, the building contains a smaller worship space called the Little Synagogue, which replicates the interior of the original Mill Street building.

In 1825 the establishment of B'nai Jeshurun, formed by a disaffected group of Shearith Israel members, signaled the breakup of the monolithic "synagogue community" and the advent of a "community of synagogues." B'nai Jeshurun was the city's first Ashkenazic-rite congregation and dedicated its first synagogue, a former church on Elm Street, in 1826. As immigration from central Europe intensified, the Jewish population of New York City multiplied from just 500 in 1820 to some 40,000 by 1860. During these years no fewer than 20 new synagogues were founded in the neighborhood of lower Manhattan known as Kleindeutschland, including Ansche Chesed (established 1828 as an offshoot of B'nai Jeshurun), Rodeph Sholom (1842), Shaaray Tefila (1845, also split from B'nai Jeshurun), and Ahawath Chesed (1846). In 1847 Shaaray Tefila dedicated a new Romanesque Revival synagogue on Wooster Street designed by Leopold Eidlitz, who is often called the first Jewish architect in the United States. In 1850 Ansche Chesed built a Gothic Revival synagogue on Norfolk Street designed by Alexander Saeltzer; it is the oldest surviving synagogue structure in New York City. Rodeph Sholom built its Rundbogenstil synagogue on Clinton Street in 1853; in 2009 it housed the Chatam Sofer congregation. Many of these congregations followed Shearith Israel's lead in moving uptown, through a series of ever more upscale locations. B'nai Jeshurun built new synagogues repeatedly: on Greene Street in 1851, on 34th Street in 1865, on Madison Avenue and 65th Street in 1885, and finally its current home on West 88th Street in 1918.

After the Civil War synagogues throughout the country were built as monuments to Americanization, most often designed in an opulent Islamic Revival style and in the religious fashion of Reform Judaism. The first Reform congregation in New York City, Emanu-El (see Temple Emanu-El), had been established in 1845. After using spaces in two refurbished churches, it built its luxurious new "temple" in 1868 on Fifth Avenue at 43rd Street. Designed by Leopold Eidlitz and Henry Fernbach, the neo-Islamic building became a landmark of post–Civil War New York City. Other monumental temples of the time include two more designed by Fernbach: Shaaray Tefila on West 44th Street (1869) and Ahawath Chesed at Lexington Avenue and 55th Street (1872) (known in the twenty-first century as Central Synagogue and extensively restored after a 1998 fire). Also in this category were Ansche Chesed at Lexington Avenue and 63rd Street (1873), Beth Elohim in Brooklyn (1876; Keap Street Temple), B'nai Jeshurun on Madison Avenue near 65th Street (1885), and Zichron Ephraim on East 67th Street near Third Avenue (1890) (Park East Synagogue). Arnold Brunner was the architect responsible for Beth El on Fifth Avenue at 76th Street (1891), Shaaray Tefila on West 82nd Street (1894) (West End Synagogue), and Shearith Israel on Central Park West (1897). Of these nineteenth-century structures, only Central Synagogue, Keap Street, West End Synagogue, Park East, and Shearith Israel were still extant in the late 2000s—the latter two still in the hands of their original Orthodox congregations. Such monumental uptown synagogues continued to be built through the early decades of the twentieth century, the most notable being the new Temple Emanu-El, built during 1928–30 on Fifth Avenue at the corner of 65th Street. An awe-inspiring structure, it is known as the "cathedral synagogue" of New York City.

The restored Eldridge Street Synagogue, one of the city's most historic houses of worship

The most prolific period of synagogue building in New York City came with the mass immigration of eastern European Jews from 1881 to 1914, when more than two million Jews arrived in the United States. Most of them settled in the city and formed an immigrant enclave on the Lower East Side of Manhattan. The neighborhood would become home to hundreds of immigrant congregations, making the synagogue, or *shul,* a ubiquitous institution of Jewish neighborhoods. According to one estimate, more than 500 shuls were established on the East Side during this period, of which about 60 occupied their own buildings, including several converted churches. Most of the myriad immigrant shuls were founded as hometown societies (a *landsmanshaft*), and their typical home was either a rented space, a "storefront shul," or a small structure of its own, often a renovated tenement, or *tenement shul*. The first Russian Jewish congregation in New York City appeared as early as 1852 with the establishment of Beth Hamedrash on Bayard Street. Its offshoot, Beth Hamedrash Hagadol, later acquired its own synagogue building, converting a former Baptist church on Norfolk Street in 1885. Two years later the original congregation, renamed K'hal Adas Jeshurun, completed the first major synagogue structure of the immigrant community. Located on a narrow side street south of Canal Street, the impressive edifice came to be known as the Eldridge Street Shul. Designed in an eclectic Revival style with pronounced neo-Islamic elements, it was reminiscent of the uptown temples of the same era. The 1887 structure was reopened in 2007 after 20 years of renovation work as the Museum at Eldridge Street (although it also still functions as an Orthodox synagogue). Besides Beth Hamedrash Hagadol and Eldridge Street, other extant downtown shuls include Anshe Ilya, better known as the Forsyth Street Shul (built in 1895 with a row of built-in storefronts on its Delancey Street side, now owned by a Spanish church); B'nai Israel Kalwarie, known as the Pike Street Shul (built in 1903 and now a Chinese church); the Bialystoker Shul on Willett Street (an 1826 church converted in 1905 and still in use by the congregation); and the former Anshe Slonim on Norfolk Street (originally built in 1850 as Ansche Chesed).

The second-generation Jews in the city were innovators of the "synagogue-center," or combined synagogue and community center, and helped spur a nationwide movement. Fondly called a "shul with a pool," the synagogue-center had its roots in the institutional church, the late nineteenth-century Reform temple, the Young Men's and Young Women's Hebrew Associations, and other institutional trends of the Jewish community. Two early exemplars in New York City were established by modern Orthodox congregations in 1917: the Institutional Synagogue, founded by Rabbi Herbert Goldstein and located on West 116th Street in Harlem, and the Jewish Center, founded by Rabbi Mordecai M. Kaplan and built on West 86th Street on the Upper West Side. Kaplan would later leave the Jewish Center, moving a block away on 86th Street to establish the first Reconstructionist synagogue, the Society for the Advancement of Judaism, in 1922. The synagogue-center concept would find its widest expression in the middle-class Jewish communities of the outer boroughs. In Brooklyn, which was rapidly becoming the borough with the largest Jewish population (100,000 in 1905, increasing to 567,000 in 1917, 740,000 in 1923, and reaching a peak of 974,765 in 1937), the prototypical synagogue-center was the Brooklyn Jewish Center (BJC), built in 1920–22 by a Conservative congregation on Eastern Parkway in Crown Heights. Throughout the 1920s dozens of new congregations were founded in Brooklyn, and nearly all followed the example of BJC, building well-appointed synagogue complexes with names such as Flatbush Jewish Center, East Midwood Jewish Center, and Ocean Parkway Jewish Center. The trend was so compelling that even the venerable Reform congregation of Brooklyn, Union Temple, built a new "Temple House" in 1926, still in use at its Grand Army Plaza location. Similarly, in 1929 Beth Elohim added a center to its 1909 temple on Garfield Place. The Bronx saw the founding of the Bronx Jewish Center and the Intervale Jewish Center; and the Rego Park Jewish Center and Forest Hills Jewish Center, among others, were established in Queens. In the twenty-first century many of these prewar structures are still in use by their congregations, although the BJC was acquired by the Lubavitcher Hasidic community and turned into a boys' school (yeshiva).

In the decades after World War II many New York Jews left the city for the suburbs

Conservative Synagogue, 2009

Shearith Israel, 2009

where hundreds of new congregations were formed and new suburban synagogue-centers built. Also after the war Holocaust survivors in the city rebuilt their lives, and charismatic leaders reasserted orthodoxy for a new generation. Unlike more liberal Jews eager to escape to suburbia, the Orthodox tended to stay in the urban environment, so the postwar period saw a spate of new Orthodox shuls, both modern and traditionalist, established within the city bounds. For example, Congregation Kehilath Jacob, founded in the 1940s on West 79th Street, came to be known as the Carlebach Shul, after Rabbi Naphtali Carlebach took over in 1950; from 1967 his son, folksinger Shlomo Carlebach, turned the Upper West Side shul into a center of hippie-styled neo-Hasidism. More traditional Hasidic enclaves had earlier emerged in the Brooklyn neighborhoods of Boro Park, Crown Heights, and Williamsburg, where synagogues flourished. Perhaps the best known is the synagogue and school complex at 770 Eastern Parkway that was the seat of the Lubavitcher Rebbe; the building's Tudor style has been replicated by Lubavitch institutions around the world. Yet another traditionalist enclave in Brooklyn was established by Sephardic Jews, primarily of Syrian origin, along Ocean Parkway. Two of their leading synagogues were Shaare Zion, designed by Morris Lapidus in 1958, and *Beth Torah,* designed by Richard Foster in 1969. At the same time, more modern Orthodox Jews were establishing new congregations farther uptown. In 1964 the Lincoln Square Synagogue was founded under Rabbi Shlomo Riskin and built a structure in 1970 with a sanctuary designed as a theater-in-the-round by Hausman and Rosenberg. The Hebrew Institute of Riverdale was founded in 1971 and built its current synagogue on the Henry Hudson Parkway in 1980. In 1973 Rebbetzn Esther Jungreis founded Hineni, an outreach organization whose mass gatherings were modeled after Billy Graham revivals. A new center was established in 1982 with the construction of the Hineni Heritage Center on West End Avenue.

In the second half of the twentieth century old structures were revitalized by new congregations. From the Jewish counterculture of the 1960s a desire emerged for a less formal synagogue and a more intimate and spiritual community called a *havurah*. Ultimately, the havurah movement influenced the mainstream synagogue, as when a dying Ansche Chesed—built in 1928 as a synagogue-center at the corner of West End Avenue and 100th Street—was revived in the 1980s by several *havurah*-style *minyanim* (prayer groups) that began to use its premises and reenergized the synagogue. Nearby B'nai Jeshurun underwent a similar revitalization as Rabbi Marshall Meyer (1985–93) began to attract young Jews to its West 88th Street synagogue. By the mid-1990s B'nai Jeshurun was attracting a standing-room-only crowd to its Friday night service, then held in a neighboring church as the original building was being restored. In a new spin on an old practice, several other nontraditional congregations began to use church spaces for their services. Congregation Beth Simchat Torah (CBST), New York's gay and lesbian synagogue, was founded in 1973 at the Holy Apostles Church on Ninth Avenue in Chelsea. In 1992, following the arrival of Rabbi Sharon Kleinbaum, it held a Yom Kippur service in the Jacob Javits Convention Center for 2200 worshippers. Though based in the Westbeth artists' complex on Bethune Street, CBST holds its Friday night service in the same church in which it was founded. The trend also includes Hadar, an egalitarian Orthodox *minyan,* and Romemu, a Jewish Renewal group, both meeting in Upper West Side churches. A new Upper East Side congregation, Or Zarua, thought it was purchasing an old church building until it discovered

that the 1890 structure had originally been a synagogue. In 2001–2, the congregation rebuilt the East 82nd Street synagogue according to a modern design by Henry Wollman. Perhaps the most compelling story of renewal belongs to the 1850 Ansche Chesed synagogue on Norfolk Street. After serving a series of Jewish congregations, it was abandoned by 1974. Later acquired by the Spanish sculptor Angel Orensanz, the building became the Orensanz Center for the Arts; in addition to serving as a cultural venue, it has been home to the Shul of New York since 1997. New York Jews expend tremendous energy in building new homes for an ever-evolving Judaism, and in the twenty-first century their synagogues demonstrate both Jewish survival and civic integration.

Syrians and Lebanese. Syrians began immigrating to the Americas in the late 1870s. Among the reasons often cited are inspiration from American missionaries and educators, wanderlust, family competition, and Ottoman conscription. Those who emigrated were mostly Christian mountain villagers—Maronites, Antiochian Orthodox, and Melchites, as well as many Protestants—but a large minority were urbanites from the cities of Tripoli, Zahle, Aleppo, Damascus, Homs, and Haifa. They first settled in lower Manhattan around Rector and Washington streets, an area that became known as Little Syria. Many of the early Syrian immigrants began as peddlers and soon accumulated enough capital to establish their own businesses, 383 of which were listed in the 1908 Syrian Business Directory. These businesses, which included groceries, import–export firms that often dealt in Madeira lace and Oriental rugs, and factories producing lingerie, kimonos, and other dry goods, were largely family run, employing local Syrians and supplying peddlers and Syrian businesses throughout the nation. The Bardwil, Haddad, Barsa, Tadross, and Trabulsi families were among the most prominent in these businesses. By the 1920s some "merchant princes" had factories in South America and East Asia. (In the early twenty-first century none of these original businesses remained, the progeny of the first immigrant generation having abandoned the family firms either to work in other businesses or to enter other professions. In fact, roughly half the members of the Salaam Club, a businessmen's fraternity dating to 1945, were in other professions.) There were 15,000 Syrians in the city by 1924, when quotas were imposed. In 1940 the community was displaced by the construction of the Brooklyn–Battery Tunnel. By that time Brooklyn and especially the stretch of Atlantic Avenue from Court Street to the water had became the community's new commercial center. Later Syrians moved to Park Slope and Bay Ridge, but Atlantic Avenue continued to be the heart of Arab New York.

Though the early immigrants identified strongly with their religious sects, they also formed new nonsectarian organizations such as the Syrian Ladies Aid Society (1907), the Damascus Masonic Lodge (1908), and the Syrian Young Men's Association (1934), all of which continued to operate in the early twenty-first century. Among the early leaders of the community were the Syrian physician Rizq George Haddad and the philanthropist Salim Malouk, a linen importer who had a shop on Fifth Avenue. One beneficiary of Malouk's generosity was al-Rabitah al-Qalamiyya (the Pen League; formed 1920), a group of Syrian émigré writers led by Kahlil Gibran, Amin Rihani, and Elia Abu Madi; its members' experiments with Western literary forms revolutionized Arabic poetry in the Arab world. Between 1890 and 1940 Syrians in the city published 51 Arabic-language periodicals (two-thirds of the country's total). The most influential of these was *Al-Hoda* (The Guidance), launched in 1898 by Naoum Mokarzel, who with his brother Salloum counseled the community on assimilation and championed Arab independence abroad. Readership of Arabic-language newspapers declined in the 1930s, primarily because of the freeze on immigration and because the American-born generation did not learn to read Arabic.

By the 1940s Syrians were becoming part of the American mainstream, as evidenced by their abandonment of arranged marriages, the employment of women outside the home and outside the family business, and growing aspirations to higher education. A large number were joining American Protestant and Roman Catholic churches or modifying their own Eastern rites, and 80 percent of the third generation of Syrian Americans in New York City were marrying non-Syrians. By the 1960s most Syrians and Lebanese were keeping their ethnicity private, with unusually strong family ties. Syrian–Lebanese culture continued to be expressed in food and music and at weddings and in *haflis,* large parties featuring Arabic dancing and performances by such musicians as the singers Hanan and Kahraman and the drummer and humorist Eddie Kochak, creator of the Ameraba (American Arabic) style of music.

New waves of Syrian, Lebanese, and other Arab immigrants began arriving after quotas were lifted in 1965. Lebanon's civil war (1975–90) accelerated Lebanese immigration. At least half the newcomers were Muslim. The new immigrants were more likely than their turn-of-the-century forerunners to be drawn from the professional classes. (New immigrants, for example, swelled the membership of the New York City chapter of the Arab American Medical Association.) While some of the immigrants planned to return to Lebanon when peace was restored, others came intending to stay. Families settled in Bay Ridge; eventually a strip of Bay Ridge's Fifth Avenue would be dotted with Arabic signage for restaurants and a variety of Arab stores and agencies, though none of the businesses yet rivaled those on Atlantic Avenue, where Rashid Music, Sahadi's Gourmet Deli, and the Damascus Bakery continued to serve the city (and the nation) by the end of the twentieth century. Manhattan drew young professionals who worked in engineering, computers, and banking, an important economic sector in Beirut. Some Lebanese became active in the city's alumni chapters of the American University of Beirut and Beirut University College. Most continued to be deeply interested in the future of Lebanon. Though they reinvigorated Arabic churches and neighborhoods, interaction between the new immigrants and the American-born Syrian–Lebanese took time to develop. One local institution that was an early bridge was St. Nicholas Home for the Aged, a nonsectarian facility that was opened in 1982 on Ovington Avenue in Bay Ridge by descendants of the first immigrants; its board represents the spectrum of Arab religious and national groups. In the 1980s new national organizations, such as the American Arab Anti-Discrimination Committee and the Arab American Institute, helped Syrians and Lebanese reframe their ethnic identities.

The twenty-first century saw the birth of new Arab American organizations, some spurred on by the anti-Arab backlash after the terrorist attacks of 11 September 2001. Among the new groups are the Arab American Family Support Center in downtown Brooklyn (established in 1994) and the Arab American Association of Bay Ridge (established in 2001), both multiservice advocacy groups; the Network of Arab American Professionals (established in 2000 as an outgrowth of the Union of Arab Students Associations); and the Kahlil Gibran International Academy (established in 2007), a bilingual Arabic public school in Boerum Hill. Since 2004 Lebanese Heritage Day has been celebrated annually in the rotunda of Brooklyn's Borough Hall, giving the city's Lebanese added visibility as they present their food and music to the public and honor individuals from the community, while the Lebanese cedar flag flies

from the top of Brooklyn's Borough Hall. In the new millennium there were an estimated 80,000 Syrian and Lebanese Christians and Muslims living in New York City.

There is a roughly equal number of Syrian Jews in the city. Syrian Jews began arriving at the beginning of the twentieth century with the first wave of Syrian Christians; they came from Damascus, Homs, and especially Aleppo (Halab). They initially settled on the Lower East Side with Jews from Europe but quickly established their own enclaves in Brooklyn, first in Williamsburg and later in Flatbush and Midwood. Their institutions along Ocean Parkway and Kings Highway include yeshivas, community centers, residences for the elderly, and synagogues representing Aleppo, Damascus, Lebanon, and Egypt. Syrian Jews have prospered in the import–export trade, particularly in clothing and electronics. They have much in common linguistically and culturally with other Syrians and Lebanese, but politically they identify with other Jews in the city rather than with other Syrians.

Prominent Syrian and Lebanese Americans include the Metropolitan Opera singer Rosalind Elias; former secretary of health and human services Donna Shalala (a former president of Hunter College); Oscar-winning actor F. Murray Abraham; fashion designers Reem Acra, Norma Kamali, and Joseph Abboud; Broadway actress Kathy Najimi; Off-Broadway playwright Betty Shamieh (*Roar,* 2004, *Chocolate in Heat,* 2001); and theater and film director Julie Taymor (*The Lion King,* 1998).

Paula Hajar

Szold, Henrietta (*b* Baltimore, 21 Dec 1860; *d* Jerusalem, 13 Feb 1945). Scholar and political activist. The first woman enrolled at the Jewish Theological Seminary, she worked as an editor and translator in German, English, and Hebrew on such books as Louis Ginzberg's *The Legends of the Jews* (1908–38) and the American Jewish Yearbook. A member of the Federation of American Zionists, she helped to form Hadassah, the first women's Zionist group, in 1912 in New York City, and was its president until 1926. Szold worked as a nurse in Palestine between 1912 and 1926, helped to organize the American Zionist Medical Unit, and directed the Youth Aliyah program from 1933.

Janet Frankston

T

tabloids. Newspapers with pages about half as large as a broadsheet and a large number of illustrations. Tabloid newspapers exerted an important influence on journalism in New York City between the world wars. The prototype for the genre was the *Daily News,* launched in 1919 by Joseph Medill Patterson and Robert McCormick, which had a terse, lively reporting style and coverage that emphasized crime, sex, scandal, sports, and gossip; its circulation reached 400,000 by 1922. The success of the *Daily News* inspired other newspapers to imitate its formula. Among the most prominent were the *Daily Mirror,* published by William Randolph Hearst, and the *New York Evening Graphic,* published by Bernarr Macfadden. By 1926 the three newspapers had captured more than 1.5 million readers, only a few of whom had been won over from the existing daily newspapers; most were immigrants and their children who had not been regular newspaper readers at all. The circulation of the *Daily News* reached 1.3 million on weekdays by 1930 and more than three million on Sundays by 1940, and in 1942 the *New York Post* adopted the format. Effectively exploiting class, racial, and ethnic tensions, tabloids had an important influence on advertising and magazines, which freely borrowed such devices as "confession" stories, suggestive headlines, and lurid photographs. Although critics dismissed them as vulgar and sensational, the tabloids expressed a shrewd awareness of working-class life not found in the more traditional press. The tabloid style remains a central element in print and broadcast journalism, especially in New York City. Three of the four major daily newspapers in the city in 2008 were tabloids: the *Daily News,* the *New York Post,* and *New York Newsday.*

Takami, Toyohiko Campbell (*b* Kumamoto, Japan, 1875; *d* Brooklyn, 17 May 1945). Physician. In 1891 he left Yokohama as a "captain's boy" on an English steamship, which he abandoned when it docked in New York City. He worked as a mess-boy at the Brooklyn Navy Yard; studied English and the Bible at a Sunday school in Brooklyn; and with the support of Nancy E. Campbell, an American missionary, attended private preparatory schools in Massachusetts and New Jersey before attending Lafayette College, Brooklyn Polytechnic Institute, Columbia University, and Cornell University Medical College (graduating in 1916). In 1907 he formed the Japanese Mutual Aid Society, serving as its president until 1918. He maintained a private practice near Fort Greene Park, was chief of dermatology at Cumberland Hospital, helped to establish Japanese immigrant organizations, and was the president of the Japanese Association from 1930 until 1933, as well as an active leader in Christian church organizations.

Mitziko Sawada

Takamine, Jokichi (*b* Ishikawa Prefecture, Japan, 1854; *d* New York City, 22 July 1922). Chemist. In 1880 he was sent by the Japanese government to study in England; on his return to Japan he set up the first artificial-fertilizer business there. After traveling to the United States several times he assumed a research position at a distillery in Chicago where he shortened the distillation process by introducing an artificial fungus culture. In suburban Clifton, New Jersey, he established the Takamine Research Center, where he perfected a digestive medicine, Taka Diastase, and was the first chemist to extract a hormone (epinephrine) in pure form. He married in 1887 and built an elaborate mansion at 334 Riverside Drive. Takamine was a founding member of the Nippon Club in 1905, a vice president of the Japan Society in 1907, and a founding member and four-term president of the Japanese Association of New York.

Mitziko Sawada

Tallapoosa Point. Name formerly used for a section of the northeastern Bronx lying south of Eastchester Bay in what is now Pelham Bay Park. It was once a privately owned island that in colonial times became attached to the mainland through silting. In the 1890s a German political group, the Tallapoosa Club, leased it as a summer headquarters. Its rocky shores, inclining toward Long Island Sound, made the area a favorite spot for boating and fishing until the 1960s, when it was buried by a refuse dump used by New York City. Proposals in the 1970s that the new hill should be used as a ski slope were generally ignored.

Lloyd Ultan

Tamiris [Becker]**, Helen** (*b* New York City, 24 April 1905; *d* New York City, 4 Aug 1966). Dancer, choreographer, and teacher. A pupil of Michel Fokine and Rosina Galli, she formed the School of American Dance in 1930 and Tamiris and Her Group, an all-female company. Her modern dances in the 1930s and 1940s, including *Walt Whitman Suite, Cycle of Unrest,* and *How Long, Brethren?* reflected her concern with social issues. She was involved in the Concert Dancers' League, which was formed to fight the city's prohibition against Sunday dance concerts. Tamiris organized the Dance Repertory Theatre (1930–31) and was instrumental in the Federal Theatre Project (sponsored from 1936 to 1939 by the Works Progress Administration) and its offshoot, the Federal Dance Project. In 1937 she helped form the American Dance Association, which had the goal to protect the economic interests of dancers and promote educational opportunities. Between 1944 and 1955 Tamiris provided choreography for 14 Broadway musicals, including *Up in Central Park* (1945; film version 1948), *Annie Get Your Gun* (1946), *Inside U.S.A.* (1948), *Touch and Go* (1949; Tony Award for choreography), *Fanny* (1954), and *Plain and Fancy* (1955). With her husband, Daniel Nagrin, she formed the Tamiris–Nagrin Dance Company in 1960.

Norma Adler

Tammany Hall. Manhattan political organization formed in 1788 in New York City as the Society of St. Tammany or Columbian Order, in response to the city's more exclusive clubs. Initially most of its members were craftsmen; they adopted Tamanend, a legendary Delaware chief, as their patron and used pseudo-Indian insignia and titles (the lowest ranks were known as braves, the council members as sachems). Meetings were held in a hall on Spruce Street from 1798 to 1812 and in another at Nassau and Frankfort streets from 1812 to 1868.

In the early nineteenth century the society supported Aaron Burr, Martin Van Buren, and such progressive policies as universal male suffrage, lien laws to protect craftspeople, and the abolition of imprisonment for debt. It was soon riddled with graft, scandals, and internal conflicts of which the most notable was a struggle in 1835 between the Locofocos and the conservative old guard. The leaders expanded their political base by helping immigrants to survive, find work, and quickly gain citizenship; the organization also opposed anti-Catholic and nativist movements of the day, thus earning loyalties that endured for generations. During the mid-nineteenth century Mayor Fernando Wood furthered his career through the society, as did William M. "Boss" Tweed (the insigne of his volunteer fire company, a tiger, became the society's symbol). In 1868 the society moved into its "wigwam" on East 14th Street near Third Avenue, where it was the host of the Democratic National Convention during the same year.

Tammany Hall did not become a disciplined political machine until it came under the direction of John Kelly (1872–86), the first of 10 successive Irish American bosses; it is said that he found the society a horde and left it an army. He introduced a system of organization in which assembly district leaders elected a

leader—an unsalaried, extralegal commander of operations. They also appointed precinct captains whose job it was to help families in their neighborhoods during times of emergency, to find them work, to ease any problems they had with the law, and to make sure that they voted. Although ballot boxes were often stolen on election day, most victories by candidates allied with Tammany Hall were achieved through year-round attention to voters' needs and interests. Because the boss controlled nominations to elective offices, he had the last word in the discretionary appointments made by successful candidates for municipal office and used this power to reward loyal district leaders and supporters and to punish dissenters. Political integration of different ethnic groups varied widely. From mid-century Irish men dominated Tammany Hall and virtually monopolized district leaderships, remaining in power despite the changing population of their neighborhoods. Many Jews and Germans were admitted to the Tammany Society and were chosen to be state legislators, congressional representatives, and judges. The growing Italian population was largely ignored, and when the number of black voters in Harlem became significant, the neighborhood was subdivided and reallocated to adjacent districts with white majorities. Richard Croker, the boss from 1886 to 1902, retained Kelly's system but delegated decisions about patronage to local leaders more than Kelly had done.

After consolidation in 1898 the primacy of Tammany Hall depended on gaining the cooperation of Democrats in the outer boroughs. Those in Brooklyn opposed the organization until John McCooey became the leader of Kings County in 1909. He was a longtime friend of Croker's successor, Charles F. Murphy. One result of their collaboration was the nomination of two mayoral candidates from Brooklyn, William J. Gaynor in 1909 and John F. Hylan in 1921. In state government during these years politicians allied with Tammany Hall sponsored progressive labor laws and opposed Prohibition and censorship. Murphy promised the suffrage leader Carrie Chapman Catt that his organization would do nothing to prevent women from gaining the right to vote; women were later allowed to be district co-leaders but rarely had a voice in decisions. After Murphy's death the leaders decided to replace Mayor Hylan with James J. Walker, a member of Tammany Hall and a state senator. Their efforts were successful owing largely to the support of Edward J. Flynn, the leader in the Bronx, and to an effective campaign against Hylan by Governor Alfred E. Smith; after winning the Democratic primary they swept the November elections.

The machine received money and "kickbacks" from many sources: municipal suppliers, real estate interests, aspirants for judgeships, and businessmen bidding for transit franchises and pier leases. Legal fees and brokerage commissions were funneled to politically active lawyers and insurance agents, and generous campaign contributions were often made by such wealthy families as the Lehmans and the Strauses. Members of the inner circle profited from "honest graft," successful speculations based on confidential information about plans for schools and public works. As George Washington Plunkitt, a sachem who died a millionaire, declared, "I seen my opportunities and I took 'em."

Tammany Hall reached its zenith in 1928. Smith was a powerful and widely respected governor; Walker was an extraordinarily popular mayor; and George W. Olvany, a college graduate, was the boss. A new building was completed in 1929 on Union Square at 17th Street, and during this period even reformers had few criticisms of Tammany Hall. But the organization's fortunes soon changed. Investigations of civic corruption by Samuel Seabury led to Walker's resignation in 1932. John F. Curry, Olvany's successor, sought to block Franklin D. Roosevelt's presidential nomination, allowing Flynn, no longer an ally of Tammany Hall, to become the strongest link between the Democratic White House and the city. In 1933 Mayor John P. O'Brien, the incumbent and a loyalist chosen by Curry, finished last in a three-way mayoral election won by Fiorello H. La Guardia, who led a coalition opposed to Tammany Hall that remained in place for 12 years. Unable to meet mortgage payments, the sachems sold their building to Local 91 of the International Ladies' Garment Workers' Union in 1943. By the time the Democrats recaptured the mayoralty in 1945, Tammany Hall had virtually ceased to exist, although politicians bred in the organization continued to flourish into the 1950s and beyond.

Frank Vos

Tannenbaum, Frank (*b* Brod, Galicia, 4 March 1893; *d* New York City, 1 June 1969). Historian. After moving from a farm near Great Barrington, Massachusetts, to New York City in 1906 he joined the Industrial Workers of the World. In 1914 he was imprisoned for almost a year on Blackwell's Island for disturbing the peace by leading homeless men into churches to demand financial assistance and work. He received a PhD in economics in 1927 from the Brookings Institution and began teaching at Columbia in 1935, becoming a full professor of Latin American history in 1945. He founded and directed the interdisciplinary University Seminars at Columbia, which grew from five seminars in 1945 to more than 90 by 2008. Tannenbaum's published writings on Latin America were numerous. He also wrote on crime and prison reform, the labor movement, and race relations and edited the book *A Community of Scholars: The University Seminars at Columbia* (1965).

Bernard Hirschhorn

tap dancing. The origins of tap dancing in New York City may be traced to the Five Points of the 1840s, where the African dances of blacks and the jigs and clog dances of the Irish exerted a reciprocal influence. Early tap dancers included the black minstrel Master Juba (William Henry Lane) and his white rival, Master John Diamond, who in 1844 faced each other in a competition at John Tryon's Amphitheater that Master Juba won. During the last third of the nineteenth century, black vaudevillians further refined the tap style, which was more rhythmic and looser than most other dances in vogue at the time.

The successful musical *Shuffle Along* (1921) by Flourney Miller, Aubrey Lyles, Noble Sissle, and Eubie Blake, which opened at Daly's Music Hall on 63rd Street, helped to establish tap dancing on the Broadway stage. In 1923 *Runnin' Wild* (also by Miller and Lyles) opened at the Colonial Theater and featured the Charleston, a fusion of tap and ballroom dancing that became immensely popular. Tap dancing was now important to the success of Broadway revues. The first great proponent of tap dancing was Bill "Bojangles" Robinson. After several years on the vaudeville circuit, he performed at clubs in Harlem and then appeared in *Blackbirds of 1928* by Lew Leslie and Will Vodery. He later danced in other Broadway shows and revues and eventually moved to Hollywood. Robinson's success inspired many tap dancers during the 1930s, among them Honi Coles, King Rastus Brown, Peg Leg Bates (who tapped on one leg), and such duos as Buck and Bubbles (Ford Lee Washington and John Washington Bubbles), Chuck and Chuckles (Charles Green and James Walker), and Stump and Stumpy (James Cross and Harold Cromer). The brothers Fayard and Harold Nicholas, who regularly performed their acrobatic tap dances at the Cotton Club and the Apollo Theater during the early 1930s, appeared on Broadway in Florenz Ziegfeld's *Follies* (1936) and in *Babes in Arms* (1937), by Richard Rodgers and Lorenz Hart.

Although tap remained essentially a black art form during the 1930s and 1940s, there were many important white tap dancers as well, including Fred Astaire, Ruby Keeler, and Gene Kelly. Clarence "Buddy" Bradley taught tap to white students and introduced creative

tap choreography. Tap dancers and their students frequented the Hoofers Club, a studio, rehearsal space, and social center that remained open at all hours and was situated at the rear of a pool hall next to the Lafayette Theatre at 131st Street and Seventh Avenue. The influence of tap was seen in the dance scenes of musicals and films and in such popular dances as the Lindy hop. During the 1940s and early 1950s groups such as the Four Step Brothers remained popular, and tap dancing was incorporated into the routines of such performers as Sammy Davis, Jr., and the members of the Hines family, who performed as Hines, Hines, and Dad (Gregory, Maurice, Jr., and Maurice, Sr.). Will Gaines and Groundhog Gaines and other performers developed a less refined and more improvisational subgenre known as bebop tap, which was influenced by recent developments in jazz and in turn influenced jazz drumming.

The popularity of tap dancing declined as that of rock-and-roll increased during the 1950s, and as dance critics focused their attention on ballet and modern dance. Interest was eventually renewed, in part by a revival on Broadway in 1969 of Vincent Youmans's musical *No, No, Nanette,* which has several tap dance numbers. In the following years several plays, musicals, and revues included tap dancing, among them *The Wiz* (1975, choreography by Geoffrey Holder), *Bubblin' Brown Sugar* (1976), and *Eubie!* (1978). Innovative dancers such as Jane Goldberg performed at the Brooklyn Academy of Music, and a number of dance schools offered instruction in tap, including the Ned Williams School of Dance, the Professional School of Dance (led by Henry LeTang), the Dance Theatre of Harlem, and the American Ballet Center. The Jerry Ames Tap Dance Company was the first professional ensemble in the United States devoted exclusively to tap and premiered in New York City in 1976; it combined elements of tap with others drawn from jazz, modern dance, and even ballet. Other notable groups included the American Tap Dance Orchestra (led by Brenda Bufalino), the Jazz Tap Ensemble (led by Linda Dalley), and Manhattan Tap. During the twentieth and early twenty-first centuries tap dancing was featured occasionally at such clubs as Smalls' Paradise, the Red Rooster, Northern Lights, and the Cat Club in Greenwich Village.

Tapia, Carlos (*b* Ponce, Puerto Rico, 27 Dec 1885; *d* New York City, 31 July 1945). Reformer and social activist. A grocer by trade, he worked with other Puerto Rican community activists to form Democratic clubs in Brooklyn between 1900 and 1919. Known as nationality clubs, these offered cultural and athletic programs and social services in addition to dispensing patronage. Often called upon to defend the fledgling Puerto Rican community, Tapia believed that by taking part in the electoral process, Puerto Ricans in New York City could achieve progress for themselves as well as play a role in deciding the political future of their homeland. Public School 120 in Brooklyn was named for him in 1965.

Virginia Sánchez Korrol

Tappan, Lewis (*b* Northampton, Mass., 23 May 1788; *d* Brooklyn, 21 June 1873). Businessman and abolitionist. He moved to New York City in 1828 to join his brother Arthur (*b* Northampton, 22 May 1786; *d* New Haven, Conn., 23 July 1865), who had moved to the city in 1826 and established the *New York Journal of Commerce* in 1827; the two had a successful partnership as silk jobbers under the name Arthur Tappan and Company from 1828 to 1841. Lewis established the Mercantile Agency, the first commercial credit-rating institution in the United States and a forerunner of Dun and Bradstreet. In the late 1820s the brothers became active in religious and social reform and led movements for stricter observance of the Sabbath and the cessation of mail delivery on Sunday. They also promoted the free church movement and financed a number of bible, tract, Sunday school, mission, and education societies in the antebellum city. Lewis Tappan broke with the American Colonization Society, which sought to repatriate freed slaves to Africa, and with his brother formed the American Anti-Slavery Society (1833), which urged the immediate abolition of slavery. The Tappans' uncompromising resistance to slavery angered many, and in 1834 Lewis Tappan's home at 40 Rose Street was ransacked by an anti-abolitionist mob. The brothers were instrumental in introducing the revivalist Charles G. Finney to the city and built the Broadway Tabernacle for his use in 1836. In 1840 they formed the American and Foreign Anti-Slavery Society, one of the leading abolitionist organizations in the city. After Arthur Tappan's business failed in 1842 the brothers helped to found the anti-slavery American Missionary Society (1846), and by the early 1850s both had retired from business to devote themselves to philanthropy. They resisted the Fugitive Slave Act of 1850 by helping the Underground Railroad to carry slaves to freedom in the North. Lewis Tappan wrote *The Life of Arthur Tappan* (1870).

Tarbell, Ida M(inerva) (*b* Erie County, Pa., 5 Nov 1857; *d* Bridgeport, Conn., 6 Jan 1944). Journalist. After graduating from Allegheny College she taught for a few years, traveled, and in 1894 joined the staff of *McClure's,* where she wrote about Napoleon, Abraham Lincoln, and John D. Rockefeller; in the years after 1901 she produced 19 articles and the book *A History of the Standard Oil Company* (1904), which exposed the firm's ruthless practices. With several other members of *McClure's,* including Lincoln Steffens and Ray Stannard Baker, she acquired control of *American Magazine* and for a time wrote about tariff reform. Increasingly mistrustful of politics, she declined an appointment to the tariff commission from President Woodrow Wilson, and in the book *The Business of Being a Woman* (1912) she questioned the causes of woman suffrage and militant feminism. After investigating conditions in factories and Henry Ford's production methods, she strongly endorsed the scientific management planner Frederick W. Taylor. She lived at 40 West Ninth Street before retiring to Connecticut. Tarbell wrote an autobiography, *All in a Day's Work* (1939).

target companies. Groups of volunteers operating as firefighters and at times militia. The first target companies in New York City were formed in the 1830s by volunteer firefighters devoted to target practice; the earliest known by name were the Baxter Blues and the Black Joke Volunteers. Unlike the state militia, in which members often served their enlistment of seven years without ever firing their weapons, target companies such as the Pocahontas Guards assembled "the best shooters in the city" for frequent target excursions. Despite casual discipline they were probably at least as effective militarily as militia units of the time. By 1850 it was estimated that the companies had 10,000 members, a large number of whom had volunteered for the Mexican War. Some companies were formed by members of ethnic and political groups, such

as the Asmonean Guard (Jewish), the American Rifles (nativist), and the Meagher Guards (Irish), and by employees of factories, foundries, and shipyards. Most target companies reportedly were democratic in selecting their officers and enforcing rules, but prosperous members often contributed for uniforms, weapons, and meals, and sometimes their largesse resulted in their being chosen as officers. Like the volunteer fire department, many target companies were allied with the Democratic Party and Tammany Hall. The Black Joke Engine Company sponsored the Baxter Blues and the Black Joke Volunteers, who by disobeying orders from the Common Council not to march in a parade for the presidential candidate James K. Polk in 1844 caused the engine company to be temporarily disbanded. Americus Engine Company no. 6 took over the equipment of the Black Joke Volunteers and was led to target practice as the William M. Tweed Guards (named after its foreman, later infamous as Boss Tweed). The *New York Times* observed that almost all politicians in Tammany Hall were leaders of target companies, which they found invaluable as bases of power.

Many companies' target excursions became drunken feasts at which the arms most in use were pocket pistols drawn during quarrels. One of the companies known for its social activity, the Shandley Legion, distributed its prizes by lottery, to the disgust of the few members who were skilled marksmen. Some companies were even named for their love of feasting, among them the Chowder and Epicurean guards; others had frivolous names such as the First Ward Magnetizers and Nobody's Guard.

Political maneuvering led to the only large-scale review of the companies, the Target Parade of 1857. At the height of Mayor Fernando Wood's dispute with the state legislature over control of the city police, the target companies formed two divisions and were led by the fire commissioner Henry Wilson in a parade down Broadway reviewed by the mayor; 2700 men took part. Frivolous companies marched alongside units such as the Peterson Guards, who had been invited to West Point to perform for the U.S. Military Academy. A month after the parade, supporters of Mayor Wood made an unsuccessful effort to join the companies into a city army.

When the Civil War began in 1861 men of all classes turned to the target companies for instruction. The companies did not enlist as units, but they contributed most of the men for the Fire Zouaves and other regiments such as the Jackson Guard (supported by Tammany Hall) and the Garibaldi Guard. Most New Yorkers expected the war to end quickly, and when it lengthened and turned into a war that would end slavery, many Irish workers became resolute Copperheads. President Abraham Lincoln's attempt to draft them in July 1863 brought about a revolt, and Black Joke Volunteers led an attack on the local conscription office. Entire companies of the volunteer fire department deserted out of sympathy with the rioters, but many others worked to control arson and violence throughout a week of disruption. During the first two days reporters thought they discerned among the rioters a well-organized cadre armed with military rifles. These roughly clad but expert marksmen at one point routed 150 Zouaves.

The treachery of some volunteer firefighters led to the dissolution of some target companies in 1865. In the following year a report of the police commissioner recommended that target excursions be outlawed, but the companies still had enough support from Tammany Hall to defeat a bill prohibiting civilian parades under arms. Membership reached its peak after the Civil War as companies recruited many former soldiers. Nearly all had become social clubs, and newspaper descriptions of their parades were no longer respectful: the *Times* alleged that the companies blackmailed saloonkeepers, politicians, and employers. A huge "target excursion" provided the cover for opposition to the Orange parade of 1871, which ended in a bloody riot. Discipline broke down among the National Guard defending the marchers; without orders, troops fired into the crowd lining the street. The disaster brought efforts to improve discipline and marksmanship in the militia. The National Rifle Association, formed later that year, was intended both to improve the skills of the militia and to put the popularity of target excursions to the service of the National Guard.

Russell S. Gilmore

Tasti D-Lite. Frozen dessert franchise. Founded in 1987 in New York City, the company sells diet frozen desserts in more than 100 flavors. In 2007 the company was acquired by a New York City private equity firm and became Tasti D-Lite LLC. In the early twenty-first century there were more than 60 independently owned and operated Tasti D-Lite locations in New York City.

Jessica Montesano

tattooing. The first mechanized tattoo shop in New York City was opened in 1875 at 11 Chatham Square by Samuel F. O'Reilly, who had invented the electric tattoo machine after observing that Thomas Edison's electric engraving pen could be modified to introduce ink into skin with speed and accuracy. The rowdy atmosphere of Chatham Square and the Bowery nurtured O'Reilly and his innovation, and he accepted two apprentices: Charlie Wagner, who took over the tattoo shop on O'Reilly's death in 1908 and went on to develop his own version of the tattoo machine, and to start a small tattoo supply business; and Ed Smith, who designed dozens of sheets of tattoo designs for the trade. During the first few decades of the twentieth century, performers at dime museums on the Bowery visited Wagner's shop regularly. These early "canvas backs" helped to boost the reputation of both Wagner and tattooing, and Chatham Square soon became a worldwide tattoo center, attracting more than a dozen tattooers from as far away as Japan.

Tattoo parlor, 2009

Usually operating out of cramped booths in local barber shops, tattooers in Chatham Square decorated the skin of the day laborers who congregated in the area and of those who visited the Bowery in search of amusement. Among the most noted tattooers were Bob Wicks at 9 Chatham Square; Millie Hull at 16 Bowery, the only female tattooer in New York City; and Willie Moskowitz at 12 Bowery, a barber who had learned tattooing from Wagner and was known for his speed. Moskowitz's sons Stanley and Walter inherited his tattoo business and moved with him to 52 Bowery, just off Chatham Square. They were the last tattooers to work on the Bowery and among those who were forced to retire from their locations in Coney Island and 48th Street on 1 November 1961, when tattooing in New York City was banned because of an outbreak of hepatitis. In March 1997 the ban was lifted, and two years later the South Street Seaport Museum hosted an exhibition titled *American Tattoo: The Art of Gus Wagner* at the same time that the American Museum of Natural History presented *Body Art: Marks of Identity,* which featured tattooing. In the early twenty-first century there were numerous tattoo parlors throughout the five boroughs, including the notable Andromeda on St. Marks Place and Red Rocket Tattoo on West 36th Street.

Tavern on the Green. Restaurant in Central Park at West 67th Street. Originally a sheepfold built in 1870 and designed by Jacob Wrey Mould, it was converted into a restaurant in 1934 by order of the parks commissioner Robert Moses when the park was renovated. Overlooking the gardens of Central Park and filled with stained-glass windows, including

one by Louis Comfort Tiffany, it offered a rustic setting rare in central Manhattan. In the 1950s the designer Raymond Loewy added the Elm Room (later called the Park Room) to the front of the building. In 1962 Restaurant Associates took over the business from its original manager, Arthur Schleiffer. After the restaurant closed in 1974, the lease was acquired by Warner LeRoy, who undertook extensive renovations: the Crystal Room and the Terrace Room were added, along with 14 sand-carved mirrors and 45 chandeliers. The restaurant reopened in 1976 and soon became a popular locale for weddings, opening-night parties, and political fund-raisers. In 2009 the city decided not to renew the lease with LeRoy, and the restaurant went bankrupt and closed; the furnishings were auctioned off in January 2010. Tavern on the Green has been a backdrop for several films and marks the finish line of the New York City Marathon.

taverns. See Bars, taverns, and saloons.

taxes. In the early years of New Amsterdam, Peter Stuyvesant financed his government primarily by a tax on liquors. An uncooperative public often stymied other efforts to raise revenue, notably an ill-fated property tax to pay off a debt. Under British rule minor taxes on property in New York City were levied for various municipal functions including public works and relief, a pattern that continued after independence and well into the nineteenth century. The creation of the comptroller's office in 1801 helped facilitate the city's taxing powers.

New York City did not pass its first important tax legislation until 1859, when it established a comprehensive system for the assessment and collection of property taxes. There were three commissioners of taxes and assessments, each appointed by the mayor, whose deputies set out every September to appraise property, both real (fixed assets like land and buildings) and personal (financial assets and material items like jewelry). Citizens were given four months in which to challenge assessments. Once the books were closed the assessments were brought before the Board of Aldermen, which set a rate of taxation according to the city's needs each year: the rate for every $100 in assessed valuation ranged from $0.42 in 1830 to $2.94 in 1875.

The city's system of taxation was widely criticized for being inequitable. Personal property taxes were valued lower than real estate taxes (45 percent lower in 1860), even though they were believed to be greater in worth. When William H. Vanderbilt died it was estimated that $40 million of his personal estate was taxable, but he had paid only $500,000 during his lifetime. The city managed to close the differential between personal property and real property rates to 22 percent by 1896, but still only 21,000 of the city's nearly two million inhabitants paid personal property taxes that year. The city's tax commissioner acknowledged in 1891 that his office was able to collect taxes only from "the widows and the orphans," because their personal property was documented in the surrogate's office.

With minor variations the system remained intact until the Depression. With the city on the brink of bankruptcy and having to resort to bank loans to pay its debts, it became obvious that the tax system was inadequate: property owners, who supplied more than 80 percent of the city's revenues, simply lacked the means to finance city government on their own. As a result an agreement was reached with the city's financial institutions, known as the "Bankers' Agreement," under which the city committed tax revenues to pay off bank loans and imposed a new tax on utilities to provide unemployment benefits. The agreement was in effect from 1 January 1934 to 31 December 1937 and curtailed the city's taxing and discretionary powers.

Other taxes were adopted during this period as well. In 1934 the city established a business tax of less than 1 percent and a sales tax of 2 percent. The sales tax was intended to be an emergency measure only, but it was eventually raised to 4 percent and remained in place into the early twenty-first century. In the following decades the city added taxes on hotel rooms, parimutuel betting, automobiles, theater tickets, gross payrolls, and other items. An income tax, begun in 1966, applied both to residents and to nonresidents who earned income in the city. Initially those subject to the income tax were required to file a separate tax return with the city, until in 1975 the state of New York began collecting the tax on the city's behalf. With the growth in new taxes, the proportion of the city's revenues accounted for by the property tax fell steadily, from 70 percent in the 1950s to 55 percent in the early 1970s. Meanwhile, the commuter tax on suburban residents was repealed in 1999.

Major changes in the city's property tax system were made in 1982, when the state passed a law establishing four classes of property for taxation: one-, two-, and three-family houses; apartment buildings (essentially cooperatives and condominiums); utilities; and commercial property. Each class of property had a different ratio of assessed valuation to market value, a formula that worked to the advantage of homeowners in the outer boroughs. (In the mid-1990s homeowners owned 32.5 percent of the city's property but paid 11.5 percent of its property taxes, while owners of cooperatives and condominiums paid much more.) Property taxes became a contentious political issue during the budget crises of the 1990s, when some observers called for a more equitable system that would generate more revenue.

Like all municipalities in New York State, New York City depends on the legislature for the power to tax. In the mid-1990s the city raised more than $18 billion a year in taxes, of which 43 percent was derived from property taxes, 19 percent from income taxes, 13 percent from sales taxes, 6 percent from corporate taxes, and 19 percent from other taxes. The city is generally regarded as a highly taxed jurisdiction: in 2007 the income tax rate ranged from 2.9 percent to 3.6 percent.

Edward D. Durand, *The Finances of New York City* (New York: Macmillan, 1898)

James Bradley

taxicabs. Taxicabs became a popular mode of transport for New York City residents in 1907, when slow-moving vehicles powered by batteries weighing 800 pounds (360 kilograms) that had been in use since 1899 were replaced with gas-powered ones. The new taxicabs were equipped with taximeters to halt widespread fare gouging. Drivers became more assertive: 5000 held a strike in November 1907 calling for better wages and the right to unionize. By 1909 there were six major "fleets" employing hundreds of drivers, as well as thousands of independent owner–drivers. In the same year the city government appointed inspectors to monitor taxicabs, and in 1913 it fixed the cost of a taxi ride at 50 cents a mile (30 cents a kilometer), a figure lower than the prevailing average.

In the early 1920s the taxi business was largely unregulated and controlled by automobile manufacturers and owners of large fleets: General Motors, the Ford Motor Company, and the Checker Motors Corporation offered easy credit to fleets seeking to purchase automobiles and sometimes set up fleets of their own. Large owners sought to drive out small ones by discounting their fares and advocating high bond requirements; reformers accused the city of ignoring corruption and complained of taxicabs that were dangerous, dirty, and uninsured. In response, the police department took control of licensing in 1923, on the grounds that taxicabs were often used in burglaries, holdups, and bootlegging; by this time there were 16,000 licensed taxicabs in the city. The new licensing requirements were lax, and cab driving remained open to all. The large fleets that controlled the business were increasingly competitive, and rate wars worsened in 1925, with some fleets lowering fares by 50 percent. In the same year the first women became licensed drivers, and the police department gained control over the licensing of taxi drivers through its newly formed Taxicab Commission.

The Depression led to a huge increase in the number of taxi drivers in New York City (75,000 operating 19,000 vehicles in 1933) and an upsurge in labor strife. Average weekly pay dropped from $26 in 1929 to $15 in 1933. Loan sharks, racketeers, and corruption were rampant: in 1932 an investigation by the Taxicab Commission revealed that the Checker Cab Company, which owned Parmalee, the largest taxi fleet in New York City, had bribed Mayor

James J. Walker, and further inquiries contributed to Walker's resignation. The Haas Act (1937) established a system of medallions, or official taxicab licenses, available for $10 and limited in number to 13,566. Considered a compromise between the owners of large fleets and the independent drivers, the law in fact created a new monopoly, as the owners of medallions became a powerful bloc intent on limiting access to the trade.

For many years most taxi drivers were Jewish, Italian, and Irish immigrants, and except during World War II almost all were men. Taxi drivers developed the image of being amiable cynics with an encyclopedic knowledge of the city who were eager to express their opinions on almost any subject. Efforts to unionize drivers in the city by the International Brotherhood of Teamsters, the Taxi Workers Union, the United Mine Workers, the American Federation of Labor–Congress of Industrial Organizations (AFL–CIO), and local unions between 1934 and 1957 met with little success. Bitter strikes shut down the business in 1934, 1939, 1949, 1956, and 1965, and the fleets retaliated by locking out and dismissing drivers and by calling in replacements. Vehicles were burned and rallies were held in Times Square and on Fifth Avenue, and striking drivers blocked avenues, squares, and bridges. The strike in 1965 resulted in an election supervised by the National Labor Relations Board in which the Taxi Workers Union, an affiliate of the AFL–CIO led by Harry Van Arsdale, was chosen to represent the city's drivers.

By the 1960s attrition reduced the number of medallion taxicabs in the city to 11,300. Special medallions for veterans of World War II were never issued because of political opposition from the unions and independent drivers. In 1967 the city ordered all medallion cabs painted yellow, which further increased the value of a license. By the late 1960s, 10 percent of the taxicab drivers in New York City were women. Drivers were often the victims of violent crimes, and bulletproof partitions were installed between the front and back seats of taxicabs in 1967.

The limited number of medallions, and medallion drivers unwilling to go to certain neighborhoods, gave rise to a number of private livery, or "gypsy," services. Unlike medallion cabs the gypsies could offer their services only to passengers who had requested them by telephone, a restriction often disregarded. Gypsy services operated primarily in black neighborhoods: the largest of these was Black Pearl Livery in Brooklyn. The Taxi and Limousine Commission reported in 1971 that although gypsy drivers earned only about a third of what medallion drivers did, gypsy services were much-needed enterprises in the inner city: they employed nearly 13,000 drivers in metropolitan New York City, of whom 58 percent were black and 39 percent Puerto Rican.

The trade experienced an influx of black, Middle Eastern, and Latino drivers in the 1970s, and of Russian Jews, Haitians, and South Asians in the 1990s. A survey by the Taxi and Limousine Commission found that 1991 applicants for licenses were 42.8 percent South Asian, 11.2 percent African, 7.6 percent Caribbean, 7 percent Middle Eastern, and 6.8 percent Russian; 10.5 percent were born in the United States. Starting in 1983, these changing demographics resulted in a mandatory orientation program consisting of 20 hours of classroom instruction for new drivers starting in 1983.

In 1979 the fleets won the right to impose a surcharge of 50 cents a ride between 8 p.m. and 6 a.m. The cost of medallions rose to $136,000 by 1989; in the same year a survey showed that drivers who leased their taxicabs earned between $21,000 and $31,000 from tips and a percentage of their fares (these drivers paid for their own gasoline), that owner–drivers averaged more than $40,000, and that only 30 percent of the city's drivers worked full time. Dangers continued to accompany the job. In 1993 alone a rash of armed robberies and murders cost the lives of 41 livery drivers and four yellow-cab drivers.

In 2006 the New York City Labor Council recognized the Taxi Workers Alliance as a "work center," the first such designation of independent contractors. Under the leadership of Bhairavi Desai, the alliance then boasted about 7000 members. It successfully negotiated a sizable pay increase in 2004. The Ford Crown Victoria continued to be the workhorse of the taxicab industry into the twenty-first century.

Taxi driving in New York City has been the subject of several anecdotal memoirs, including *Hacking New York* (1930) by Robert Hazard and *My Flag Is Down: Diary of a New York Taxi Driver* (1948) by James Maresca, and it figures prominently in Martin Scorsese's film *Taxi Driver* (1976). One well-known former taxi driver is Danny Sullivan, who worked in the city during the early 1970s and won the Indianapolis 500 in 1985.

Charles Vidich, *The New York Cab Driver and His Fare* (Cambridge, Mass.: Shenkman, 1976); Biju Mathew, *Taxi! Cabs and Capitalism in New York City* (New York: New Press, 2005); Graham Russell Gao Hodges, *Taxi! A Social History of the New York City Cabdriver* (Baltimore: Johns Hopkins University Press, 2007)

Graham Hodges

taxpayers. Term used to mean one- and two-story buildings that yield sufficient commercial or residential rent to pay real estate taxes until landlords can undertake more intensive and more profitable development. After the collapse of the real estate market in 1929, taxpayers became a common means of "land banking" and kept land productively available to the urban economy, but the term did not come into popular use until after the Depression. One of the best-known and most distinctive taxpayers in New York City is Pomander Walk on the Upper West Side of Manhattan, a two-row mews of very small town house apartments that extends from 94th Street to 95th Street between Broadway and West End Avenue. Its developer, Thomas Healy, and the architectural firm of King and Campbell obtained the model for its layout from the popular play *Pomander Walk* (1911), which takes place in a mythical suburb of London at the time of George III. Healy had hoped to build a high-rise hotel with 600 rooms, but by the time construction began in 1921 the hotel project was no longer feasible. Much construction during the real estate expansion of the 1980s took place on sites that had been developed as taxpayers during the Depression.

Elliot Sclar

Taylor, Billy (*b* Greenville, N.C., 24 July 1921). Jazz pianist and composer. He began playing piano professionally after graduating from Virginia State College with a BS in music in 1942. His first professional gig was playing piano for Ben Webster's Quartet on 52nd Street in New York City. He became the house pianist at Birdland, a famous jazz venue in midtown Manhattan, where he performed with the likes of Miles Davis, Charlie Parker, and Dizzy Gillepsie and was a protégé of jazz pianist Art Tatum. In 1958 he became the musical director of the National Broadcasting Company (NBC) program *The Subject Is Jazz,* the first-ever television series about jazz music. During the 1960s the Billy Taylor Trio was a regular feature at the Hickory House on West 55th Street in Manhattan. In 1964 Taylor founded New York City's Jazzmobile, which provides arts education programming via special projects, concert series, and workshops. One of his most famous songs is "I Wish I Knew How It Would Feel to Be Free," composed in 1954, which became associated with the civil rights movement of the 1950s and 1960s, and which was covered most famously by Nina Simone. In the early twenty-first century Taylor held over 20 honorary doctoral degrees and was the recipient of two Peabody awards, a National Endowment for the Arts (NEA) Jazz Masters Award, an Emmy Award, and a Grammy Award.

Benjamin Yakas

Taylor, Cecil (Percival) (*b* New York City, 15 March 1933). Pianist. After growing up in Corona, Queens, and studying at the New England Conservatory, he made his debut in 1956 at the Five Spot in New York City and recorded the albums *Jazz Advance* (1956), *Looking Ahead* (1958), and *The New Breed* (1961). Influenced by Thelonious Monk, he soon forged a percussive and often violently atonal style that owed something to the keyboard works of Igor Stravinsky, Béla Bartók, and Karlheinz Stockhausen. His performances and recordings with the drummer Max Roach secured his reputation as the most uncompromising member of the jazz avant-

garde. For many years he lived in a loft at 58 West 31st Street.

Marc Ferris

Taylor [Cooney]**, Laurette** (*b* New York City, 1 April 1884; *d* New York City, 8 Dec 1946). Actress. In 1912 she achieved success in the play *Bird of Paradise,* as well as in *Peg o' My Heart,* written by her second husband, J. Hartley Manners, who later wrote a number of unsuccessful plays in which she appeared. After his death she became reclusive but then returned to Broadway in 1938 for a revival of Sutton Vanes's *Outward Bound.* Known for her radiance, she won critical acclaim for her profound characterization of Amanda in Tennessee Williams's *The Glass Menagerie* (1945), a role that she continued to play until near the end of her life.

David J. Weiner

Taylor, Moses (*b* New York City, 11 Jan 1806; *d* New York City, 23 May 1882). Industrialist and financier. Born at Broadway and Morris Street, he was the son of John Jacob Astor's business manager. In 1821 he began an apprenticeship to G. G. and S. S. Howland, a leading trader in products from Latin America; he formed his own company at 44 South Street in 1832 for importing Cuban sugar. In 1837 he was made a director of City Bank, which became a treasury for his business empire, as did the Manhattan and Metropolitan insurance companies and Farmers' Loan and Trust. After 1841 he invested aggressively in gas lighting companies in the city, including the Manhattan Gas Light Company, and in 1853 he became a director of the Lackawanna Iron and Coal Company, a producer of rails. He also recognized the importance of anthracite coal to New York City and from 1854 was a director of the Delaware, Lackawanna and Western Railroad, a producer and carrier of coal. During the same year he was made the treasurer of the New York, Newfoundland and London Electric Telegraph Company, which after five attempts linked New York City and London by transatlantic cable (1866). By 1855 the customs duties of Moses Taylor and Company were the second highest in the nation, after those of A. T. Stewart's department store. Taylor became the president of City Bank in 1856 (remaining until 1882), and as the chairman of the loan committee of the New York Clearing House he gave strong financial support to the federal government during the Civil War. By 1865 he controlled the entire gas lighting industry in the city. After the transatlantic cable began operating in 1866 he controlled the American side and became a director of the Western Union Telegraph Company, which had a monopoly on the telegraph industry in the United States. He became a vice president of Lackawanna Iron and Coal in 1872 and in the 1870s arranged for its conversion to the Bessemer process in steel production. At his death he left an estate worth $40 million. Taylor was perhaps the most important businessman in New York City between 1840 and 1880. His varied investments in trade, lighting, communication, and finance were instrumental in making the city a national and international center of business.

Joan L. Silverman

Taylor, Paul (*b* Pittsburgh, 29 July 1930). Dancer and choreographer. He moved to New York City in 1952 to study at the Juilliard School, danced with the companies of Merce Cunningham and Pearl Lang, and in 1955 began to perform his own choreography and became a soloist with Martha Graham, for whom he originated the roles of Aegisthus in *Clytemnestra* and Hercules in *Alcestis.* His concert *Seven New Dances* at the 92nd Street Young Men's and Young Women's Hebrew Association in 1957 became legendary as an exploration of extremes: ordinary movement and stillness, ordinary sounds and quiet. To a degree these concerns continued to color his work. In 1961 he left Graham to devote himself fully to his own company, which performed in New York City and toured consistently into the next century. He provided choreography to scores by many modern composers and commissioned designs from several well-known artists. A number of distinguished dancers performed in his company, including Bettie de Jong, Carolyn Adams, Dan Wagoner, Twyla Tharp, and Cliff Keuter. In 1989 he received the Mayor's Award of Honor for Art and Culture and was elected an honorary member of the American Academy and Institute of Arts and Letters. The tension in Taylor's work between light and dark, athleticism and wit, and the lovely and the sinister has created an unusually provocative body of work. One of his most popular and most musical dances is *Aureole* (1962). His published writings include *Private Domain* (1987).

Taylor Law [Public Employees' Fair Employment Act]. New York State statute. Named for labor researcher George W. Taylor, it authorizes a governor-appointed Public Employment Relations Board to resolve contract disputes for public employees, while also curtailing their right to strike. Mediation and binding arbitration are intended to give voice to unions, while work stoppages are made punishable with fines and jail time. The United Federation of Teachers and the Uniformed Sanitationmen's Association challenged the Taylor Law soon after its 1967 inception. Following a 2005 strike, Roger Toussaint, president of the Transport Workers Union Local 100, was incarcerated for three days as a result of a Taylor Law ruling.

Eric Robinson

Teachers College. Graduate school of education. It was founded in 1887 at 654 East 11th Street (9 University Place) by the philanthropist Grace Hoadley Dodge and the philosopher Nicholas Murray Butler as the New York School for the Training of Teachers. The impetus for the school was the rapid increase in New York City of poor immigrant children, whom it aimed to serve through social services and innovative methods of education. In 1892 it took its present name and received its permanent charter. The need for additional space and a gift of $100,000 from George Vanderbilt prompted the founders in 1894 to move the school to its present location on West 120th Street between Broadway and Amsterdam Avenue, making it the first of many academic institutions to settle in Morningside Heights. Constructed of brick and red sandstone, the original building dominated a rocky hilltop otherwise occupied only by farms, squatters, and the Bloomingdale Insane Asylum. Soon after Columbia University moved its campus to the same neighborhood in the mid-1890s, the two institutions entered into an academic alliance. Their agreement of 1898 provided the college with access to the university's faculty and empowered it to grant degrees in the university's name, while permitting it to retain its legal and financial independence. After the turn of the twentieth century, the college embraced the educational philosophy of pragmatism promoted by faculty member and Progressive reformer John Dewey, and it expanded and diversified its curriculum to include emerging fields such as psychology, sociology, health, and nutrition. In later years it focused special attention on research programs, urban education, increasing educational access and achievement for disadvantaged youth, and advanced classroom technology. Among the better-known alumni are Shirley Chisholm, the first African American woman to serve in the U.S. Congress; Norman Cousins, author and editor of the *Saturday Review;* Thomas H. Kean, chairman of the National Commission on Terrorist Attacks upon the United States (also known as the 9/11 Commission); artist Georgia O'Keeffe; and sex therapist Ruth Westheimer. In the early twenty-first century it enrolls more than 5000 students from 80 different countries.

Teachers Insurance and Annuity Association–College Retirement Equities Fund [TIAA–CREF]. Nonprofit financial institution formed in New York City

in 1918 as the Teachers Insurance and Annuity Association by the Carnegie Foundation for the Advancement of Teaching, with an endowment of $1 million from the Carnegie Corporation of New York. It began as a pension and insurance organization that offered life insurance and retirement plans to professors and other employees of colleges and universities. Both employers and employees contribute to the pension, which the employees may take with them from one institution to another. In the 1930s the association began to invest in mortgage loans and became a leader in investing pension assets in mortgages and real estate. The high inflation that followed World War II severely eroded the purchasing power of fixed-income investments, and in response the association formed the College Retirement Equities Fund and took its current name. The fund invested in common stocks and offered a variable annuity, a method of managing retirement savings and income that was considered radical at the time but was later adopted by many other companies and pension plans. Group life and disability insurance was added in the 1950s, and eligibility for individual life insurance was extended to public school teachers in 1989. In the early twenty-first century TIAA–CREF manages approximately $400 billion in assets, with more than 3.5 million customers at 15,000 colleges, universities, research organizations, and independent schools throughout the nation. Its headquarters are at 730 Third Avenue.

Carolyn Kopp

teachers' unions. Teachers in New York City first organized in 1913, and in 1916 they formed the Teachers' Union, an affiliate of the American Federation of Teachers (AFT). Because teachers were split among many societies, the union was not recognized as their bargaining agent but nonetheless effectively defended and advanced their interests. During the early 1930s the union was divided by a struggle among its officers, many of them socialists, and a growing faction led by communists. In 1935 the communist faction took over, and the former leaders left to organize the Teachers' Guild. In 1940 the AFT expelled the Teachers' Union and recognized the Teachers' Guild as the city's local. During the next 20 years the guild grew stronger but did not represent most teachers, and in 1960 it merged with a large segment of the High School Teachers' Association to form the United Federation of Teachers (UFT) under the direction of Charles Cogen. It held a strike, the first in the history of the school system, on 7 November 1960 for a collective bargaining election promised by the Board of Education; the election was finally held in December 1961 and was won by the UFT, which proved highly effective, conducting strikes in April 1962 and September 1967 that resulted in higher salaries, better working conditions, and a workable grievance procedure.

The UFT made a number of gains under Albert Shanker, who succeeded Cogen as president in 1964 and became a major figure in the local labor movement. Efforts to decentralize the school system led to a major crisis in 1968 when the local school board in the largely black Ocean Hill–Brownsville district ordered the transfer of 13 teachers and six other school employees, of whom 18 were white. Despite intense pressure 10 of the teachers continued to oppose their involuntary transfer, and this led to a conflict over teachers' contractual rights and community control of schools that culminated in three strikes by the UFT and a citywide political and racial crisis. The final settlement largely upheld the position taken by the UFT, and the teachers were reinstated. Strengthened by its role in the conflict, the UFT also helped to save the city from bankruptcy during its fiscal crisis by urging the trustees of the Teachers' Retirement System to buy bonds of the Municipal Assistance Corporation. Shanker was succeeded by Sandra Feldman in 1986. On Shanker's death in 1997, Feldman replaced him as president of the AFT while remaining as the leader of the UFT. In 1998 Randi Weingarten succeeded her as president of the UFT. In 2007 home child-care providers joined the union, bringing the UFT's membership in the early twenty-first century to more than 200,000.

technology. During the seventeenth century commercial activity in New York Harbor encouraged the growth of technology. Shipbuilding employed local blacksmiths and carpenters, who fashioned raw materials into vessels. Wind and water provided the power for many other trades that developed near the harbor: millers used waterwheels and windmills to grind grain for bread and for export goods such as beer and flour; sawmills and paper mills also used these sources of power. A system of apprenticeship evolved in the trades that was reminiscent of the medieval European guilds. By the eighteenth century emerging technology in New York City reflected increased wealth. Bricklayers were active as brick became an increasingly common substitute for wood. Silversmiths made engraved silver plates; coppersmiths made kettles, stills, and maritime instruments; and pewterers made ornate goblets and candlesticks.

At the same time New Yorkers made plans to build turnpikes and canals to tap the natural resources of the nation's interior and to serve new markets. Many saw transportation as the most promising area for investment, because unlike commerce or manufacturing it seemed relatively safe and long-lived. Water travel gained in importance during the early nineteenth century: the *North River Steamboat,* built by Robert Fulton, marked the beginning of steamboat service, with regular trips between Albany, New York, and New York City; and the Erie Canal was completed in 1825, linking Albany to Lake Erie at Buffalo and granting New York City access to national markets. Many western cities sought to tie into the canal, while eastern cities sought to compete with New York City by other means: among these were Baltimore, which built a railroad to the Ohio River, and Philadelphia, which set out to establish a connection with Pittsburgh and therefore the Ohio River by canal, turnpike, rail, and inclined plane.

Europeans who immigrated to the United States during the nineteenth century brought with them knowledge of technological advances related to textiles, steam engines, daguerreotype photography, railroads, telegraphs, and ocean steamers. By 1840 the American interest in technology was highly visible in New York City: Samuel F. B. Morse made critical contributions to photography and telegraphy at the University of the City of New York (now New York University); John B. Jervis invented a device to improve locomotive cornering. The city's most important role in railroad development was as a source of capital for the extraction and smelting of iron ore, the laying of track, and the manufacture of engines and rolling stock. Railroad promoters made New York City the eastern terminus of the four great antebellum railroad lines.

Much of the groundwork for the city's basic services and utilities was laid during the mid-nineteenth century. The Croton Aqueduct, which carried abundant water from outside the city limits to private and public facilities, was constructed during 1837–42. Sewers were dug for storm drainage and wastewater, and mains were laid to deliver gas to homes and offices. Paved city streets were continually torn up so that new mains could be laid and new buildings constructed. Of all the technological developments occurring in New York City, the farthest-reaching were centrally generated electricity and telephony: businesses in the city provided the money that enabled Thomas Edison and Alexander Graham Bell to capitalize on their inventions. At his laboratory in Menlo Park, New Jersey, Edison developed a high-resistance filament bulb that made electrical lighting economically competitive with gas lighting. In 1882 he placed the first commercial generating

station on Pearl Street in the heart of the financial district, offering four months of free service to prospective customers. Edison also worked on the microphone device of the telephone for Western Union, which attempted to patent a telephone on the same day as Bell in 1876. In 1879 the firm contested Bell's patent in court: under a settlement Western Union received $3 million from Bell Telephone to withdraw from telephony and sold to Bell its sets and Edison's patent for the microphone.

During the nineteenth and early twentieth centuries, New York City was a center of manufacturing, in part because the many southern European immigrants who lived there provided a large supply of labor. Most of the factories were powered by steam engines and built near railroad terminals connected to the waterfront. The city acquired its reputation as a garment center during these years. The early twentieth century also saw many developments in transportation, as the automobile became popular and Americans began moving to the suburbs. SUBWAYS were a technologically impressive achievement, as were the Lincoln and Holland tunnels and the George Washington Bridge, which made parts of neighboring states more accessible. During the 1960s and later years entrepreneurs in the city financed influential ventures elsewhere and helped to fuel the technological revolution around the country, making substantial investments in the development and manufacture of technologically advanced microelectronic equipment, lasers, computers, and pollution-control equipment.

In the late twentieth and early twenty-first centuries, New York City residents embraced the vast new electronics technologies that arose, including various digital technologies, cellular phones, "smartphones," and MP3 players. Wireless Internet access became available in many New York City cafés, restaurants, colleges, universities, and hotels. The New York City College of Technology, a division of the City University of New York, offered close to 60 degree and certificate programs related to technology in areas such as applied mathematics, architectural technology, computer systems, and communication design. Forums and organizations such as Government Technology and the New York City Department of Information Technology and Telecommunications (DoITT) oversaw how the city used current and emerging technologies and the way in which it delivered such services to the general public. DoITT was intended to improve the government's technological efficiency and make any communications clear and comprehensible. Public information services were available through the 311 Citizen Service Center, a citywide customer service organization that provided nonemergency government services and around-the-clock online information about city services and information. In addition, DoITT offered the NYC Media Group, made up of one broadcast television station, five cable stations, and an FM radio station, all featuring information about culture, government, history, and lifestyle.

telegraphy. The telegraph was invented in the 1830s by Samuel F. B. Morse, a professor of art at the University of the City of New York, with the help of Leonard Gale, a fellow professor, and Alfred Vail, a mechanic and former student from Morristown, New Jersey. The first functional line was built in 1844 between Washington, D.C., and Baltimore by the federal government and operated for a time by the U.S. Post Office. After Congress refused to buy patent rights and establish a permanent postal telegraph system, entrepreneurs acquired rights from Morse and his partners to build lines between major U.S. cities. In January 1846 the first sections of a network connecting New York City with Philadelphia, Boston, Buffalo, St. Louis, and New Orleans became operational. The location of the city on the eastern seaboard and its role as the major financial and shipping center in the nation helped to make it the heart of the U.S. telegraph network. Telegraph companies chartered in New York State seeking to consolidate lines and link them to New York City benefited from liberal incorporation laws passed by the state legislature. As a result these companies led the reorganization of the industry during the 1850s, when many small, regional companies were taken over by a few conglomerates such as the Western Union Telegraph Company, which controlled the most important lines west of New York City, and the American Telegraph Company (formed by Cyrus Field, Peter Cooper, and others), which bought enough eastern companies and links to the planned transatlantic cable to dominate the telegraph market in most states on the Atlantic coast. In 1857 representatives from American Telegraph, Western Union, and four other companies met in the city to sign a cartel agreement known as the "treaty of six nations," which carved the market into clearly defined territories. Western Union abrogated the agreement in 1860 when it won a government subsidy to build a transcontinental telegraph; the completion of this system and government subsidies acquired during the Civil War gave Western Union a competitive advantage, and by 1866 it had almost gained a monopoly by obtaining control of its major competitors, including American Telegraph. About this time it moved its headquarters from Rochester, New York, to the American Telegraph Building at 145 Broadway in New York City.

In the decade after the Civil War the city remained the national center for telegraphy. New telegraph companies made their headquarters there, thus gaining access to funds for laying lines and to advanced technology that would reduce their construction costs and make them competitive with the national system operated by Western Union. Many inventors including THOMAS EDISON settled in the metropolitan area and helped to develop long-distance technology and a distinct urban telegraph industry. The first urban telegraph system, the fire alarm telegraph, was developed in Boston, but in the decade after the Civil War most services and companies evolved in New York City.

The Gold and Stock Telegraph Company installed the first stock tickers at the New York Stock Exchange in 1868 and soon offered market quotations for other exchanges in the city. It also adapted its printing telegraphs to provide communication banks, linkages between courthouses and lawyers' offices, and private lines connecting homes, offices, and factories. Gold and Stock was in competition with several firms; in an effort to control the expansion of its commercial news services outside New York City, Western Union signed an exclusive contract with the Associated Press for the transmission of news and used the local American District Telegraph Companies in major cities and towns to deliver messages. It acquired these local companies in 1901 and combined them into the alarm company that later became known as ADT. The American District Telegraph Companies, the first of which was organized in New York City in 1871, used message boxes connecting homes and businesses with a central station to provide a number of urban telegraph services, including private burglar and fire alarms. Fire and burglar alarms were also an important business of such other firms in the city as the Holmes Burglar Alarm Company, which offered the first major private security service; the Gamewell Fire-Alarm Telegraph Company, which installed most of the municipal fire and police alarm systems in the nation during the rest of the nineteenth century; and American District. Fire and burglar alarm services became separate from telegraphy in the twentieth century.

Western Union continued to dominate the long-distance telegraph industry into the twentieth century even as the telegraph was gradually supplanted by the telephone and the radio. In the decades after World War II telegraphy was superseded by other telecommunications, and Western Union moved to suburban New Jersey and reduced its operations.

Paul Israel

telephony. The first licenses granted by the American Bell Telephone Company in New York City date from 27 August 1877, and a primitive telephone device was placed on the market soon after. The Metropolitan Telephone and Telegraph Company was formed in 1878, when a central switching office opened in Manhattan, serving 271 subscribers. The only competitor of American Bell in the early years of telephony in New York City was a subsidiary of Western Union; this firm abandoned the field in 1879, and within a year the Metropolitan Telephone and Telegraph Company expanded service beyond Manhattan. New York Telephone was organized in 1896 and absorbed the Bell operations for New York City. Over time American Telephone and Telegraph (AT&T) acquired a controlling interest in New York Telephone, which in 1909 consolidated six regional companies serving New York State, northern New Jersey, and parts of Pennsylvania. In 1927 operations in New Jersey were taken over by New Jersey Bell, and in the same year transatlantic service was established between New York City and London. In 1984 AT&T divested itself of its regional operating companies to comply with the settlement in 1981 of an antitrust suit. New York Telephone then became a subsidiary of NYNEX along with New England Telephone and other, smaller regional subsidiaries. By 1990 New York Telephone employed nearly 50,000 people, served 9.2 million access lines (connections between the customer and the central switching office, excluding coin and private lines), and handled nearly 106 million telephone calls a day through almost 100 million miles (160 million kilometers) of cable, including calls for new services in data transmission and cellular telephones. Through various acquisitions during the late 1990s, NYNEX eventually became part of Verizon Communications, with headquarters at 140 West Street.

George David Smith

television. During the 1930s the nation's two leading radio networks, the Columbia Broadcasting System (CBS) and the National Broadcasting Company (NBC), operated experimental television stations in New York City. NBC's parent company, Radio Corporation of America (RCA), aggressively promoted the new technology, with television being the centerpiece of RCA's pavilion at the World's Fair of 1939–40 in the city. NBC also telecast President Franklin D. Roosevelt's remarks opening the fair. In May 1939 NBC aired the first sports telecast, a Columbia–Princeton baseball game at Baker Field, but reception was poor. Concerns about uneven transmission standards and the cost of receivers inhibited sales, but at the end of 1941 three stations operating in New York City served about 5000 set owners. Promotion declined during the war years, and the city's stations remained on the air but had limited schedules. Soon after the war, however, regular telecasts began on four networks: CBS, NBC, Du Mont (ceased operations in 1955), and the American Broadcasting Company (ABC), each of which owned stations in New York City. Several independent stations were formed as well, including WPIX (1948; owned by the *Daily News*). Like the city's other non-network channels, WPIX relied heavily on sporting events and old movies.

The long-awaited television boom arrived in the late 1940s; a February 1949 survey indicated that 40 percent of all American television set owners lived in Greater New York. The city dominated early television in other ways; in particular, all the networks were based there. Up until 1951 all network programs originated from New York City, which had an ample supply of theatrical performers, who were especially suited for live broadcasts. Network executives assumed that viewers preferred live broadcasts, and the more cost-effective method of videotaping programs did not become available until the late 1950s. But the city's reign over television did not last. In October 1951 *I Love Lucy* debuted on CBS. Although set in New York City, the show was filmed in California, and its great popularity demonstrated that viewers had no bias against filmed series. Filmed Westerns, private detective series, and situation comedies displaced much of the mostly live, New York–based programming. New York City also never had enough studio space to overcome southern California's advantages as a production center. In early 1965 all but 10 of the 96 entertainment programs aired in evening prime time by the three networks were produced in the Los Angeles area. During the 1977–78 season only one network prime time series was shot in New York City.

But New York City was not entirely abandoned; the network variety program remained a New York City product into the 1960s. The most durable, CBS's *The Ed Sullivan Show,* ran for more than two decades (1948–71). Sullivan, a former columnist for the *New York Graphic* and *New York Daily News,* had an eye for spotting and luring talent to his Sunday night program. A variation on the variety program was NBC's *The Tonight Show,* which aired late at night on weekdays. From 1954 to 1972 *The Tonight Show* usually originated from New York City, as did many non-network talk shows and several late evening network efforts, including shows hosted by the comedian David Letterman and the long-running *Saturday Night Live* (premiered 1975). NBC's popular situation comedy *The Cosby Show* (1984–92) was videotaped in a studio in Queens, and the fictional Huxtable family lived in Brooklyn.

During the 1990s the city became a common setting for network programs. Twenty series in the fall of 1997 took place in New York City, including the cable series *Sex and the City* and *The Sopranos*, and the NBC show *Friends*. NBC also produced a succession of popular *Law & Order* dramas that were filmed in the city. Other city-centered programs, such as *NYPD Blue* and *Seinfeld,* were mostly produced in and around Hollywood. Many long-running soap operas, however, were filmed in Manhattan. The networks continued to produce most of their news programs, including their newscasts, in New York City. NBC's *Today Show,* a morning information program, originated from the network's Rockefeller Center studios. Competing programs on ABC, CBS, and the Fox News Network were also based in the city.

The growing popularity of cable during the 1980s and 1990s robbed the networks of about half of their evening audience. These new

channels often proved immensely profitable, and many cable channels elected to operate out of New York City. The city remained a significant programming source for the Public Broadcasting Service (PBS). The popular PBS children's series *Sesame Street* (premiered 1969; still running in the early twenty-first century), was a New York–based production; set in a fictional New York City neighborhood, it had a decidedly urban look. Although the Public Broadcasting Act of 1967 discouraged a centralized programming authority, WNET (Channel 13), which covers the New York metropolitan area and whose transmitter is on the Empire State Building, was a major supplier of series to PBS stations. It distributed the well-regarded British miniseries *The Forsythe Saga* in the late 1960s and subsequently produced the arts anthology *Great Performances*.

New York City's commercial channels in the powerful very high frequency range were 2 (CBS), 4 (NBC), 5 (Fox), 7 (ABC), and 9 (independent). The networks owned their profitable outlets; indeed, they contended that their New York City stations helped to make up for losses occasionally incurred from other network operations. The major profit center of New York City stations beginning in the 1960s was the evening newscast. News programs, despite high salaries paid to some on-air talent, actually cost less than the rights to rerun the more popular old network series; moreover, stations could keep any sales of advertising time. Not surprisingly, the length of early evening newscasts grew from 15 to 120 minutes, though critics could find little of substance added to the programs. Early in the twenty-first century New York City remains the headquarters of all four major television networks (ABC, CBS, NBC, and Fox).

James L. Baughman

Temple Ansche Chesed. Conservative synagogue, opened in 1876 by a traditional German-speaking congregation on 86th Street and Third Avenue in Yorkville; it was initially known as Chebra Ansche Chesed. The congregation moved successively to East 112th Street in Harlem (during the 1890s) and to a stately brick temple designed by Edward I. Shire on 114th Street and Seventh Avenue (1907), where it flourished under the direction of Jacob Kohn. By the 1920s many Jews had left the neighborhood for the Upper West Side, and after languishing for a number of years the synagogue moved to a new building designed by Edward I. Shire and erected in 1927 at 100th Street and West End Avenue. The facilities there included a sanctuary for a congregation of more than 1500 and a community house containing classrooms, a library, an auditorium, and a social hall. After World War II the congregation declined as the surrounding neighborhood changed; it prospered again when the Upper West Side revitalized after the 1970s.

Jenna Weissman Joselit

Temple Emanu-El. The first Reform congregation in New York City, formed in 1845 as a *Cultus Verein,* or German literary society, and incorporated as a congregation within 10 years. It initially occupied rented rooms and remodeled church buildings on the Lower East Side. By 1868 a synagogue in a Moorish style was erected on Fifth Avenue and 43rd Street, where the congregation remained for nearly 60 years. As the neighborhood became commercial, the congregation moved farther up the East Side, sold its building to the developer Joseph Durst for $7 million, merged with Beth El, another prominent Reform congregation, and moved to Fifth Avenue and 65th Street in 1927, where an art deco synagogue designed by Robert D. Kohn, Clarence Stein, Charles Butler, and Bertram Goodhue was built in limestone. One of the largest synagogues in the world, Temple Emanu-El was built with seating for 2500 in a sanctuary ornamented with dazzling stained-glass windows and colorful mosaics in a Viennese Secessionist style. A community house was built on an adjacent site to accommodate a wide range of educational and social activities; several architectural elements from Beth El were incorporated into the design, among them a Tiffany window. Temple Emanu-El remains one of the most prominent Reform congregations in the United States.

Jenna Weissman Joselit

Temple Israel. Reform Jewish synagogue. Founded in 1870 by German Jews as Congregation Hand in Hand, Temple Israel's first location was on East 125th Street. The congregation was traditional and quickly established a religious school called the Gates of Learning. By 1876 the congregation was in its third location on 116th Street between First and Second avenues. The first permanent rabbi, Maurice H. Harris, was appointed in 1882; that same year the congregation became Temple Israel of Harlem. As the congregation grew, it moved to a former church at 125th Street and Fifth Avenue, to a limestone building at 120th Street and Lenox Avenue (still standing), to 91st Street and Broadway, and finally to 112 East 75th Street. In 2006 David Gelfand became the fifth rabbi of Temple Israel.

Jessica Montesano

Temple of Dendur. Ancient Nubian sanctuary dedicated to Isis from circa 15 BCE at the Metropolitan Museum of Art. Donated in 1965 to the United States by the Egyptian government in gratitude for assistance in constructing the Aswan Dam, it was reassembled in a spacious new wing at the museum, specially designed for it by Roche Dinkeloo and Associates and opened in 1978, after alternative proposals to place it near the Potomac River in Washington, D.C., were rejected.

Peter L. Donhauser

Ten American Painters. Group of impressionist and figurative artists formed in 1898 by Thomas Dewing, Childe Hassam, Willard Leroy Metcalf, Robert Reid, Edward Simmons, John Henry Twachtman, and Julian Alden Weir (from New York City) and Frank Weston Benson, Joseph Rodefer De Camp, and Edmund Charles Tarbell (from Boston). When Twachtman died in 1902 William Merritt Chase was elected to take his place. Until 1918 the group held yearly exhibitions in New York City, usually at the Durand–Ruel Gallery or the Montross Gallery.

Patricia Hills

Tenderloin. Nightclub district in Manhattan during the 1880s, bounded to the north by 42nd Street, to the east by Fifth Avenue, to the south by 24th Street, and to the west by Seventh Avenue. The name allegedly was coined by police captain Alexander Williams, sometimes known as the Czar of the Tenderloin, who was reported to have said that after his transfer from an obscure precinct to his new command, he was going to enjoy eating tenderloin after years of rump steak. During the Lexow Committee investigations, Williams denied that the name referred to better living in the district because of extortion payments made to the police by legitimate and illegitimate businesses in the area. Known as Satan's Circus by reformers, the district contained the greatest concentration of saloons, brothels, gambling parlors, dance halls, and "clip joints" in the city. It is now the site of the Empire State Building, the garment district, and Herald Square.

Linda Elsroad

Tenement House Law Act of 1901. See HOUSING.

tenements. The construction of multiple-unit residential buildings called tenements began in the mid-nineteenth century, providing compact rental housing at $2 to $3 a room a month for poor and working-class immigrants living and working in lower Manhattan. Tenements were inspired by "rookeries," a name applied to warehouses, mansions, churches, and breweries in the fourth ward that were converted in the 1830s so that each floor housed many families in small, cramped, poorly ventilated rooms. The first tenements built by speculators were spartan, functional buildings erected on standard lots 25 feet (8 meters) wide and 100 feet (30 meters) deep: each building had four stories, four apartments to a floor, and dark, unventilated interior rooms connected like railroad cars (hence the expression "railroad apartment"). Many buildings had no indoor running water, and there was a communal privy in a cellar vault or in the backyard. Often a second tenement known as a "double house" went up in the backyard.

The regulation of construction began just after the Civil War, when middle-class citizens

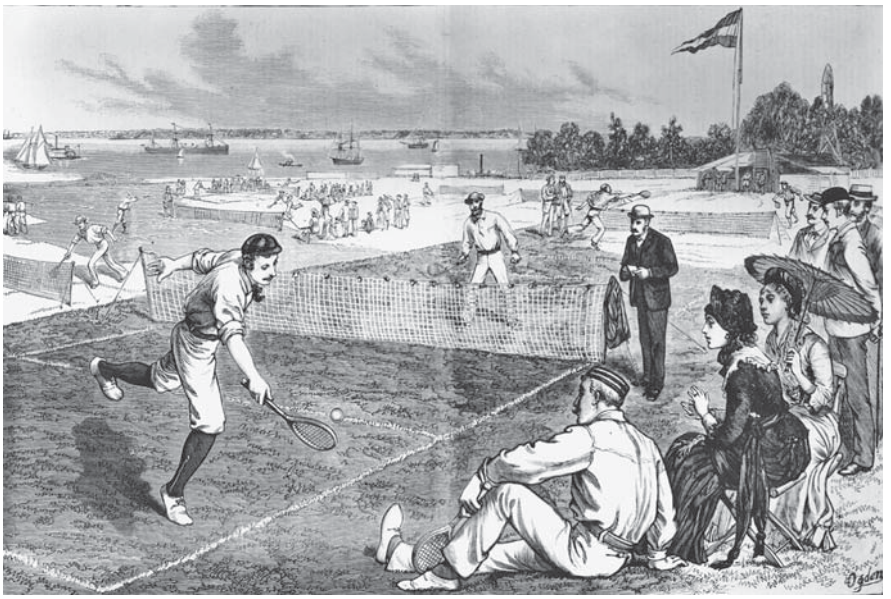
began to view the tenements as a social and health menace. In 1867 the state legislature enacted the first legislation in the United States to improve living conditions. The law defined a tenement house as a multiple dwelling, required landlords to provide a privy and a fire ladder for every 20 tenants, and established the maximum proportion of a lot that could be covered by a building, a minimum area for rear courts, and standards for the open-air ventilation of interiors. Throughout this period, apartments were designed with a front room, or "parlor," and two inner sleeping chambers barely 10 feet (3 meters) square, and privies began to be placed in a subterranean vault where the effluvial stench became so powerful that it contributed to concerns about cholera.

By the late 1870s the housing stock contained roughly 21,000 rookeries and railroad apartments. The Association for Improving the Condition of the Poor sought to improve the living conditions in these buildings. In 1878 the publication *Plumber and Sanitary Engineer* conducted a competition for the best new design for a tenement. The architect James E. Ware won the contest with the "dumbbell" design, which was intended to raise hygienic standards by providing ventilation and light for interior rooms. The design was so named because the building resembled a dumbbell when seen from above: between the front and back rooms the exterior walls were indented, creating air shafts of nearly 10 by 13 feet (3 by 4 meters) between adjacent buildings that extended from the ground to the roof. The tenements had interior toilets with plumbing, vents to guard against sewer gas, two rear bedrooms, each 6.5 feet by 8 feet (2 by 2.25 meters), a kitchen of 7.5 feet by 10.5 feet (2.5 by 3 meters), and a living room of 8.5 feet by 13 feet (2.5 by 4 meters), for a total area in each apartment of 293 square feet (27 square meters). The interior rooms were ventilated by horizontal air shafts 4 feet (1.5 meters) long and a 2-foot (60-centimeter) indentation formed by the dumbbell. Reformers incorporated these designs into the Tenement House Law of 1879, introducing a clause that forbade the construction of rooms removed from a source of outside air.

During the 1880s many real estate developers installed sinks and stationary tubs in the hallways, where they could be ventilated by horizontal, "studded" (embedded) shafts, 5 feet (1.5 meters) long, that were square or octagonal. Soon sanitary regulation and the rising cost of brick construction caused the studded shafts to be replaced by a single shaft, or "light well," 2 feet (60 centimeters) square and 30 feet (9 meters) deep. Architects also repositioned stairways and hallways in the indentation of the dumbbell to avoid the layout of a railroad apartment, which had the stairs at the front, and installed extra shafts to ventilate toilets, hallways, and interior rooms. In rough accordance with the law of 1879, nearly 20,000 dumbbell buildings went up in Manhattan and the Bronx between 1880 and 1900; nearly one-third of these were in Yorkville and Harlem, and thousands more were on the Lower East Side.

At the end of the nineteenth century, five-story tenement houses were designed for 20 families, housing perhaps 100 residents, not including boarders. Upwards of 200 licensed "flophouses" with nearly 18,000 bunks lined the Bowery and Oliver, Chatham, and Mulberry streets. Many people lived in basements subject to tidal seepage, and thousands lived in the 2379 rear houses counted in the census of 1897. Apartments with two rooms had no closets: tenants hung their clothing from nails that they tacked into recesses in the walls 6 inches (15 centimeters) deep. Bedrooms had no space for washbasins or bureaus, and kitchens were rarely large enough for people to sit around the four sides of a table. The lack of privacy led families to develop a strict hierarchy, particularly regarding children. Only one-third of the city's tenements had running water, and in some blocks it was lacking altogether. Only 306 of the 255,033 persons living on the Lower East Side had bathrooms in their apartments, and most East Siders continued to use a vault privy or one at school even as hallway toilets became standard. In 1893 there were 12,434 persons in the Italian slum of Centre Street, where the typical apartment had two rooms, each housing two persons, and was rented for $4.60 a month. Only 2 percent of all families there had toilets on their level, and most shared with their neighbors a backyard or vault privy that was "mucked out" by hand (hygienically advanced "school sinks" were ostensibly flushed once a day). Although most working-class families had three rooms (including a dark inner bedroom), during the 1890s health inspectors found that in dilapidated buildings on Allen, Orchard, and Baxter streets entire families lived in a single room.

Miserable conditions in the tenements prompted the reformers Jacob A. Riis, Lillian Wald, Felix Adler, Simon Baruch, and Alfred E. Smith to take action. The Tenement House Committee of the Charity Organization Society, led by Robert De Forest but run by Lawrence Veiller, launched investigations and mounted exhibits that indicted the dumbbell tenement and led to the passage of the Tenement House Law of 1901. Buildings constructed before that date are still referred to as "old law" tenements. The law required that buildings have side courts 4 feet (1.33 meters) wide and backyards 11 feet (3.5 meters) deep, which meant that a building could cover no more than 72 percent of a standard lot; one room had to have an area of at least 120 square feet (11 square meters) and none could be smaller than 70 square feet (6.5 square meters), which made the traditional lot size impractical for the development of mass housing. The law also created a Tenement House Department to administer improvements in upwards of 83,000 "old law" structures and enforce "new law" standards on buildings under construction in the outer boroughs.



Around the turn of the twentieth century, a wave of new immigrants arrived in the city, and in response to the heightened demand for housing the department sought to improve the conditions in the "old law" buildings rather than shut them down. It focused on Manhattan and Brooklyn, bringing up to code 331,168 previously undocumented inner rooms and 96,079 rooms with no ventilation. The development of "new law" buildings and steam-heated apartments in the outer boroughs by the late 1920s decreased the population of the Lower East Side by nearly 250,000, and throughout lower Manhattan landlords boarded up thousands of "old law" buildings with vacancy rates of 15 to 30 percent. As the housing market moved to the outer boroughs, thousands of old structures were removed and major public works projects were executed: Sixth and Seventh avenues were extended, Allen Street was widened, and the notorious stretch of "old law" tenements between Chrystie and Forsyth streets was leveled.

The Multiple Dwellings Law (1929) required that landlords install toilets, fire retardants, and ventilation for inside rooms, and the commissioner of tenement housing Langdon W. Post bolstered the law with radical revisions, notably a six-month limit on the installation of fire retardants and an amendment that expanded the definition of legal ownership to include mortgage holders: as a result landlords and local banks threatened to abandon the 68,000 "old law" tenements that remained standing in the early 1930s. With the aid of New Deal subsidies for slum clearance, Mayor Fiorello H. La Guardia razed nearly 9500 buildings beginning in 1934. The end of the Depression brought a sharp increase in the occupancy of "old law" buildings, and La Guardia eased the enforcement of the Multiple Dwellings Law. After World War II the city's construction coordinator Robert Moses, who believed that the poor should move into public housing, used federal funds granted under Title I of the Housing Act of 1949 to demolish "old law" buildings on the Lower East Side between the Brooklyn Bridge and 23rd Street and to build projects such as the Corlears Hook Houses (1955). Social reformers and architects in the mid-1960s explored various possibilities in tenement renovation. Attempts were made at "gut rehabilitation" of remaining tenements, but the buildings proved difficult to repair and nearly impossible to bring up to code. About 200,000 tenement units remained scattered throughout the city at the end of the twentieth century, with the largest concentration in lower Manhattan between Houston and Delancey streets and west of Sarah D. Roosevelt Park, a neighborhood of Chinese immi-

grants adjacent to Chinatown. At 97 Orchard Street the Lower East Side Tenement Museum (opened in 1988) preserves the interior of a typical "old law" residence.

Joel Schwartz

Lawn tennis

tennis. Tennis was introduced to the United States in 1874 by Mary Outerbridge, who oversaw the construction of the first lawn court at the Staten Island Cricket and Baseball Club. The growing popularity of the sport led to the formation in New York City on 21 May 1881 of the United States National Lawn Tennis Association (USNLTA), known from 1920 as the United States Lawn Tennis Association (USLTA) and from 1975 as the United States Tennis Association (USTA).

The first courts in Manhattan opened in Central Park in 1881. Although primarily for the wealthy, tennis attracted players from all economic and racial groups, and local clubs were organized according to language, ethnicity, and class. Initially the USNLTA had no African American clubs or players. The centers for local tennis were the Crescent Athletic Club, bounded by New York Bay, First Avenue, 83rd Street, and 85th Street in Bay Ridge, and the West Side Tennis Club in Manhattan, which began as an all-male club on Central Park West in 1892 and moved successively to 238th Street and Broadway (1898), 117th Street and Morningside Drive (1902), and Forest Hills (1914, and remaining into the twenty-first century). The National Indoor Championship was played in the city from 1900 until 1940 and again from 1946 to 1963. In 1902 the Crescent Athletic Club competed for the Davis Cup against players from Great Britain. Robert LeRoy, a student at Columbia University, became the first national intercollegiate champion from the city in 1904. The West Side Tennis Club in Forest Hills was the site of American defenses of the Davis Cup (from 1914), as well as the United States Open tennis championships (US Open) from 1915 to 1920 and again from 1924 to 1978, when the championship was first held at Louis Armstrong Stadium in Queens. (After its relocation, the US Open became the fourth of the Grand Slam tournaments after the Australian Open, the French Open, and Wimbledon.) Much of the growth of the club from World War I to 1950 was overseen by Julian Myrick, a resident of New York City who was also a president of the USNLTA.

Church and club teams were formed by black immigrants from the West Indies, who also helped to establish the Cosmopolitan Tennis Club (at 138th Street and Convent Avenue in Harlem) and the predominantly black American Tennis Association in 1916. Two black players, Gerald Norman and Reginald Weir, competed in several indoor events sponsored by the USNLTA at the Seventh Regiment Armory. The National Public Parks championships began in 1923 and inspired the construction of most of the 550 public courts in the city. In 1938 Don Budge, champion of the USLTA, played against the African American champion Jimmy McDaniels in an exhibition at the Cosmopolitan Tennis Club. Althea Gibson received her training at the public courts on 155th Street in Harlem; with the help of Sarah Palfrey, another New Yorker, in 1950 she became the first black member of the West Side Tennis Club, and in 1957 she won Wimbledon and the national championship and became the first African American player to be generally recognized as world champion. Another well-known player of the 1950s from New York City was Dick Savitt. In 1968 the national indoor championship of the USLTA adopted an open format, allowing both amateurs and professionals to compete. Vitas Gerulaitis, a New Yorker who attended Columbia, won major world tournaments during the 1970s; John McEnroe, who grew up in Douglaston, Queens, dominated the sport in the 1980s.

By the 1990s the US Open was broadcast on television worldwide from the Billie Jean King National Tennis Center in Flushing Meadows Corona Park; the New York Junior Tennis League operated on public courts and schoolyards and was the largest league of its kind in the United States. In 1997 the US Open introduced the largest outdoor tennis stadium in the world, Arthur Ashe Stadium, which seats 22,547 spectators and features five restaurants and two players' lounges. Louis Armstrong Stadium was then downgraded to court number two in the complex and for the tournament. In 2006 the US Open became the first major tennis tournament to implement the use of instant replay.

Arthur Ashe, Meghan Lalonde

Tenth Street Studio Building. Building erected in 1857 at 15 10th Street, between Fifth and Sixth avenues, to house artists' studios, the first such building in the United States or Europe. The address was renumbered 51 West 10th Street in 1866. The building was commissioned by the businessman James Boorman Johnston and designed by Richard Morris Hunt, the first American architect trained at the École des Beaux-Arts. Its symmetrical plan incorporated a large central exhibition gallery two stories high surrounded by 25 studios. In the early years tenants included Frederic E. Church and Albert Bierstadt, both prominent members of the Hudson River School; Winslow Homer (in the 1870s); and William Merritt Chase, who painted cosmopolitan subjects of everyday life as well as landscapes. An annex was added at 55 West 10th Street in 1873. Although a few well-known artists remained into the twentieth century, the building became antiquated and was inhabited mostly by illustrators, art teachers, and photographers. It was sold by Johnston's descendants in 1920 and after several changes of ownership was demolished in 1956.

Annette Blaugrund, "The Tenth Street Studio Building: A Roster, 1857–1895," *American Art Journal* 14, no. 2 (spring 1982), 64–71

Annette Blaugrund

term limits. Since its founding, New York City has limited its mayors to two four-year terms,

either by tradition or by law. Advocates of term limits argue that having limited years in office prevents the corruption associated with career politicians. The opposition counters that term limits keep those with valuable experience from continuing their work and fulfilling their goals. After the terrorist attacks of 11 September 2001, Mayor Rudolph Giuliani asked for several extra months in office in order to ease the transition between mayors, but Michael Bloomberg nevertheless was elected in November 2001 and took office in January 2002, per the usual procedures. As Bloomberg approached the end of eight years in office, he petitioned for a measure from the City Council to rescind term limits. In 2008 the council voted to allow Bloomberg to run for mayor for a third term; he won the election in November 2009.

Penelope Gelwicks

terra-cotta. Glazed or unglazed ceramic made from clay was used in New York City during the late nineteenth and early twentieth centuries to ornament masonry and to make curtain walls. It was introduced in the city in 1853 as a cheaper substitute for cut stone. Early examples include the Trinity Building by Richard Upjohn (1851–53, demolished), which used material from the Hudson River Pottery and Terra Cotta Works, and the Cooper Union Building by Fredrick A. Petersen (1853–58, extant). The material for this building was manufactured by Tolman, Hathaway and Stone in Worcester, Massachusetts. Recent research shows that this company supplied terra-cotta for numerous buildings on the East Coast, some of which still survive. In 1853 James Renwick engaged a local sewer pipe factory owned by Alexander Young to manufacture terra-cotta cornices and window surrounds for the Tontine Building, the St. Denis Hotel, and three houses on Ninth Street. These projects were successfully completed but met with opposition from stonecutters and masons, who feared that terra-cotta would endanger their livelihood and helped to keep it out of the city for many years. The terra-cotta industry flourished in other parts of the country, and in 1877 the Chicago Terra Cotta Company supplied unglazed, reddish terra-cotta for use on two buildings in New York City: the Braehm Residence (1877, George B. Post) and the Morse Building at 12 Beekman Street (1879, Silliman and Farnsworth). The fireproof qualities of the material were put to use in the Potter Building at 38 Park Row (1883–86, N. G. Starkweather). Its owner, Orlando B. Potter, was committed to fireproof construction after a fire destroyed his previous building on the site. Potter was instrumental in founding the first local terra-cotta manufacturer to achieve success, the New York Architectural Terra Cotta Company, in Long Island City, in 1886 (offices built in 1892 with terra-cotta trim at 42-10 Vernon Boulevard). Another local supplier in the 1890s was B. Kreischer and Sons, a brick-making firm in Charleston, Staten Island. Polychrome glazed terra-cotta in blues, whites, yellows, and greens was introduced in 1906 by McKim, Mead and White in the Madison Square Presbyterian Church (Madison Avenue at 24th Street, demolished 1913) but did not become popular for two decades. A wide range of glazes was developed about 1925, including metallic lusters, vivid yellows, and shades of lime green and lavender characteristic of art deco; the McGraw–Hill Building (1931, Hood, Godley and Fouilhoux), at 330 West 42nd Street, was decorated with horizontal bands of blue-green. Other buildings in the city that used terra-cotta ornament include the Bayard Building (1898, Louis Sullivan), the Flatiron Building (1901–3, D. H. Burnham), the Alwyn Court Apartments (1909, Harde and Short), the Audubon Theatre and Ballroom (1912, Thomas W. Lamb), the Woolworth Building (1913, Cass Gilbert), 2 Park Avenue (1927, Ely Jacques Kahn), the Pythian Temple at 135 West 70th Street (1927, Thomas W. Lamb), and 235 East 22nd Street (1928, George and Edward Blum). After the International Style was introduced by Henry Russell Hitchcock and Philip Johnson in 1932 in an exhibition at the Museum of Modern Art, architects abandoned the kind of exuberant ornamentation to which terra-cotta was suited, and its use diminished during the 1930s. Terra-cotta regained popularity in the twenty-first century and is being used in both its glazed and unglazed forms as a cladding or "rainscreen" for tall buildings. Renzo Piano is the architect who has been most involved with this renewed interest; his New York Times Tower (2007) used 250,000 glazed clay rods to create a screen on this skyscraper's facade.

terrorism. Because of its size and importance, New York City has often been a target of terrorists. An explosion on 30 July 1916 killed seven people, when munitions bound for England and France exploded on Black Tom Island. A claims commission ruled in 1939 that the Black Tom explosion was an act of saboteurs of the imperial German government. Thirty people were killed in an unsolved attack on Wall Street on 16 September 1920, when a horse-drawn wagon exploded across from the New York Stock Exchange; Bolsheviks were suspected, but no arrests were made. A disgruntled former employee of Consolidated Edison named George P. Metesky became known as the Mad Bomber after he terrorized New York City with 33 homemade bombs that he planted around the city between 1940 and 1956. Fifteen people were injured. During the 1960s and 1970s a wave of political terrorism swept the United States, and left-wing terrorists attacked several targets in the city. Many were the headquarters of corporations such as Mobil Oil, General Telephone and Electronics, and International Business Machines; other targets were governmental or institutional, including the Federal Office Building. The city's most notable terrorist incident of the 1970s was accidental. On 6 March 1970 an explosion demolished a town house at 18 West 11th Street in Greenwich Village, killing three people, including Theodore Gold, a student at Columbia University. Two women were seen fleeing the explosion, one of whom was Cathlyn Wilkerson, whose father owned the town house. Wilkerson and Gold were members of the Weathermen, a violent radical faction of the left-wing group Students for a Democratic Society. Sixty sticks of dynamite and 30 blasting caps were found in the ruins, leading the police to conclude that the building was being used as a bomb factory.

From the 1970s into the mid-1980s several violent attacks were staged on businesses and institutions in the city by advocates of independence for Puerto Rico, in particular by the group Fuerzas Armadas de Liberación Nacional (FALN). In early 1975 the FALN claimed responsibility for a bomb that exploded at Fraunces Tavern and killed four people, and in 1977 and 1978 the group planted pipe bombs at the headquarters of several major corporations in New York City and at the New York Public Library; it also planted incendiary devices that set off fires at La Guardia, Kennedy, and Newark airports. In 1982 it bombed the lobbies of several financial firms on Wall Street and of the headquarters of the New York Police Department. The FALN also remains the main suspect in the unsolved bombing of the Trans World Airlines terminal at La Guardia Airport on 29 December 1975, which killed 11 people. Other Puerto Rican nationalist groups also attacked targets in New York City: one occupied the Statue of Liberty on 25 October 1977, and another bombed Pennsylvania Station in 1980.

On 26 February 1993 a car bomb exploded in an underground parking garage beneath the World Trade Center, killing six people and closing both towers for several weeks. Four Egyptians arrested in connection with the bombing were identified as followers of the Muslim cleric Sheik Omar Abdel-Rahman, who had been exiled from Egypt and was then living in the United States. In late June the Federal Bureau of Investigation arrested eight other Egyptian and Sudanese followers of Abdel-Rahman on charges of plotting to bomb

Ground Zero, site of the World Trade Center attack in 2001, shown in 2009

several targets in the city, including the United Nations, the tunnels between Manhattan and New Jersey, and the Javits Federal Office Building and to assassinate the secretary general of the United Nations, Boutros Boutros-Ghali, as well as Egyptian President Hosni Mubarak and New York Senator Alfonse D'Amato. Abdel-Rahman himself was charged as the ringleader of the terrorist group. In 1994 the four main suspects in the bombing of the World Trade Center were convicted on nearly all charges.

The most famous and destructive of terrorist attacks on New York City—and the United States—occurred on 11 September, when two hijacked airliners crashed into both towers of the World Trade Center, resulting in at least 2749 deaths. The hijackers were members of Al-Qaeda, a network of Islamic radicals, who had been training for the attack for years. In the years after 2001, the New York Police Department enhanced its own anti-terrorist activities and began stationing its operatives in multiple locations around the world in order to help prevent more terrorist attacks on American soil.

Rohit T. Aggarwala, Kenneth T. Jackson

Terry, William (Bill) (*b* 30 Oct 1898, Atlanta; *d* 9 Jan 1989, Jacksonville, Fla.). New York Giants baseball player and manager; member of National Baseball Hall of Fame. Originally the team's first baseman, Terry became manager as well in June 1932. He retired from playing after 1936 but was the Giants manager through 1941. In 1930 he amassed 254 hits and his batting average was .401. As Giants manager, Terry won three pennants (1933, 1936, 1937) and one World Series (1933).

Andrew Sparberg

Tesla, Nikola (*b* Smiljan, near Gospic, Croatia, 10 July 1856; *d* New York City, 7 Jan 1943). Physicist, electrical engineer, and inventor. He moved to New York City in 1884 to work for the Edison Machine Works and in the following year joined Westinghouse in Pittsburgh, where he was the leading advocate of alternating electric current in the debate over its merits relative to direct current. In 1889 he built a laboratory at South Fifth Avenue (now La Guardia Place), which he then moved to 46 East Houston Street; there he demonstrated his best-known invention in 1898, a device known as the "Tesla coil" that contributed to the development of broadcasting. Having gained great wealth and prominence from his inventions, Tesla lived at the Waldorf-Astoria, dined at Delmonico's, and was acquainted with John Jacob Astor IV, J. P. Morgan, and Mark Twain, but he died a debt-ridden recluse at the Hotel New Yorker. His memoir *My Inventions: The Autobiography of Nikola Tesla* was published posthumously in 1982.

Val Ginter

T. G. I. Friday's. Restaurant and bar opened on 15 March 1965 on First Avenue and East 63rd Street by Alan Stillman, a perfume and flavor salesman, on the site of a neighborhood bar called the Good Tavern. Generally regarded as the world's first "singles bar," it inspired many imitators in the neighborhood, notably Maxwell's Plum and Mister Laff's. By the time the original location closed in 1994, it had given rise to 294 franchises throughout the world.

Kenneth T. Jackson

Thalia Movie Theater. Movie theater at West 95th Street between Broadway and West End Avenue, occupying the basement of the former Astor Market building (opened in 1915). Originally the site of the Sunken Garden Restaurant, it was converted in 1931 by Raymond Irrera and Ben Schlanger into a theater seating 292 and using many architectural innovations. The long, narrow parabolic reverse floor, dipping in the center and sloping up toward the edges, was invented by Schlanger to provide each seat with the same view of the screen and soon became standard in the construction of movie theaters nationwide. The Thalia offered mainly foreign films initially but added Hollywood films in 1955. Under the direction of Richard Schwartz it became exclusively a revival house by 1977. After years of neglect it closed in 1987, the victim of a struggle for the ownership of the old market building as well as the decline of revival houses. Refurbished by local businesspeople, the Thalia reopened in 1993, its original architecture and *art moderne* interior intact, and it remained one of few repertory movie theaters in New York City. After being closed once again in the mid-1990s, the theater reopened on 13 April 2002 at 250 West 95th Street. A part of Symphony Space, it is called the Leonard Nimoy Thalia at Symphony Space.

Isabelle Kaplan

Thanksgiving Day Parade. See Macy's Thanksgiving Day Parade.

Tharp, Twyla (*b* Portland, Ind., 1 July 1941). Dancer and choreographer. She graduated from Barnard College in 1963 and danced with the Paul Taylor Dance Company from 1963 to 1965, when she formed her own modern dance company. Since then she has choreographed over 125 dances for her own company and others, including the Joffrey Ballet, American Ballet Theatre (where she was Artistic Associate), New York City Ballet, Mikhail Baryshnikov, ice skater John Curry, Martha Graham Dance Company, Paris Opera Ballet, and the Royal Ballet. Tharp's loose-limbed, impudent, high-energy style includes elements from jazz, modern dance, and ballet. Her dances include *Tank Dive* (1965), *Eight Jelly Rolls* (1971), *Deuce Coupe* (1973), *Sue's Leg* (1975), *Push Comes to Shove* (1976), *The Catherine Wheel* (1981), *Nine Sinatra Songs* (1982), *Brahms/Handel* (1984), and *In the Upper Room* (1986). Tharp choreographed for five Hollywood films, among them *Hair* (1978), *Amadeus* (1984), and *White Nights* (1985). Her Broadway shows include *When We Were Very Young* (1980), *Singin' in the Rain* (1985), *Movin' Out* (2002), and *Come Fly Away* (2010). Among her numerous awards and grants are the National Medal of Arts, a Tony Award, two Emmy Awards, and a Drama Desk Award.

Norma Adler

Tharpe [née Nubin]**, Rosetta** (*b* Cotton Plant, Ark., 20 March 1915; *d* Philadelphia, 9

Oct 1973). Gospel singer and guitarist. She is known for popularizing gospel music among audiences outside of African American churches. After moving to New York City in 1934, Tharpe made a number of pioneering recordings for Decca Records that blended gospel and jazz styles. Her albums drew harsh criticism from gospel aficionados, but they were wildly popular among secular audiences. Her performance in Cab Calloway's 1938 fall revue at the Cotton Club (then segregated) is thought to be the first performance of gospel music for a white audience.

Rowan Moore Gerety

theater. The history of theater in New York City reflects the city's dominance as the cultural hub of the United States. No other city has been able to support such an ensemble of richness.

1. Colonial Period and Early Republic (1699–1798)

During the first half of the eighteenth century, theater in the city was confined to amateur productions presented in venues such as the New Theatre (better known as the Theatre in Nassau Street), which opened in 1732 in a house owned by Rip Van Dam, president of the Common Council. The first confirmed professional performance in the city took place there on 5 March 1750, when an English company led by Walter Murray and Thomas Kean produced *Richard III.* Murray and Kean continued at the Theatre in Nassau Street until July 1751; when they left for Williamsburg, Virginia, the theater was leased to Robert Upton, who had been sent by the London theatrical manager William Hallam to ascertain whether the city could support continued theatrical activity. Although there is no record of Upton's scouting report, a British troupe billed as the London Company of Comedians and led by Hallam's brother Lewis arrived in the city in the summer of 1753. When it left for Philadelphia in March 1754, the Theatre in Nassau Street ceased operation.

The company returned to New York City in 1758 under the leadership of David Douglass. In addition to managing the London Company (soon renamed the American Company of Comedians) Douglass embarked on a building campaign that led to the construction of a theater on Cruger's Wharf (1758) and the Theatre in Beekman Street (1761), as well as the Theatre in John Street (1767), which became the best-known playhouse in New York City and remained so until the Park Theatre on Park Row was built in 1797–98. During the American Revolution all professional production ceased, and the only theatrical activity in the city was amateur drama presented for the entertainment of British troops. By 1785 the American Company returned from wartime exile in the West Indies, and theater in the city began a period of expansion and popularity.

Theaters within the Present Boundaries of New York City, by Date of Founding

Corbett Tavern,[1] Broadway and Exchange Place, *ca* 1732
Playhouse on Broadway, Broadway north of Beaver Street, *ca* 1732
New Theatre,[2] 1732–54
Theater on Cruger's Wharf,[3] Cruger's Wharf near Dock and William streets, 1758–?59
Theater in Beekman Street, Beekman (Chapel) Street near Kid Street, 1761–64
Theater in John Street, John Street near Broadway, 1767–97
Rickett's Amphitheatre, Greenwich Street,[4] from 1795
Park Theatre,[5] Park Row, 1798–1848
Theater in Mount Vernon Gardens, Broadway between Leonard and Franklin streets, 1800–1803
Grove Theatre,[6] Madison (Bedlow) Street and Catherine Street, 1804–5
Lyceum Theatre, Broadway between Warren and Chambers streets, 1808–9
Broadway Circus, 1812–14
Washington Hall,[7] Broadway and Houston Street, 1812–1945
Anthony Street Theatre, Worth (Anthony) Street near Broadway, 1814–21
Pantheon, Mercer Street between Houston and Prince streets, 1821–22
African Grove Theatre, Church Street between Duane and Anthony streets, from 1821
City Theatre, 15 Warren Street near Broadway, 1822–23
Niblo's Garden Theatre, Broadway and Prince Street, 1822–46
Unnamed African theater, Greene Street and Bleecker Street, 1823
Chatham Garden Theatre, Chatham Street off Pearl Street, 1824–32
Lafayette Theatre, Canal Street between Thompson and Laurens streets, 1825–29
Vauxhall Garden Theatre, Lafayette Place between Broadway and Bowery, 1826–55
Bowery Theatre, 48 Bowery between Bayard and Canal streets, 1826–1929
Richmond Hill Theatre, Varick Street between Charlton and Vandam streets, 1831–49
National Theatre,[8] Church Street between Leonard and Franklin streets, 1833–41
Bowery Amphitheatre,[9] 37–39 Bowery between Bayard and Canal streets, 1833–66
Franklin Theatre, 175 Chatham Street between James and Oliver streets, 1835–54
Broadway Theatre, 410 Broadway at Canal Street, 1837
(Second) City Theatre, Broadway and Ann Street, 1837
Olympic Theatre,[10] 444 Broadway between Howard and Grand streets, 1837–54
Chatham Theatre,[11] Chatham Street between James and Roosevelt streets, 1837–60
Castle Garden Theater, Battery Park, 1839–55
Barnum's American Museum and Lecture Room, Broadway and Ann Street, 1841–65
Apollo Rooms, Broadway between Canal and Walker streets, 1842–51
Palmo's Opera House,[12] 39–41 Chambers Street behind City Hall Park, 1844–76
Astor Place Opera House, Astor Place, 1847–53
Mechanics Hall, 472 Broadway near Grand Street, 1847–57
Broadway Theatre, 326 Broadway, 1847–59
Niblo's Theatre,[13] Broadway and Prince Street, 1849–95
Coliseum, 448 Broadway between Howard and Grand streets, 1850s
Minerva Rooms, Broadway and Grand Street, 1850s
Old Stuyvesant Hall, Broadway between Bleecker and Bond streets, 1850–60
Brougham's Lyceum,[14] Broadway and Broome Street, 1850–69
Tripler Hall,[15] Broadway at Bond Street, 1851–67
Deutsches National Theatre, 53 Bowery, 1853
Crystal Palace, Bryant Park (Reservoir Square), Sixth Avenue and 42nd Street, 1853–58
St. Charles Theatre, 17–19 Bowery, 1853–54
Chinese Rooms to Barnum's New American Museum,[16] 539 Broadway between Spring and Prince streets, 1853–68
Fellow's Opera House and Hall of Lyrics, 444 Broadway between Howard and Grand streets, 1854–66
White's Opera House, 49 Bowery, 1854–?70
Academy of Music,[17] East 14th Street between Irving Place and Third Avenue, 1854–1926
Kelly and Leon's, 720 Broadway near 12th Street, 1855–1870s
Laura Keene's Varieties to Olympic Theatre,[18] Broadway between Houston and Bleecker streets, 1856–80
Buckley's Hall, Broadway between Prince and Houston streets, 1856–81
Atlantic Gardens, 50 Bowery, 1856–1911
Henry Wood's Marble Hall, 561 Broadway near Houston Street, 1857–59
Hoym's Theatre,[19] Bowery and Spring Street, from 1858

Lucy Rushton's Theatre,[21] Broadway and Waverly Place, 1865–81
Broadway Athenaeum,[22] 734 Broadway, 1865–84
Theatre Comique, 514 Broadway between Spring and Broome streets, 1865–84
Fifth Avenue Theatre,[23] southwest corner of Fifth Avenue and 24th Street, 1865–1908
Fourteenth Street Theatre, West 14th Street between Sixth and Seventh avenues, 1866–1911
Steinway Hall, 109 East 14th Street, 1866–1925
Daly's Theatre, 1221 Broadway between 29th and 30th streets, 1867–1920
Pike's Opera House,[24] northwest corner of Eighth Avenue and 23rd Street, 1868–1960
Booth's Theatre, southeast corner of Sixth Avenue and 23rd Street, 1869–83
Harlem Music Hall, Third Avenue at 130th Street, 1870–85
Koster and Bial's,[25] West 23rd Street between Sixth and Seventh avenues, 1870–1924
Madison Square Garden,[26] 26th to 27th streets between Fifth and Madison avenues, 1870–1925
Union Square Theatre, Broadway and Fourth Avenue, 1870–1936
Brooklyn Theatre,[27] Johnson and Washington streets, Brooklyn, 1871–90
Neuendorff's Germania Theater, 1872–81
New Park Theatre, 932 Broadway from 21st to 22nd streets, 1873–82
Chickering Hall, Fifth Avenue and 18th Street, 1875–1902
San Francisco Music Hall, Broadway and 28th Street, 1875–1907
Eagle Theatre,[28] Sixth Avenue between 32nd and 33rd Streets, 1875–1909
Third Avenue Theatre,[29] Third Avenue between 30th and 31st streets, from 1875
Pendy's Gayety Theatre,[30] Third Avenue between 125th and 126th streets, 1877–79
Daly's Fifth Avenue Theatre, northwest corner of Broadway and 28th Street, 1877–1930
Brighton Theatre,[31] 1239 Broadway between 30th and 31st streets, 1878–1915
Das Thalia Theater, 1879–88
Aberle's Theatre,[32] East Eighth Street between Broadway and Fourth Avenue, 1879–1904
Miner's Bowery Theatre, 169 Bowery, from 1879
Broadway Theatre,[33] southwest corner of Broadway and 41st Street, 1880–1929
Metropolitan Opera Hall, Broadway between 41st and 42nd streets, 1880–1965
Das Star Theater, 1881–83
Miner's Eighth Avenue Theatre, Eighth Avenue between 26th and 27th streets, 1881–1902
Tony Pastor's New 14th Street Theatre, East 14th Street between Irving Place and Third Avenue, 1881–1928
Oriental Theatre,[34] 104 Bowery, 1882–98
Wallack's Theatre, northwest corner of Broadway and 30th Street, 1882–1918
Casino Theatre, southeast corner of Broadway and 39th Street, 1882–1930
Temple Theatre,[35] 141 West 23rd Street, 1883–?1900
Herald Square Theatre, northeast corner of Broadway and 35th Street, 1883–1914
Metropolitan Opera House, Broadway to Seventh Avenue between 39th and 40th streets, 1883–1966
Theatre Comique,[36] 125th Street between Third and Lexington avenues, 1885–93
Lyceum Theatre, Fourth (Park) Avenue between 23rd and 24th streets, 1885–1902
F. F. Proctor's Theatre,[37] Driggs Avenue and South Fourth Street, Brooklyn, from 1886
Théâtre Français,[38] 14th Street west of Sixth Avenue, from 1886
Criterion Theatre, Fulton Street near Grand Street, Brooklyn, 1886–95
Amberg Theatre, 11 Irving Place at 15th Street, 1888–93
Berkeley Theatre, 19 West 44th Street, from 1888
Amphion Theatre, Bedford Avenue between South Ninth and South 10th streets, Brooklyn, 1888–1913
Hyde and Behman's Theatre, Adams Street between Fulton and Myrtle streets, Brooklyn, 1888–?1915
Broadway Theatre,[39] southwest corner of Broadway and 41st Street, 1888–1929
Chinese Theatre, 5 Doyers Street, 1890s
The Gayety (Gaiety), Broadway and Throop Street, Brooklyn, from 1890
Harrigan's Theatre,[40] West 35th Street off Sixth Avenue, 1890–1932

(*continued*)

2. Lower Broadway, the Bowery, and the Park (1798–1850)

At the beginning of the nineteenth century the Park Theatre dominated dramatic activity in the city. Under the management of William Dunlap (an art critic, playwright, theater historian, and early manager) and then Stephen Price and Edward Simpson, the Park engaged some of the most accomplished actors from England, encouraged American-born actors, and introduced New Yorkers to Italian opera. The Park had no serious competition until 1824, when a theater was erected nearby in the Chatham Gardens on Park Row between Duane and Pearl streets. The building of new and in some cases larger theaters continued (the Bowery Theatre, Vauxhall Garden Theatre, Niblo's Garden and Theatre), and theaters began to concentrate on Broadway and the Bowery. The same period saw the beginnings of the "star system" in American theater, as stage actors from England sought fame in the new country, and managers in New York City tried different means of filling their new theaters. The first English star was George Frederick Cooke, engaged by Dunlap in 1810 to stimulate attendance at the Park; he was followed by such well-known performers as Edmund and Charles Kean, Charles Mathews, William Conway, William Charles Macready, and Charles Kemble and his daughter Fanny.

During the 1820s a popular and aggressively democratic theater emerged as laborers and recent transplants from rural areas began to patronize the theater in larger numbers and enjoyed early melodramas, foreign and American; "Yankee" plays that appealed specifically to their tastes; the performances of American-born stars like James Hackett, George H. Hill, and Dan Marble, known for their wry humor in Yankee roles; and the performances of Edwin Forrest and Charlotte Cushman, both renowned for their displays of raw emotional power. The following decades saw the emergence of native-born stars like E. L. Davenport, Lawrence Barrett, Laura Keene, Lester Wallack, John Brougham, Matilda Heron, and E. A. Sothern and theatrical dynasties like those of the Jeffersons, the Drews, the Barrymores, and the Booths. By the early 1830s popular theaters for working-class audiences complemented those customarily patronized by high society. The new theaters furnished the fare demanded by the masses, whom they further accommodated by reducing admission prices (75, 50, and 37-and-a-half cents). Theaters like the Park and Burton's remained bastions of the elite, but the Bowery, the National, and the Chatham were for the working classes. Thus while Knickerbocker society appreciated the talents of the Kembles at the Park during the 1832–33 season, the masses flocked to the Bowery to see George Gale in the spectacular melodrama *Mazeppa*.

During the 1840s many popular entertainment forms evolved and flourished. Minstrelsy,

descended from the songs and dances performed in the 1830s by Thomas D. "Jim Crow" Rice and other entertainers, attracted New Yorkers in such numbers that it rivaled the legitimate stage. Variety—the raunchy precursor of the more genteel vaudeville—catered to all-male audiences in museums, saloons, and concert halls. Circuses occupied any vacant lot large enough to hold them; panoramas (giant landscapes or other spectacular scenes painted on canvas) were shown in buildings built especially for their viewing; and dime museums displayed their assorted oddities to thousands each day. For about the first half of the nineteenth century no attempt was made to centralize the theaters, so they remained scattered throughout Manhattan. There were small clusters of theaters at Park Row, on Broadway between City Hall and Houston Street, and on the lower Bowery, while roughly half a dozen theaters were in the regions west of Broadway (including three African American theaters, one of which helped to foster the career of Ira Aldridge, the first famous black actor in the United States).

3. Lower Broadway and the Bowery to Astor Place (1850–75)

It was not the legitimate theater but the minstrel show that was instrumental in the evolution of the first theater center in New York City. In the 1850s and 1860s a belt of minstrel halls developed along Broadway, extending from Fellow's Opera House at 444 Broadway to a minstrel hall in Hope Chapel just south of Waverly Place. This concentration of theaters was a harbinger of a district that developed around Union Square during the last quarter of the nineteenth century. Theatrical impresarios in Brooklyn had difficulty competing with their counterparts in Manhattan. The first Brooklyn Academy of Music was not built until 1861, followed by the Park Theatre in 1863 (opposite City Hall on Fulton Street). Frederick and Sarah Conway managed the Park from 1864 until 1871, when they opened the Brooklyn Theatre. Both of their theaters housed repertory companies and presented performances by Sothern, James O'Neill, Kate Claxton, John Gilbert, and Lillian Russell.

By the middle of the nineteenth century the economic centralization of the American theater had already become evident. The success of *Uncle Tom's Cabin,* which ran for more than 300 performances at the National Theatre in 1853–54, and the ensuing mania for "Tom shows" that swept both the city and the nation, signaled a new preoccupation with long runs in the American theater that persisted into the twenty-first century. Although some managers were at first skeptical about the long run, they were quickly persuaded by the success of *The Black Crook.* Based on a melodrama by Charles M. Barras, this show ran for 475 performances from 1866 and was important in the evolution of the musical.

St. Clement's Church,[111] 423 West 46th Street, from 1962
Lincoln Center for the Performing Arts, Broadway between 62nd and 66th streets, from 1962

(*continued*)

The breakdown of the traditional stock company, which had been the standard producing unit since before the American Revolution, and the advent of the combination company (a company formed for the run of one play and then disbanded) created a need for a new industry. Unlike the stock company, which was self-contained and produced scenery, costumes, and properties in its own shops, the combination company was transient, with neither theater nor shop facilities, and was forced to rely on businesses formed specifically to cater to its complex needs. A growing number of actors seeking work created a demand for agents; increased competition among theaters and the consequent demand for better publicity generated a market for the theatrical printer and the bill poster; and the sheer increase in the size of the theatrical community supported many new hotels and restaurants. During the 1870s the coalescence of these enterprises in one area, Union Square, created the first theater district in the city.

4. Union Square (1875–1900)

In the late nineteenth century the Union Square neighborhood was the site of appearances by such leading performers as the Booths, Adelaide Ristori, John McCullough, George L. Fox, Helena Modjeska, Maurice Barrymore, Mary Anderson, Henry Irving, and Ellen Terry. Among the theaters where they performed were the Fourteenth Street Theatre, the Union Square Theatre, and Wallack's Theatre, on Broadway at 13th Street. The area around Union Square was also a center of venues for popular entertainments: the Palace Garden, a pleasure garden on West 14th Street near Sixth Avenue; the Hippotheatron, on East 14th Street, which housed equestrian shows and in the 1870s the famous menagerie of P. T. Barnum; a hall on East 14th Street near Irving Place where Dan Bryant's Minstrels appeared; one of the city's largest panoramas, the Battle of Gettysburg, on Fourth Avenue between 18th and 19th streets; two of the most popular dime museums in the city, Huber's (on East 14th Street adjacent to Lüchow's) and Bunnell's Museum (on the northwest corner of Broadway and Ninth Street); and several small-time variety theaters. The best-known theater in New York City devoted exclusively to popular entertainment was the New Fourteenth Street Theatre of Tony Pastor, which was widely renowned as the birthplace of vaudeville; it was regarded as having the best, most wholesome variety entertainment in the city and the widest array of stars, which included the vaudevillians Russell, May Irwin, Nat Goodwin, the team of Harrigan and Hart, Denman Thompson, Pat Rooney, and Sophie Tucker. The Academy of Music, on the corner of East 14th Street and Irving Place, was built expressly for opera (as only three other theaters in the city before it had been). Meanwhile, the Park Theatre in Brooklyn achieved its greatest success under the management of Colonel

William E. Sinn (1875–95). When the Brooklyn Theatre was destroyed in 1876 by what was then the worst theater fire in U.S. history (295 died), Sinn and others improved their shows, and there was a boom in the construction of theaters in Brooklyn during the 1880s and 1890s.

By 1900 the city's legitimate theaters established themselves along the streets around Long Acre Square (now Times Square). The area surrounding Union Square was given over to dime museums, film studios (including the Biograph Studios at 11 East 14th Street), and movie theaters, while Second Avenue below 14th Street had become the locus for Yiddish theater. At the same time the theater increasingly underwent structural changes: not only had the stock system been displaced by the combination company and the theater become a thriving, lucrative industry, but the actor-manager in the mold of Brougham, Wallack, William Mitchell, and William Burton had been supplanted by the producer. Businessmen like A. M. Palmer, Marc Klaw, Abraham Erlanger, Charles and Daniel Frohman, and the brothers Sam S., Lee, and J(acob) J. Shubert were astute entrepreneurs with little or no stage experience. A turning point was marked in 1896 when the firm of Klaw and Erlanger, which controlled or leased many theaters nationwide, joined forces with the producer Charles Frohman, the booking agent Al(bert) Hayman, and two theater owners from Philadelphia, S. F. Nixon and J. F. Zimmerman, to standardize chaotic booking practices. The result was the Theatrical Syndicate, which soon held a monopoly on American theater production.

5. Times Square (after 1900)

By 1904 it was estimated that the Theatrical Syndicate controlled more than 500 theaters and had a virtual stranglehold on American theater, employing a blacklist to keep both the acting profession and independent theater owners in line. Although a few theater professionals were courageous enough to challenge the power of the Theatrical Syndicate (among them Harrison Grey Fiske, Minnie Maddern Fiske, and David Belasco), there were no serious threats to its monopoly until the early twentieth century, when the Shubert brothers built a theatrical empire in direct opposition to it. Compared with the Theatrical Syndicate the Shuberts at first appeared to be the benevolent saviors of American theater, but as they continued to acquire theaters, it became apparent that they were creating an organization as powerful and monopolistic as the syndicate had been, and that they used similar tactics. After the death in 1905 of Sam S. Shubert in a train wreck, his brothers continued to work together; by 1925 they controlled the legitimate theater. But the influence of the Shuberts was minimal in Queens, Staten Island, and the Bronx, where professional theater was not standard fare. Repertory companies

Theaters within the Present Boundaries of New York City, by Date of Founding (*Continued*)

Public Theatre,[112] 425 Lafayette Street, from 1967
Theatre 80 St. Marks, 80 St. Mark's Place, from 1967
Theater at Madison Square Garden, Eighth Avenue at 32nd Street, from 1968
The Kitchen, 512 West 19th Street, from 1971
Circle in the Square Theatre, 253 West 50th Street, from 1972
George Gershwin Theatre,[113] 222 West 51st Street, from 1972
Minskoff Theatre, 1515 Broadway between 44th and 45th streets, from 1972
Marquis Theatre, 1535 Broadway at 45th Street, from 1986
Hilton Theatre,[114] from 1998

1. Corbett Tavern and the Playhouse on Broadway may have been the same; sources differ.
2. May have been at Pearl (Queen) Street and Maiden Lane (Garden Street), but more likely on Nassau Street between Maiden Lane and John Street. The building stood until 1765, though it was used as a theater only until 1754.
3. In business only for a short time; the owner, David Douglass, had neglected to obtain permission for the theater and left for Philadelphia, returning in 1761 to open a theater on Beekman Street.
4. At Broadway and Exchange Alley until 1797.
5. Originally known as the New Theater in the Park.
6. Later known as the Covent Garden Theatre.
7. Known as Charley White's Opera House from 1860.
8. Originally the Italian Opera House, 1833–36.
9. Known as Das Alte Stadt Theater, 1854–64.
10. Also known as Mitchell's.
11. Also known as Purdy's New National Theatre.
12. Known as Burton's Chambers Street Theatre from 1848.
13. Replaced Niblo's Garden Theatre, which had burned in 1846, on same site.
14. Later known as Wallack's Lyceum.
15. Also known as Metropolitan Hall and by various other names from 1854–59; known as Winter Garden from 1859.
16. Known as Barnum's, 1865–68.
17. Building housed the Palladium nightclub in the mid-1990s; demolished by New York University in 1998.
18. Became the Olympic in 1863.
19. Known as Tony Pastor's Opera House 1865–75, People's Theatre 1883–1901, and Yiddish Theatre from 1902.
20. Known as the Windsor, 1878–1910.
21. Later known as the New Theatre Comique.
22. Various names, including Lucy Rushington's (1865), the Globe (1870), and the Theatre Comique (1881).
23. Known as the Madison Square Theatre from 1877.
24. Later known as the Grand Opera House.
25. Also known as Old Koster and Bial's.
26. Also known as Gilmore's Garden, P. T. Barnum's Hippodrome.
27. Destroyed by fire 1876; rebuilt 1879.
28. Known as the Standard (1878–97) and Manhattan Theatre (1897–1909).
29. Also known as the American; became a movie theater in 1909.
30. Also known as Tony Pastor's.
31. Also known as the Bijou Theatre from 1883.
32. Also known as the Germania Theatre.
33. Known as the Metropolitan Concert Hall (1880–88).
34. Also known as the National, Adler's Theatre, the Columbian Theatre, the Roumanian Theatre, and by other names.
35. Became Proctor's Theatre in 1889.
36. Also known as the Harlem Theatre.
37. Known as the Novelty Theatre (1886–88,) Blaneys (1902–4), and the Novelty (from 1904).
38. Known as Haverley's (1879) and Fourteenth Street Theatre (1886); became a movie theater 1908.
39. Became a movie theater and vaudeville house 1913.
40. Became the Garrick Theatre in 1895.
41. Later known as Koster and Bial's New Music Hall.
42. Known as Abbey's Theatre, 1893–96.
43. Became a movie theater in 1911.
44. Known as the Majestic until 1908, then by various names until 1944. Became a television studio 1949.
45. Later known as the Criterion.
46. Also known as Proctor's 58th.
47. Site of the Socony–Mobil Building; may have been demolished earlier.
48. Became a movie theater 1915; known as the Rialto from 1916.

(*continued*)

Theaters within the Present Boundaries of New York City, by Date of Founding (*Continued*)

49. Known as the Belasco (1900–1910); converted to a Minsky's Burlesque in 1931; became the Victory, a movie theater, in 1942; restored as a main stage and reopened 1995 as New Victory Theatre.
50. Became a movie theater in 1917.
51. Became a movie theater in 1937, but resumed operation as a main-stage theater from 1997 under a lease with Walt Disney Theatrical Productions.
52. Controlled by the Columbia Broadcasting System (1934–37) and the National Broadcasting Company (1950–59), used as a movie theater 1967–80 and a nightclub 1980–83. Used as a conference center and auditorium for adjacent hotel since 1987.
53. Became a movie theater in 1934.
54. Became a movie theater in 1933, through 1980s. In 2000 Madame Tussaud's Wax Museum was built on the site, retaining the building's exterior structure.
55. Known by various names until 1924, as Wallack's (1924–31), and as the Anco (from 1940). Became a movie theater in 1931, interior gutted 1988.
56. Became a movie theater in 1942; abandoned in 1968. Acquired by Brooklyn Academy of Music in 1987 and returned to service as a main-stage theater. Known from 1999 as the BAM Harvey Lichtenstein Theatre.
57. Became a movie theater in 1925, closed 1972; demolished 1982.
58. Known as the Stuyvesant until 1910.
59. Became a Minsky's Burlesque in 1932; renamed the Victoria in 1943; became a movie theater in 1943; demolished 1982.
60. Later known as Manhattan Center. Acquired by Unification Church 1976.
61. Originally at 1555 Broadway. Known as the Globe until 1958; used as a movie theater from 1932–57.
62. Also known as Nazimova's.
63. Known as the Folies Bergère April–Oct 1911; as the Fulton Theatre until 1955.
64. Known as the Little Theatre (until 1931), Times Hall (1931–63), and Winthrop Ames Theatre (1963–82).
65. Became a movie theater in 1942. Entire building moved 200 feet (61 meters) east of original location in 1998 to become lobby and facade of AMC Empire 25 multiplex. Interior destroyed.
66. Used for radio and television, 1943–53.
67. Originally Weber and Fields' Broadway Music Hall. Basement was the site of the Stage Door Canteen, 1941–43.
68. Was the Labor Stage briefly in the late 1930s; became a movie theater in 1933.
69. Known as the Candler (until 1916), and as Cohan and Harris (until 1921); became a movie theater in the 1930s.
70. Known as the Punch and Judy until 1926; showed movies as the World Theatre from 1933. Became the Embassy 49th Street Theatre in 1982.
71. Part of City College. Demolished 1973.
72. Also known as Henry Street Playhouse.
73. Known as the Gerald Schoenfeld Theatre from 2005, after the chairman of the Schubert Organization from 1972–2008.
74. Became a movie theater 1969; later the site of the nightclubs Xenon (1978) and Shout.
75. Became a movie theater in 1934. Returned to use as a main stage in 2000. Known as the American Airlines Theatre from 2000.
76. From 1921 through 1957, alternated movies and live theater; operated as a movie theater alone through 1988. Lobby became Roxy Deli; auditorium became dance club. Auditorium demolished 2005 to make way for W Hotel.
77. Originally known as the Norworth.
78. Used as a radio studio, 1939–53.
79. Known as the Bryant until 1938; showed films 1938–78; became the Academy cabaret 1987.
80. Used as movie theater, 1933–97.
81. Used as radio studio, 1943–65. Dark through 1969, it reopened in 1971. Bought by Jujamcyn in 1981 and renovated in 1989. Known as the Walter Kerr Theatre from 1990.
82. Known as the National Theatre until 1959, later as the Billy Rose Theatre.
83. Became a movie theater in 1938.
84. Known as the Avon Theatre from 1929.
85. Known as Jolson's 59th Street Theatre until 1934; used as a movie theater 1934–37; known as the New Century from 1944; acquired by the National Broadcasting Company 1954. Demolished 1962.
86. Used as a nightclub 1933–39. Acquired by Woolworth's 1939; interior demolished. Razed 1990.
87. Known as the Al Hirschfeld Theatre from 2003.
88. Known as B. S. Moss's Colony until 1930 and B. S. Moss's Broadway until 1939. Bought by the Shuberts in 1939, who turned it into a legitimate house.
89. Known as the Forty-Sixth Street Theatre until 1990.
90. Known as Forrest Theatre (1925–45) and Coronet Theatre (1945–59).
91. Known as the Samuel J. Friedman Theatre from 2008.
92. Built as the Guild Theatre; renamed the Virginia in 1982; known since 2005 as the August Wilson.
93. Known originally as the Golden; became a movie theater in 1936; later a film and television studio.

(*continued*)

like the Brooklyn Comedy Company visited the Jamaica Opera House, but entertainment consisted largely of musical evenings, balls, amateur theatrical productions, and lectures. The Bronx Theatre opened in 1908, the first of many vaudeville houses situated on or near East 149th Street, an area known as the Hub.

During these years there was a growing dissatisfaction among actors with their working conditions, particularly with regard to rehearsals, which were unpaid and unlimited; moreover, actors often found themselves stranded on the road without sufficient funds to pay for their train fare back to New York City. The theater managers at first refused to redress the actors' grievances, and the phrase "starve the actors out" became their rallying cry. The managers' attitude changed only when the actors went on strike moments before curtain time on 6 August 1919, and a contract between the managers and Actors' Equity was signed on 6 September.

While the economic structure of the professional theater was moving toward centralized control, an upheaval of similar magnitude was occurring in American dramaturgy. During the early years of the twentieth century the work of the European Realists and of the native dramatists James A. Herne, Augustus Thomas, Clyde Fitch, William Vaughn Moody, Eugene Walter, and Ned Sheldon created a demand for psychological realism and for drama that was more socially aware than its nineteenth-century predecessors had been. This change in attitudes did not endanger traditional melodrama or escapist works, but it altered the climate on Broadway. In the 1920s audiences took a growing interest in plays by Henrik Ibsen, George Bernard Shaw, Anton Chekhov, Sean O'Casey, and Luigi Pirandello, on Broadway as well as in the avant-garde theaters of Greenwich Village. New York City was visited by the Moscow Art Theatre (led by Konstantin Stanislavsky), the Comédie Française, the well-known Chinese actor Mei Lan-fang, the Spanish Art Theatre, Austrian director Max Reinhardt, Habima (a troupe from Israel), and the Italian star Elenora Duse. A remarkable number of young American playwrights came to prominence in the 1920s, among them Elmer Rice, George S. Kaufman, Marc Connelly, Maxwell Anderson, Paul Green, Sidney Howard, and Robert E. Sherwood. Eugene O'Neill saw 14 of his plays produced during the decade, including *Beyond the Horizon* (1920–21), *Anna Christie* (1921–22), and *Strange Interlude* (1927–28), all of which won the Pulitzer Prize, as well as *The Emperor Jones* (1921), *The Hairy Ape* (1922), and *Desire under the Elms* (1925).

During the 1920s artists who had been prominent in the experimental theater of the 1910s began to work on Broadway, thus infusing it with some of the experimental spirit that had been generated in Greenwich Village. The Theatre Guild, which had begun in 1914 as the Washington Square Players to provide an alternative to the mainstream theater (see §6,

below), emerged as a major Broadway producer, and regular performances were given of such innovative works as O'Neill's *Mourning Becomes Electra* (1931) and *Strange Interlude* (1928), Elmer Rice's expressionistic work *The Adding Machine* (1923), John Howard Lawson's *Processional* (1925, which the author called a "jazz symphony of American life"), Georg Kaiser's *From Morn to Midnight* (1912), and Ernst Toller's *Man and the Masses* (1924). Yet the experimental spirit did little to dampen the popular taste for entertainments that challenged neither the conventions of the stage nor the mind of the viewer: garish revues like Florenz Ziegfeld's *Follies* (1912), Earl Carroll's *Vanities* (1924), and the Shuberts' *Passing Shows* retained their popularity in the early 1920s; vaudeville remained in fashion until the end of the decade; and racy melodramas, saccharine comedies, and other innocuous fare in the vein of *Lightnin'* (1925, by Winchell Smith and Frank Bacon), *Rain* (1922, by John B. Colton and Clemence Randolph, after the short story by W. Somerset Maugham), *The Bat* (1926, by Avery Hopwood and Mary Roberts Rinehart), and *Abie's Irish Rose* (1922, by Anne Nichols) continued to set records for long runs.

During the same years the American musical moved away from the stereotyped romantic characters, formulaic plots, and fairyland settings of the comic operas of Victor Herbert, Rudolph Friml, and Sigmund Romberg. In musicals like *Show Boat* (1927), by Jerome Kern and Oscar Hammerstein II, and *Of Thee I Sing* (1931), by George Gershwin, and in Gershwin's opera *Porgy and Bess* (1935), more serious subjects were addressed, the musical numbers advanced the dramatic action, and the characters sang songs that expressed their personalities. Vincent Youmans, Cole Porter, Richard Rodgers, and Lorenz Hart also wrote works in the 1920s that established new goals and standards for musical comedy. Economically the 1920s were a peak for the theater, and the 1927–28 season still stands as the most successful in New York City's history: 264 shows opened in 76 Broadway theaters. This prosperity was, however, short-lived, as the "talkies," introduced in 1926–27, siphoned audiences away from burlesque and other live theater, and the Depression severely curtailed production. By the 1930–31 season only 187 shows opened in 64 theaters, and the signs of a decline in production were evident.

Along with widespread poverty the Depression brought unemployment to 5000 actors in the city and roughly 25,000 theater workers nationwide. The theater became politicized as leftist organizers saw that drama could be used as an ideological weapon. In New York City capitalism underwent stinging critiques at the hands of the Workers' Laboratory Theatre, the German-language company the Proletbuhne, the Theatre Collective, the Theatre Union, and the Group Theatre, which gave the American theater not only the playwright Clifford Odets but also the actors Morris Carnovsky, Ruth Nelson, Franchot Tone, John Garfield, and Lee J. Cobb; the directors Harold Clurman and Elia Kazan; Lee Strasberg, founder of the Actors' Studio; and Stella Adler, founder of her own acting school. The Depression also prompted the federal government to become a theatrical producer through its Federal Theatre Project. Formed under the auspices of the Works Progress Administration and administered by Hallie Flanagan, a drama professor and director of the Experimental Theatre at Vassar College, the project set as its central goal the reemployment of theater people who were on relief rolls. To this end it began a number of ventures ranging from regional theaters to an experimental theater wing to popular entertainments. Although the Federal Theatre Project was national, New York City was the site of its largest branch, which encompassed a Black Theatre wing, a troupe called the Living Newspaper that produced social documentaries, and offices that functioned as a national service center for the project. The *Federal Times Magazine* was published and distributed there, and the offices also housed a play-reading center and a bibliographic service. More important, some of the best-known works of the project were originated in the city, including *It Can't Happen Here* (1936, after the novel by Sinclair Lewis; adapted by Lewis and John C. Moffitt), *One Third of a Nation* (1938, by Arthur Arent), and *Triple A Plowed Under* (1936, the writing of which was supervised by Arent).

The 1940s and 1950s were a contradictory period in American theater. During World War II the New York City stage was dominated by escapist froth (*Arsenic and Old Lace*, 1941, by Joseph Kesselring; *My Sister Eileen,* 1940, by Joseph Fields and Jerome Chodorov; *Harvey,* 1944, by Mary C. Chase; *Life with Father,* 1939, by Howard Lindsay and Russel Crouse) and patriotic dramas (*Candle in the Wind,* 1941, and *Storm Operation,* 1944, by

Theaters within the Present Boundaries of New York City, by Date of Founding (*Continued*)

94. Known as the Mansfield Theatre until 1960.
95. Became Village East Cinema in 1992.
96. Became a movie theater in 1933; used for shops from 1941.
97. Originally the Edyth Totten, known by various names until 1956. Part of Mamma Leone's restaurant until 1988.
98. Known as the Theatre Masque until 1937.
99. Known as the Gallo Theatre until 1943, used for radio and television by the Columbia Broadcasting System from 1943. Later the site of the nightclubs Studio 54 (1977–80) and the Ritz (1989–96). Known as Studio 54 from 1998. Acquired by the Roundabout Theater Company in 2003 after a successful revival of Cabaret was staged there.
100. Known as the Bernard B. Jacobs Theatre from 2005.
101. Known as Hammerstein's until 1931; used for radio and television by the Columbia Broadcasting Company from 1936. Renamed for Ed Sullivan 1967.
102. Known as Erlanger's Theatre until 1932.
103. Originally known as the Alvin Theatre.
104. Used as a television studio, 1955–63.
105. Originally known as Billy Rose's Diamond Horseshoe.
106. Known as the Craig Theatre until 1934; the Adelphi (1934–39); the Fifty-Fourth Street Theatre (1939–65).
107. Used as a movie theater until 1934. Known as the Hollywood until 1936 and the Fifty-First Street Theatre until 1949; leased (from 1989), then sold to the Times Square Church in 1991.
108. Showed films as the RKO Roxy and RKO Center until 1934.
109. Built as meeting hall for the Ancient and Accepted Order of Nobles of the Mystic Shrine 1923.
110. Originally the Theatre de Lys.
111. Built in 1872 as the Faith Chapel of the West Presbyterian Church, used since 1920 as an Episcopal parish church. Interior reconfigured in 1962 as small proscenium theater.
112. Founded as the Shakespeare Workshop 1954; housed in the former Astor Library building on Lafayette Street from 1967.
113. Known as the Uris Theatre until 1983.
114. Opened in 1998 as the Ford Center for the Performing Arts on the location of the Lyric Theatre, retaining the Lyric's 42nd Street and 43rd Street facades.

Maxwell Anderson; and the classic of the genre, *Watch on the Rhine,* 1941, by Lillian Hellman). After the war American playwriting experienced a renaissance, which for a short time seemed to presage a second flowering of native dramaturgy. Among the high points of this period were the production of O'Neill's *The Iceman Cometh* (1946) and *Long Day's Journey into Night* (1956) and of the early plays of Arthur Miller (*All My Sons,* 1947; *Death of a Salesman,* 1949; an adaptation of Ibsen's *An Enemy of the People,* 1950; *The Crucible,* 1953; *A Memory of Two Mondays* and *A View from the Bridge,* 1955), Tennessee Williams (*The Glass Menagerie,* 1945; *A Streetcar Named Desire,* 1947; *Summer and Smoke,* 1948; *The Rose Tattoo,* 1951; *Camino Real,* 1953; *Cat on a Hot Tin Roof,* 1955; *Orpheus Descending,* 1957; *Sweet Bird of Youth,* 1959), and William Inge (*Come Back Little Sheba,* 1950; *Picnic,* 1953; *Bus Stop,* 1955; *The Dark at the Top of the Stairs,* 1957). At the same time the playwriting careers of Odets, Hellman, and William Saroyan declined.

The economic troubles besetting New York City theater that had begun in the mid-1920s continued in the 1940s and 1950s. Fewer shows opened each year in fewer active Broadway houses, and it took longer to make back the "nut" (the income needed to recoup the cost of mounting a production). Opportunities for productions other than musicals continued to dwindle as the costs of producing even a small-cast comedy or drama soared. But musical comedy thrived during this period, largely because it was increasingly favored by the public: librettos continued to improve, themes became generally more substantial, and the production of *Oklahoma!* (1943), by Rodgers and Hammerstein, heralded a greater synthesis of libretto, score, and dance. During the succeeding decades nonmusical comedies were gradually displaced as the longest-running shows on Broadway by musicals (*My Fair Lady,* 1956, by Alan Jay Lerner and Frederick Loewe; *Annie,* 1977, by Charles Strouse and Martin Charnin; *Hello, Dolly!,* 1964, by Jerry Herman; *Fiddler on the Roof,* 1964, by Jerry Bock and Sheldon Harnick; *Grease,* 1974, by Jim Jacobs and Warren Casey), which soon gained recognition as the economic bedrock of Broadway.

The early 1960s introduced Broadway audiences to two playwrights who were influential in shaping theater in New York City. Edward Albee was controversial and often esoteric (*Who's Afraid of Virginia Woolf?* 1962; *Tiny Alice,* 1964; *A Delicate Balance,* 1966); Neil Simon was popular and extremely prolific: during the 1960s alone his output encompassed *Come Blow Your Horn* (1961), the book for *Little Me* (1962), the book for *Sweet Charity* (1962), *Barefoot in the Park* (1963), *The Odd Couple* (1965), *The Star-Spangled Girl* (1966), *Plaza Suite* (1968), and the book for *Promises, Promises* (1968).

Manhattan's theater fared better than that in the other boroughs. Although Brooklyn had been part of the vaudeville subway circuit until the late 1920s, by the mid-twentieth century its legitimate theater barely existed. The Brooklyn Center for the Performing Arts opened at Brooklyn College in 1955, and smaller venues like the Billie Holiday Theatre in Bedford–Stuyvesant were founded in subsequent decades. The Brooklyn Academy of Music, refurbished in the 1960s, remained at the center of Brooklyn theater—and at the forefront of New York City's alternative theater—into the early twenty-first century. Stage performance in Queens, Staten Island, and the Bronx was largely displaced by movie theaters and was left to college theater programs and local troupes, like the Selma and Max Kupferberg Center at Queens College and the Lehman Center for the Performing Arts at Lehman College in the Bronx. After being shuttered for years, the St. George Theatre in

Staten Island was restored in 2007 and staged music, theater, and opera productions.

By the late twentieth century the cost of Broadway shows had reached an average of $8 million, a successful run of 60 to 65 weeks was required to reimburse investors, and ticket prices ran as high as $100 a seat. The mainstream theater had grown increasingly dependent on revivals, spectacle, and imports from Britain (especially those by Andrew Lloyd Webber) and on such promotional and sales devices as package tours, "two-fers," and half-priced tickets from the "TKTS" booths in Times Square and on Wall Street. While detractors viewed these developments as symptoms of weakness and even impending doom, its supporters saw them as signs of the theater's ability to adapt to changing economic and artistic currents. In 1990–91 Broadway theaters drew 7.36 million spectators. Because tourists accounted for a high percentages of Broadway audiences, ticket sales slumped after the terrorist attacks of 11 September 2001, but by 2005 they had risen to record-breaking figures. During the 2007–8 Broadway season more than 12 million people attended performances, including 36 new productions. Broadway grossed about $937 million, a slight decline from the previous year due to a 2007 stagehand strike that darkened theaters for more than two weeks. Notable new productions included Tom Stoppard's Tony Award–winning winning trilogy *The Coast of Utopia* (2002, Broadway debut 2006), and Tracy Letts's *August: Osage County* (2007), which won the Pulitzer Prize for drama and the Tony Award for best play in 2008.

6. Alternative Theater: Art Theater, Off-Broadway, Off-Off-Broadway

By the second decade of the twentieth century many alternative theaters and companies flourished in the progressive environment of Greenwich Village. The Washington Square Players, formed in Greenwich Village in 1914 by Philip Moeller, Helen Westley, and Lawrence Langner, had the stated goal of producing "plays of artistic merit." After staging 62 one-act plays and six full-length plays the group was disbanded in 1918 and reorganized as the Theatre Guild, which became one of the leading production institutions in New York City, instrumental in introducing Americans to the plays of Shaw, Ibsen, Leonid Andreyev, Maurice Maeterlinck, and August Strindberg and in producing plays by O'Neill, Saroyan, Sherwood, Rice, and Philip Barry. The Theatre Guild was also one of the first American theater companies to exhibit the style of theater design known as the new stagecraft, which was practiced by Robert Edmond Jones and Lee Simonson. The Provincetown Players were established in 1915 as a playwrights' company presenting the works of Susan Glaspell, Theodore Dreiser, Edna St. Vincent Millay, and Green, but their most notable achievement was their advocacy of O'Neill and their staging of many of his early plays (first in a makeshift theater on a wharf in Provincetown, Massachusetts, and later in a small theater at 133 MacDougal Street). The Neighborhood Playhouse began in the Henry Street Settlement on the Lower East Side; it was endowed in 1915 by Alice and Irene Lewisohn and produced not only experimental playscripts (by O'Neill and Shaw, among others) but also avant-garde dance and music. During the 1920s actress and director Eva Le Gallienne established a company run on a strict repertory system (1926–31), which entailed a nightly change of bill and a nightly rotation of scenery. During the following decades alternative theater was for the most part confined to the agitprops (propaganda plays) and socially aware dramas of the Group Theatre and other left-wing troupes. The American Negro Theater was formed in 1940 and performed at the Schomburg Library on 135th Street; Sydney Poitier, Ruby Dee, and Harry Belafonte were affiliated with it. Like one of its predecessors, the Lafayette Players (formed in 1915 by Anita Bush), it was criticized for imitating Broadway.

The next important phase of alternative theatrical activity in New York City began on 24 April 1952, when Williams's *Summer and Smoke* opened at the Circle in the Square, an event widely regarded as marking the beginning of Off Broadway. When the production was reviewed by Brooks Atkinson, drama critic for the *New York Times,* public attention became focused on theater below 42nd Street, and Off Broadway was discovered, legitimated, and made economically viable. The cost of producing on Broadway had grown prohibitive, which meant that fewer new scripts could be staged; the increased conservatism of audiences and backers had severely limited production concepts and all but stifled creativity; and producers were using only experienced actors. In opening the Circle in the Square, its

founders, José Quintero and Theodore Mann, were fighting the fiscal, artistic, and political conservatism of mainstream theater.

During the 1950s and early 1960s the commercialism of Broadway led to the formation of other companies (the Living Theatre of Julian Beck and Judith Malina, the New York Shakespeare Festival of Joseph Papp, the Phoenix Theatre) and individual playhouses (the Sullivan Street Playhouse, the Public Theater, the Theatre de Lys, and the Cherry Lane). In an environment that encouraged experimentation, such young, progressive artists as Beck and Malina, Quintero, Geraldine Page, George C. Scott, Peter Falk, Ellis Rabb, Jason Robards, and Dustin Hoffman tested their talents and ideas; scripts considered too risky for Broadway were staged; and a second hearing was given to some artists who were in danger of being forgotten (such as O'Neill and Williams). This nurturing milieu provided backing and a suitable environment for staging "small" musicals like *Little Mary Sunshine* (1959) and *The Fantasticks,* which ran for more than 17,000 performances (1960–2002) at the Sullivan Street Playhouse. The formation in 1967 of the Negro Ensemble Company was a landmark in attempts to forge an autonomous black theater. It staged works by such leading African American playwrights as Lorraine Hansberry, James Baldwin, LeRoi Jones (later known as Amiri Baraka), Douglas Turner Ward, Ed Bullins, Lonne Elder, and Charles Gordone. Other black companies such as AMAS Rep symbolized more than simply an alternative to the mainstream values of Broadway: they enabled blacks to enter the ranks of theatrical producers, dramatically represented black life, and in general promoted the goal articulated by W. E. B. Du Bois, that there should be a theater "about, by, for, and near" African Americans.

In the 1960s political, social, and artistic upheaval created the environment for yet another form of alternative theater, Off Off Broadway. Theatrical radicals rejected the professionally trained actor, the classics, conventional relations between actor and audience, the star system, and even the role of the playwright and the primacy of the script. The Caffe Cino, a small coffeehouse at 31 Cornelia Street, is generally acknowledged as the place where Off Off Broadway began. In 1958 the proprietor, Joe Cino, invited performers and writers to present their work; among those who did were the writers Jean-Claude van Itallie, Lanford Wilson, and Sam Shepard. The Caffe Cino closed when the proprietor took his own life in 1967, but other venues opened and continued to offer a forum for experimental work (Ellen Stewart's La MaMa Experimental Theatre Club, the Judson Poets' Theatre, Theatre Genesis). In the decades that followed, the rebellion inherent in Off Off Broadway became embodied in the iconoclasm and political activism of the Living Theatre; in experiments with the relation of actor to audience and with the creation of performance "environments" by Richard Schechner and the Performance Group; in the improvisational ensemble work of Joseph Chaikin and the Open Theater; in the use of masks and puppets and the public protests of the Bread and Puppet Theater; in Allan Kaprow's happenings; and in the high "camp" of Charles Ludlam's Ridiculous Theatrical Company.

Caravan Theatre, 1937

By the 1980s alternative theater in New York City had grown more fragmented, eclectic, and private, encompassing black, Latin American, gay, and lesbian theater and artists and ensembles as diverse in their ideologies and aesthetics as Robert Wilson, JoAnne Akalaitis, Ethyl Eichelberger, Richard Foreman, Lee Breuer, the Wooster Group, Split Britches, and Michael Kirby's Structuralist Workshop. The alternative theater generated the most influential American playwrights of the 1970s and 1980s. Although their works were routinely produced on Broadway, the playwrights Lanford Wilson and August Wilson nevertheless created many of them for the Circle Repertory Theatre and the Yale Repertory Theatre, respectively. David Mamet generally premiered his plays Off Broadway—when they were performed in New York City at all. Shepard, whom many critics considered the most talented playwright of his generation, had his work produced in a prominent theater in New York City (*Operation Sidewinder* at the Vivian Beaumont Theater in Lincoln Center in 1970), but during the 1970s and 1980s he did not have his work produced even once in a Broadway theater. In the late twentieth and early twenty-first centuries festivals offered important theatrical venues: the New York International Fringe Festival was founded in 1997, and in 2008 it presented 1300 performances at more than 20 venues; the Summer Play Festival began in 2004, and in 2008 it began a partnership with the Public Theater. By offering low ticket prices, festivals were able to attract young theatergoers. Other alternative companies tried to broaden theater audiences: the critically acclaimed company Waterwell offered free tickets to veterans and high school students.

In the early twenty-first century the lines between Broadway and Off Broadway began to blur; many successful musical productions were staged Off Broadway and moved to Broadway in an effort to recoup investments. *Avenue Q* (2003), *Spring Awakening* (2006), and *Grey Gardens* (2006) garnered critical success Off Broadway and moved to Broadway within a year, each later winning Tony Awards. In 2008 tax-exempt Off-Broadway institutions had taken control of five Broadway theaters, further confusing the distinction. Off-Off-Broadway productions were more difficult to track, as the characteristics of this brand of theater made it nebulous and resistant to classification; about 1700 such productions were staged in 2006–7, for example.

7. The Business of the Theater

A variety of businesses and organizations in New York City help to mount theatrical productions and support the many people who work in the theater. Labor is by far the major resource used in theatrical production. In the early twentieth century the considerable growth in the number, size, and type of productions and the increasing role of technology led to the formation of theatrical unions and societies to establish contractual guidelines. A century later, theater owners and producers did business with many such organizations; which ones are involved in a given production will depend on the type of production (play, musical, opera, revue) and on the size and location of the theater. The principal unions and

associations include the Dramatists Guild, which represents authors; Actors' Equity Association (which, along with six other performers' unions, is affiliated with the Associated Actors and Artistes of America), for professional actors and stage managers; the Society of Stage Directors and Choreographers; the United Scenic Artists of America, to which most scenic, costume, and lighting designers belong, along with scenic, mural, display, and diorama artists; Wardrobe Supervisors and Dressers, Local 764; the International Alliance of Theatrical Stage Employees, of which Local 1 in Manhattan represents all carpenters, stagehands, electricians, sound technicians, and property crewmen; Treasurers and Ticketsellers, Local 751; Porters and Cleaners-Service Employees in Amusement and Cultural Buildings, Local 54; the International Union of Operating Engineers, Local 30, for those who maintain heavy equipment, such as heating and air-conditioning engineers; Ushers and Doormen; the Association of Theatrical Press Agents and Managers; and the American Federation of Musicians, Local 802. In response to difficulties posed by these performers' and technicians' unions, after 1910 producers and theater owners formed their own association; this has undergone several reorganizations and changes of name and is now known as the League of American Theaters and Producers, a voluntary body with headquarters in the city.

Goods and services used in the theater are provided by many businesses in the metropolitan area, including builders and suppliers of scenery, lighting and sound equipment, costumes, and makeup. Traditionally these businesses were situated in and around the theater district, where "walk-in" business accounted for much of their trade, but over the years many moved out of Manhattan because of rapidly rising real estate costs and a lack of suitable space. The difficulty of moving goods in and out of midtown was especially troublesome for scenic studios, which deal in large, bulky items, and the majority of these studios relocated outside of Manhattan. Most production suppliers nonetheless chose to remain near Broadway because of the necessity of maintaining a connection with the theater district, no matter how tenuous.

Theater's growth in the late nineteenth century begat the rise of theatrical agents and managers. Agents advise, represent, and promote performers, playwrights, directors, and other creative artists; they arrange bookings in venues ranging from Broadway theaters to small cabarets, negotiate terms and contracts, and mediate disputes. Although in the early twenty-first century some agents operated independently and with only a few clients, large organizations like the William Morris Agency had thousands. Theatrical managers differ from agents in that they often provide their clients with legal and financial guidance.

Lucille Lortel Theatre, 2009

Theatrical publishing encompasses play publishers' and authors' representatives as well as trade and general-interest magazines and newspapers. The acting versions of most plays and the scores of most musicals are published by companies based in New York City. In the early twenty-first century Samuel French and the Dramatists Play Service remained leading publishing houses for nonmusical properties; musicals were controlled by Tams Witmark, Music Theater International, and the Rodgers and Hammerstein Music Library. These companies maintained the sole authority to charge royalty fees and to release plays for production in stock, educational, and amateur theaters throughout the world. All funds collected were apportioned by prior agreement between the publishing houses and their authors.

The first theatrical periodical in the city was the weekly newspaper the *Thespian Mirror,* published for a brief period in 1805. It was followed by hundreds of magazines and newspapers devoted to the theater, including the weekly general-interest newspapers the *New York Clipper* (1853–1924) and the *New York Dramatic Mirror* (1879–1922); the monthly magazine *Theater Arts* (1916–64), which was noted for publishing the complete texts of new plays; *New Theater* (1934–37), the mimeographed monthly organ of the Workers Theaters of U.S.A. and the Workers Dance League; and the *New York Review* (1909–31), a weekly trade newspaper issued by the Shubert Organization as a vehicle to combat the Theatrical Syndicate. Leading periodicals in the early twenty-first century included *TDR* (The Drama Review), a quarterly journal devoted to performance theory from an anthropological perspective; *American Theater,* a monthly forum for news, features, and opinions; *TCI* and *Live Design,* monthly magazines on technical aspects of the theater; and the weekly trade publications *Backstage* and *Variety.* The influential publication *Best Plays and Year Book of the Drama in America,* first compiled in 1919 by Burns Mantle, contains a detailed overview of every play produced in New York City the preceding year as well as condensations of the 10 best.

Bookshops devoted to the performing arts once doubled as informal gathering places for professionals in the theater, as at Brentano's Literary Emporium in the nineteenth century. In the early twenty-first century, as chain bookstores drove small, specialized bookshops out of business, the Drama Book Shop persevered: the city's oldest extant store for theatrical books and periodicals, it set up shop in 1923 on a card table in the lobby of the ANTA Theater. Web sites such as Playbill.com stepped in to replace some aspects of bookstores as centers of information about the theater world.

8. Acting and Theater Schools

The American Academy of Dramatic Arts, formed in New York City in 1884, was the first school in the United States to provide professional training in acting. In the early twenty-first century most colleges and universities in the city had offerings ranging from informal courses to doctoral programs; among the most notable were the Juilliard School, the Graduate School at City University of New York, and the Tisch School of the Arts at New York University. Most acting schools were founded by noted practitioners in the field, including Strasberg (the Actors Studio), Adler (the Stella Adler Conservatory of Acting), Herbert Berghof and Uta Hagen (HB Studio), and Sanford Meisner (the Neighborhood Playhouse School

of the Theater). Certificates in acting were granted by the American Academy of Dramatic Arts, the Circle in the Square Theater School, and the American Musical and Dramatic Academy.

theater architecture. The first of more than 1000 theaters in New York City was perhaps the New Theatre (also known as the Theatre in Nassau Street), built by English colonists about 1732. A theater district took form in 1798 when the Park Theatre was erected across from City Hall Park. Its facade was designed in a neoclassical style by the French-born architect Joseph François Mangin, who later helped to design City Hall. Little survives of the early theaters, but drawings and photographs suggest that their exteriors were designed according to the architectural fashions of the day. The facades of the Chatham Gardens Theatre (1824) and the New York Theatre (1826; later the Bowery Theatre) were built in the Greek Revival style and could easily have been mistaken for those of churches. As the city expanded to the north, theaters were built along Broadway, the most fashionable avenue, and became well known. The center of the theater district moved successively to Canal Street, Union Square, Madison Square, and Herald Square; there were also German music halls on the Bowery, theaters for Yiddish productions on Second Avenue, theaters and opera houses in Harlem, and a theater district in downtown Brooklyn. Most nineteenth-century theaters were narrow and semicircular; two balconies, one directly above the other, were supported by slender cast-iron columns, while enclosed two-tiered boxes flanked the stage. Theaters with elaborate neoclassical designs were common, such as Haverly's Theatre (1866; later the 14th Street Theatre). Edwin Booth's Theatre (1869) on 23rd Street had a facade in a French style with an enormous mansard roof. Harrigan's Theatre (1890; later the Garrick Theatre) on West 35th Street had a facade in the beaux-arts style.

The theater district moved to what is now called Times Square in 1895, when Oscar Hammerstein opened the Olympia theater complex on Broadway at 45th Street, and during the next three decades about 85 theaters were built in the blocks between Sixth and Eighth avenues from 39th Street to Columbus Circle. All were built for impresarios who produced their own shows and sometimes their own plays with companies of actors under contract. These theaters were both auditoriums and business offices, designed to be symbols of the impresarios and their productions. Many of the upstairs offices were attached to handsome living and sleeping quarters that often acted as venues for seduction. Hammerstein, David Belasco, Daniel Frohman, Winthrop Ames, Henry B. Harris, and Charles Dillingham had theaters built to their specifications and engaged architects who specialized in designing theaters. Commissions were given to many architects, including J. B. McElfatrick and Son, George Keister, Herts and Tallant, Thomas W. Lamb, V. Hugo Koehler, C. Howard Crane, Carrère and Hastings, Warren and Wetmore, and Harry Creighton Ingalls.

The grand beaux-arts designs popular in the late nineteenth century were used into the early years of the twentieth. The Republic Theatre (Albert E. Westover, 1899; now the Victory Theatre), built for Hammerstein on West 42nd Street, is the only remaining theater on Broadway with an interior in the nineteenth-century style; sculpted *putti* look down at the audience from the rim of the ceiling dome. In Frohman's New Lyceum Theatre (1902–3), Herts and Tallant introduced cantilevered balconies to eliminate columns that obscured the view of the stage in the orchestra and the first balcony; they also gave the theater one of the most heavily ornamented facades in the city and an elaborate interior decorated with murals, bronze statues, and unusual lighting fixtures (featuring hundreds of electric bulbs across the ceiling instead of a chandelier). The New Amsterdam Theatre (Herts and Tallant, 1902–3), built for the "Theatrical Syndicate" of Marc Klaw and Abraham Erlanger, remains the finest art nouveau theater in the city. For Dillingham's Globe Theatre (1909–10; now the Lunt–Fontanne Theatre), Carrère and Hastings, the architects of the New York Public Library, designed a monumental, classic beaux-arts facade.

Changes in audiences, entertainment, and technology led to changes in theater design. Second balconies were eliminated in the early twentieth century as patrons of the cheapest seats abandoned the theater for the movie palaces. Interest in "little theater," which consisted of dramatic productions in intimate spaces, led to the restrained neo-Georgian style of Belasco's Stuyvesant Theatre (George Keister, 1906; now the Belasco Theatre) and Ames's Little Theatre on West 44th Street (H. C. Ingalls, 1912; now the Helen Hayes Theatre), both designed to recall the privacy of drawing rooms in Georgian mansions. The Stuyvesant has Tiffany fixtures, a paneled ceiling, and murals by Everett Shinn over the proscenium arch. After World War I, theaters were built for several impresarios, among them Henry Miller, Martin Beck, Irving Berlin, Sam Harris, and the members of the Theatre Guild. Most were built for one of two organizations: the Shuberts, producers who built theaters in Times Square and across the nation for lease to producers or in concert with them, and the Chanins, major developers in the city who built six theaters in three years. Between 1916 and 1927 both organizations gave most of their commissions to Herbert J. Krapp, who was known for designing similar theaters with fine acoustics and sightlines, handsome plasterwork, and minimal ornamentation. He designed simple theaters that often had to fit awkward spaces, such as the Ambassador Theatre (1923), which had an angled entrance. The Plymouth and Broadhurst theaters were intended to be simpler versions of the adjoining Shubert and Booth theaters (Henry B. Herts, 1912): they have inexpensive brick and terra-cotta facades and plasterwork in the Adam style. Some of Krapp's simplest facades for the Shuberts are those of the Ritz Theatre (1919–20) and the Imperial Theatre (1923), which were designed to support signboards. For the Chanins he designed the Majestic Theatre, the Royale Theatre, and the Theater Masque (now the Golden Theatre) in 1926–27 in a Spanish-Moorish style executed in simple brickwork with stone trim on the facades.

The Shuberts and the Chanins, both families of immigrants, softened the distinction between the orchestra and the balconies, which was a vestige of class distinction in English theaters; they also replaced separate entryways with a single entrance for all ticket holders, as in the Shuberts' Broadhurst and Plymouth theaters (Krapp, 1917). As the Shuberts strengthened their hold on Broadway theater, an area along West 44th and 45th streets between Seventh and Eighth avenues came to be known informally as "Shubert Alley." The Chanins introduced the "stadium plan" in their 46th Street Theater (Krapp, 1924–25; now the Walter Kerr Theatre), in which the balcony, cantilevered over the lobby rather than the orchestra, merged with the orchestra into an undifferentiated space. Boxes flanking the stage, which had often been reserved for royalty in English theaters, gradually diminished in size and importance: in the Ethel Barrymore Theater (Krapp, 1928) they were entirely ornamental and contained no seats.

Theaters ceased to be built on Broadway during the Depression, and only five were built in the following half-century (others were built at Columbus Circle and Lincoln Center). The American Place, the Uris Theatre (now the Gershwin Theatre), the Circle in the Square Theatre, and the Minskoff Theatre were built after a zoning resolution was passed to encourage the construction of

theaters in new office buildings in Times Square. Despite strong public opposition led by Actors' Equity, the Marquis Theatre was built in the Marriott Marquis Hotel on Broadway between 45th and 46th streets, which replaced five theaters (the Folies Bergère, later known as the Fulton Theatre and then as the Helen Hayes Theatre; the Astor Theatre; the Gaiety Theatre; the Bijou Theatre; and the Morosco Theatre). More than 40 of the original theater buildings in Times Square were demolished during the late twentieth century. Many of the remaining ones have been designated landmarks by the city or the federal government, and most are protected by the special listing of the New York City Planning Commission.

theater criticism. Daily reviews first appeared in New York City when regular theaters opened there in the eighteenth century. Authors writing for the *Daily Advertiser* and the *Gazette of the United States* under the names "Candour" and "Criticus" reviewed plays staged in the John Street Theatre, and by 1796 a circle of daily critics was established in the city. In the beginning of the nineteenth century Washington Irving wrote lively review letters under the name Jonathan Oldstyle for the *Morning Chronicle,* and William Coleman frequently contributed long articles on the theater to the *New York Evening Post.* After 1829 William Leggett carried on Coleman's tradition of providing substantial theater criticism and became the critical champion of Edwin Forrest. In the 1840s plays were reviewed by Edgar Allan Poe for the *Broadway Journal* and the *Evening Mirror* and by Walt Whitman for the *Brooklyn Eagle* (of which he was also the editor). They did not use pseudonyms, unlike many nineteenth-century reviewers including William Winter, who wrote as "Mercutio" for the *Albion* in the early 1860s, and Andrew Carpenter Wheeler, the most influential reviewer just after the Civil War, who wrote for the *New York Weekly Leader* as "Trinculo" and later for the *New York World* and the *Sun* as "Nym Crinkle"; by the 1870s pseudonyms were rarely used. Winter dominated criticism in the city for several decades, writing under his own name as the drama critic for the *New York Tribune* (where he remained until 1909). Henry James, who was not affiliated with any one newspaper, became well known in 1865–69 and 1874–75 for his writings on European theater. The end of the century saw the rise of a new group of critics receptive to modern drama: J. Ranken Towse of the *New York Post* (1874–1927), James Gibbons Huneker of the *New York Recorder* and later the *New York Advertiser* and the *Sun,* Edward August Dithmar of the *New York Times* (1884–1901), known for his advocacy of the playwright Clyde Fitch, and Alan Dale, perhaps the most influential critic, who wrote for the *Evening World* (1887–95), the *New York Evening Journal* (1897–1915), and the *New York American* (1913–21). Critics sometimes came into conflict with producers eager for good reviews, as James Metcalfe of *Life* did with the Theatrical Syndicate.

The leading critics of the 1920s included such talented writers as Robert Benchley, George Jean Nathan, Gilbert W. Gabriel, John Mason Brown, Stark Young, Heywood Broun, Alexander Woollcott, and Joseph Wood Krutch. Perhaps the best-known was Brooks Atkinson, who began reviewing for the *New York Times* in 1926 and remained there until 1960 (except for a few years in the 1940s); he was the first president of the New York Critics' Circle (formed in 1935). During the same years pressure increased on critics to ensure the commercial success of plays in the city by providing positive reviews. In general they acquiesced, and from 1923 to 1950 *Variety* calculated scores based on how often each critic's favorable reviews were followed by success at the box office. The early 1940s were marked by confrontations between on the one hand the producers Jacob and Lee Shubert and on the other Woollcott and Walter Winchell. In an effort to prevent theater managers from denying entry to their productions to reviewers who they thought would be antagonistic, the state legislature passed a bill prohibiting the practice in 1941. The most important critics after World War II were Atkinson, Howard Barnes, and later Walter Kerr of the *New York Herald Tribune* and John Chapman of the *Daily News;* others who had considerable influence included Robert Coleman (the *Daily Mirror*), Louis Kronenberger (*PM*), Robert Garland (the *Journal-American*), Richard Watts (the *New York Post*), William Hawkins (the *New York World-Telegram*), and Ward Morehouse (the *Sun*). The ability of critics to make or break a show caused such widespread concern by the late 1940s that the first "paid preview" was offered in 1952 to curtail their power. This financially "opened" the show before the reviews appeared, and allowed time for publicity to work by word of mouth.

Apart from Atkinson reviewers of plays on Broadway paid little attention to the emerging theater of Off Broadway, and consequently there developed in the early 1960s a separate group of critics who specialized in it, among them Jules Novick and Erika Munk of the *Village Voice.* As the number of daily newspapers diminished (only three remained by 1967) the power of each critic increased commensurately. Public disputes arose between Howard Taubman of the *New York Times* and David Merrick, and in 1968–69 between Kerr, later at the *Times,* and Joseph Papp. A new generation of Broadway critics became prominent in the 1970s and early 1980s, and many of them remained so into the 1990s: Edwin Wilson of the *Wall Street Journal,* Howard Kissel and Martin Gottfried of *Women's Wear Daily,* Frank Rich of the *New York Times,* Clive Barnes of the *Times* and the *New York Post,* John Beaufort of the *Christian Science Monitor,* and Douglas Watt of the *Daily News.* Reviews on television and radio became more common but lacked the influence of those in newspapers. A number of weekly and monthly magazines continued to provide important reviews, among them the *New Yorker* (Edith Oliver, Brendan Gill, and Mimi Kramer), *New York* (John Simon), *Time* (William A. Henry III), *Newsweek* (Jack Kroll), the *Nation,* and the *New Republic.*

By the end of the century regular television and radio reviewing had almost disappeared and only a few newspapers and magazines offered regular reviews and fewer had specific full-time reviewers on their staff. The most influential of these were Ben Brantley at the *New York Times,* Clive Barnes at the *New York Post*, Eric Grode at *The Sun,* and Michael Feingold at the *Village Voice.*

As the reviews in the print media declined in number, electronic reviewing increased in importance. In the opening years of the new century, regular reviewing was provided by major booking Web sites such as nytheatre.com (Martin Denton) and theatermania.com (Brian Scott Lipton), and more significantly by individual Web sites. A few of these, such as Jonathan Kalb's hotreview.org, offered electronic reviews in a traditional format, but more operated as interactive blogs, mixing reviews with other material and encouraging ongoing conversations about productions. A pioneer in blog reviewing was Terry Teachout, the *Wall Street Journal* reviewer, who established the Weblog *About Last Night* in 2003 where he also provided connections to more than 20 other stage blogs, such as George Hunka's *Superfluities* (established 2003) and Garrett Eisler's *The Playgoer* (established 2005).

Marvin Carlson

Theater Row. Complex of small Off-Broadway theaters on 42nd Street between Ninth and 10th avenues. Initiated in 1976 under the auspices of the 42nd Street Development Corporation and the New York State Urban Development Corporation, in the

early twenty-first century it consists of the Acorn, Beckett, Clurman, Kirk, Lion, and Studio theaters, each renovated after several improvement phases from earlier burlesque or moderately sized, legitimate show houses.

Peter L. Donhauser

Theatre Guild. Organization of theater producers. Known initially as the Washington Square Players, it was formed in 1914 by amateurs including the patent lawyer Lawrence Langner (1890–1962), the directors Edward Goodman and Philip Moeller (1880–1958), the actresses Helen Westley (1879–1942) and Ida Rauh, and the bookseller Albert Boni; they sought to present intellectual plays of artistic merit as an alternative to the glossy revues popular on Broadway at the time. The group took its current name in 1918 and in 1920 mounted the American premiere of George Bernard Shaw's *Heartbreak House.* It moved in 1925 to its own theater at 243 West 52nd Street, designed by Norman Bel Geddes, where it presented plays by Shaw, Robert E. Sherwood, Maxwell Anderson, William Saroyan, and S. N. Behrman; it also presented most of Eugene O'Neill's plays on Broadway, including *Marco Millions* (1927) and *Strange Interlude* (1928), which was so long that a dinner intermission was required after the fifth act. Among the actors and actresses that the guild engaged regularly were Katherine Cornell, Eva Le Gallienne, Judith Anderson, Judy Holliday, and Joseph Schildkraut. It cast Alfred Lunt and Lynn Fontanne in Ferenc Molnar's *The Guardsman* in 1924, and the two later appeared together in 18 other productions. Sets, lighting, and costumes were designed by Lee Simonson (1888–1967). The guild sold season subscriptions and by the mid-1920s had more than $600,000 in working capital each season. In 1931 it bought the Westport Country Theatre in Connecticut. During the 1920s and 1930s Langner, Westley, Simonson, Moeller, the financier Maurice Wertheim (1886–1950), and Theresa Helburn (1887–1959) made up the board of directors.

Financial pressure during the Depression led the guild to offer more commercial productions, which nonetheless introduced a new level of artistry to Broadway. Such musicals as *Porgy and Bess* (1935) and *Oklahoma!* (1943) were praised for their innovativeness. After 1939 Helburn was the executive director and Langner and his wife, Armina Marshall (1895–1991), were administrators. The guild produced dramatic plays for the *Theatre Guild of the Air* on radio and *The U.S. Steel Hour* on television and also made motion pictures, the best-known being *The Pawnbroker* (1961). In 1972 the Theatre Guild and its subsidiary American Theatre Society won a special Tony Award for its service to touring companies. The guild's presentation of *Golda* (1977) on Broadway was successful, as was its 1996 production of *State Fair.* For many years, it handled subscription series for the Shubert Organization in New York City and elsewhere through the American Theatre Society. Run from offices on Central Park West (having vacated the Theatre Guild building at 226 West 47th Street), it operated the Theatre at Sea cruises (est. 1975).

Alana Erickson Coble

Theatrical Syndicate. A trust formed in 1896 by the theater producers Marc Klaw, Abraham Erlanger, and Charles Frohman, the booking agent Al(bert) Hayman, and two theater owners from Philadelphia, S. F. Nixon and J. F. Zimmerman. It was intended to bring order to the chaotic booking practices of the time and by 1903 controlled legitimate theater production throughout the United States. In New York City only a few independent producers, including David Belasco, Harrison Grey Fiske, and Minnie Maddern Fiske, successfully challenged the syndicate; the Shubert brothers finally broke its monopoly in 1916.

Don B. Wilmeth

The Gates. Public art installation created in Central Park in 2005. Designed by artists Christo and Jeanne-Claude, the exhibit was made up of a series of metal gates with saffron-colored fabric spread across them. The artists were inspired by the fact that the park had no gates. Spread out over 23 miles (37 kilometers) of walkways in the park, 503 gates were installed, each of them 16 feet (1.8 meters) tall, transforming the experience of walking through the park. The exhibit was installed on 12 February 2005 and removed by 11 March 2005, during which time millions of people visited the park.

Jessica Montesano

Theosophists. The Theosophical movement, organized to explore ancient wisdom, comparative religion, and science, was founded in New York City by the Russian aristocrat Helena Blavatsky and Henry Steel Olcott, a lawyer and journalist. Together they explored the occult and lived at 302 West 47th Street, which became known as the Lamasery, where they sponsored well-attended lectures and parties. They formed the Theosophical Society in September 1875, with Olcott as president and Blavatsky as corresponding secretary. She wrote *Isis Unveiled* (1877), and in 1879 the two moved to India. After the deaths of Blavatsky and Olcott, Theosophy survived in New York City, influencing occultism and a number of artists, including Nicholas Roerich. In the early twenty-first century the society's branches in the city were the Theosophical Society at 240 East 53rd Street and Theosophy Hall at 347 East 72nd Street. The Roerich Museum, dedicated to the work of Nicholas Roerich, is located at 107th Street and Riverside Drive.

Robert Ellwood

Thomas'. Baking company. Founder Samuel Bath Thomas (1855–1919) left England for New York City in 1874 and opened his own bakery shop at 163 Ninth Avenue in 1880. In addition to regular breads, the bakery sold English muffins, a new type of baked good in the United States. During the following decades other stores began buying English muffins from him, deliveries increased to outside New York City, and Thomas opened more bakeries. After his death his daughters and nephews inherited and incorporated the business into S. B. Thomas. In the early twenty-first century Thomas' is owned by George Weston Bakeries, which sells bagels, breads, and multiple flavors of English muffins under the brand name.

Jessica Montesano

Thomas, Andrew J(ackson) (*b* New York City, 1875; *d* New York City, 25 July 1965). Architect. He distinguished himself by developing the community of Jackson Heights for the Queensboro Corporation and became known as a designer of garden apartments set in full-block, open-court plans. In 1920 he completed the Homewood Garden Apartments for the City and Suburban Homes Company (17th Avenue and 73rd Street, Brooklyn) and Linden Court. Thomas's later projects included the Dunbar Apartments in central Harlem (1926–28) for John D. Rockefeller, Jr., buildings in Woodside and Astoria for the Metropolitan Life Insurance Company, the Thomas Garden Apartments at 840 Grand Concourse in the Bronx (1928), and the Dunolly Gardens in Jackson Heights (1939). He wrote *Industrial Housing* (1925).

Marjorie Pearson

Thomas, Dylan (Marlais) (*b* Swansea, England, 27 Oct 1914; *d* New York City, 9 Nov 1953). Poet and performer. Well known in Britain for his intensely personal verse and readings in a ringing voice, the Welsh poet found a new audience in 1950 when he came to New York City at the invitation of John Malcolm Brinnin, director of the Poetry Center at the Young Men's and Women's Hebrew Association (now the 92nd Street Y). Thomas's national tour of 40 universities was a financial and critical success, and he returned to America in 1952 and twice in 1953. New York City at first intimidated Thomas: "I would never get used to the speed, the

noise, the utter indifference of the crowds, the frightening politeness of the intellectuals, and, most of all, those huge phallic towers, up & up & up, hundreds of floors, into the impossible sky." He came to enjoy the city, however, socializing with Allen Ginsberg, E. E. Cummings, and other poets and writers. He usually lived at the Hotel Chelsea at 222 West 23rd Street and spent evenings at the White Horse Tavern, 567 Hudson Street, and other bars. Thomas recorded poems and prose pieces for the new Caedmon record label at Steinway Hall, 109 West 57th Street. On his last visit, in declining health and extremely agitated, Thomas was injected with morphine, fell into a coma, and died on 9 November 1953 at St. Vincent's Hospital. His body was returned to Wales for burial.

Paul Ferris, ed., *The Collected Letters of Dylan Thomas* (London: J. M. Dent, 1985); Peter Thabit Jones and Aeronwy Thomas, "Dylan Thomas Walking Tour of Greenwich Village, New York," http://www.dylanthomas.com/media/pdf/j/m/Dylan_Thomas_Walking_Tour.pdf

John Rousmaniere

Thomas, Franklin A(ugustine) (*b* Brooklyn, 27 May 1934). Lawyer and foundation executive. Educated at Columbia University (BA 1956, LLB 1963), he worked in New York City as a lawyer for the Federal Housing and Home Finance Agency (1963–64), as an assistant U.S. attorney (1964–65), and as an attorney with the police department (1965–67). He was the president and chief executive officer of the Bedford Stuyvesant Restoration Corporation (1967–77). As president of the Ford Foundation (1979–96) he focused on domestic poverty, problems of refugees and immigrants, and leadership in state government. Since 1996, Thomas has worked as a consultant for TTF Study Group, a nonprofit organization working with development in South Africa. He also was hired as chair of the September 11th Fund to aid victims of the 9/11 attacks.

Shan Jayakumar

Thomas, Lowell (Jackson) (*b* Woodington, near Greenville, Ohio, 6 April 1892; *d* Pawling, N.Y., 29 Aug 1981). Broadcaster and writer. In 1930 he was made the broadcaster of the first daily network news program on radio by William S. Paley of the Columbia Broadcasting System (CBS), and until 1976 he worked for both CBS and the National Broadcasting Company (NBC). He traveled widely and often gave reports at remote locations from which radio broadcasts had never before been made. He was also the narrator of *20th Century-Fox Movietone News,* a founder of Capital Cities Communications, and the author of more than 50 books, the best known of which was *With Lawrence in Arabia* (1924). His broadcasts and many of his other writings were done in collaboration with Prosper Buranelli, a former feature writer for the *New York World.* At the end of his career he was the host of the television series *Lowell Thomas Remembers* for the Public Broadcasting System (PBS) and of *The Best Years,* a daily syndicated radio series about the accomplishments of well-known people in their later years; he also wrote an autobiography, *Good Evening Everybody: From Cripple Creek to Samarkand* (1976). Thomas's was the longest continuous career of any reporter in radio.

Judith Adler Hennessee

Thomas, Norman (Mattoon) (*b* Marion, Ohio, 20 Nov 1884; *d* Huntington, N.Y., 19 Dec 1968). Political leader. His family moved to Lewisburg, Pennsylvania, and he attended Bucknell University and then Princeton University, where he graduated in 1905 as the valedictorian of his class. He next moved to New York City and enrolled at Union Theological Seminary where he was influenced by Henry Sloane Coffin; he became the minister of the East Harlem Presbyterian Church on 116th Street between Second and Third avenues in 1911 and in 1917 helped to form the National Civil Rights Bureau (later the American Civil Liberties Union). In 1918 he was pressured by church officials and community members to resign his pastorate because he opposed World War I and belonged to the Socialist Party. After leaving East Harlem he moved with his wife to East 17th Street and entered politics, unsuccessfully seeking election as mayor in 1925 and 1929, state senator in 1926, alderman in 1927, borough president of Manhattan in 1931, and president of the United States in every campaign between 1928 and 1948 (his strongest showing was in 1932 when he received more than 2 percent of all presidential votes cast). A visit to Europe and the Soviet Union in 1937 led him to abandon notions of importing socialism based on the Soviet model, but he remained a committed socialist and peace activist. He formed the Keep America out of War Committee in the city in 1938 but was forced to reassess pacifism by the Spanish Civil War and Nazism; he became an outspoken critic of the internment of Japanese citizens and later protested against nuclear weapons. In 1943 he moved with his family to 20 Gramercy Park. Thomas was at the forefront of American activism during the 1950s and 1960s, protesting McCarthyism and the Korean and Vietnam wars. Toward the end of his life he lived in suburban Cold Spring Harbor, New York, but continued to work in Manhattan and make national speaking tours.

Thomas, Theodore (Christian Friedrich) (*b* Esens [now in Germany], 11 Oct 1835; *d* Chicago, 4 Jan 1905). Conductor and violinist. He arrived in New York City in 1845 and in 1854 became a violinist with the Philharmonic Society. On 29 April 1859 he made his debut as a conductor at the New York Academy of Music, and he then had a distinguished career as the conductor of the Brooklyn Philharmonic Society (1862–91), his own ensemble the Thomas Orchestra (1869–88), and the New York Philharmonic Society (1877–78, 1879–91). He was one of the first orchestral conductors in New York City to popularize German classical music, which he performed at such events as the summer concerts in Central Park (1868–75). As the conductor of the American Opera Company (1886–87), which experienced financial difficulties, he suffered exhaustion from his competition with the rival conductors Anton Seidl and Frank and Peter Damrosch, and in 1891 he moved to Chicago.

Thomashevsky, Boris (*b* Ukraine, 12 May 1868; *d* New York City, 9 July 1939). Yiddish theater actor. Thomashevsky is considered by most critics to be the greatest actor of the Yiddish theater, which thrived in New York City from the late nineteenth through the early twentieth centuries. An immigrant from the Ukraine with no formal voice training, he learned about music from listening to fellow workers in a cigarette-manufacturing sweatshop who sang tunes from Yiddish productions. By the time he was 13, Thomashevsky, a forceful tenor, was touring with Yiddish theater companies, singing and acting. He performed with many companies; at its peak there were a dozen based in New York City and as many as 200 traveling to cities where Jewish immigrants had settled. He produced the first Yiddish Shakespeare plays in New York City, including *King Lear, Othello,* and *Hamlet;* his repertoire also included *Faust, Salome,* and *Parsifal,* as well as popular productions dealing with common issues of immigrant life, such as *The Singing Rabbi.* During the first two decades of the twentieth century, Thomashevsky packed the Yiddish theaters. He also made several movies, including the acclaimed *Bar Mitzvah* in 1935. More than 30,000 people attended his funeral in 1939.

Lisa Keller

Thomas Y. Crowell Company. Firm of book publishers formed in 1876 by Thomas

Young Crowell at 744 Broadway. It published little fiction, focusing instead on specially bound gift editions as well as religious and inspirational titles. With its publication in 1886 of *Roget's Thesaurus* it also developed a strong list of reference books, and in the same year it established a children's list that eventually became a leader among book publishers. Crowell remained autonomous after being acquired in 1968 by Dun–Donnelly Publishing Company; in 1979 it became an imprint of Harper and Row.

Eileen K. Cheng

Thompson, Kay (*b* St. Louis, 9 Nov *ca* 1903; *d* New York City, 2 July 1998). Actress and author. See Eloise.

Thomson, Virgil (Garnett) (*b* Kansas City, Mo., 25 Nov 1896; *d* New York City, 30 Sept 1989). Composer and critic. After early study in Kansas City and then with Edward Burlingame Hill at Harvard, he studied the organ and counterpoint with Nadia Boulanger from 1919 to 1921 in Paris, where he took up residence. His opera *Four Saints in Three Acts* (1933), to a libretto by Gertrude Stein, was staged on Broadway for 48 performances in 1934 with an all-black cast and launched his career. After the fall of Paris in 1940 he moved to New York City, where he spent the rest of his life at the Chelsea Hotel on 23rd Street. In addition to composing he wrote acerbic, witty, and often controversial music criticism for the *New York Herald Tribune* from 1940 to 1954. His second opera to a libretto by Stein, *The Mother of Us All,* was first performed in 1947 at Columbia University; *Lord Byron,* his last opera, was given its premiere at the Juilliard School in April 1972. Thomson's music is characterized by a fondness for Americana, a conception of harmony that owes something to the French impressionists, and an aphoristic quality reminiscent of Erik Satie. Among his compositions inspired by New York City are *The Mayor LaGuardia Waltzes* (1942), *Crossing Brooklyn Ferry* (1958), and *Metropolitan Museum Fanfare* (1969).

Barbara L. Tischler

Thorndike, Edward L(ee) (*b* Williamsburg, Mass., 31 Aug 1874; *d* Montrose, near Croton-on-Hudson, N.Y., 9 Aug 1949). Psychologist. He attended Wesleyan College and Harvard University and in 1898 received his PhD from Columbia University for a dissertation on animal psychology, a subject that he was among the first to study scientifically. In 1899 he joined the faculty of Teachers College at Columbia; he became a full professor there in 1904 and the director of the division of psychology of the Institute of Educational Research in 1922. His belief that measurement was the key to scientific progress in education and psychology led him to devise several tests that were later used to assess intelligence and evaluate handwriting, drawing, and reading. He wrote many basic texts in the field of educational psychology, helped design intelligence tests for the U.S. Army during World War I, and published more than 500 books and articles on behavior, education, intelligence, and the learning process. Thorndike was also a president of the American Psychological Association, the American Association for the Advancement of Science, and the New York Academy of Science. He remained at Columbia until his retirement in 1940.

Sandra Opdycke

Thorne's Neck. Former name of the peninsula in Queens later known as Willets Point.

311. New York City's nonemergency hotline. The idea of the hotline was first launched in Baltimore and was introduced in New York City by Mayor Michael Bloomberg in 2003. The individual phone numbers for various city agencies were consolidated into one phone number through which people could be connected to agencies specific to their complaints or inquiries, in an effort to avoid overlapping jurisdictions among city government departments. While offering a more organized system for handling citizens' phone calls on all nonemergency, city-related matters, the system also allowed for Bloomberg to gauge the performance of the city officials responsible for helping callers, as well as of the organization of the city's services. In 2008 the system received on average 15,000 calls a day through 375 operators, who worked out of centers in lower Manhattan and Long Island City. It has been hailed as one of Bloomberg's greater contributions throughout his mayoralty.

Cecilia Magnusson

Throg(g)s Neck. Neighborhood in the northeastern Bronx, lying on a peninsula overlooking Long Island Sound to the north and east and the East River to the south. The area was called Vriedelandt by the Dutch and derives its current name from John Throckmorton, an Englishman whom the Dutch allowed in 1642 to settle a colony in the area; the colony was eventually driven out by American Indian uprisings. The peninsula was mapped as Frockes Neck in 1668, and General George Washington wrote of Frogs Neck in his journal during an invasion of 4000 redcoats and Hessians in 1776. In the nineteenth century the area became the site of estates and farms where Irish immigrants worked as servants and tenant farmers. The construction from 1833 to 1856 of Fort Schuyler drew laborers, stonemasons, and other craftsmen and their families to the area, which in the late part of the century became a fashionable summer resort. When all of what is now the Bronx became part of New York City in 1895, the expanding transit lines spurred an influx of Italian farmers and tradesmen. Old landowners sold out to developers, and soon rows of private houses covered what had been cultivated estates. Fort Schuyler ceased being an active military installation in 1932 and then became the campus for the cadets of the New York State Maritime College. The neighborhood changed again in 1961 when the Throgs Neck Bridge was completed, and the Throgs Neck, Cross Bronx, and Bruckner expressways ended its comparative isolation. Throgs Neck has several beach clubs and marinas, and a diverse housing stock that includes modest middle-class housing, expensive beachfront condominiums such as White Beach, former summer resorts such as Silver Beach and Edgewater Park that have been converted to cooperative ownership, and Throgs Neck Houses, begun in 1953 as one of the first low-income housing projects in the city. In 2006 the population was about 22,000 residents, mostly of Italian, Irish, and German ancestry. In the early twenty-first century many first-generation Italian immigrants remained in the neighborhood.

John McNamara, *History in Asphalt: The Origin of Bronx Street and Place Names* (New York: Bronx County Historical Society, 1984); John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

John McNamara

Throgs Neck Bridge. Steel suspension bridge spanning the East River between Throgs Neck in the Bronx and Bayside in northern Queens. Designed by Othmar H. Ammann and built at a cost of $92 million by the Triborough Bridge and Tunnel Authority, it was built to relieve traffic congestion on the Bronx–Whitestone Bridge, 2 miles (3 kilometers) to the west. It opened on 11 January 1961 and was used by an average of 63,000 vehicles a day during its first year. The bridge has six lanes, a main span of 1800 feet (549 meters) between two towers 360 feet (110 meters) high, and a total length of 13,410 feet (4087 meters). The bridge is an important element in a system of highways that connect New Jersey, upstate New York, New England, and Long Island. In the mid-1980s a controversy occurred when the Metropolitan Transportation Authority (MTA) intended to use South Korean steel to reconstruct the roadway of the bridge. After several "Buy American" protests by union workers and their supporters, the MTA purchased steel from domestic mills. Usage of the bridge expanded

early in the twenty-first century to an average of more than 100,000 vehicles a day.

Rebecca Read Shanor

Thumb, Tom. See Stratton, Charles Sherwood.

Thurber, James (Grover). (*b* Columbus, Ohio, 18 Dec 1894; *d* New York City, 2 Nov 1961). Humorist and cartoonist. After attending Ohio State University he worked on newspapers in Columbus and Paris. In 1926 he moved to New York City to work for the *Evening Post.* He soon left to join the staff of the *New Yorker*, for which he provided humorous stories and drawings. He began drawing cartoons for that magazine when his colleague E. B. White discovered Thurber's cartoons in the trash and submitted them for publication. He collaborated with White on the book *Is Sex Necessary?* (1929) and with Elliot Nugent on the play *The Male Animal* (1940), which had two runs on Broadway. He had quarters at 65 West 11th Street in 1928–29 and from that time lived mostly at the Algonquin Hotel at 59 West 44th Street. From the autumn of 1935 until the summer of 1936 he lived at 8 Fifth Avenue. Among Thurber's many books are *My Life and Hard Times* (1933), *Men, Women and Dogs* (1945), and the *Years with Ross* (1957), recollections of working at the *New Yorker*. His short story "The Secret Life of Walter Mitty" (1939) inspired the motion picture. He wrote the children's books *Many Moons* (1943) and *The White Deer* (1945) as well as the Broadway play *A Thurber Carnival* (1960), in which he starred as himself.

Photographer Andreas Feininger's view of a ticker-tape parade

ticker-tape parades. Parades given in New York City to honor heroes, champion athletes, pioneers of air and space travel, political leaders, soldiers, and sailors. The parades begin at the Battery at the southern end of Manhattan. Those honored ride in open limousines or on parade floats up lower Broadway, the "canyon of heroes," to City Hall where the mayor hosts a reception. Spectators shower confetti and shredded paper, and in the past ticker tape, on the parade. (Ticker tape, invented in 1867, was a 1-inch-wide ribbon of paper on which ticker machines recorded telegraphed stock quotes; its use was discontinued in the 1960s.) Contemporary accounts of the earliest parades describe the cascade of ticker tape as a spontaneous gesture by office workers. Grover A. Whalen, chairman of the mayor's reception committee (1919–53), recognized the promotional value of ticker-tape parades and established them as a function of municipal government. From 1919 to the present, the mayor has decided who will receive a ticker-tape parade.

During the 1920s it became customary to hail arriving heads of state with a ticker-tape parade. The city started a tradition of recognizing champion athletes with the parade for the U.S. Olympic team on 6 August 1924. The legendary reception on 13 June 1927 for Charles Lindbergh's solo transatlantic flight, one of 17 parades for achievements in aviation, made the ticker-tape parade famous around the world. From 1945 to 1965 the city staged 130 ticker-tape parades, more than half of them welcoming heads of state, usually at the request of the U.S. Department of State. During this cold war period, many parades featured men and women of the armed services. By the mid-1960s there had been so many ticker-tape parades that they came to be seen as routine. Mayor John V. Lindsay, elected in 1965, ended the practice of greeting heads of state with ticker-tape parades but kept the tradition alive for celebrating the success of the U.S. Apollo space program (10 January to 13 August 1969) and the World Series–winning Mets baseball team (20 October 1969). The number of parades dropped considerably during the last decades of the twentieth century, though parades still celebrated sports champions, war veterans, and noted individuals, such as Pope John Paul II (1979) South African leader Nelson Mandela (1990), astronaut John Glenn (1998), and baseball player Sammy Sosa (1998).

There have been numerous recipients of more than one ticker-tape parade, including sea captain George Fried (1926 and 1929), golfer Bobby Jones (1926 and 1930), Admiral Richard E. Byrd (1927 and 1930), the aviators Amelia Earhart (1928 and 1932) and Wiley

Ticker-Tape Parades, 1886–2009

1886–95

28 Oct 1886, Dedication of the Statue of Liberty

29 April 1889, Centennial of George Washington's inauguration as first president of the United States

1896–1905

30 Sept 1899, Adm. George Dewey, hero of the Battle of Manila during the Spanish–American War

1906–15

18 June 1910, Theodore Roosevelt, former president of the United States, on his return from an African safari

1916–25

9 May 1917, Joseph J. C. Joffre, marshal of France

8 Sept 1919, Gen. John J. Pershing, commander in chief, American Expeditionary Force in World War I

3 Oct 1919, Albert and Elizabeth, King and Queen of the Belgians

18 Nov 1919, Edward Albert, Prince of Wales

19 Oct 1921, Gen. Armando V. Diaz, chief of staff of the Italian army

21 Oct 1921, Adm. Lord David Beatty, commander of the British and Allied fleets in World War I

28 Oct 1921, Ferdinand Foch, marshal of France, commander of the Allied armies in World War I

18 Nov 1922, Georges Clemenceau, premier of France during World War I

5 Oct 1923, David Lloyd George, prime minister of Great Britain during World War I

6 Aug 1924, U.S. Olympic athletes on their return from the Paris games

1926–35

16 Feb 1926, Capt. George Fried and the crew of the steamship *President Roosevelt* for rescuing the crew of the British freighter *Antinoe*

27 May 1926, Gustaf Adolf and Louise, Crown Prince and Princess of Sweden

23 June 1926, Lt. Cmdr. Richard E. Byrd and Floyd Bennett for the first flight over the North Pole

2 July 1926, Bobby Jones, British Open champion

27 Aug 1926, Gertrude Ederle, first woman to swim the English Channel

10 Sept 1926, Mille Gade Corson, first mother and second woman to swim the English Channel

18 Oct 1926, Marie, Queen of Romania

13 June 1927, Charles A. Lindbergh for the first solo nonstop transatlantic flight

18 July 1927, Double parade for two separate transatlantic flights: one by Cmdr. Richard E. Byrd, Lt. George O. Noville, Bernt Balchen, and Bert Acosta; and the other by Clarence D. Chamberlin and Charles A. Levine

11 Nov 1927, Ruth Elder, first woman to attempt a transatlantic flight, with pilot George Haldeman

20 Jan 1928, William T. Cosgrave, president of Ireland

30 April 1928, Capt. Hermann Koehl, Maj. James Fitzmaurice, and Baron Guenther von Huenefeld for the longest westward transatlantic flight

4 May 1928, Prince Ludovico Potenziani Spada, governor of Rome

6 July 1928, Amelia Earhart, first woman to complete a transatlantic flight, with pilots Wilmer Stultz and Louis E. Gordon

16 Oct 1928, Dr. Hugo Eckener and the crew of the dirigible *Graf Zeppelin* for the first commercial transatlantic flight

28 Jan 1929, Capt. George Fried, Chief Officer Harry Manning, and the crew of the steamship *America* for rescuing the crew of the Italian freighter *Florida*

4 Oct 1929, Ramsay MacDonald, prime minister of Great Britain

29 April 1930, Henry Lewis Stimson, secretary of state, and U.S. delegates returning from the London Naval Disarmament Conference

26 May 1930, Marquis Jacques de Dampierre and family, descendants of the Marquis de Lafayette, passengers on the maiden voyage of the French ocean liner *Lafayette*

11 June 1930, Dr. Julio Prestes de Albuquerque, president-elect of Brazil

18 June 1930, Rear Adm. Richard E. Byrd for his first Antarctic expedition and flight over the South Pole

2 July 1930, Bobby Jones, British Open champion

3 Sept 1930, Capt. Dieudonné Costes and Maurice Bellonte for the first nonstop transatlantic flight from Paris to Long Island

2 July 1931, Wiley Post and Harold Gatty for their flight around the world (eight days, 15 hours, 51 minutes)

2 Sept 1931, Olin J. Stephens, Jr., and the crew of the *Dorade*, winners of transatlantic yacht race from Newport, Rhode Island, to Plymouth, England

22 Oct 1931, Pierre Laval, premier of France

26 Oct 1931, Henri Philippe Pétain, marshal of France

30 Nov 1931, Dino Grandi, foreign minister of Italy

20 June 1932, Amelia Earhart for the first solo transatlantic flight by a woman

21 July 1933, Italian Air Marshal Italo Balbo and the crews of 24 seaplanes for their flight from Rome to Chicago

26 July 1933, Wiley Post for the first solo flight around the world (seven days, 18 hours, 49 minutes)

1 Aug 1933, Pilots Amy Johnson and Capt. James A. Mollison, the first married couple to fly the Atlantic

1936–45

3 Sept 1936, Jesse Owens and members of the U.S. Olympic team on their return from the Berlin games

15 July 1938, Howard Hughes and crew for their record-breaking flight around the world (three days, 19 hours, eight minutes)

5 Aug 1938, Douglas "Wrong Way" Corrigan for his flight from New York to Ireland instead of his "intended" destination of California

27 April 1939, Olav and Martha, Crown Prince and Princess of Norway

1 May 1939, Rear Adm. Alfred W. Johnson, officers and men of the Atlantic Squadron of the U.S. Fleet

19 June 1945, Gen. Dwight D. Eisenhower, supreme commander of the Allied Expeditionary Force in World War II

27 Aug 1945, Gen. Charles de Gaulle, president of the Provisional Government of France

13 Sept 1945, Gen. Jonathan M. Wainwright, hero of the Battles of Bataan and Corregidor in World War II

9 Oct 1945, Fleet Adm. Chester W. Nimitz, commander in chief of the navy's Pacific Fleet in World War II

27 Oct 1945, Harry S. Truman, president of the United States

14 Dec 1945, Fleet Adm. William F. Halsey, Jr., commander of the navy's Third Fleet in World War II

1946–55

15 March 1946, Winston Churchill, prime minister of Great Britain during World War II

23 Oct 1946, Delegates to the first plenary session of the General Assembly of the United Nations

25 Oct 1946, Col. Clarence S. Irvine, commander of the B-29 *Dreamboat*, and his crew for their Honolulu-to-Cairo flight over the North Pole

13 Jan 1947, Alcide De Gasperi, premier of Italy

7 Feb 1947, Harold Alexander, viscount of Tunis, field marshal of the British armies in World War II, and governor-general of Canada

(*continued*)

Ticker-Tape Parades, 1886–2009 (*Continued*)

2 May 1947, Miguel Alemán, president of Mexico
9 June 1947, Willie Turnesa, British amateur golf champion, and fellow members of the victorious American Walker Cup team
5 Nov 1947, Officers and crew of the French warship *Georges Leygues* for bringing rare French tapestries for exhibition at the Metropolitan Museum of Art
18 Nov 1947, Friendship Train bearing gifts and supplies from the United States to Europe
9 March 1948, Eamon De Valera, former prime minister of Ireland
7 July 1948, Rómulo Gallegos, president of Venezuela
3 Feb 1949, French Gratitude Train bearing gifts from France to the United States in appreciation of the Friendship Train
19 May 1949, Gen. Lucius D. Clay, military governor of Germany and commander of the Berlin airlift
23 May 1949, Eurico Gaspar Dutra, president of Brazil
11 Aug 1949, Elpidio Quirino, president of the Philippines
19 Aug 1949, Connie Mack on his 50th year as manager of the Philadelphia Athletics baseball team
16 Sept 1949, 48 European journalists in celebration of Freedom of the Press Day during their U.S. tour
4 Oct 1949, Raymond A. Garbarina Memorial Post 1523 for winning the American Legion Drum and Bugle Corps national championship
17 Oct 1949, Jawaharlal Nehru, prime minister of India
21 Nov 1949, Mohammad Reza Pahlevi, shah of Iran
17 April 1950, Gabriel González Videla, president of Chile
28 April 1950, Adm. Thomas C. Kinkaid, hero of World War II naval battles and retiring commander of the navy's Eastern Sea Frontier and the Atlantic Reserve Fleet
8 May 1950, Liaquat Ali Khan, prime minister of Pakistan
9 May 1950, Fernando Casas Alemán, governor of Mexico City Federal District
10 May 1950, Ten foreign mayors attending the 18th annual U.S. Conference of Mayors
2 June 1950, Fourth Marine Division Association veterans of Pacific Battles in World War II
4 Aug 1950, Robert Gordon Menzies, prime minister of Australia
22 Aug 1950, Lt. Gen. Clarence R. Huebner, commander of U.S. Armed Forces in Europe
31 Aug 1950, William O'Dwyer upon his resignation as mayor of the City of New York
3 April 1951, Vincent Auriol, president of France
20 April 1951, Gen. Douglas MacArthur
9 May 1951, David Ben-Gurion, prime minister of Israel
24 May 1951, U.S. Army Fourth Infantry Division, Eighth Regimental Combat Team: the first NATO troops to be sent overseas
25 June 1951, Galo Plaza Lasso, native New Yorker and president of Ecuador
17 Sept 1951, Sir Denys Lowson, 623rd lord mayor of London
28 Sept 1951, Alcide De Gasperi, premier of Italy
8 Oct 1951, New York National Guard's 165th Infantry Regiment on its centennial
29 Oct 1951, 50 wounded United Nations veterans of the Korean War
13 Nov 1951, Women in the armed services
17 Jan 1952, Capt. Henrik Kurt Carlsen for his heroic attempt to save his sinking ship, the SS *Flying Enterprise*
7 April 1952, Juliana, Queen of the Netherlands, and Prince Bernhard
14 May 1952, Mayors of 250 cities attending the 20th annual U.S. Conference of Mayors
7 July 1952, U.S. Olympic team send-off to the Helsinki games
18 July 1952, Commodore Harry Manning, Chief Engineer William Kaiser, and crew of the SS *United States* for setting a new transatlantic speed record
18 Dec 1952, Lt. Gen. Willis D. Crittenberger, retiring commander of the First Army
30 Jan 1953, Vice Adm. Walter S. Delany, commander of the navy's Eastern Sea Frontier and the Atlantic Reserve Fleet
3 April 1953, Metropolitan New York Combat Contingent, the first U.S. Army troops to return from the Korean War
24 April 1953, Gen. James A. Van Fleet, retired commander of the United Nations ground troops in Korea
26 May 1953, New York City departments and units of the armed services to commemorate the 150th anniversary of the laying of the cornerstone for City Hall
21 July 1953, Ben Hogan, British Open champion
1 Oct 1953, José Antonio Remón, president of Panama
20 Oct 1953, Gen. Mark W. Clark, retiring commander of U.S. forces in the Far East
26 Oct 1953, Maj. Gen. William F. Dean, hero of Taejon and prisoner of war for three years during the Korean War
2 Nov 1953, Paul I and Frederika, King and Queen of Greece
5 Nov 1953, Lt. Gen. James H. Doolittle and marching units from the armed forces in observance of the 50th anniversary of powered flight
21 Dec 1953, 144 convalescing Korean War veterans from the New York metropolitan area
1 Feb 1954, Celâl Bayar, president of Turkey
31 March 1954, 4000 New York City firefighters in observance of Firemen's Day
22 April 1954, Veterans of the 45th "Thunderbird" Infantry Division on their return from the Korean War
1 June 1954, Haile Selassie, emperor of Ethiopia
26 July 1954, Geneviève de Galard-Terraube, a nurse known as the Angel of Dienbienphu for staying with wounded French soldiers in Vietnam
2 Aug 1954, Syngman Rhee, president of South Korea
27 Sept 1954, New York Giants, National League champions
28 Oct 1954, William V. S. Tubman, president of Liberia
19 Nov 1954, Lt. Gen. Withers A. Burress, retiring commander of the First Army
31 Jan 1955, Paul Eugène Magloire, president of Haiti
1 March 1955, New York Chapter of the American Red Cross to kick off their 1955 fund-raising campaign
15 April 1955, 3000 New York City firefighters in observance of Firemen's Day
11 Aug 1955, Order of the Knights of Pythias
4 Nov 1955, Carlos Castillo Armas, president of Guatemala
9 Dec 1955, Luis Batlle Berres, president of Uruguay

1956–65

12 March 1956, Giovanni Gronchi, president of Italy
23 May 1956, Sukarno, president of Indonesia
30 Aug 1956, 3000 volunteer firefighters attending the 84th annual convention of the New York State Firemen's Association
2 May 1957, 62 U.S. Navy and Marine veterans of World War II and the Korean War
13 May 1957, Ngo Dinh Diem, president of South Vietnam
2 July 1957, Capt. Alan J. Villiers and the crew of the replica ship *Mayflower II*
11 July 1957, Althea Gibson, Wimbledon women's champion

4 Nov 1959, Sékou Touré, president of Guinea
9 March 1960, Carol Heiss, Women's Olympic figure-skating champion
11 April 1960, Dr. Alberto Lleras Camargo, president of Colombia
26 April 1960, Charles de Gaulle, president of France
2 May 1960, Mahendra Bir Bikram Shah Dev and Ratna Rajya Lakshmi Devi Shah, King and Queen of Nepal
5 July 1960, Bhumibol Adulyadej and Sirikit, King and Queen of Thailand
14 Oct 1960, Frederick IX and Ingrid, King and Queen of Denmark
19 Oct 1960, Senator John F. Kennedy, Democratic presidential nominee
2 Nov 1960, Dwight D. Eisenhower, president of the United States, and Vice President Richard M. Nixon, Republican presidential nominee
11 May 1961, Habib Bourguiba, president of Tunisia
14 July 1961, Mohammad Ayub Khan, president of Pakistan
22 Sept 1961, Manuel Prado Ugarteche, president of Peru
13 Oct 1961, Gen. Ibrahim Abboud, Sudanese leader
27 Oct 1961, Capt. Thomas J. Walker, crew and builders of the USS *Constellation*, the world's largest aircraft carrier
1 March 1962, Lt. Col. John H. Glenn, Jr., first American to orbit the earth
16 March 1962, Ahmadou Ahidjo, president of Cameroon
22 March 1962, Sylvanus Olympio, president of Togo
5 April 1962, João Goulart, president of Brazil
12 April 1962, New York Mets, new National League baseball team
16 April 1962, Mohammad Reza Pahlevi, shah of Iran, and Empress Farah
25 May 1962, Félix Houphouët-Boigny, president of the Ivory Coast
8 June 1962, Archbishop Makarios III, president of Cyprus
14 June 1962, Roberto F. Chiari, president of Panama
1 April 1963, Hassan II, King of Morocco
22 May 1963, Maj. L. Gordon Cooper, Jr., *Mercury* astronaut who orbited the earth 22 times
10 June 1963, Dr. Sarvepalli Radhakrishnan, president of India
10 Sept 1963, Mohammad Zahir Shah and Homaira, King and Queen of Afghanistan
4 Oct 1963, Haile Selassie, emperor of Ethiopia
16 July 1964, Crews of sailing vessels participating in Operation Sail
3 Sept 1964, Staten Island's Mid-Island All-Stars, Little League World Series champions
8 Oct 1964, Diosdado Macapagal, president of the Philippines
29 March 1965, Maj. Virgil I. Grissom and Lt. Cmdr. John W. Young, *Gemini III* astronauts
19 May 1965, Park Chung Hee, president of South Korea
1 June 1965, 4500 firefighters celebrate the 100th anniversary of New York City's first professional fire department

1966–75

10 Jan 1969, Lt. Col. Frank Borman, Lt. Col. William A. Anders, and Capt. James A. Lovell, Jr., *Apollo 8* astronauts, the first people to see the far side of the moon
13 Aug 1969, Neil A. Armstrong, Col. Buzz Aldrin, and Lt. Col. Michael Collins, *Apollo 11* astronauts, for the first manned moon landing
20 Oct 1969, New York Mets, World Series champions

1976–85

6 July 1976, Crews of sailing vessels participating in Operation Sail for the United States bicentennial
19 Oct 1977, New York Yankees, World Series champions
19 Oct 1978, New York Yankees, World Series champions
3 Oct 1979, Pope John Paul II
30 Jan 1981, U.S. hostages released from Iran after 444 days in captivity
15 Aug 1984, U.S. Olympic medal winners from the Los Angeles games
7 May 1985, Vietnam War veterans

1986–95

28 Oct 1986, New York Mets, World Series champions
20 June 1990, Nelson Mandela, African National Congress leader
10 June 1991, Persian Gulf War veterans
25 June 1991, Korean War veterans
17 June 1994, New York Rangers, Stanley Cup champions

1996–2009

29 Oct 1996, New York Yankees, World Series champions
17 Oct 1998, Sammy Sosa, Chicago Cubs baseball player who broke the single-season home-run record
23 Oct 1998, New York Yankees, World Series champions
16 Nov 1998, Senator John Glenn and fellow crew members of the U.S. space shuttle *Discovery*
29 Oct 1999, New York Yankees, World Series champions
30 Oct 2000, New York Yankees, World Series champions
5 Feb 2008, New York Giants, Super Bowl champions
6 Nov 2009, New York Yankees, World Series champions

Post (1931 and 1933), Dwight D. Eisenhower (1945 and 1960), French president Charles de Gaulle (1945 and 1960), Italian premier Alcide De Gasperi (1947 and 1951), Ethiopian emperor Haile Selassie (1954 and 1963), astronaut John Glenn (1962 and 1998), the New York Mets (1962, 1969, and 1986), and the New York Yankees (1977, 1978, 1996, 1998, 1999, and 2000). The largest ticker-tape parade, as measured by the amount of paper collected by the Sanitation Department, took place on 1 March 1962 for astronaut John Glenn. It resulted in 3474 tons (3152 metric tons) of scrap paper along the 7-mile (11-kilometer) route through the city (longer than the traditional route from the Battery to City Hall). Of parades confined to lower Broadway, Douglas "Wrong Way" Corrigan (5 August 1938, who flew to Ireland

Ticker-tape parade for Major General William F. Dean, 26 October 1953

instead of California) and Howard Hughes (15 July 1938, after his record-breaking flight around the world) were the champions of paper usage, at 1900 and 1800 tons (1724 and 1633 metric tons), respectively. Parades in the twenty-first century average about 50 tons (45 metric tons) of scrap paper.

Kenneth R. Cobb

tides and currents. New York Harbor challenges navigators with its flow of tidal currents, as the water level rises and falls approximately 5 feet (1.5 meters) every six and a half hours (and more during the spring tides that arrive with the full moon). Every hour, hundreds of millions of gallons of water flow in the harbor, from or back to three large bodies of water: the Atlantic Ocean through Ambrose Channel, the Hudson River off the Battery, and Long Island Sound through the East River. A prolonged, strong south wind can push even more water into the harbor, and a brisk northerly will blow water out—in both cases changing water depth and disrupting the tide's schedule and velocity.

The most dangerous tidal currents are at the aptly named Hell Gate, where the East River turns sharply toward Long Island Sound. The area already had that name and was a graveyard of ships in 1670, when a mariner, Daniel Denton, wrote that "there runneth a violent stream both upon flood and ebb, and in the middle lieth some islands of rocks, which the current sets so violently upon, that it threatens present shipwreck; and upon the flood is a large whirlpool, which continually sends forth a hideous roaring." Even though the boulders were dynamited in the late 1800s, Hell Gate's currents continue to run as fast as 5 to 6 knots (5.8 to 6.9 mph), often swirling violently.

The water moves less quickly and more straightly in the main part of the two rivers. In the Hudson, the flow usually runs 10 percent faster on the ebb, when it carries freshwater out of the great inland watershed, than it does on the flood, which carries saltwater all the way to Albany. Off the Battery, where the Hudson and the East rivers meet, the currents can be risky to navigate. Two hours after high water, the ebb current out of the East River meets the flow out of the Hudson in an intricate, confusing pattern that the *U.S. Coast Pilot* calls "the Spider." It can push unwary ships down onto Governor's Island.

River currents were quickened in the early 1800s when the construction of wharves and piers, and the dumping of vast amounts of garbage and human waste, constricted the Hudson and especially the East River, where flow sped up by more than half a knot. Currents were further accelerated by dredging harbor channels from the normal average depth of 20 feet (6.1 meters) at low tide to at least 40 feet (12.2 meters) to accommodate ocean liners, and (in the early twenty-first century) to more than 60 feet (18.3 meters) in order to allow the biggest container ships to enter and leave the harbor safely.

Meanwhile, knowledge of currents and tides advanced with the development of current-recording buoys, satellite imaging, and computer modeling. The New York Harbor Observing and Prediction System (NYHOPS) at the Stevens Institute of Technology employs these and other tools in enhancing both navigation and port security, while also managing emergencies. After the emergency landing of U.S. Airways Flight 1549 on the Hudson off 48th Street on 15 January 2009 (the "Miracle on the Hudson"), NYHOPS advised New York City's Office of Emergency Management, the New York Fire Department, and the National Transportation Safety Board concerning the environmental conditions surrounding the slowly sinking airplane as it drifted down the river on an ebb tide. The system's advice to deploy rescue vessels south of the landing site and then to pull the plane to the west side of the Battery, where currents were then weakest, helped lead to the rescue of all 155 people on board the plane and the recovery of the aircraft.

John Rousmaniere

Tiemann, Daniel F(awcett) (*b* New York City, 9 Jan 1805; *d* New York City, 18 June 1899). Mayor. A paint dealer and member of Tammany Hall, he became known as a Democratic alderman and almshouse governor before winning the mayoral election of 1858, in which he called attention to the outrageous excesses of his opponent, Fernando Wood. While in office he reorganized the Board of Education and set up an efficient

government based on honesty. He did not receive his party's nomination again.

James E. Mooney

Tiffany, Louis Comfort (*b* New York City, 18 Feb 1848; *d* New York City, 17 Jan 1933). Artist and designer. He was born at 57 Warren Street. As a young man he studied painting in New York City and Paris and pursued a career in the decorative arts rather than enter his father's business, Tiffany and Company. He soon became one of the most innovative designers of the American Aesthetic movement. During the late 1870s he and his rival, John La Farge, revolutionized the production of stained glass. By 1881 they were granted patents for a kind of opalescent glass with inherent tonal gradations, textures, and densities that could be used for detailing rather than enamels. In 1879 Tiffany opened his own firm, Louis C. Tiffany and Associated Artists, which decorated the interiors of mansions and private clubs. In 1893 he built a factory in Queens that produced Favrile, a line of organically shaped objects free blown from integrally colored glass that was often iridescent; these items were widely exhibited in Europe and gained him international recognition. This factory became known as Tiffany Studios, which in the early twentieth century produced decorative light fixtures, metalwork, enamelware, ceramics, and jewelry that were sold from his showroom in Manhattan, as well as thousands of windows, many of which remained in their original settings into the twenty-first century. For many years Tiffany lived at 27 East 72nd Street; his last home was at 19 East 72nd Street. A wide range of his work is displayed by the Metropolitan Museum of Art, and many of his lamps are held by the New-York Historical Society. One of his surviving interiors is the restored Veterans' Room of the Seventh Regiment Armory on Park Avenue.

Tiffany and Company. Firm of jewelers at 727 Fifth Avenue in Manhattan, formed on 21 September 1837 as Tiffany and Young by Charles L. Tiffany (1812–1902) and John B. Young. At the outset it sold stationery and fancy goods at 237 Broadway. When Jabez Ellis became a partner in 1841, the firm changed its name to Tiffany, Young and Ellis and began selling jewelry and silver from Europe; it soon manufactured jewelry in gold (from 1848) and silver (from 1851). In 1853 Tiffany bought out Young and Ellis, and the name became Tiffany and Company. As its business expanded, the firm moved successively to 271 Broadway (1847), 550 Broadway (1854), Union Square (1870), the corner of 37th Street and Fifth Avenue (1905), and its present location (1940). Under the direction of Edward C. Moore (1827–91), Paulding Farnham (1859–1927), and George Frederick Kunz (1856–1932) the firm achieved international recognition for its innovative designs (particularly of Japanesque-inspired silver) and elaborate diamond and enameled jewelry, and for its collection of rare gemstones. On Tiffany's death in 1902 his son Louis Comfort Tiffany became vice president and artistic director of the company, and from 1907 to 1933 a department manufactured and sold his jewelry and enamels. Walter Hoving (1897–1989) took over the firm in 1955 and worked with such talented designers as Jean Schlumberger (1907–87), Donald Claflin (1931–79), Angela Cummings (*b* 1944), Elsa Peretti (*b* 1940), and Paloma Picasso (*b* 1949). Tiffany and Company was bought in 1979 by Avon Products. During the tenure of William R. Chaney (*b* 1932) the firm was sold by Avon in 1984 and expanded nationally and internationally. Truman Capote's novella *Breakfast at Tiffany's* (1958), later made into a film, helped to make Tiffany the most famous jewelry store in the United States.

Tilden, Samuel J(ones) (*b* New Lebanon, N.Y., 9 Feb 1814; *d* Yonkers, N.Y., 4 Aug 1886). Governor, lawyer, and presidential candidate.

Samuel J. Tilden

After his admission to the bar in 1841, he practiced law with Andrew Haswell Green and had one of the earliest and most successful corporate practices in New York City. He first gained political prominence when he directed an attack on the Tweed Ring: elected governor as a reformer in 1874, he continued his crusade against corruption and was nominated for the presidency by the Democrats in 1876. He lost to Rutherford B. Hayes in a stolen election; a dispute surrounding the electoral vote was resolved in Hayes's favor by a commission in which Republicans formed a majority. Tilden was praised by supporters for his principles but criticized by others as indecisive. His bequest of his large book collection for the establishment of a public library was long delayed in the courts, but ultimately led to the formation of the New York Public Library. He lived at 15 Gramercy Park.

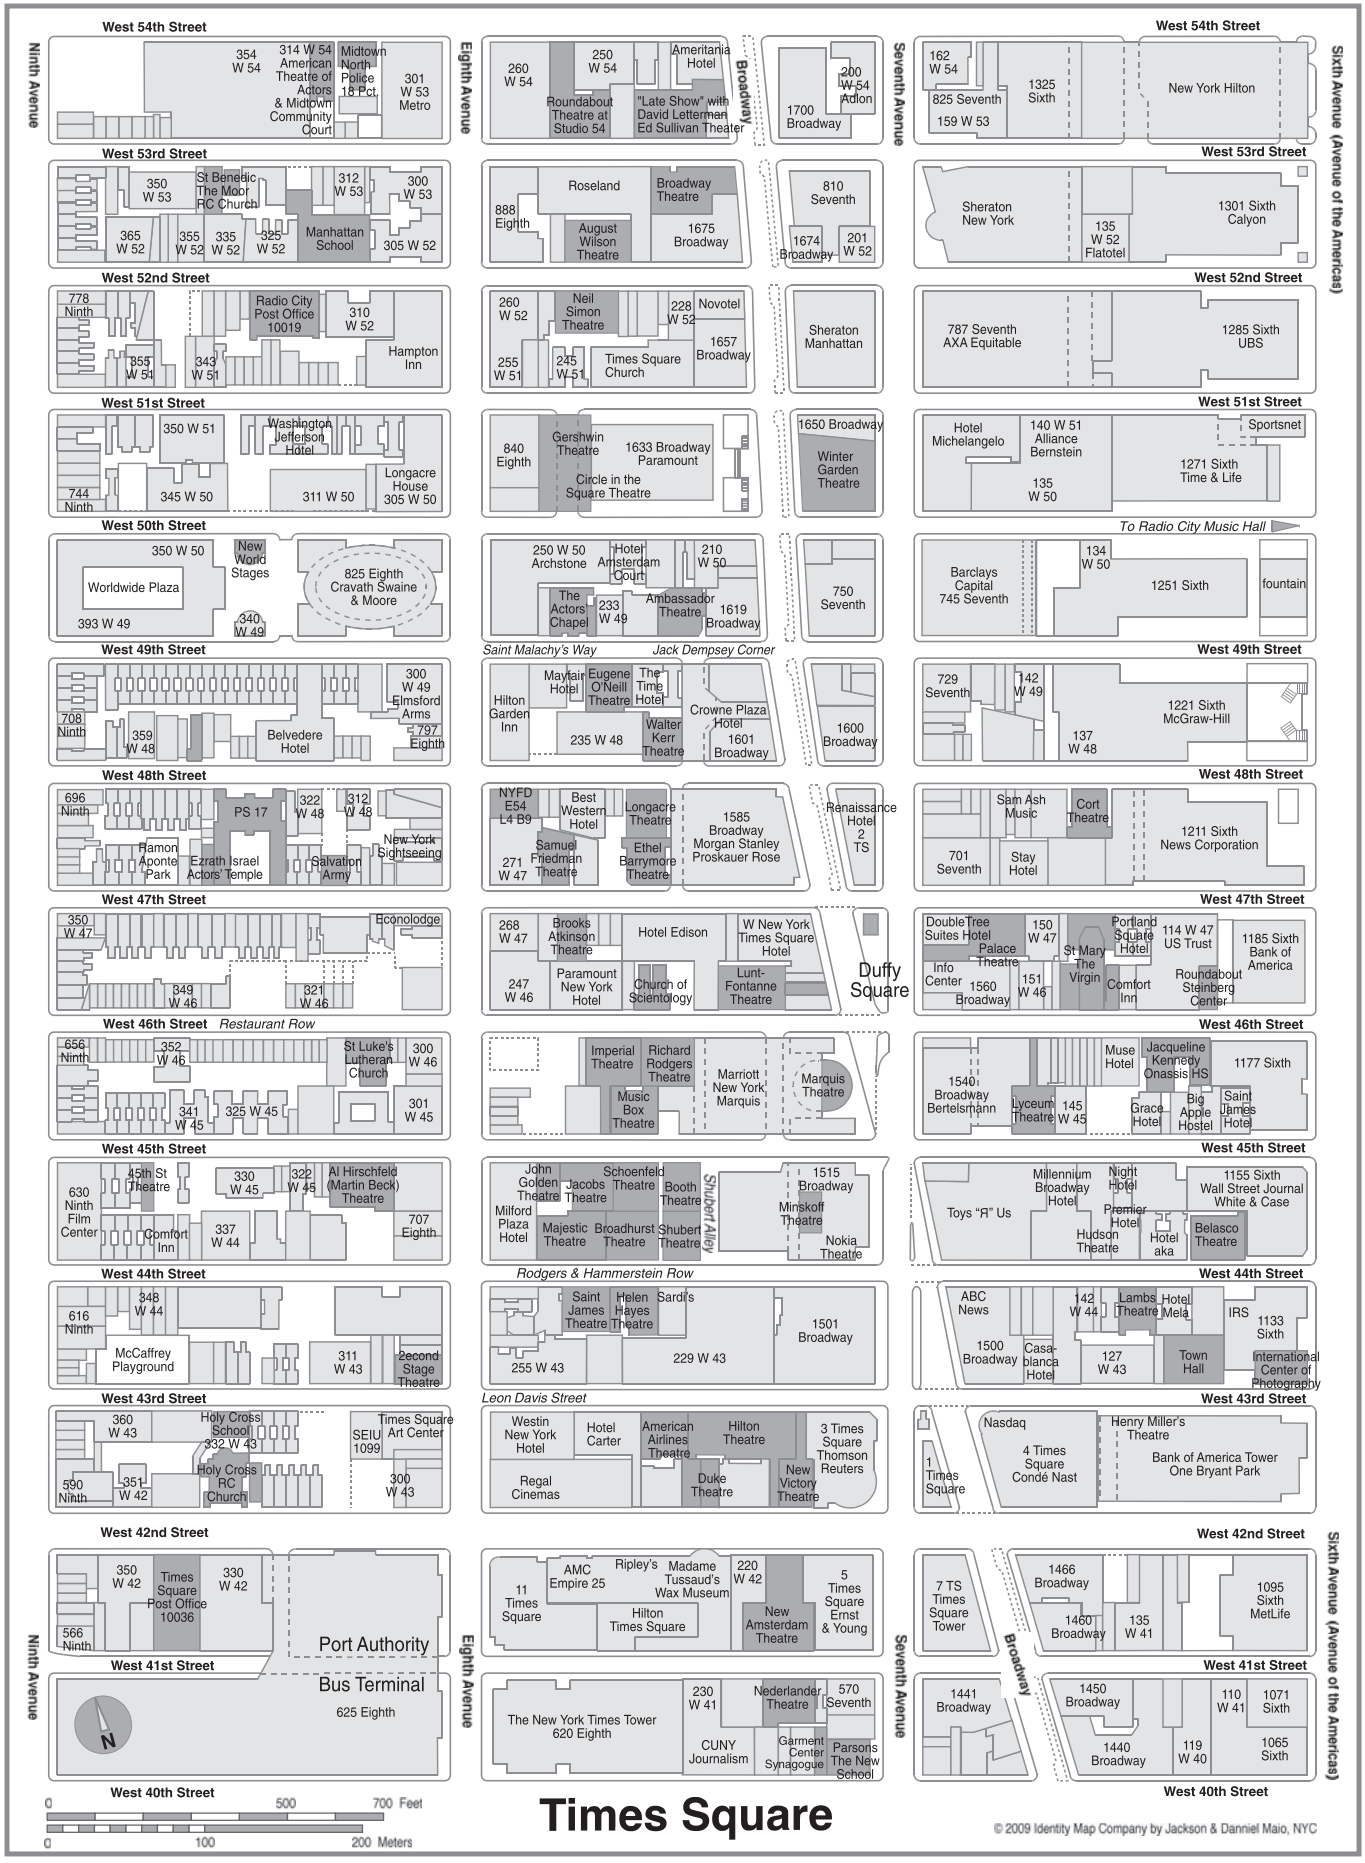
Tile Club. Social organization formed in 1877 by 12 artists and writers, among them the painters Winslow Homer and J. Alden Weir and the journalist William Mackay Laffan. It held informal weekly meetings for a decade. Inspired by the aesthetic movement, its members painted white tiles and later plaques 8 inches (20 centimeters) square, experimenting with a range of subject matter and styles. They also published articles on their activities in *Scribner's* and the *Century* that helped to popularize tile painting. Later members of the club included William Merritt Chase and Augustus Saint-Gaudens. Most of the club's tiles were destroyed by fire in 1881, and the group disbanded in 1887. Surviving examples of their work were collected by the Guild Hall Museum in East Hampton, New York.

Carol Lowrey

Time. Magazine launched by Henry R. Luce and Briton Hadden in New York City in February 1923. It was the nation's first successful "news magazine." Initially relying on the *New York Times* and Walter Lippmann's editorials in the *New York World, Time* summarized and interpreted the week's news. Its dependence on New York City newspapers was reinforced when Luce and Hadden, in a money-saving gesture, tried to publish the magazine in Cleveland during 1925–27 and found that Cleveland's newspapers proved inadequate sources on national and international events. Despite *Time*'s New York City base, the magazine's core readership consisted of middle-class Americans living in smaller cities and towns whose demand for national and international news was largely unmet by their hometown papers, which stressed local news. For such readers, *Time*'s distinctive voice—sometimes irreverent, usually omniscient—created the sensation of "being in the know." *Time*'s circulation rose sharply during the 1930s and 1940s, when economic upheaval and global conflict greatly complicated the task of staying informed. By then, *Time* had its own reporters, though it was said that their stories were heavily edited. During the 1950s *Time* was commonly considered the single most influential national news medium. Its importance declined beginning in the 1960s as television news provided small-town Americans with a national news agenda. The magazine's bias toward the Republican Party and intervention in Vietnam soured some readers, to the advantage of rival *Newsweek.* During the late twentieth century *Time*'s editors labored to reposition the publication. It stopped trying to summarize the week's news, and much international news was dropped in favor of more stories on domestic trends and interpretative pieces. In the early 2000s the magazine's circulation was approximately 3.4 million.

James L. Baughman



Timely Publications. Original name of Marvel Comics.

Times Square. A section of midtown Manhattan centered at the intersection of Broadway and Seventh Avenue. Known as Long Acre Square before 1904, the area was the site of William H. Vanderbilt's American Horse Exchange and was an important commercial center. Between 1830 and 1860 the Astor family built a neighborhood there that remained exclusive until the 1890s. "Silk hat" brothels opened at the turn of the century, served discreetly by carriages and cabs. The area was renamed after the turn of the century when the *New York Times* erected a new building nearby on 43rd Street. To commemorate the new site publisher Adolph Ochs staged a New Year's Eve spectacular that began a tradition continuing into the twenty-first century. During the early years of the twentieth century Times Square became the main transfer point for north–south traffic in the new subway system, and its importance grew after Grand Central Terminal opened at 42nd Street and Fourth Avenue in 1913, further helping to focus commercial activity in midtown Manhattan.

By the time of World War I most legitimate theaters had moved to Times Square from the former entertainment districts along the Bowery to East 14th Street and along Broadway from 42nd Street to Union Square; vaudeville, the music business (known as Tin Pan Alley), dance halls, and cabarets were concentrated in the streets nearby. Hotels like the Astor and the Knickerbocker and restaurants like Rector's thrived. The entertainment newspaper *Variety* had its offices in the neighborhood, and there was ceaseless activity in trade associations such as the Actors' Equity Association, in the Lambs and Friars clubs, and in the many local bars and gathering places. During the 1920s the number of visitors increased, owing partly to large-scale tourism and business travel and partly to the decline of religious and moral strictures against various amusements. In 1927–28 a record was set when 264 shows were produced in 76 theaters. The Palace Theatre at 47th Street and Broadway was the center of vaudeville, and the neighborhood also became a staging area for the touring companies of Broadway shows. Several journalists were closely associated with the area, among them Walter Winchell and Damon Runyon, whose columns were nationally syndicated.

The neighborhood changed dramatically after the stock market crash of 1929. Few new theaters were built, and during the Depression many existing ones were converted into cheap "grinder" houses that offered continuous showings of sexually explicit films. The Palace became a movie theater, and the premieres of motion pictures replaced the openings of Broadway shows as the focus of entertainment. Burlesque shows were introduced by the Minsky brothers and other promoters; cheap restaurants, peep shows, taxi dance halls, penny arcades, and dime museums also opened. There was an increasing array of commercialized sex, including that offered by unemployed women and men who became prostitutes along 42nd Street. At the same time Tin Pan Alley had produced more than half a million songs, and many of the entertainments developed in Times Square became known nationally through the efforts of the major broadcasting companies and Hollywood studios, which had offices there.

The interruption to Broadway theatrical productions brought on by World War II

Times Square

removed the last real check on the descent of Times Square into a zone for vice. During the war soldiers on leave made the area a haven for hustlers (male and female) and other purveyors of erotic entertainment. Attempts during the 1950s to check the growth of disreputable businesses through zoning had little effect. The continuing proliferation of cheap rooming houses, hotels, cafeterias, bars, adult bookstores, peep shows, and arcades was depicted in John Schlesinger's film *Midnight Cowboy* (1968) and Martin Scorsese's film *Taxi Driver* (1976).

Efforts during the 1980s and 1990s to redevelop the area met with success, and by the early twenty-first century Times Square was more successful, attractive, opulent, and brilliantly lit than in any previous decade. The once grimy 42nd Street pornographic shops and theaters had given way to Madame Tussaud's Wax Museum, giant multiplex movie theaters, child-oriented emporiums, and hugely successful musicals. Most notably, new skyscrapers throughout Times Square made the neighborhood the media capital of the world. The *New York Times* itself relocated to an impressive new tower between 40th and 41st Streets along Eighth Avenue, and high-tech billboards made the area easily visible from commercial aircraft descending into La Guardia Airport. Times Square continues to advertise itself as "the crossroads of the world" and the "Great White Way."

time standardization. As the commercial and scientific hub of the United States, New York City played a major role in establishing standard time zones. Before 1883 every community ran according to its own local time: in New York City a time ball atop the Western Union Building at Broadway and Dey Street descended precisely at noon, and sailors referred to another ball at the U.S. Custom House and the South Street Seaport. An early campaign for time standardization was led by William F. Allen, a railroad engineer from New York City who was the head of the American Railway Association, and Frederick A. P. Barnard and J. K. Rees, two prominent scientists at Columbia University who tried to have a national standard time law enacted by the U.S. Congress; Barnard was also instrumental in having meteorological and astronomic observations coordinated to a standard time. Time standardization was first put into effect by railroad engineers, who depended on strict timetables to establish schedules and avoid collisions. Allen edited the *Traveller's Official Guide,* a collection of railway timetables and trade information, and formulated a four-zone plan that railroads adopted at noon on Sunday 18 November 1883 without benefit of federal or state law. There was little opposition in New York City, but other parts of the nation objected strenuously to the new time zones.

Michael O'Malley, *Keeping Watch: A History of American Time* (New York: Viking, 1990)

Michael O'Malley

Time Warner. Entertainment conglomerate formed by a merger of Time Inc. and Warner Communications Inc. in 1990. Time Inc. became successful by publishing a succession of innovative and profitable magazines, notably *Time* (1923), *Fortune* (1930), *Life* (1936), *Sports Illustrated* (1954), and *People* (1974). All were based in New York City. After working out of various midtown sites, including the Chrysler Building and Rockefeller Center, in 1960 Time Inc. moved into an office tower at Rockefeller Center (1271 Avenue of the Americas). In 1970, three years after the death of Henry R. Luce, Time Inc. entered cable television, securing a controlling interest in Sterling Communications, which provided cable service for the lower half of Manhattan. The firm inaugurated a premium cable service, Home Box Office (HBO); subscribers paying an additional fee could view recent films and live events. With access to a satellite relay system beginning in 1976, HBO offered its

Time Warner Building, 2009

service nationally and became the leading pay cable outlet. By 1988 cable activities constituted 41 percent of Time Inc.'s revenues, but a large cash flow made the company vulnerable to a hostile takeover. In a bold if defensive gesture, in 1990 Time Inc. paid $15 billion in stock for Warner Communications Inc., a giant filmmaking, cable, and book publishing concern; Time Warner became the largest entertainment conglomerate in the world. Despite the firm's massive debt from the Warner purchase, Chairman of the Board Gerald Levin made still more acquisitions. In 1995 Time Warner purchased the substantial broadcast-cable properties of Ted Turner. Five years later, the Internet provider AOL bought Time Warner. Although a friendly merger, it was poorly timed. The value of AOL stock, which had been used to pay for the acquisition, collapsed, and Levin fell from power. His successor struggled to placate investors who wanted to break up the conglomerate. In 2004 the company moved to the $1.7 billion Time Warner Center on Columbus Circle; the magazine operations continued at Rockefeller Center.

James L. Baughman

Time Warner Center. Mixed-use building located at 10 Columbus Circle. It was designed by David Childs and Mustafa Kemal Abadan of the architecture firm Skidmore, Owings and Merrill. The project faced nearly 15 years of delays spearheaded by opponents like Jacqueline Kennedy Onassis, who believed that a building there would cast a shadow on Central Park. The project hung in limbo until 2000, when the Coliseum, the building that formerly occupied the site, was demolished and construction started. In 2003 it became the first major construction project to be completed after the terrorist attacks of 11 September 2001. It occupies nearly half of Columbus Circle, consisting of two 750-foot (229-meter) towers connected by a multistory atrium with a facade that curves to echo the traffic circle in front. The center includes the headquarters of Time Warner Inc., upscale shops, hotel and restaurant space, a Cable News Network (CNN) studio, residential units, performance space, and other office space.

Anne Epstein

Tin Pan Alley. Name applied originally to a district in New York City in which composers and music publishers were concentrated from the 1890s to the 1950s, and by extension to the style of their music and to the popular music business generally; the term may derive from the tinny sound of the pianos played by song pluggers. During the 1890s the corner of Broadway and 14th Street was the focus of the popular music business. After the eminent publishers M. Witmark and Sons moved uptown in the late 1890s, the focus shifted successively to West 28th Street between Broadway and Sixth Avenue; during 1903–8 to West 42nd Street, where many large publishers had their offices; during 1911–19 to the vicinity of the Exchange Building at 145 West 45th Street, which housed many smaller publishers; and during the 1920s to an area near 49th Street where the Brill Building was erected in 1931 at 1619 Broadway, although the music district extended as far south as West 42nd Street and as far north as West 56th Street.

Tin Pan Alley innovated music marketing and production. In the early days of music publishing the industry was dispersed across the country; such established firms as Oliver Ditson of Boston and Lee and Walker of Philadelphia issued many kinds of music, which they publicized and distributed with little business acumen. Songwriters of the time, including Stephen Foster, George Root, Will S. Hays, and James Bland, wrote melodies rooted in English and American folk traditions, supported by simple harmonies and set to lyrics that expressed the values of rural America. During the 1880s a new group of publishers and songwriters emerged, many of them of eastern European and Jewish origin, and the industry changed dramatically after Charles K. Harris's song "After the Ball" (1892) sold nearly five million copies in the 1890s and nearly 10 million altogether. New songs were now expertly promoted and aggressively advertised in newspapers and magazines, on the back covers of the sheet music of older songs, and by hired song pluggers who played them on city streets and in theaters, department stores, and retail music shops. Noted singers and unknown organ grinders alike received stipends for publicizing new songs, publishers readily altered pieces to suit the needs of any entertainer, and free copies went to everyone likely to perform the music in public. To advance their music, publishers in Tin Pan Alley also staged musicals and invested in theaters and vaudeville circuits. During the 1920s, when sheet music sales began to decline, the industry began producing recordings and promoting them on the radio. The advent of motion pictures with sound during the 1930s made possible the filming of musicals and helped bring songs to a wider public.

Through the early years of the twentieth century the best-known songwriters in Tin Pan Alley included Charles Harris, Jean Schwartz ("Bedelia," 1903), George M. Cohan ("Give My Regards to Broadway," 1904), Paul Dresser ("My Gal Sal," 1905), and Harry Von Tilzer ("Wait 'Till the Sun Shines, Nellie," 1905). Between 1910 and 1940 publishers enlisted a generation of younger composers, including Irving Berlin, Fats Waller, Jerome Kern, George Gershwin, Cole Porter, Duke Ellington, and Richard Rodgers and lyricists such as Ira Gershwin, Lorenz Hart, and Oscar Hammerstein II. Although they worked in the same idiom as their older colleagues, their music was more original and their lyrics more sophisticated. During the 1950s and 1960s Tin Pan Alley failed to compete with new styles of music, such as the rock-and-roll of Elvis Presley, the protest folk songs of Peter, Paul and Mary, and country music, and New York City accordingly ceased to dominate the popular music business. Nevertheless, the best-known songs of Tin Pan Alley remain in the repertory into the twenty-first century, inspiring films, television productions, and theatrical revivals, and many new songs and Broadway shows draw on their stylistic conventions.

David A. Jasen, *Tin Pan Alley: The Composers, the Songs, the Performers, and Their Times* (New York: Donald I. Fine, 1988); Nicholas E. Tawa, *The Way to Tin Pan Alley: American Popular Song, 1866–1910* (New York: Schirmer, 1990)

Nicholas E. Tawa

Tipperary Corners. Obsolete name of Egbertville.

Tishman, David (*b* New York City, 1889; *d* New York City, 18 June 1980). Real estate developer. With his father, Julius Tishman, he built luxury apartment buildings on the Upper West Side between 1910 and 1920, 17 similar buildings on the Upper East Side between 1922 and 1929, and several office buildings and lofts in the garment district. The city's most prominent and successful developer by the late 1930s, he survived the Depression and built the first postwar office tower in Manhattan (1947, 445 Park Avenue). In 1957 he completed the Tishman Building, a skyscraper at 666 Fifth Avenue between 52nd and 53rd streets that became the headquarters of his firm, which was taken over during the 1960s by his sons Robert Tishman and Alan Tishman, his nephew John Tishman, and his son-in-law Jerry Speyer.

Marc A. Weiss

Titanic. Steamship that sank in 1912 on its maiden voyage from England to New York City. New York banker J. Pierpont Morgan held the controlling interest in the International Mercantile Marine Co., which owned the RMS *Titanic.* Of the 74 passengers from the city, at least 24 died, including millionaires John Jacob Astor IV and George Widener, and two maids, Julia Barry and Ida Livija Ilmakangas. Twelve victims were buried in New York City. The ship was to dock at Chelsea Piers, on the Hudson near 18th Street. Instead, more than 700 survivors were brought by the liner *Carpathia* to Pier 54, at 12th Street, and were treated at St. Vincent's Hospital.

There are four permanent *Titanic*-related monuments in the city. The official *Titanic* Memorial is a 60-foot (18-meter) lighthouse that was placed on the roof of the 12-story

Seamen's Church Institute building at 25 South Street in 1915. Its green light guided ships into the harbor until 1968, when the building was torn down and the lighthouse was moved to the corner of Water and Fulton streets. At the Battery is a monument to maritime wireless telegraph operators who lost their lives at sea; at the top of the list is Jack Phillips, the *Titanic*'s radio operator. Set into Central Park's retaining wall at Fifth Avenue and 91st Street is a bronze plaque memorializing William Thomas Stead, an English journalist who was on his way to a peace congress at Carnegie Hall. (The plaque is a copy of one at the London Embankment.) The Straus Park and Memorial Fountain, at 106th Street between Broadway and West End Avenue, memorializes Ida and Isidor Straus, who had lived nearby at 2745 Broadway. A former congressman and an officer at the R. H. Macy and Abraham and Straus department stores, Straus declined to enter a lifeboat until all women and children were saved, and his wife of 41 years refused to leave without him. The monument, designed by H. Augustus Lukeman, is called *Memory*. Its inscription reads, in part, " 'Lovely and pleasant were they in their lives and in their death they were not divided.' II Samuel 1:23."

The most authoritative account of the loss of the *Titanic* remains *A Night to Remember* (1955), by Walter Lord, who lived at 116 East 68th Street. His large collection of *Titanic*-related artifacts is now at the National Maritime Museum in Greenwich, England. The loss of the *Titanic* became a landmark in American journalism, according to *New York Times* columnist Russell Baker, who in his memoir *The Good Times* (1989) wrote that the *Times* maintained an overstaffed newsroom of more than 100 reporters as late as the 1960s because the paper's owners always resolved to be prepared "to cover the story when the *Titanic* sinks."

John Rousmaniere

TKTS, 2009

TKTS. Discount theater ticket service (pronounced Tee-Kay-Tee-Ess). At the behest of the New York City mayor's office and with the cooperation of the League of American Theaters and Producers, the Theater Development Fund (TDF) opened a discount ticket booth in Times Square's Duffy Square in 1973 with the hope that it would boost sagging theater ticket sales. With a Parks Department construction trailer, TKTS began selling day-of theater tickets at a 25 to 50 percent discount, modeled after Joe LeBlang's cut-rate ticket service during the 1920s and 1930s at Gray's Drugstore. TKTS was immediately successful and broke even within two months. As of 2007 TKTS had sold nearly 50 million tickets to productions on and off Broadway and to music and dance events in New York City, generating $1.2 billion in returned revenue for city theaters. A $2.50 service charge per ticket funds the daily operations of the three TKTS booths in Duffy Square, South Street Seaport, and downtown Brooklyn. TKTS has helped to make TDF the largest performing arts foundation in the country and has led to the establishment of similar services nationally in Boston, Chicago, Pittsburgh, Philadelphia, Denver, and San Francisco and internationally in London, Sydney, and Toronto.

Rowan Moore Gerety

TLC Beatrice International Holdings. International holding company. It was based at 9 West 57th Street, specializing in grocery products and food distribution. Formed in 1987, when Reginald F. Lewis bought Beatrice International Foods for $985 million, it became the largest black-owned firm in the United States from 1989 to 1999. At its highest point TLC Beatrice grossed over $2.1 billion in sales. Its operations consisted mainly of the former overseas operations of Beatrice International Foods, which became a subsidiary of Conagra. Most of the subsidiaries made well-known brands of ice cream, desserts, beverages, and snacks in western Europe; the firm also had interests in Thailand, Puerto Rico, and Canada. After Lewis's death in January 1993, the firm came under the control of his heirs. In 1997 TLC Beatrice sold off its food distribution business, which had constituted the vast majority of its revenues, and in 1999 the rest of the company was liquidated.

Gilbert Tauber, Nathan Morgante

tobacco. Trade in tobacco began in New Amsterdam and flourished after the British took control of the colony. During the eighteenth century tobacco was brought north from the Chesapeake River and prepared for export to Europe, becoming the third most lucrative export crop for the colony, after cotton and flour. It was also grown on small plantations in Manhattan and Brooklyn but was never a major crop, as the quality was considered not as good as Virginia tobacco, a dominant export. The growth in snuff and pipe tobacco consumption led French Huguenot immigrant Pierre Lorillard to open the first large snuff factory in 1760. Its snuff mill was in a rural area now part of the northern Bronx (the site of the Bronx Botanical Garden), but most snuff mills were in Manhattan, including those of Isaac de Voe and Daniel Snowhill.

In the early nineteenth century the firm of G. B. Miller, later known as H. J. Mickle and Sons, was a major producer of chewing tobacco. The federal census of 1840 lists more than 200 workers in Manhattan's tobacco business. By 1846 the city was the principal point of entry for Caribbean cigars, an increasingly valuable import during the first half of the nineteenth century: city directories listed 44 importers. By the mid-nineteenth century most pipe and chewing-tobacco businesses had moved to the South, while most snuff manufacturing was in Middlesex County, New Jersey. In New York City, small shops around Chatham Square specialized in cigars; immigrants from Cuba, Spain, England, the Netherlands, and Germany worked in this growing industry. After the Civil War domestic cigar making became more popular as import duties on foreign tobacco increased, and New York City became the largest cigar-making center in the United States. In 1870 about 144 million cigars were produced annually in Manhattan (eight times as many as

in 1863), and more than 5500 men and women were employed by more than 1000 cigar-making establishments.

During the late 1860s the introduction of the cigar mold enabled workers with much less skill to roll reasonably uniform cigars, resulting in significant expansion of the industry. By 1881 at least 17 employers had more than 250 workers each, with more than 1500 workers in each of the three largest firms: Kerbs and Spiess, Straiton and Storm, and Lichtenstein Brothers. At the same time about 1700 small shops were situated in the city, as well as an indeterminate number of "tenement manufacturers" who rented tenements in which families lived and worked as cigar makers. German immigrants and east European Jews accounted for the bulk of employees. In the 1870s new unions fought for higher pay for cigar workers. During the height of the industry's growth cigar making was concentrated in two sections of Manhattan: around Chatham Square, an immigrant area, and north of 50th Street, where large numbers of Germans and Bohemians settled. In Brooklyn the industry was smaller, with only a few firms employing more than 100 workers.

By the twentieth century continued mechanization changed the industry. The increasing need for space and capital investment made the city much less desirable to cigar manufacturers, and many firms moved to Lancaster County, Pennsylvania, or farther south. Some remaining firms became part of the American Cigar Company of New York City, a cigar trust formed in 1901 by James B. Duke. Over the next six years the trust was joined by some of the largest firms (including Powell and Smith; Kerbs and Spiess; Wertheim and Schiffer; Hirshorn, Mack and Company; and Straiton and Storm), but it was less successful than trusts in the tobacco trade and in cigarette manufacturing. By World Ward II few cigars were manufactured in the city and none in major factories.

The decline of cigar making was largely due to the rise of the cigarette industry during the 1880s. Centered in Manhattan and Jersey City, New Jersey, the industry was dominated by Duke and the firm of P. Lorillard. By the 1890s cigarette production was mechanized and the workforce was ethnically heterogeneous: young women operated cigarette-rolling machines in large factories employing an average of more than 500 workers. In 1911 six large cigarette factories throughout Manhattan dominated the industry, with a large facility owned by Lorillard in Jersey City overlooking the Hudson River. A number of New York City firms, including Goodwin and Company, Kinney Tobacco, Lorillard, and the Continental Tobacco Company, merged and became the Consolidated Tobacco Company of Jersey City, which dominated the cigarette and "plug" (chewing-tobacco) markets nationwide from 1904 until a court order in 1911 forced the dissolution of the trust into three firms (Lorillard, American Tobacco, and Ligett and Myers).

New York City was the largest metropolitan market for cigarettes and a source of cheap female labor until the 1920s, when more than 30 percent of all North American cigarettes were still manufactured in the metropolitan area. The Depression reduced the size of the region's cigarette industry. By 1963 only about 200 people in Greater New York were employed in the tobacco industry. The city remained a center of corporate headquarters for tobacco conglomerates such as Philip Morris, American Brands (successor to the American Tobacco Company), and Lorillard. By the early 1990s there were no longer any tobacco, cigarette-making, or cigar-making facilities in the region.

After the 1960s opposition to tobacco use increased significantly, resulting in more laws restricting advertising, requiring notices of health dangers, and eventually limiting places where smoking could occur. New York City benefited from the 1998 Tobacco Master Settlement Agreement and received more than $1.8 billion as of 2007, a quarter of the annual payments made to New York State. The city used the payments to fund antismoking campaigns in schools and around the city. In 2002 the city increased the cigarette tax from eight cents per pack to $1.50, making New York City home to the country's most expensive pack of cigarettes. More dramatically, in 2003 a citywide ban on smoking in restaurants and bars took effect. Despite a backlash centered on smokers' rights and fears over diminished business in restaurants and bars, the ban is considered a success.

Dorothee Schneider, Rowan Moore Gerety

Tobagonians. Tobagonian immigration is discussed in the entry Trinidadians and Tobagonians.

Tobin, Austin J(oseph) (*b* Brooklyn, 25 May 1903; *d* New York City, 8 Feb 1978). Public official. After graduating from Holy Cross College in 1925 he joined the Port of New York Authority in 1927 and earned a law degree from Fordham University in 1928. Appointed executive director of the authority in 1942, he assembled a skilled, politically independent staff and during the next three decades oversaw the development of La Guardia, John F. Kennedy, and Newark Liberty airports; the creation of the massive bus terminal in Manhattan and of container ports in Newark–Elizabeth, New Jersey; the modernization of the Port Authority Trans-Hudson (PATH) transit system; and the construction of the World Trade Center. He retired in 1972.

Jameson W. Doig, *Empire on the Hudson: Entrepreneurial Vision and Political Power at the Port of New York Authority* (New York: Columbia University Press, 2001)

Jameson W. Doig

Todt Hill. Neighborhood in north central Staten Island. It is centered at a hill near the intersection of Todt Hill Road and Ocean Terrace that rises 410 feet (125 meters) above sea level and is the highest point on the Atlantic Coast of the United States south of Maine. The area was initially called Yserberg ("iron hill") by Dutch settlers, for the iron in the local serpentine rock, and was eventually renamed for a burial ground at the foot of the hill (now Moravian Cemetery). Large open-pit mines were operated from 1830 to 1885; some were eventually covered by the large golf course of the Richmond County Country Club. In 1928 St. Francis Seminary was built on a lot of 44 acres (17 hectares) north of the golf course. Architect Ernest Flagg built many houses of the native rock, including his own on a side of the hill (now a city landmark). Eventually the golf course and the seminary became part of the Greenbelt, a nature preserve that also includes 140 acres (57 hectares) to the south covered by Moravian Cemetery and the cemetery of the Vanderbilt family, as well as some other private land; the Greenbelt has many marked trails and a study area at High Rock Conservation Center (formerly a Girl Scout camp). The area was the primary filming location for the movie *The Godfather* (1972). In the early twenty-first century Todt Hill was one of the wealthiest neighborhoods in Staten Island and the site of Staten Island Academy, a prestigious private day school. Buttonwood Road is typical of its elegant, tree-lined streets.

Marjorie Johnson

toiletries. See Soap and toiletries.

tokens. Coin issued by various New York City institutions to be used in place of money. The city's first token was issued under Governor Francis Lovelace (1668–73). It depicted Cupid and Psyche (a rebus on the name Lovelace) and on the reverse an eagle on a regulated fesse (the crest of the Lovelace arms) within the inscription "New Yorke in America." The merchants Talbot, Allum and Lee issued large numbers of tokens in 1794 and 1795. The Theatre at New York token shows an image of the First Park Theatre copied from Longworth's Directory of 1797. "Hard-times tokens" circulated after the panic of 1837; during the Civil War, nearly 100 different merchants in the city issued tokens. In the late 1800s tokens were issued by amusement arcades on Coney Island. When the dime fare on the subways increased to 15 cents in 1953, brass

tokens were introduced; to discourage hoarding when fares were increased, the design was altered on five subsequent occasions. Subway tokens were phased out at midnight, 13 April 2003, in favor of the electronic MetroCard.

John M. Kleeberg, "The New Yorker in America Token," *Money of Pre-Federal America,* ed. John M. Kleeberg (New York: American Numismatic Society, 1992), 15–57; John M. Kleeberg, "The Theatre at New York," *The Token: America's Other Money,* ed. Richard G. Doty (New York: American Numismatic Society, 1995), 19–64

See also People's Token.

John M. Kleeberg

tolls. Many of the connections between New York City's five boroughs, and all of the crossings to New Jersey, require the payment of a toll. There are no toll roads within New York City. The first toll bridge in the city was King's Bridge (1693), at Manhattan's northern end, which charged a toll until 1759. Other early city toll bridges were Coles Bridge (1795), across the East River at 129th Street, and the first Macomb's Dam Bridge (1813), which crossed the Harlem River at 155th Street. The first modern toll facility in the city was the Brooklyn Bridge (1883). Horse-drawn vehicles were charged 10 cents, riders on horseback paid five cents, and pedestrians were charged a penny. The toll for pedestrians was later dropped, and a 10-cent fee was added for automobiles. Similar charges were levied on the Williamsburgh Bridge (1903), the Manhattan Bridge (1909), and the Queensboro Bridge (1909). However, while all four of the East River crossings charged tolls, bridges across the Harlem River were free, as were crossings elsewhere in the city. This prompted Mayor William Gaynor in 1911 to halt the collections of the tolls on the four East River bridges.

In the 1920s and 1930s tolls were used on new bridges and tunnels. The revenues collected by these new tolls fueled the growth of two giant public benefit corporations—the Port Authority of New York and the Triborough Bridge and Tunnel Authority. The Port Authority collects tolls on all of the links between New York City and New Jersey, including two tunnels, the Holland (1927) and the Lincoln (1937), as well as four bridges: Goethals (1928), Outerbridge Crossing (1928), Bayonne (1931), and George Washington (1931). The Triborough Bridge and Tunnel Authority also collects tolls within the city on two tunnels, Midtown (1940) and Brooklyn–Battery (1950), plus seven bridges: Henry Hudson Memorial (1936), Triborough (1936), Marine Parkway–Gil Hodges Memorial (1937), Bronx–Whitestone (1939), Cross Bay–Veterans Memorial (1939), Throgs Neck (1961), and Verrazano–Narrows (1964).

Toll collection changed dramatically in 1993 with the introduction of E-ZPass, an electronic toll-collection technique pioneered by a consortium of New York toll authorities and agencies in Pennsylvania and New Jersey. The technology quickly spread nationwide and prompted new debates about variable pricing policies that had previously been impractical, such as congestion pricing, off-peak discounts, and rush-hour surcharges.

Owen Gutfreund

Tombs. Name commonly applied to the Manhattan Detention Complex at 125 White Street, the third prison to occupy the same general site. It is derived from the design for the first building, which was inspired by a photograph of an Egyptian tomb that appeared in a book on the Middle East written by John L. Stephens in 1837. Construction of the prison was made necessary by the city's growing population, the decrepit condition of the Bridewell near City Hall, and the inconvenient location of the penitentiary at Bellevue. The new prison proved inadequate: it had too few cells (200, of which 50 were reserved for women), and because it was built on a swampy landfill near the canal connecting the Hudson and East rivers, it soon began to sink; the same happened to a new building constructed in 1902, which was replaced in 1941. For decades the prison received widespread attention for its deplorable conditions and became a symbol of much that was wrong in correctional institutions. A renovation of the South Tower was completed in 1983, and construction of the North Tower, connected by a footbridge, was completed in 1990. Between 2001 and 2006 the facility was temporarily named the Bernard B. Kerik Complex after the former corrections commissioner who became police commissioner and later was indicted on corruption charges. The Tombs is now a modern facility that has a capacity for 900 inmates.

Joseph P. Viteritti

Tompkins, Daniel D. (*b* Fox Meadow [now Scarsdale], N.Y., 21 June 1774; *d* Staten Island, 11 June 1825). Governor and vice president of the United States. He graduated from Columbia College in 1795, practiced law in New York City, and became a Tammany Hall organizer. Elected governor of New York State in 1807 and thrice reelected, he achieved several reforms during his tenure, notably a commitment by the state to abolish slavery by 1827. During the War of 1812 he resolutely supported President James Madison's policies against legislative opposition, mobilized an unprepared militia, and raised money for the war effort by backing loans with his own credit; he also supervised the ceding of land and construction of forts on the islands of New York Harbor and, as the commander of the third military district, oversaw the mobilization of the civilian work crews that fortified the city in 1814. His founding that same year of a village called Tompkinsville

The Tombs, 1941

on Staten Island marked the beginning of the island's integration into Greater New York; even while serving as President James Monroe's vice president from 1817 to 1825, he spent much of his time developing this property. His Richmond Turnpike Company built the thoroughfare across the island now known as Victory Boulevard and, with the launching of the *Nautilus* in 1817, began the first steamboat ferry service to Manhattan and later the first towing service in the harbor. In 1824 he was the host in Staten Island of the start of the Marquis de Lafayette's triumphant tour of the United States. His last years were marred by ill health and political and financial embarrassment occasioned by his protracted struggle for compensation for his wartime expenditures and unsettled accounts. Tompkins is buried in the churchyard of St. Mark's Church in the Bowery, where a bust was unveiled in 1939. Tompkins Square was named for him in 1833; Tompkins Street was eventually obscured by the FDR Drive.

Ray W. Irwin, *Daniel D. Tompkins: Governor of New York and Vice President of the United States* (New York: New-York Historical Society, 1968)

Mariam Touba

Tompkins Square, 2009

Tompkins Square. Neighborhood bordering Tompkins Square Park, bounded to the north by 10th Street, to the south by Seventh Street, to the east by Avenue B, and to the west by Avenue A. Originally called Clinton Square, the park was the remnant of a large area designated a market in the 1811 Commissioners' Plan. In 1834 John Jacob Astor sold the 10.5-acre (4.2-hectare) swamp (used for snipe hunting) to New York City for $93,000. Named after New York Governor Daniel D. Tompkins, the square was first opened in 1834; it was landscaped and fenced, and it featured walkways and a fountain. The neighborhood, known as the Dry-Dock before the Civil War, became the new 17th ward, a dense population center for immigrants and new businesses. St. Brigid's, on the northwest corner, served Irish residents; the large number of Germans gave rise to the area's nickname, Kleindeutschland. A monument was erected in the square to honor the more than 1000 Germans—all local residents—killed in the General Slocum disaster in 1904. In the 1860s a radical transformation occurred when the square was converted into a parade ground. But in the 1870s it became a park again, hosting concerts, fireworks, and military parades. Political protest occurred in the 1870s: the 1874 "Blood or Bread" Riot involved police clashing with unemployed demonstrators, and in 1877 a meeting of people sympathetic to striking railroad workers was held (violence was averted).

In the twentieth century Tompkins Square continued to serve as a local recreation ground for the large immigrant community that surrounded it, increasingly Italians, Jews, Poles, and Ukrainians. In the 1980s it became a camping ground for the homeless and a gathering place for drug dealers; their eviction in 1988 precipitated one of the last violent demonstrations in the square. The park was renovated once again in the 1990s, and the neighborhood became increasingly gentrified in the early twenty-first century.

Lisa Keller, *Triumph of Order: Democracy and Public Space in New York and London* (New York: Columbia University Press, 2008)

Lisa Keller

Tompkins Square Riot. Name given to two riots on the Lower East Side of Manhattan, the first on 13 January 1874 and the second on 6 August 1988. See Riots.

Tompkinsville. Neighborhood in northeastern Staten Island lying along the eastern shore south of the terminal for the Staten Island Ferry at St. George. The oldest village in eastern Staten Island, it was a landing where early explorers replenished their water supply and was known in colonial times as the Watering Place; a settlement was established there next to the quarantine station in 1815 by Daniel D. Tompkins, who built a dock at the foot of Victory Boulevard and initiated steam ferry service to New York City in 1817. He named several streets after his children: Arietta Street (now Victory Boulevard), Griffin Street, Hannah Street, Sarah Ann Street (now part of Van Duzer Street), and Minthorne Street. A fleet of the U.S. Coast Guard was based there in the early nineteenth century and shared quarters with a regional lighthouse depot. In 2008 the population was Italian, Latin American, and black. The center of the village is a commercial area around Tompkinsville Park where a statue was placed to honor heroes of World War I and two smaller markers commemorate Tompkins and the Watering Place.

Barnett Shepherd

tongs. Secret Chinese protective associations that operate legal and illegal enterprises and employ youth gangs to control gambling, drug dealing, and extortion. Wars between tongs took place during periods of rapid expansion and internal power struggles in Chinatown. From 1910 to 1930 the young "soldiers" of the Hip Sing and On Leung tongs fought each other in the streets. Gangs sponsored by tongs became strong again in the 1960s, when there was a new influx of Chinese immigrants. By the 1980s tongs were outnumbered by other street gangs, which undertook their own enterprises, expanded into Chinese communities outside Manhattan, and increasingly engaged in violence to assert their authority against other gangs sponsored by tongs. Although such gangs as the Ghost Shadows became known citywide through sensational accounts in the press, their activities were largely confined to Chinese communities.

Joshua Brown

Tontine Coffee House. Building erected in 1793 at the corner of Wall and Water streets. In 1796 it became the headquarters of the New York Insurance Company. The 21 members of the company's board of directors

Tontine Coffee House

assigned values to slaves, ships, houses, and effects to form a tontine, a financial arrangement in which each member received a share of profit that increased as the number of participants was reduced by death. The tontine asserted that its actions would "have a tendency to advance the mercantile interest in particular and promote the general welfare of the State." Its first president was Archibald Gracie, whose home on the East River later became the official residence of the mayor.

Anthony Gronowicz

Tony Award. Award presented annually by the American Theater Wing, an educational and service organization of theater professionals, for distinguished achievement on Broadway. It was established in 1947 to honor the actress and director Antoinette "Tony" Perry (1888–1946), who at the time of her death was the head of the board of directors of the organization. The Tony Award is given to outstanding performers, plays, playwrights, and designers in both dramatic plays and musicals.

Martha S. LoMonaco

Topps Company. Chewing gum and baseball card manufacturers. Formed as Topps Chewing Gum in 1938, it was headquartered initially in Williamsburg before moving in 1946 to Bush Terminal at 36th Street. (The factory at Bush Terminal closed in 1965.) In 1947 the firm introduced Bazooka bubble gum, which became its first important success; Major League Baseball cards followed in 1951. The firm enjoyed tremendous prosperity in the late 1980s, when baseball cards became collector's items. In August 1989 it sponsored a baseball card auction at Hunter College that attracted national attention and yielded more than $1.5 million in receipts. The undisputed leader in sports trading cards, Topps became a publicly traded company and in 1994 moved its headquarters to 1 Whitehall Street.

James Bradley

Torres, Edwin (*b* New York City, 7 Jan 1931). Judge and novelist. Born to Puerto Rican parents, he lived as a child at 107th Street and Madison Avenue in Spanish Harlem and graduated from Stuyvesant High School and City College of New York. After serving in the navy overseas he attended Brooklyn Law School, working as a waiter to support himself. In 1958 he became the city's first Puerto Rican assistant district attorney. In 1977 he became a criminal court judge. In 1975 he published *Carlito's Way,* a novel about a small-time cocaine hustler during the 1940s, 1950s, and 1960s that was one of the first fictional works to deal with Puerto Ricans' experience in the city after World War II. *Q&A* (1976), a novel drawn from Torres's experience as a prosecutor and defender, and the sequel to *Carlito's Way, After Hours* (1979), were made

Tony Awards for Best Musical and Best Play

Year	Best Musical	Best Play
1948	(None awarded)	Mister Roberts
1949	Kiss Me, Kate	Death of a Salesman
1950	South Pacific	The Cocktail Party
1951	Call Me Madam	The Rose Tattoo

into motion pictures in 1990 and 1993, respectively. In 2005 *Carlito's Way* was made into the motion picture *Carlito's Way: Rise to Power.* As a state supreme court justice in New York City (1980–2007) Torres maintained a reputation for toughness. In 2008 he was appointed to the New York State Athletic Commission.

Chad Ludington

Toscanini, Arturo (*b* Parma, Italy, 25 March 1867; *d* New York City, 16 Jan 1957). Conductor. He conducted the world premieres of Giacomo Puccini's *La bohème* (Turin, 1896) and Ruggiero Leoncavallo's *Pagliacci* (Milan, 1892), as well as the Italian premieres of works by Richard Strauss and Claude Debussy. In 1908 he became the artistic director of the Metropolitan Opera, a position he retained until 1915. In 1926 he was a guest conductor of the New York Philharmonic, which under his direction became one of the leading orchestras in the world and made its first European tour (1930); he was made music director in 1933. He became well known for his performances of Beethoven, Brahms, Verdi, and Wagner. He gave his final concert on 29 April 1936. In the following year he was named conductor of the NBC Symphony Orchestra. The orchestra became known worldwide through its radio broadcasts and its recordings for RCA Victor. Toscanini retired to home in Riverdale in the Bronx after its last concert, on 4 April 1954 at Carnegie Hall.

Tottenville. Neighborhood in southwestern Staten Island, bounded to the north by the Arthur Kill and Mill Creek, to the south by Raritan Bay, and to the west by the Arthur Kill; it is the most southerly part of New York City and New York State. The land was first inhabited by the Delaware or Lenape Indians, whose burial sites and artifacts were found near Ward's Point. The first European settler was Captain Christopher Billopp, an English naval officer who in 1678 was given 1200 acres (486 hectares) by the British government; he built a stone house called Bentley Manor and before 1700 operated a ferry across the Arthur Kill to carry travelers to Philadelphia after they crossed into Staten Island from Manhattan along King's Highway (now Richmond and Amboy roads). Ferry service was continual until the Outerbridge Crossing was built in 1927. The local economy was closely linked to that of Amboy (now Perth Amboy), New Jersey, and was composed of agriculture, mining, and oyster farming. The Totten family owned land in the area during the eighteenth century. Colonel Christopher Billopp, a great-grandson of the first settler, actively supported the British during the American Revolution, and after the war all his land was confiscated. Bentley Manor became known as the Conference House, after an unsuccessful peace conference held there in 1776 between Lord Howe and Benjamin Franklin, John Adams, and Edward Rutledge.

The deep water of the Arthur Kill was well suited to fishing and water transport, and the waterfront flourished in the early nineteenth century as freight and passenger boats docked there on their way to Manhattan. The Staten Island Railroad built a line to the area from St. George in the 1860s. The Atlantic Terra Cotta Company, the primary manufacturer of architectural terra-cotta ornaments, built a factory on the Arthur Kill in 1897; it became one of the largest employers on Staten Island and remained in operation until the early 1930s. There were eight boatyards in the neighborhood in 1898 (the best-known of which was Brown and Ellis), but after 1900 they declined as steel replaced wood in ship construction.

The Nassau Smelting and Refining Company built a plant in 1900 on the Richmond Valley line. In 1915 state officials banned the harvesting of oysters and clams in Raritan Bay because of pollution. Oyster harvesting was allowed to resume in the 2005 season. The smelting works was bought by Western Electric in 1931; in 1971 it became a metal recycling plant and was renamed the Nassau Recycling Corporation. In the early twenty-first century the contaminated site was undergoing remediation.

The shopping and business area of Tottenville is on Main Street; in the 1990s and early twenty-first century many houses in the Federal and Victorian styles remained there and along Amboy Road, and a second commercial center began to emerge at the north end of the community, along Page Avenue west of Amboy Road. During this period there was also housing construction southeast of Hylan Boulevard. In 2003 the Tottenville Historical Society was created. Conference House Park lies along the shore and contains two designated landmarks: Conference House and Biddle House. There are seven small marinas serving commercial and sport fishermen. The population remained predominantly white into the early twenty-first century.

tour boats. See Excursion boats.

Tourian, Leon Elisee (*b* Üsküdar, Turkey, 1881; *d* New York City, 24 Dec 1933). Archbishop. Ordained in 1903, he was made bishop in 1913, and upon his arrival in New York in 1931 he was named the archbishop of the Armenian Apostolic Diocese of North America. His vocal support of Soviet hegemony over the republic of Armenia was resented by members of the Armenian Revolutionary Federation (known as Dashnags), and during a Christmas Mass he was fatally stabbed at the altar of the Holy Cross Church of Armenia (580 West 187th Street in Manhattan); he was later interred in the church. When nine Dashnags were found guilty of the murder in July 1934, thousands of the party's members left the diocese to form independent parishes.

tourism. Tourists visited New York City in increasing numbers after 1820, when improvements in transportation made travel faster, cheaper, and more comfortable. Journeys through the United States often began in the city, a terminus of major steamship companies. Most tourists first saw the city from the harbor, framed by a number of islands to the east and the Hudson to the north; wharves extended the length of the waterfront, and masts and steeples defined the skyline. By 1850 the city was known for its effervescence and cosmopolitan character. The shopping, entertainment, and jostling crowds on Broadway were noted by many, including Charles Dickens, who visited the city in 1842, and the Scottish publisher William Chambers, who found the hotels on Broadway to be more like palaces than commercial enterprises. The city did little to promote tourism, and guidebooks, pamphlets, and newspapers were among the few resources for planning itineraries. About the turn of the century the Royal Blue Line offered tours of Manhattan and Brooklyn in its nine electric buses; tours of the waterfront were given by sightseeing boats such as the *Halcyon* and the *Tourist,* which sailed from Battery Park. By the mid-1920s viewing the city's skyscrapers was a popular activity. Soon after its completion in 1931 the Empire State Building (often called the "eighth wonder of the world") became a symbol of the city and a destination for most tourists: during the first year one million people rode the elevator to the top, at a cost of a dollar each. Transformed by electricity, Broadway at night was considered by Philippe de Rothschild in 1930 and other Europeans to be a spectacle unmatched in the world. The city's art galleries, museums, concert halls, and theaters also drew many visitors. In 1935 the city formed the New York Convention and Visitors' Bureau to build tourism into a major industry.

By the mid-twentieth century tourism was an important part of the city's economy. Sightseeing excursions around Manhattan were introduced in 1945 by the Circle Line, which by 1991 had carried more than 45 million passengers. Mayor John V. Lindsay promoted the city as "fun city" in the 1960s. In 1971 the Visitors' Bureau under Charles Gillett launched the "Big Apple" promotional campaign, which became one of the most successful ventures of its kind. At the end of the 1980s the city remained the world's most popular city to visit. The Empire State Building alone had about two million visitors a year. Other popular attractions included Central Park (where rides in horse-drawn carriages were especially popular), Dyckman House (the only surviving eighteenth-century farmhouse in Manhattan), the United Nations, McSorley's Old Ale House, the Russian Tea Room, and the Cloisters, the medieval branch of the Metropolitan Museum of Art, which overlooks the Hudson from Fort Tryon Park.

Before the 11 September 2001 terrorist attacks, tourists were drawn to lower Manhattan to enjoy dining at Windows on the World on the 107th floor of the North Tower of the World Trade Center or to take in the spectacular views of the metropolis from the observation deck on the 107th floor of the skyscraper's South Tower. In the immediate aftermath of the attacks, visitors to the city continued to be drawn to the World Trade Center site, but now they came to both see and contemplate what no photograph or television image could convey as well as to pay their respects. Both before and after the attacks, the World Trade Center site was the primary tourist destination in lower Manhattan. The Tribute WTC Visitor Center, a project of the September 11th Families Association located at 120 Liberty Street opposite the World Trade Center site, opened to the public on 18 September 2006. The center functioned as what New York Governor George E. Pataki called an "interim destination" for visitors and tourists until the National September 11th Memorial and Museum opened. Lower Manhattan has other attractions for tourists, including the Skyscraper Museum, the New York City Fire and Police museums, the Lower East Side Tenement Museum, the South Street Seaport Museum, the Museum of American

Double-decker tour bus, 2009

Financial History, and the Museum of Jewish Heritage—A Living Memorial to the Holocaust.

The aftermath of the 9/11 attacks saw a modest decline in tourism (which had already fallen off slightly in 2000 due to the economic downturn), but by 2003 tourism already had surpassed the level of 1999. This happened in part because the city acted immediately to retain and attract tourists and visitors. A patriotic tourism campaign was launched with "Paint the Town Red, White and Blue" hotel and theater packages. A television campaign promoted the theme "Everyone has a New York dream. Come find yours," spotlighting celebrities engaged in activities in the city they had supposedly always dreamed of doing. In 2007 an estimated 46 million tourists visited New York City, according to NYC & Company, New York City's official marketing, convention, and tourism organization. Of that number 37.1 million were domestic visitors, while 8.76 million came from other nations—making New York City the number-one port of entry into the United States for foreign visitors. Visitor spending totaled $24.71 billion in 2006, and tourism generated $16 billion in wages, supported 368,179 jobs, and generated $6.24 billion in taxes that year. At the end of February 2008 there were 73,333 hotel rooms in the city, and the occupancy rate for 2007 was 86.5 percent.

Touro College. Private coeducational institution at 27–33 West 23rd Street in Manhattan, founded by Bernard Lander in 1971. It offers undergraduate programs in the liberal arts, general studies, health studies, and Jewish studies; a law school was added in 1980. The college is nonsectarian but requires that students in the liberal arts division earn credits in Hebrew and Jewish studies. As of 2008 the college enrolled approximately 17,500 students at 28 locations domestic and abroad, although the majority are in New York City.

Rachel Sawyer

Toussaint, Pierre (*b* St.-Marc, St.-Domingue [now Haiti], 27 June 1766; *d* New York City, 30 June 1853). Philanthropist and candidate for sainthood. Born a slave in St.-Domingue, he moved to New York City in 1797 with the family of the French colonist Jean-Jacques Bérard. Toussaint supported the Bérard family with earnings he received while working as a hairdresser for New York City society women. He was freed on 2 July 1807 and later purchased freedom for his fiancée, Juliette Noël, whom he married on 5 August 1811 at St. Peter's Church (16 Barclay Street). He gave financial assistance to Catholic orphanages and to the clergy. He housed refugees of the French and Haitian revolutions, welcomed the indigent into his home, and helped a number of people purchase their way out of slavery. He was buried at St. Patrick's Old Cathedral cemetery on Mott Street. The Pierre Toussaint Guild was established in New York in the 1950s. In 1990 Toussaint's remains were removed from the cemetery of St. Patrick's Old Cathedral and placed in the crypt under the altar of St Patrick's Cathedral on Fifth Avenue. On 17 December 1996 Pope John Paul II proclaimed him "venerable," a necessary step toward canonization, or sainthood.

Michel S. Laguerre

Towers Nursing Home. Nursing home located at 455 Central Park West (at 106th Street) during the NURSING-HOME SCANDALS of the 1970s. In 1955 Bernard Bergman opened Towers Nursing Home in a Charles Haight–designed building modeled on a French château, which had originally housed the New York Cancer Hospital. By the mid-1970s the facility was one of the largest in a Bergman-operated network of 37 nursing homes facing state and federal fraud charges, and Bergman himself was eventually convicted of Medicaid fraud and bribery. As a result of the scandals, Towers Nursing Home was closed in 1974.

Eric Hollingsworth

Town Hall. Four-story building at 123 West 43rd Street in Manhattan housing a concert hall of the same name. Designed in a Georgian Revival style by the firm of McKim, Mead and White, it was built during 1919–21 by the League of Political Education for public meetings, lectures, and concerts. From the outset the hall was a popular forum for debates on a wide range of social and political issues. Ann Blaksley Bliss contributed funds to buy the site in the rapidly developing theater district. The concert hall, renowned for its superb acoustics, has been the setting for performances by Richard Strauss, Sergei Rachmaninoff, Dizzy Gillespie, and Joan Sutherland.

Rebecca Read Shanor

Townsend Harris High School. Public high school in Queens, opened in 1906 as a three-year school for boys called Townsend Harris Hall on the campus of City College in Manhattan, with which it was affiliated. It was named for an influential merchant and diplomat who also established the Free Academy (which later became City College). The school offered free tuition to its selectively admitted students, who in early years were frequently immigrants and the sons of immigrants. Notable graduates included the bacteriologist Jonas Salk and the writer Herman Wouk. The school closed in 1942. In 1984 it reopened as a four-year, coeducational school affiliated with Queens College.

Rachel Shor

Town Shop. Lingerie store on the Upper West Side that specializes in bra fitting. Located on Broadway near 82nd Street since 1936, it began as a dry-goods store on Sixth Avenue near 53rd Street and at one point expanded to four locations throughout the city. The business was established by Samuel Koch in 1888 and was transformed into a lingerie emporium by his daughter-in-law Selma Koch, who began working in the shop in 1928. She focused on customer service and gave every woman individual attention, claiming that almost 80 percent of her customers were wearing the wrong bra size before visiting Town Shop. Her knack for sizing, usually with a look rather than a tape measure, gained her loyal customers and national celebrity status. She was interviewed on National Public Radio in 2002 and appeared on the New York City–based *Rosie O'Donnell Show* to discuss her field of expertise. Koch died in 2003; her obituary in the *New York Times* stated that "she was 95 and a 34B." Her son and grandson continue to run the store.

Holly Cronin

toys and games. Until the mid-nineteenth century, the majority of toys in the United States were imports from Germany. Many of the earliest domestic toymakers were based in New York City, including F. and R. Lockwood (154 Broadway), makers of printed wooden game boards; J. Ruthven and Son (14 John Street), metal, wood, and ivory turners who made whistles, balls, chessmen, and blocks; and Boardman and Hart (6 Burling Slip), pewterers who manufactured miniature utensils and table settings. After moving to New York City from Rhode Island, several members of the Crandall family emerged as the city's most prominent toymakers between 1845 and 1915. The most renowned was Jesse A. Crandall, who in a shop at 73 Fulton Street made wooden hobby horses, sleds, and early bicycles called velocipedes. Other outstanding toymakers were the McLoughlin Brothers, who opened a store at 24 Beekman Street in 1855 and sold paper dolls and dollhouses, toy books, lithographed wooden toys, board games, and blocks. After the Civil War more elaborate toys helped to free U.S. toymakers from the domination of European imports. The Buckman Manufacturing Company in Brooklyn sold a "Brooklyn toy steam engine," and the Union Manufacturing Company of Brooklyn

manufactured cast-iron boats, fire engines, and steam-powered toy factories that included lathes and grindstones. One of the country's largest makers of "clockwork," or windup, toys was R. J. Clay's Automatic Toy Works, which secured patents for a creeping doll and a crying doll. Althof, Bergmann and Company, formed in 1867, advertised 177 tinplate toys and miniatures in its catalogue in 1874. The first department store to open a section devoted to toys was R. H. Macy in 1875. With the growing commercialization of Christmas, toy stores rapidly increased in number across the city. Some of the largest included Hinrich's at 29–33 Park Place, Hubbell and Ward at 21st Street and Broadway, E. Ridley and Sons at 309 Grand Street, and F. A. O. Schwarz, which opened a store at 42 East 14th Street in 1880.

To sell their products, most nineteenth-century American toymakers relied on catalogues or middlemen. Edward I. Horsman and Company, which manufactured dolls, also imported toys and acted as a wholesale agent for small U.S. makers. George Borgfeldt at 425 Broome Street helped to change the way toys were sold by opening a sample house where manufacturers exhibited their products to retailers. His system was a forerunner of the toy convention, which eventually made New York City the center of the toymaking business and also made the middleman unnecessary. Perhaps the city's most lasting contribution in the field of toymaking was the teddy bear, named after President Theodore Roosevelt, whose nickname was Teddy. It was introduced in 1902 by Morris Michtom, the owner of a cigar and novelty store in Brooklyn, who in the following year formed the Ideal Toy and Novelty Company. By 1906 the teddy bear was so popular that Ideal was also a maker of dolls, and through Michtom's nationwide marketing efforts it became the world's largest. The city was also the original location of the Lionel Train Company, a maker of model railroad sets formed in 1903 by Joshua Lionel Cowen (the firm moved to New Haven, Connecticut, in 1910). In 1916, 68 toy companies in the city organized a trade group called the Toy Manufacturers of the USA (now the Toy Manufacturers of America) with headquarters at 200 Fifth Avenue; in later years the group expanded its headquarters to 1107 Broadway and developed a degree program in toy design at the Fashion Institute of Technology. The city's most successful toy magnate was Louis Marx, an innovator in mass production and mass marketing who formed Marx Toys in 1921 and took advantage of the boycott of German goods occasioned by World War I to build it into the world's largest toymaker by the late 1920s. In 1972 Marx sold the firm to the Quaker Oats Company for $52 million.

After World War II plastic became the most widely used material in toy manufacturing. Many firms in New York City maintained showrooms and corporate headquarters at 200 Fifth Avenue and other locations but moved their manufacturing elsewhere, sometimes under contract. Among the toymakers that continued to manufacture in the city in the 1950s were Ideal (at 184-10 Jamaica Avenue in Hollis), Palmer Plastics (at 31 Stone Avenue in Brooklyn), and the Automatic Toy Company (at 77 Alaska Street in Staten Island). Popular toys and games developed in the city included the "action figure" G. I. Joe, Mr. Potato Head (by toy inventor George Lerner), and the board games Scrabble and Parcheesi. The number of toy factories in the city declined after the 1950s, and those that remained were small. In 1987 there were 45 plants that made dolls and stuffed toys, with a total employment of 1500. In the early twenty-first century the doll makers that remained in the city included the well-known firms of Alexander at 615 West 131st and Goldberger at 538 Johnson Avenue in Brooklyn.

Marshall McClintock and Inez McClintock, *Toys in America* (Washington: Public Affairs Press, 1961)

Marc Ferris

trade associations. In New York City associations to promote the business interests of various merchants were formed during the earliest days of the colony. Among the first were the Society for the Promoting of Arts, Agriculture, and Economy, in the Province of New York (1764) and the Marine Society (1770). The New York Cheap Transportation Association (1873), later renamed the New York Board of Trade and Transportation, rivaled the Chamber of Commerce (1768) in its influence over the development of the city. Most of its members were merchants in wholesale and import commerce who sought to reduce their transportation costs, and in 1904–6 they supported congressional investigations of the rate structures used by the railroads. These investigations led to the passage in 1906 of the Hepburn Act, which significantly increased the power of the Interstate Commerce Commission to regulate railroad rates. The Retail Dealers Protective Association was formed by 1899. Other associations of small businesses included the Neighborhood Cleaners Association, the New York Association of Women Business Owners, the Dairy Council of Metropolitan New York, the Downtown–Lower Manhattan Association, the Boot and Shoe Travelers Association of New York (which sponsored a semiannual trade show that continues in the early twenty-first century), the Box Manufacturers Association of Greater New York, the Business Committee on Midtown Traffic, and the Chinese Merchants Association.

Donald R. Stabile

traffic. The control of traffic and proper management of street space started slowly in New York City. During the eighteenth century carts traveling northward along the road that is now Broadway were required to give way to those traveling southward. In the second third of the nineteenth century, the city's booming business and manufacturing base made traffic much worse. Heavy horse wagons, carriages, omnibuses and horse trams, riders, pushcarts, porters, and pedestrians formed a chaotic mix, each mode moving at its own speed with no traffic lanes, no rules, no signs, no insurance, and no oversight. There were also no formal procedures for handling accidents and collisions, and it was not uncommon for disputes to be settled by physical means (drivers always carried whips and knives).

The constant stream of vehicles and the wet layer of horse manure made street crossing hazardous for pedestrians, so the newly formed Police Department (1845) stepped in and created the Broadway Squad to help people across. A pedestrian bridge was built across Broadway near Fulton Street in the years after the Civil War, but it was not much used. Bicyclists presented a new challenge during the 1890s, and Police Commissioner Theodore Roosevelt formed the Bicycle Squad, called the Scorchers, to keep order on the streets. They were soon also charged with the responsibility of controlling motor vehicles, which became increasingly difficult because offenders had to be apprehended and fined on the spot.

The arrival of automobiles in New York City was greeted with great expectation and relief because a car was smaller than a horse and wagon, it was more maneuverable, it moved faster, it could back up, and it did not leave any waste (air pollution was not discovered for many decades). However, the number and speed of motor vehicles soon overwhelmed the capacity of streets to accommodate them. Some of the principal arteries were made dark and dangerous by the building of elevated rail structures with a forest of columns in the middle of roadways (the last elevated railway in Manhattan's core was removed in the 1950s). The Mounted Division of the Police Department, with a peak number of 800 men, formed the core of the Traffic Squad.

In 1908 Police Commissioner Theodore Bingham started to define and enforce traffic rules—keep to the right, pass on the left, and signal turns and stops. A system of summonses for traffic violations was instituted in 1910. Eventually police officers were posted at street intersections to direct competing flows of traffic; they were aided by stop-and-go mechanical devices known as semaphores from 1915 into the 1930s. In 1919 the first crude electric traffic signal with large lights was introduced on Fifth Avenue. Placed atop 16-foot-high (4.9-meter-high) control towers in the middle of the street, 50 such signals were erected throughout the city. The system of red-amber-green lights was confusing until the standard railroad code was adopted in 1924. The signals placed on Fifth Avenue during the 1920s were

handsome art deco structures in bronze. The late 1920s and 1930s was a period of major tunnel, bridge, and highway construction in the city, accompanied by a growth in street traffic volumes. The standard electric traffic signal was developed, and in 1934 there were 7700 of them in the city. A significant improvement in 1914 brought the synchronization of lights between intersections. Traffic engineering and management became recognized as a profession after World War II, largely in response to the rise of the automobile and the shift of freight transport from rail to trucking.

The Police Department was almost entirely responsible for traffic control until many of its duties were given over to the newly formed Department of Traffic in 1950. Commissioner Thomas T. Wiley (1950–61) initiated a number of control programs, including strict parking rules and the installation of the first parking meters. To free up streets and generate revenue, the city also built parking garages, the first of which opened in Flushing in 1954. The streets in Manhattan were the first in the city to be marked for one-way traffic, which improved carrying capacity and safety, and during the 1950s and 1960s almost all the avenues were converted to one-way traffic (the last were Madison and Fifth avenues in 1966). The program was soon extended to the other boroughs as well. Wiley's successor, Henry A. Barnes (1962–68), was effective in gaining support for the Traffic Department. Computerized signals that took traffic loads into account from minute to minute were introduced in the early 1960s, and the first exclusive bus lanes were designated along Livingston Street in Brooklyn and Victory Boulevard in Staten Island in 1963. The "Barnes Dance," a pedestrians-only signal phase in all directions, was tried at some critical intersections in the early 1950s but did not become widespread.

During the 1960s the first national, state, and local laws were passed to clean the air of pollutants produced by internal combustion and diesel engines, including carbon monoxide and ozone (two types of emissions for which New York City was soon identified as a "nonattainment" area, or an area that exceeded accepted levels of certain pollutants) and particulates. In the early 1970s the State Implementation Plan for air quality was formulated, which constituted basic guidelines for traffic control and urban development, and it became mandatory for developers to write environmental impact statements assuring that their proposed projects would not result in unacceptable levels of congestion and air pollution. In 1969 a consolidated Transportation Administration was formed; this agency was eliminated after a few years, and most of its functions were transferred in 1977 to the New York City Department of Transportation, which in turn assigned responsibility for street operations to its bureaus of traffic and parking violations and established its own uniformed force of traffic enforcement agents (mostly parking control). Bus lanes were added at the inbound lanes of the Lincoln Tunnel (1970) and the Long Island Expressway (1971); a transitway was implemented on 49th and 50th streets (1979), followed by one along Madison Avenue (1981). Plans to establish pedestrian malls failed on Madison Avenue (1971–73) but succeeded on Nassau Street in lower Manhattan (1969), 165th Street in Jamaica Center, and Fulton Street in Brooklyn (1984).

By the early 1990s it was estimated conservatively that traffic delays cost the local economy $7 billion a year; lines at the gateways to the city extended for miles every day during the morning hours, and accidents were numerous. The speeds in midtown Manhattan usually ranged on the avenues from 12 to 15 miles per hour (19 to 24 kilometers per hour), and on the cross streets from 9 to 12 miles per hour (14 to 19 kilometers per hour). During the worst periods traffic crawled at 2.5 miles per hour (4 kilometers per hour) throughout the area.

Unlike most urban areas that have a clearly distinguishable inward flow of traffic in the morning and an outward flow in the late afternoon, central Manhattan fills up in the early morning and remains nearly saturated until the theaters let out late at night. The bridges and tunnels to the island of Manhattan, being completely full and generating lines during the morning, act as metering devices for vehicular entry. Because of this, many motorists now arrive earlier or later, thus extending the duration of the overload period (often to 14 hours) and increasing the total volume of daily entries nevertheless. The battle for space is waged among pedestrians, bicyclists, private automobiles, delivery and repair vans, minibuses, taxicabs, commuter vans, trucks, public delivery vehicles, buses, emergency vehicles, and limousines. In addition, the streets and highways carry a considerable volume of traffic that neither originates nor terminates in the city (20 percent of the flow in the core). Intersections are vulnerable to gridlock, a term coined to describe the blockage of traffic flow in all directions caused by vehicles caught in intersections when traffic lights change. Heavy truck traffic on city streets remains a major problem because there is no freight delivery by rail within or across the city, barges are used very little, motor vehicles are becoming larger, designated truck routes create controversies, and high tolls in the westbound direction only on the Verrazano–Narrows Bridge force additional movement on city streets. Space along curbs in Manhattan is rarely available for parking or standing, off-street facilities are expensive, and many motorists park, stand, or stop illegally, thus further reducing already limited street carrying capacity. Traffic congestion hinders the movement of fire trucks and ambulances (fire lanes are not always clear of other vehicles). Manufacturing and distribution operations in the city are also impeded by traffic congestion—the principal source of the estimated economic losses—and many production establishments left the city during the second half of the twentieth century. It was estimated in 2006 that the total economic loss to the city caused by traffic congestion, delays, and uncertainty amounted to more than $13 billion per year. Business organizations have asserted that traffic congestion is no longer just an inconvenience but a "significant drag" on the city's and region's economy. Considerable nonmotorized traffic also complicates traffic flow. Bicycles are used by commuters and messengers, but attempts to create bicycle lanes have met with little success, in part because they reduce the amount of space available to other types of traffic. In central districts walking is frequently the best means of reaching destinations on time (residents of New York City walk more than residents of any other American city).

The city's traffic control responsibility since the 1990s has reverted almost entirely to the Police Department. In 1996 the Parking Enforcement District was established within the Police Department, and movement control was assumed almost entirely by regular police. The handling of tickets for noncriminal moving violations (not parking) and the collection of fines was taken over by the Traffic Violations Bureau of the New York State Department of Motor Vehicles. The New York City Department of Transportation became the sole owner and caretaker of city streets, traffic signals, street lights, and parking meters, not the enforcer of traffic regulations or planner of long-range transportation programs.

The city uses various methods to alleviate traffic congestion, such as marking off loading zones at curbside (as well as red zones for buses), establishing truck routes (of doubtful utility), providing pedestrian crossing elements (zebras or black and white stripes to distinguish walking areas, signals, fences), and striping boxes in heavily traveled intersections in which motorists may be fined for stopping ("Don't Block the Box!") as well as applying discretion in ticketing double-parked vehicles. In 2004 a new effort established nine "Thru Streets" in midtown to expedite cross-town movements by banning almost all turns and giving time for pedestrian crossing. The introduction of electronic "E-ZPasses," in 1991, which allow vehicles to move through toll gates without stopping, has improved flow at these facilities. Additional bus lanes (for example on Fulton Street in Brooklyn and the Staten Island Expressway) have reduced the space available for cars and trucks but improved the movement of public service vehicles. This program is to be expanded by introducing bus rapid transit (BRT) priority arrangements on several arterials in each borough. In general the city's efforts to limit traffic congestion do not include efficient land-use planning, although sectorial and district plans are produced as needed. Streets and highways are no longer being built, and it is

not possible to create additional lanes. Repair and maintenance have high priority, as do attempts to achieve greater capacity and safety with the current streets. Most parking garages and lots are now in the outer boroughs where the overall traffic situation resembles the "normal" conditions in most U.S. cities.

By 2008 more than 1.8 million motor vehicles were registered in New York City, a number that had remained practically unchanged for a decade. Many city residents, however, registered their cars outside the city. Meanwhile, 3.3 million residents hold driver's licenses. Each day 810,000 vehicles enter Manhattan south of 60th Street; this number was 650,000 in 1978. Motor vehicles accumulated a total of 51 million vehicle-miles on the streets of New York City each day. The Gowanus Expressway near the Brooklyn–Battery Tunnel experienced the largest traffic overloads in the city, with rush hour lines lasting six hours or more. In 2003 it was estimated that an average traveler in the metropolitan area was delayed 49 hours each year; this number was 34 hours in 1993. The highest daily traffic volume, about 300,000 vehicles per day, was found on the George Washington Bridge; this number represents the practical capacity of the bridge and is as high as can be found anywhere in the country. Among New York City highways, the Brooklyn–Queens Expressway (at the Kosciuszko Bridge) carried 199,000 vehicles almost every day in 2008. Among major surface arterials, the Queens Boulevard (in Elmhurst, including service roads) recorded 79,000 vehicles daily. By 2007 severe traffic accidents dropped in the city, and the number of traffic fatalities, reflecting national trends, changed from about 450 in 1996 to less than 300 annually. Between 2000 and 2006 about 160 pedestrians were killed annually by motor vehicles, compared with 952 in 1929. The city has 11,800 signalized intersections, 1.3 million traffic signs, and more than 300,000 streetlights. The average commuting time to work for New York residents is the highest in the country, at 39 minutes; 12 percent of Staten Islanders commute for 90 minutes or more.

See also Streets and highways and Parking.

Sigurd Grava

Trains Meadow. Former name of Jackson Heights. From colonial times the area was mostly lowlands with a few meadows and farms. In 1915 the Board of Estimate abolished Trains Meadow Road and adopted a street grid, making the development of Jackson Heights possible.

Vincent Seyfried

transatlantic cable. Following a series of failures, the New York, Newfoundland, and London Telegraph Company, headed by capitalist entrepreneur Cyrus W. Field, successfully laid down more than 1000 miles (1600 kilometers) of underwater cable for the first transatlantic cable communication. On 17 August 1858 U.S. President James Buchanan and Queen Victoria of Great Britain successfully communicated via cable. Nationwide celebrations followed, with none more elaborate than those in New York City, where activities continued for more than a month. The official day of celebration in New York City was 1 September 1858. The morning began with services at Trinity Church and the disembarkment at Castle Garden by Field and many of the sailors who had placed the cable. The ensuing procession, including bands and extensive fanfare, headed from the Battery to the Crystal Palace at 42nd Street and Fifth Avenue, where numerous speeches and commemorations took place. Napoleon Sarony captured the day's events with lithographs. The celebration ultimately proved somewhat premature and costly, as the cable communication technology soon faltered, and the bonfires and fireworks for the occasion ignited a fire that razed City Hall. In 1866 Field and other entrepreneurs renewed their efforts with longer-lasting results.

David White

transportation. See Aviation, Buses, Cable cars, Elevated railways, Ferries, Heliports, Railroads, Streetcars, Subways, and Taxicabs.

Transportation Alternatives. Advocacy organization promoting bicycling, walking, and public transit in New York City. Founded in 1973, it fought the city for less dependency on automobile transportation and has since worked on campaigns in five areas: car-free parks, pedestrian advocacy and traffic calming, bicycling, safe streets, and "sensible transportation." In 1993 it began publishing the quarterly *Reclaim* magazine. In the early twenty-first century its headquarters are located at 127 West 26th Street.

Jessica Montesano

Transport Workers Union of America [TWU]. Union of transit workers formed in 1934 and based in New York City. Within three years it had 30,000 members and contracts with the Interborough Rapid Transit Company (IRT), the Brooklyn–Manhattan Transit Corporation (BMT), and the city's major bus and trolley companies. After becoming an affiliate of the Committee for Industrial Organization in 1937 it organized transit workers in other cities and airline and railroad workers. In New York Irish workers initially accounted for half the membership, but later declined in number. When New York City took over the IRT and BMT in 1940, Mayor Fiorello H. La Guardia refused to engage in collective bargaining or sign union contracts, but the TWU successfully pressured the city to continue discussions about working conditions and grievances. In the following years it set a precedent for other civil service unions by gradually expanding its role. In 1941 it shut down most bus lines in Manhattan for 12 days. The union was often at the center of controversy because of its close ties to the Communist Party, its support for the American Labor Party, and the sharp comments of its president, Michael J. Quill. In 1948 Quill broke with the Communist Party and, after a bitter factional struggle, so did the union. It regained the bargaining rights that it had lost under Mayor La Guardia after lending strong support to mayors William O'Dwyer and Robert F. Wagner.

In 1954 the TWU signed a contract with the New York City Transit Authority, an agency set up in 1953 to run the buses and subways. From this time into the early 1960s the union won only modest wage gains for its members, resulting in a week-long wildcat strike by subway motormen in December 1957. On failing to reach a contract agreement with Mayor-elect John V. Lindsay, the TWU called a strike of workers on city-run lines on 1 January 1966. The union was widely criticized for crippling the city, and nine of its leaders were imprisoned, but after 12 days the walkout ended with terms highly favorable to the workers. Quill died soon afterward; his successors, including Matthew Guinan and John E. Lawe, were neither as skillful nor as prominent as he had been. Opposition groups sprung up within Local 100, the main unit of the TWU in the city, based on the fact that they were unhappy with its diminished militancy and the underrepresentation of African Americans in its leadership. In 1980, after winning control of the Local 100 Executive Board, they called a strike of bus and subway workers that lasted for 11 days. Under the Taylor Law heavy fines were imposed on workers for illegally striking, but these fines were partially offset by the gains they made in the walkout.

By the late 1980s, opposition groups once again were challenging incumbent leaders, including Sonny Hall, Lawe's successor as Local 100 president and head of the national TWU. In elections in 2000, members of the New Directions caucus took over all the major posts in Local 100, with Roger Toussaint becoming its president. A more militant stand toward management and greater rank-and-file involvement culminated in a three-day strike in December 2005 that threw the city into chaos just before Christmas. In an era when public employee strikes had become extremely rare, the TWU again proved itself exceptional in its willingness to take militant action to advance its members' interests.

Trans World Airlines [TWA]. Formed in 1928 as Transcontinental Air Transport, it offered the first transcontinental service by air and rail from Greater New York. In 1934 it flew Mayor Fiorello H. La Guardia from Newark Airport in New Jersey to Floyd Bennett Field in Brooklyn to satisfy the implied guarantee of his flight ticket that he would be offered transport into the city. The airline lobbied to develop what is now La Guardia Airport. It is well known for its terminal at Kennedy Airport, designed by Eero Saarinen and completed in 1960. Until the 1980s TWA was the second-largest international carrier in the United States. In 1988 it moved its headquarters from midtown Manhattan to suburban Mount Kisco, New York. In 1994 it moved the headquarters to St. Louis while maintaining large operations at Kennedy and La Guardia airports. After financial difficulties TWA filed for bankruptcy in 2001 and was bought by American Airlines. The final TWA flight was on 1 December 2001.

Travelers. One of the country's largest providers of property and casualty insurance products, formerly based in New York City at 55 East 65th Street in Manhattan as the Travelers Group. The Travelers Group merged in 1998 with Citicorp to become Citigroup. In 2002 the Travelers property and casualty insurance business was spun off as a stand-alone company to become Travelers Property and Casualty Corp., a predecessor company of the Travelers Companies, now based in St. Paul, Minnesota. A forerunner of Travelers Group was Primerica Corporation, from which it evolved after a series of mergers. In 2007 the Travelers Companies reacquired its red umbrella trademark, a logo once prominent at 388 Greenwich Street in Manhattan.

Janet Frankston

Travis. Neighborhood in west central Staten Island bounded to the north by Meredith Avenue and Victory Boulevard, to the east by the William T. Davis Wildlife Refuge and Main Creek, to the south by Fresh Kills, and to the west by the Arthur Kill. The area was the site of an Indian village and was renamed many times after being settled by Europeans. Developed as Jersey Wharf and known as New Blazing Star during the American Revolution, it was an important connecting point for ferries to New Jersey. One ferry operated from 1757 by Jacob Fitz Randolph and then for several decades by John Mersereau was a segment of a short route connecting Manhattan and Philadelphia: a road led from the area to the Port Richmond Ferry, from which passengers could travel to Manhattan and Bergen Point, New Jersey. During the following decades the area and the local settlement were known variously as Travisville (in the early nineteenth century, after the local property owner Captain Jacob Travis), Long Neck (during the Civil War, because of its peninsular configuration), and Deckertown (after a local family). In 1873 the American Linoleum Company opened a factory and workers' cottages on a tract of 300 acres (120 hectares) near the docks. Much of the early workforce was imported from England, where the process of rolling ground cork and oxidized linseed oil into a floor covering had been developed. Success led to rapid expansion, and the area became known as Linoleumville. The firm was an innovator in the development of decorative and inlaid styles of linoleum; surfaces for battleships, railroad cars, and large institutions; and linoleum-making machinery. In the early twentieth century the factory had 700 employees, or half the population of Linoleumville. The firm was sold in 1928 and ceased operations in 1931. Residents then voted to rename the village Travis. In later years the relative isolation of the area was disrupted by the building of the West Shore Expressway, of new housing, and of the Teleport, a fiber-optics network and business complex. Important institutions in the neighborhood include the Church of St. Anthony of Padua, which serves a largely Polish and Slavic congregation; a volunteer fire company; and an equestrian group. An Independence Day Parade inaugurated in 1911 continues to be held into the twenty-first century. Travis's location near the chemical factories of nearby New Jersey can lead to poor air quality, which was somewhat improved in the early twenty-first century by the closing of the Fresh Kills landfill.

Howard R. Weiner

Treadwell Farm. Designated historic district on the Upper East Side of Manhattan, bounded to the north by 62nd Street, to the east by Second Avenue, to the south by 61st Street, and to the west by Third Avenue. The area was once the farm of Peter Van Zandt and William Beekman and is named for the fur merchant Adam Treadwell, who in 1815 bought Van Zandt's parcel, on which he built his own farm. After his death in 1852 his daughter Elizabeth bought Beekman's parcel. Luxurious brownstones and row houses were erected in the 1860s and 1870s. The neighborhood was designated a historic district in 1967; among its landmarks is Trinity Baptist Church (1931). Well-known residents have included Walter Lippmann, Tallulah Bankhead, and Eleanor Roosevelt.

James Bradley

Tree of Hope. Tree formerly situated at the corner of 131st Street and what is now Adam Clayton Powell Boulevard. It symbolized the promise that many black artists found in Harlem and was believed to have the power to bring good luck; however, it fell victim to urban renewal and was cut down in 1934. A few months later a second tree on the same site was donated by the entertainer Bill "Bojangles" Robinson, who had a brass plaque embedded in the sidewalk bearing the inscription "The Original Tree of Hope / Beloved by the People of Harlem / You asked for a tree of hope, so here 'tis, Best wishes," along with his signature. The brass plaque was later stolen, and the second tree, also cut down, was replaced in 1972 by an interpretive sculpture by Algernon Miller of lavender, black, red, and green. A portion of the original Tree of Hope remains a fixture at the Apollo Theater.

Emilyn L. Brown

trees. More than five million trees grow in New York City, covering about one-quarter of the land area in tree canopy. When Henry Hudson arrived in 1609, Manhattan was a wilderness full of American Chestnuts, Red Oaks, White Oaks, and Canadian Hemlocks; Inwood Hill Park at the northern tip of the island contains the last piece of original forest in the borough. Native Red Oak and Tulip trees grow at the park, and forest restoration teams battle the invasive Norway Maple. The Bronx River Forest features Pin Oak and River Birch trees, and Forest Park in Queens contains the largest continuous oak forest in the United States. Trees on New York City's streets also play an important role in residents' quality of life. A survey by the Parks Department in 2007 tried to quantify the dollar value of street trees, finding that they provided residents with a total annual benefit of $122 million, including increased property values and positive environmental effects such as carbon dioxide absorption. Of the total number of street trees in 2006 (592,130—a 19 percent increase from 1996), 41 percent are in Queens, followed by Brooklyn (24 percent), Staten Island (17 percent), the Bronx (10 percent), and Manhattan (8 percent). Of the 168 species identified, the top 10 accounted for 74 percent of street trees: London Planetree, Norway Maple, Callery Pear, Honeylocust, Pin Oak, Littleleaf Linden, Green Ash, Red Maple, Silver Maple, and Gingko. The Asian Longhorned Beetle, an invasive insect from China that probably arrived in untreated packing crates, presents a twenty-first century threat, infesting and killing trees across the boroughs.

Kate Lauber

Tremont. Neighborhood in the west central Bronx bounded to the north by East 182nd Street and Bronx Park South, to the east by the Bronx River and the Boston Road, to the south

by Claremont Park, Mount Eden Avenue, and Mount Eden Parkway, and to the west by the Grand Concourse. It includes several smaller neighborhoods, including Claremont, Mount Eden, and Mount Hope. The area was farmland when the New York and Harlem Railroad opened a station in 1841 that soon became the center of a village. The name Upper Morrisania was used until the postmaster, Hiram Tarbox, discovered that it was being confused with that of a neighboring town, Morrisania; in the 1850s he renamed his office Tremont for three hills in the area (Fairmount, Mount Eden, and Mount Hope). Growth hastened after improvements were made to the transit system in the 1890s: a trolley line along Tremont Avenue that served the railroad station in the west, a new subway station to the east in West Farms, and an extension of the Third Avenue elevated line running between the two stations. In 1897 the borough hall, designed by George B. Post, opened in Crotona Park at Tremont and Park avenues. In the late nineteenth and early twentieth centuries apartment buildings replaced one-family frame houses and Tremont Avenue became a thriving shopping district. Jews accounted for most of the population; there were also many Italians and Irish who moved from crowded neighborhoods in Manhattan. In 1934 the borough offices were moved to the new Bronx County Building on 161st Street, but other city offices continued to occupy Borough Hall until it was abandoned in 1965; fire destroyed the building in 1968. Other city agencies occupied the Bergen Building on Arthur Avenue. In the early 1950s there was strong opposition to plans for the Cross Bronx Expressway, which called for the demolition of homes and the bisecting of the neighborhood. After the expressway opened in 1955 the population became increasingly black and Latino. Arson was common in the early 1970s, but at the same time the construction of the innovative scatter-site housing project Twin Parks helped the neighborhood to slowly stabilize. About one-third of the immigrants who settled in Tremont in the 1980s were Dominican; there were also many immigrants from Jamaica, Guyana, Honduras, Ecuador, and Guatemala. The late 1990s saw an increased number of Puerto Rican immigrants in the region. By the early twenty-first century, much of the devastated existing housing was rehabilitated or replaced with new dwellings. Tremont Avenue has remained a thriving local commercial thoroughfare.

Lloyd Ultan

Tresca, Carlo (*b* Sulmona, Italy, 9 March 1879; *d* New York City, 11 Jan 1943). Labor leader and revolutionary. He moved from Italy to the United States in 1904 and for more than a decade after his arrival edited several radical newspapers and led striking workers in Italian immigrant communities throughout the East. During 1912–16 he became well known as a labor agitator for the Industrial Workers of the World. He moved his newspaper *L'Avvenire* in 1913 from Steubenville, Ohio, to New York City where his militant activities and flamboyant personality quickly made him a leader among the city's radicals. He was a key figure in the defense of Ferdinando Sacco and Bartolomeo Vanzetti, for whom he mobilized support from 1920 until their execution in 1927. In the early 1920s he attacked the fascist government in Italy in his newspaper *Il Martello.* His arrest and conviction for sending "obscene" matter (a book on birth control) through the mail was engineered by the State Department, the Federal Bureau of Investigation, and the postal authorities at the behest of Benito Mussolini's government and led to his imprisonment for four months in a federal penitentiary in 1925; a protest campaign waged by his friends and political associates in New York City defeated efforts by the government to deport him to Italy. An opponent of Stalinism, he supported the anarchists during the Spanish Civil War (1936–39) and served on the commission led by John Dewey in 1937 that found Leon Trotsky innocent of the conspiracy charges leveled against him by Joseph Stalin. From 1941 he fought efforts of communists and prominent former fascists to infiltrate the Mazzini Society and the Italian–American Victory Council, both of which had large followings in New York City. Tresca was assassinated outside the office of *Il Martello* on Fifth Avenue and 15th Street. Although many associates believed that the murder was instigated by the communist Vittorio Vidali or by Generoso Pope, publisher of *Il Progresso,* it is more likely to have been the work of a member of the Mafia named Frank Garofalo, who acted to avenge a personal insult.

Nunzio Pernicone

Triangle Shirtwaist fire. The worst factory fire in the history of New York City occurred on 25 March 1911 in the Asch Building at the northwest corner of Washington and Greene streets where the Triangle Shirtwaist Company occupied the top three of 10 floors. Five hundred women were employed there, mostly Jewish and Italian immigrants between the ages of 13 and 23 who were working on the Sabbath out of economic necessity. To keep the workers at their sewing machines, the proprietors locked the doors leading to the exits. The fire began shortly after 4:30 p.m. in the cutting room on the eighth floor and spread rapidly, fed by thousands of pounds of fabric. Panicked workers rushed to the stairs, the freight elevator, and the fire escape. Most on the eighth and 10th floors escaped, but dozens on the ninth floor died, unable to force open the locked exit door. The rear fire escape collapsed, killing many and eliminating an escape route for others. Some tried to slide down elevator cables but lost their grip. Many more, their dresses on fire, jumped to their deaths from open windows. Engine Company 72 and Hook and Ladder Company 20 of the Fire Department arrived within minutes, but firefighters were hindered by the bodies of victims who had already jumped. Fire Department ladders extended only to the sixth floor, and life nets broke when panicked workers jumped in groups of three and four. Additional companies were summoned by four more alarms transmitted in rapid succession.

Triangle fire plaque, 2009

In fewer than 15 minutes, 146 women died. Although there was widespread revulsion and rage over the working conditions that had contributed to the fire, many defended the right of shop owners to resist government safety regulations, and some in government insisted that they were at any rate powerless to impose it. The owners of the company were charged with manslaughter and later acquitted, but in 1914 a judge ordered them to pay damages of $75 to each of the families of 23 victims who had sued. The Factory Investigating Commission of 1911 gathered testimony, and later that year the city established the Bureau of Fire Investigation under the direction of Robert F. Wagner, which gave the Fire Department additional powers to improve factory safety. The event crystallized support for efforts to organize workers in the garment district and in particular for the International Ladies' Garment Workers' Union. A witness to the event was Francis Perkins, who became Franklin D. Roosevelt's secretary of labor. The first woman appointed to a cabinet post, she remained in that post throughout the New Deal years. The Triangle Shirtwaist fire remains one of the most vivid symbols for the American labor movement of the need for government to ensure a safe workplace.

Tribeca. Neighborhood in lower Manhattan occupying a trapezoidal parcel bounded to the north by Canal Street, to the east by Broadway, to the south by Murray Street, and to the west by the Hudson River; the name was adopted by real estate developers in the mid-1970s and stands for the "triangle below Canal." Once used as farmland by Dutch settlers, the area was included in a large tract granted in 1705 by Queen Anne to Trinity Church, which built St. John's Chapel on Varick Street in 1807 and several years later laid out St. John's Park on an adjacent lot bounded by what are now Laight Street, Varick Street, Ericsson Place, and Hudson Street; the park could be used only by the wealthy families living in Hudson Square, the surrounding neighborhood of elegant brick houses. A fruit and produce market called Bear Market opened in 1813 at the western edge of the neighborhood along Washington, Vesey, and Fulton streets and became an important wholesale and retail supplier of food to the city. Among the products sold were locally grown fruits and vegetables, wild game, and imported meats, cheeses, and caviar. The neighborhood remained mostly residential until increased shipping and commerce in lower Manhattan attracted businesses during the 1840s and soon made the area a major point of transfer. During the mid-nineteenth century the eastern section was the center of the textile and dry goods industry: five- and six-story buildings with marble, sandstone, and cast-iron facades were built to house stores, factories, and storage facilities. After the Civil War St. John's Park became the site of the freight depot of the New York Central and Hudson River Railroad. The site of the depot is now the exit of the Holland Tunnel.

Bear Market became known as Washington Market, and the name was eventually applied to the entire neighborhood. During the 1880s warehouses were built to accommodate mercantile exchanges dealing in butter, cheese, and eggs. By 1939 the market stretched from Washington Street to West Street and had a greater volume of business than all the other markets in the city combined. It remained vital until the early 1960s when fruit and produce markets moved to Hunts Point in the Bronx and city planners approved the Washington Market Urban Renewal Project, leading to the demolition of many old buildings to make way for high-rise housing, office buildings, and educational facilities. Among these were Independence Plaza (1975) on Washington Street, a 40-story apartment building for middle-income tenants, the Borough of Manhattan Community College (1980) to the west, and Washington Market Park (1983) to the south. Factories and warehouses were converted to residential lofts, many of which became the homes of artists. The Tribeca Film Festival was founded in 2002 by Robert De Niro, Jane Rosenthal, and Craig Hatkoff as a response to the terrorist attacks on the World Trade Center of 11 September 2001. It was conceived as a way to foster the economic and cultural revitalization of lower Manhattan through an annual celebration of film, music, and culture. In the early twenty-first century Tribeca is a fashionable residential neighborhood with an affluent population. The streets are lined with shops, art galleries, bars, and restaurants.

Joyce Gold

Tribeca Film Festival. Film festival spearheaded in 2002 by actor Robert De Niro in the wake of the terrorist attacks of 11 September 2001. It was part of an initiative to economically and culturally revitalize the Tribeca area, for which it is named. (*Tribeca* stands for "triangle below Canal [Street]"; the area is directly north of the World Trade Center site.) The participation of De Niro, who has appeared in some of the most acclaimed movies made in New York City, helped lead to the festival's success. Occurring annually in the spring, by 2008 the festival had attracted more than two million attendees and was estimated to have generated more than $425 million in economic activity for New York City.

Jessica Montesano

Triborough Bridge. See Robert F. Kennedy Memorial Bridge.

Triborough Bridge and Tunnel Authority. Municipal agency responsible for financing, constructing, and maintaining bridges and tunnels in New York City. Its origins date to the 1920s when the city made plans to build a major crossing over the East River at 125th Street in Manhattan. Construction of the Triborough Bridge began at the site on 25 October 1929, during the same week the stock market crashed. Construction was soon halted when investors were unwilling to purchase municipal bonds. In early 1933 Robert Moses, chairman of the New York State Emergency Public Works Commission, initiated state legislation that formed the Triborough Bridge Authority as an alternative source of funds. The authority was structured as an independent public-benefit corporation empowered to sell revenue bonds to the Reconstruction Finance Corporation (RFC) and later the Public Works Administration; once all debts were retired, it was to be dismantled and the bridge turned over to the city. The bridge opened in 1936 and during its first year generated $2.72 million in tolls. Its unexpected success made the authority's bonds attractive in the private market: Moses persuaded the RFC to resell the bonds, which were bought quickly. He then transformed the authority into a permanent, multipurpose agency capable of refinancing its bonds to take on new projects. Once restructured, the authority became a model of fiscal resourcefulness and political independence. It built the Bronx–Whitestone Bridge and the Brooklyn–Battery Tunnel, then took its current name. It also assumed control of the Queens–Midtown Tunnel and acquired or built the New York Coliseum, the Eastside Airline Terminal, several parkway approaches, and five more bridges, including the Verrazano–Narrows Bridge (opened in 1964). The authority's political and fiscal powers were curtailed in 1968 when Governor Nelson A. Rockefeller removed Moses as its chairman and merged the authority with the financially troubled regional subway, rail, and bus authorities to form the Metropolitan Transportation Authority (MTA). Eventually, its receipts from tolls and other sources came to provide almost 80 percent of the total income of the MTA. During the early twenty-first century the nine crossings of the former Triborough Bridge and Tunnel Authority carry 300 million vehicles a year and generate $1 billion in revenues annually.

David C. Perry

Trilling, Lionel (Mordecai) (*b* New York City, 4 July 1905; *d* New York City, 5 Nov 1975). Literary critic. He attended Columbia University (BA 1925, MA 1926, PhD 1938) where he joined the faculty in 1938 and remained for the rest of his career. His first book, a study of Matthew Arnold (1939), marked him as a critical scholar of the first rank, and he soon emerged as a leader of the liberal intellectual community in New York City. Although he disdained the bitter ideological struggles that divided his peers, his criticism nonetheless reflected ideological concerns: his only novel, *The Middle of the Journey* (1947), is a fictionalized account of the retreat from communism by his friend Whittaker Chambers, and in such critical works as *The Liberal Imagination* (1950) he explored the ambiguity of conventional political ideals. Trilling's criticism had a decisive effect on the self-critical, antitotalitarian liberalism of the 1950s, and as a teacher and mentor he influenced figures as diverse as Norman Podhoretz and Norman Mailer.

Stephen L. Tanner, *Lionel Trilling* (Boston: Twayne, 1988)

Peter Eisenstadt

Trinidadians and Tobagonians. Immigrants from the West Indian nation of Trinidad and Tobago first settled in New York City about 1900 and numbered several thousand by the early 1950s. Most then lived in Harlem or Bedford–Stuyvesant. Although often skilled, they were usually denied employment in their trades and consequently did menial and unskilled industrial work outside their neighborhoods. Before the 1930s Trinidadians and Tobagonians formed the Trinidad Benevolent Association and the Tobago Benevolent Society. In the 1930s they also formed the United Mutual Insurance Company, which for decades was the largest black insurance company with headquarters in New York City. Charles Augustin Petioni, a physician, was the best-known leader of the community. Immigration increased markedly with the passage of the Hart–Celler Act in 1965 and continued into the early twenty-first century. The new immigrants included both blacks and East Indians (each group accounts for about 40 percent, respectively, of the population of Trinidad and Tobago). In the mid-1990s the number of Trinidadian and Tobagonian nationals in the metropolitan region was estimated at 150,000. In 2000 they were eighth on the list of new immigrant groups in the city, and more than 88,000 residents of Trinidadian and Tobagonian ancestry had been born outside of the United States. In the early twenty-first century both blacks and East Indians from Trinidad and Tobago lived in the black neighborhoods of Brooklyn, as well as in racially integrated neighborhoods throughout the city; East Indians were especially numerous in Richmond Hill. Most Trinidadians and Tobagonians were unskilled or clerical workers; others worked as technicians and managers and in business and other professions. Black Trinidadians have had a noticeable impact on the city's cultural life through the musical genres calypso and soca, and through their participation in the West Indian carnival on Labor Day in Brooklyn, which they were instrumental in creating in the late 1960s. Indo-Trinidadian organizations in the city include the Sanatana Dharma Maha Sabaha of the West Indies.

Trinity Church. Anglican church. It was formed by royal charter from King William III on 6 May 1697; the first service was conducted on 13 March 1698 in a new church at Broadway and Wall Street. In 1705 Queen Anne granted the church land extending from Fulton Street to Christopher Street that became known as the Queen's Farm. The Charity School (now Trinity School) opened at the church in 1709, the parish granted land for King's College (now Columbia University) in 1754, and it founded a school for freed blacks in the late 1700s. Chapels were added around the city; St. Paul's Chapel (1766, Broadway and Fulton Street) became the best-known. Trinity Church was destroyed by fire in 1776, and a replacement building was consecrated in 1790 but demolished after structural problems became evident in 1839. A new Gothic Revival church designed by Richard Upjohn opened in 1846.

The parish adapted to meet the needs of its members, founding a home for the elderly called St. Margaret's House, the John Heuss House for the homeless and mentally ill, and a cemetery and mausoleum at 155th Street. Income from the Queen's Farm enabled the parish to contribute to 1700 churches and religious institutions of different denominations; Trinity later gave about two-thirds of the land to the city and to various religious institutions. Some of the land was sold, and Trinity Real Estate managed the parish's remaining commercial properties. The chapels of St. Augustine, the Intercession, and St. Luke became independent churches in 1976; other chapels closed, and St. Cornelius's on Governors Island was given to the federal government in 1987.

During the terrorist attacks of 11 September 2001, debris knocked over a huge and ancient sycamore tree at St. Paul's Chapel; the roots were used in a sculpture by Steve Tobin and displayed next to Trinity Church. The church's

organ was also damaged by debris; a new organ was installed in 2003. In 2006 the church's bell tower was redesigned to accommodate 12 change-ringing bells, a gift of British philanthropist Martin Faulkes. Trinity Church and St. Paul's have had many well-known members, including William Kidd, John Jay, and Alexander Hamilton. Among those buried in the churchyard are Francis Lewis, a signer of the Declaration of Independence; Hugh Williamson, a signer of the U.S. Constitution; and Robert Fulton. Because Trinity Church owns more than 5 million square feet (464,000 square meters) of commercial office space in lower Manhattan, it has long been regarded as one of the wealthiest parishes in the world.

Morgan Dix, *A History of the Parish of Trinity Church in the City of New York* (New York: G. P. Putnam's Sons [vols. 1–4], Columbia University Press [vol. 5], Rector Churchmen and Vestrymen at the Parish of Trinity Church in the City of New York [vol. 6], Seabury [vol. 7], 1898–1978)

Phyllis Barr

Trinity Church Cemetery and Mausoleum. Last active cemetery in Manhattan. Part of Trinity Church parish, it was established in 1842 on 23 acres (9.3 hectares) of naturalist John James Audubon's estate, bounded by 153rd and 155th streets, Riverside Drive, and Amsterdam Avenue. Audubon is buried at the cemetery, along with Charles Dickens's son Alfred Tennyson Dickens, Albert Gallatin, Clement Clarke Moore (author of the poem "A Visit from St. Nicholas"), and actor Jerry Orbach. In 2008 former mayor Edward I. Koch bought a much-coveted burial plot in the cemetery for $20,000.

Kate Lauber

Trinity School. Private, coeducational elementary and secondary school founded by royal charter in 1709 in Manhattan as a charity school and directed by the headmaster William Huddleston (the first licensed lawyer in the colonies). Classes were held at Trinity Church until 1717; in 1749 the first school building was constructed near Rector Street. In the nineteenth century the school became a private institution along the English model with mostly middle-class students, moving to Varick Street, 14th Street, Eighth Avenue and 33rd Street, Longacre Square, Madison Avenue near 59th Street, West 45th Street, and its present location, on West 91st Street. Trinity is the oldest continuously operating educational institution in New York City.

Richard Schwartz, Peter L. Donhauser

Tri-State Regional Planning Commission. Planning organization. It was a source of much praise and considerable criticism during its 21 years of operation, from 1961 to 1982. The commission was born in a crisis—the imminent abandonment of the money-losing, privately owned commuter rail lines serving the region. New York's governor at the time, Nelson Rockefeller, invited his counterparts from New Jersey and Connecticut to a summit meeting on 30 August 1961, where they announced the formation of the Tri-State Transportation Committee. They selected Dr. William J. Ronan, Governor Rockefeller's personal secretary, to chair the committee, and invited J. Douglas Carroll, Jr., the nation's leading expert in urban travel demand analysis, to direct its technical activities. Rockefeller's grand plan for the committee was to convert it into an interstate transportation commission that would take control of the bus, subway, railroad, and toll highway facilities in the region, absorbing the Port Authority of New York and the Triborough Bridge and Tunnel Authority. Though he succeeded in gaining the approval of the New York and Connecticut legislatures, his plan was rejected twice in the New Jersey legislature, in 1963 and 1964.

With this setback Rockefeller concentrated his efforts on New York State, creating the Metropolitan Transportation Authority in 1965. New Jersey and Connecticut agreed to join New York in establishing the Tri-State Regional Planning Commission, with Carroll as its executive director. The agency's responsibilities grew as planning requirements for federal funding were increased. In the Great Society era of the 1960s, the federal government encouraged metropolitan planning organizations (MPOs) to support programs that went beyond transportation; as a result the commission, as the official MPO for the region, became responsible for creating plans for housing, open space, and other governmental functions, in addition to transportation. Federal agencies made funds available for planning in these functional areas but also imposed planning requirements through the MPOs as a condition for receiving federal assistance.

While many factors led to the agency's dissolution in 1982, the unpopularity of many of these federal programs in the suburbs was an important source of conflict. Counties and localities felt that they did not have an adequate voice in the affairs of the commission. With the election of a conservative U.S. president in 1980, hope ended that the federal government might intervene and stem the growing tide for dissolution. Connecticut voted to terminate its participation in the commission, leaving New York and New Jersey to scramble for a bi-state solution. That was not to happen, and the agency was dissolved on 30 June 1982. For the New York State portion of the metropolitan area, the official MPO became the New York Metropolitan Transportation Council.

George Haikalis

trolleys. See Streetcars.

Trotsky, Leon [Bronstein, Lev (Davidovich)] (*b* Yanovka [now in Ukraine], 26 Oct 1879; *d* Mexico City, 21 Aug 1940). Revolutionary. After being expelled from France and Spain he settled with his wife and two sons in January 1917 in New York City, where they lived for a short time in a three-room apartment at 1522 Vyse Avenue in the Bronx. He was welcomed enthusiastically by the city's Russian expatriates and joined Nikolai Bukharin in producing the newspaper *Novyi Mir* (New World), which was printed in the basement of a building at 77 St. Mark's Place; he was also a popular speaker at gatherings of workers and antiwar activists. Trotsky left the city in March 1917 and made a two-month journey to Russia to join the Bolshevik Revolution.

Kevin Kenny

trucking. Everything that a New Yorker consumes or uses arrives in the city, at least part of the way and certainly on the "last mile," by motor truck. Of all the large cities in North America, save for Boston, New York City has the smallest percentage of goods delivered by rail (1 percent), which, together with water and pipeline transport, in most cities remains the most efficient mode for moving large volumes of cargo.

In some respects, freight operations in New York City are primitive, lacking overall coordination and advanced goods-handling methods (for example, large containers to all destinations, direct rail access, double-stack movements, or large tandem trailers). The job gets done, however, largely because of trucks and vans. Intricate and effective coordination mechanisms among shippers, carriers, and receivers function as business enterprises to make the freight move, almost entirely through private operators using public roadways. These individual enterprises range from national companies with thousands of units to individuals with vans moving their own goods. The integrated carriers, such as United Parcel Service and Federal Express, are special cases that set an example. The carriers operate independently to deal with their own tasks; they expect the government to provide the infrastructure but otherwise not to interfere. The operations are not regulated or controlled, and public agencies have no direct role, except for street traffic rules (including size and weight limits) and safety regulations (including drivers' work practices). The activity operates at a metropolitan level, with political boundaries having little significance (except for the registration of vehicles and taxation), which is particularly the case in the metropolitan region. No regular process exists for recording what and how much moves where, but estimates can be made. Thus, for example, the total annual freight volume generated in the city plus the five nearby counties is 392 million tons, of which 263 million tons are

associated with the city. Trucks carry the bulk of it, but they are registered and garaged mostly outside the city.

Rail cargo systems have atrophied in the metropolitan region, and the largest modern freight rail cars cannot even enter the city. The nearest crossing of the Hudson River is near Albany, New York; there are no efficient freight or container yards; and clearances are not adequate. But even if more freight could be brought in by rail, it would still have to be distributed locally by truck. The continental goods-carriage systems effectively stop on the west side of the river, and internal access has to be gained from the many active nodes there. Marine cargo operations have mostly moved to Port Elizabeth and Port Newark in New Jersey. Distribution centers relying on trucks have assumed a major role in freight handling and they, too, are now located primarily west of the Hudson. All of these generate heavy vehicular volumes. Air cargo is growing in volume and is particularly time-sensitive and valuable, thus relying entirely on truck feeders. The congestion around John F. Kennedy International Airport is an economic drain for many of these carriers.

The critical trucking tasks in New York City are the distribution of consumer goods, the moving and storage of household items, the supply of offices and institutions, and the transport of materials to construction sites, as well as sufficient access by repair and maintenance vehicles. Responsiveness to immediate needs is the dominant objective, and vans and trucks can do that well; however, they face various complications in the city: on-time delivery is more important than a full load, so trucks frequently are almost empty; most enterprises are in fierce competition, so they insist on having full control of their own supply operations, resulting in duplication of effort and lack of cooperation; the city is crisscrossed by waterways, and each bridge and tunnel—almost all of which have width and height restrictions affecting the entry of large vehicles—can become a bottleneck for trucks; illegal parking by passenger cars is prevalent in some busy districts, so goods delivery is impeded by blocked access and lack of loading space; construction equipment, parades, and motorcades can disrupt normal operations; much of the regional highway network consists of parkways, so trucks must use overcrowded local streets and arterials. As trucks become larger and heavier, they damage old pavements; the trucks in turn are easily damaged by potholed roadways. The most common damage that trucks sustain in the city is the loss of side-view mirrors because of tight clearances.

Above all, there is the persistent congestion of streets and highways in the city. Although the trucking industry suffers direct economic effects from congestion, it also contributes to it because of the high number of trucks in the regular traffic stream and the fact that they are not easily maneuverable and need to get as close as possible to their loading locations. Truckers in New York City are reluctant to leave their vehicles and cargo out of sight even briefly, and the busiest shopping streets tend to have a solid row of double-parked trucks during the early part of each working day, when stores are restocked. Certain road sections—such as the Cross Bronx Expressway, the Long Island Expressway in Queens, the Gowanus Expressway, and the Brooklyn–Queens Expressway—can be counted on to be always overloaded, but chronic congestion is found throughout the city on the larger arteries that touch high-intensity areas (such as the several business districts, Hunts Point Market, and the Brooklyn waterfront) and at gateways.

The principal effort by the municipal government to assist truck operations is a truck route program extending over some 1000 miles (1600 kilometers). A few major expressways and arterials are designated as through routes and allow 53-foot-long (16-meter-long) trailers. Most of the network consists of local truck routes that reach all districts. All cargo vehicles are required to stay on this system and leave it only at the closest point to a local delivery. The program is effective, except for inadequate signage, some drivers who are unfamiliar with the system, and temporary obstructions. But many of the traffic improvements and controls on streets that expedite the operations of private cars, buses, pedestrians, and bicycles (for example, special lanes, turn restrictions, bus stops, privileged parking permits, reserved spaces, and exclusive lanes) are seen by truckers to be at the expense of trucks and other working vehicles.

The costs that result from congestion and other difficulties are tangible. The delivery of a ton of goods or a parcel in New York City is more expensive than in any other North American city. Surcharges are routinely imposed. The most common complaint by city truckers is the high number of traffic and parking summonses that they receive, which is nonetheless considered a normal cost of doing business in the city. Some firms have employees working full time to get tickets dismissed. Also, truckers may have to pay various tolls in the city, which add up, with other charges, in the ledgers of truck operators.

An "external" trucking-related problem is the fact that truck movements along the eastern seaboard of the United States tend to cross New York City, thus overloading the George Washington and Verrazano–Narrows bridges. Three out of every five eastbound goods vehicles on the George Washington Bridge have destinations east and north beyond the city. Because the tolls on the Verrazano–Narrows Bridge are collected only in the western direction, westbound truckers avoid them by utilizing, for example, Canal Street, thus exacerbating traffic conditions across Manhattan.

Congestion has contributed materially to the disappearance of manufacturing from the city. The only remaining large manufacturing component is the garment industry in midtown Manhattan, which is serviced entirely by motor and hand trucks. This is an example of a traditional manufacturing and marketing activity housed in a fixed environment (buildings, elevators, and streets) that cannot accommodate modern transport and access operations.

Trucking activity in any city is associated with several environmental and community issues that are secondary to their primary business of moving freight; the effects of these are particularly obvious in New York City. Motor truck operations have a reputation for environmental pollution, largely because of diesel engines, which generate nitrogen oxides and small particulate matter (soot) from their exhausts and are noisy if not properly controlled. The noise affects the livability of many neighborhoods, and vibrations from several large units operating near buildings can be destructive. There are also safety and security issues. Truck-related accidents are feared in residential areas. Hijacking of trucks (particularly those loaded with liquor or clothes) was a common occurrence, but this practice has been brought under control because of rooftop identification numbers, better communications among law enforcement personnel, and the fact that vehicles and drivers are now equipped with advanced communications and surveillance systems. Nevertheless, three-person crews are frequently employed for moving valuable cargo in the city. The New York City Police Department is also aware that trucks can be used to blow up strategic targets, as was the case in the 1993 terrorist attack on the World Trade Center.

All other nonmanufacturing activities of the city have to live with the chronic frictions and inefficiencies affecting the trucking industry. Demands for relief and improvement have always been a part of the civic and business debate. Effective programs are difficult to implement: for instance, rail-freight access could be created by building a cross-harbor tunnel to Brooklyn, but the cost could amount to more than $7 billion. Truck routes could be expanded, but there are only a few places where truck volumes would fill dedicated lanes adequately; exclusive "freightways" do not appear to be feasible. Nighttime deliveries could be practiced more, but most small establishments cannot afford to engage another shift of personnel during off-hours. Deliveries could be consolidated and district distribution centers built, but both would require direct and strong city action, the granting of monopoly rights to some enterprises, or the enforcement of cooperative arrangements. None of these approaches is feasible, given the institutional characteristics of the industry. Large vehicles (18-wheelers, for example) could be banned

from all city streets, but this might create even larger inefficiencies. Trucks could be ferried along and across waterways on barges, but this might slow down operations because of complicated on- and off-movements. Off-street loading spaces could be built every few blocks in business districts, but land acquisition costs would be prohibitive, ownership and management responsibilities would be contested continuously, and delivery people would probably avoid them anyway. Some parkways could be opened to small trucks and vans, but excess capacity to be used for working vehicles is rare.

Estimates indicate that by the year 2030 the freight volume in the region will grow by 50 percent because of population increases, expansion of business activity, and changing distribution patterns. The existing street and highway network cannot absorb this additional load. In the short run, work hours will have to be extended; in the long run, consolidation and prioritization of movements may became mandatory.

Sigurd Grava

Trumbull, John (*b* Lebanon, Conn., 6 June 1756; *d* New York City, 10 Nov 1843). Artist. Born to a prominent family, he graduated from Harvard and fought in the American Revolution before traveling to London to study with Benjamin West. In 1804 he moved to New York City and became the guiding force behind the American Academy of the Fine Arts, serving as its president (1817–35). Guided by a belief that the fine arts are essential to national welfare, he advocated hanging American portraits and historical paintings beside works by old masters and generally favored the works of his contemporaries. Although criticized by young artists for his conservatism, he was widely regarded for his talent. In 1816 he received a commission for four murals for the rotunda of the U.S. Capitol. He executed idealized, patriotic scenes drawn from the Revolution

Irma B. Jaffe, *John Trumbull: Patriot-Artist of the American Revolution* (Boston: New York Graphic Society, 1975); Helen A. Cooper, *John Trumbull: The Hand and Spirit of a Painter* (New Haven, Conn.: Yale University Art Gallery, 1982)

Carrie Rebora Barratt

Trump, Donald (John) (*b* Queens, 14 June 1946). Real estate developer. The son of Fred Trump, an important developer and owner of residential housing in the outer boroughs of New York City, he attended the University of Pennsylvania and then entered his family's business. In 1974 he took an option to buy the Penn Central Railroad yards on the Upper West Side and announced plans for what later became known as Trump City, a large development of luxury apartments and mixed-use facilities. In 1976 he received the first tax abatement under the city's new business-incentive program to purchase the distressed Commodore Hotel near Grand Central Station and refurbish it as the Grand Hyatt. In the 1980s he purchased the Plaza Hotel at 59th Street and Fifth Avenue. A number of his projects during the 1980s proved controversial because of the ways in which he allocated funds. He used tax abatements to finance Trump Tower, a lavish skyscraper on Fifth Avenue serving as the organization's headquarters and also containing offices, stores, and condominiums; he built a number of luxury apartment complexes in midtown Manhattan and on the Upper East Side, including Trump Plaza at Third Avenue and 63rd Street, as well as several gambling casinos in Atlantic City, New Jersey; and he bought a football team (the New Jersey Generals) and the Eastern Airlines shuttle (which he renamed the Trump Shuttle). Because his investments were highly leveraged, the collapse of the real estate market in the late 1980s forced him to renegotiate nearly $2 billion in debt and divest himself of various holdings, including the air shuttle (bought by U.S. Air). In the 1990s he continued to work on various developments, including a scaled-down version of Trump City that was renamed Riverside South in 1991. In 2001 the Trump World Tower, a residential skyscraper across from the United Nations headquarters, was completed. In addition to his vast real estate holdings Trump became known for his flamboyant personality. In 2003 he began producing and hosting the reality television show *The Apprentice,* which takes place in New York City and for which Trump received a star on the Hollywood Walk of Fame.

Marc A. Weiss

"trunk mystery." Incident in 1871 that began when a baggage master discovered a nude female corpse in a trunk measuring 3 by 3 by 2 feet (90 by 90 by 60 centimeters) at the Hudson River Depot on Saturday, 26 August. The body was identified as that of Alice Augusta Bowlsby, a 19-year-old unmarried woman from Paterson, New Jersey. An investigation revealed that she had been impregnated by a man named Walter Conklin, who arranged for Jacob Rosenzweig to perform an abortion. After accidentally killing Bowlsby, Rosenzweig sought to conceal the evidence by sending her corpse to Chicago; he was sentenced to seven years in prison, and Conklin took his own life. The case fueled campaigns to outlaw abortion.

Mary Elizabeth Brown

Truth, Sojourner [Baumfree, Isabella] (*b* Hurley, N.Y., *ca* 1797; *d* Battle Creek, Mich., 26 Nov 1883). Abolitionist. Born a slave, she was separated from her parents in 1810 after being sold to a farmer in New Paltz, New York. With a slave named Thomas she had five children including a son, Peter, who was sold to a planter in Alabama despite a state law (1788) prohibiting the sale of slaves out of state. She fled her owner in 1826 and with the help of Quakers undertook a lawsuit that resulted in the return of her son. Freed under state law in 1827, by 1829 she settled with her children in New York City, where she worked as a domestic servant and sometimes attended the Mother African Methodist Episcopal Zion Church at 156 Church Street. She maintained that she took the name Sojourner Truth after hearing a voice in 1843 calling on her to testify against the sins of slavery. She then left the city to travel throughout New England, where she met such noted abolitionists as William Lloyd Garrison, Frederick Douglass, and Wendell Phillips; they invited her to speak at abolitionist gatherings, where she described the experiences of women slaves and the destruction of black families under slavery. The eloquence and religious tone of her speeches became a powerful tool for abolitionists committed to "moral suasion," the policy of attacking slavery by revealing its evils through moral argument. Truth became one of the best-known abolitionists in the country, and by 1850 she was acquainted with such leaders of the woman suffrage movement as Lucretia Mott and Elizabeth Cady Stanton. She spoke at many women's rights conventions, among them the Fourth Annual Women's Rights Convention in New York City (1853). She often called on white women to recognize black women as sisters, who had much in common as mothers. During the Civil War she nursed black troops, worked in a freedmen's community in Arlington, Virginia, and in 1864 was invited to Washington, D.C., to consult with President Abraham Lincoln about the fate of emancipated blacks; she later unsuccessfully petitioned the U.S. Congress to pass a bill allowing freedmen to claim homesteads on public land in the West.

Thelma Foote

tuberculosis. Infectious disease that usually affects the lungs. Once known as consumption or the "white plague," it became an unfortunate hazard of life in New York City in colonial days, and for most of its history little could be done to combat it. The disease was long thought to be hereditary rather than contagious, and even Robert Koch's discovery in 1882 of the microbe that causes tuberculosis met with some hostility among the local medical community. In 1897 Health Commissioner Hermann M. Biggs made the reporting of tuberculosis cases to the Health

Department mandatory. At that time tuberculosis was one of the leading killers of New Yorkers; about 12,000 new cases occurred that year, and the disease was responsible for about one of every four deaths of people between the ages of 15 and 65. By 1904 the number of cases had tripled. Privately practicing physicians were hesitant to report their tubercular patients to the Health Department for fear of initiating their forcible removal to a sanitarium or quarantine hospital and of losing paying patients in economically difficult times. Despite this reluctance a strong public health campaign was mounted by such local officials as Biggs, T. Mitchell Prudden, William H. Park, and Lawrence Veiller. The Health Department opened the first municipal clinic for tuberculosis in the United States in 1904, and efforts at education, prevention, and isolation helped contribute to the decline of the disease by the late 1930s. Several chemotherapeutic agents that cured tuberculosis were developed between 1944 and 1952.

A further decline was brought about by municipal programs beginning in the 1950s and lasting into the 1980s that provided daily nursing and medical attention to the city's urban poor and others with the disease. During the late 1960s the New York City Department of Health spent more than $41 million each year on tuberculosis treatment and prevention programs. As a result of these efforts, new cases of the disease declined steadily each year between 1960 and 1978. Basking in the glow of overconfidence and changing budget priorities, however, the city began to execute massive funding cuts for almost every public health program, especially those directed at tuberculosis control. Added to this volatile mix were two decades of increasing numbers of homeless New Yorkers, the dismantling of psychiatric and public hospitals, the rise of AIDS, and the boom in immigration from nations where tuberculosis is common. Each of these factors helped to create a situation one infectious disease expert labeled a "tuberculosis time bomb." In 1979 the decades-long decline in tuberculosis in New York City came to an end, and by 1992 the case rate ballooned to almost three times what it had been in 1979. More striking, doctors established that once released from the hospital only 11 percent of tuberculosis patients completed their six-month course of medication and that one of every three newly diagnosed cases in the city was resistant to many of the drugs used to treat the disease. In response, the Health Department unrolled a massive anti-tuberculosis campaign, including neighborhood screening programs, directly observed therapy (DOT) clinics, improved health care in the city's jails, and for noncompliant patients a special quarantine facility. The price tag for these interventions was more than $1 billion. By 2008 the tide had turned in New York City. In the years following the epidemic's peak in 1992, multidrug-resistant cases of the disease fell by 91 percent in the city, and the overall case rate fell from a high of 49.8 cases per 100,000 to 16.6 cases per 100,000. Nevertheless, this incidence remained almost three times the nationwide rate of 5.8 cases per 100,000.

Tucker, Richard [Ticker, Reuben] (*b* Brooklyn, 28 Aug 1913; *d* Kalamazoo, Mich., 8 Jan 1975). Singer. Trained as a cantor in Brooklyn, he gained fame as a lyric tenor specializing in classical Italian repertory. He was a star at the Metropolitan Opera from the time of his debut in *La Gioconda* in January 1945. He was known for the quality of his voice and technique. He died during a concert tour with his friend Robert Merrill. The Richard Tucker Music Foundation aids the careers of American opera singers.

George A. Thompson, Jr.

Tudor, Antony [Cook, William] (*b* London, 4 April 1908/9; *d* New York City, 19 April 1987). Choreographer. He provided choreography for the Ballet Rambert in London before leaving Britain for New York City in 1939 to join the Ballet Theatre, which had just been formed. For the company's first season in January 1940 he revived three of his earlier ballets: *Jardin aux lilas* (1936), *Dark Elegies* (1937), and *Judgment of Paris* (1938). Tudor gained wide recognition for his explorations of psychological themes, especially in such works as *Pillar of Fire* (1942) and *Romeo and Juliet* (1943).

David Vaughan

Tudor City. Apartment complex located in Manhattan between 40th and 43rd streets and First and Second avenues. It was New York City's largest residential construction project when the Fred F. French Company began building in 1927; it included nine apartment buildings and 4500 residents by 1932. Promoted as an urban enclave with moderately priced housing, most of the buildings face parks between East 42nd and East 43rd streets or between East 41st and East 42nd streets. French oriented the building this way to eliminate East River views, because slaughterhouses occupied the land directly to the east of Tudor City before the construction of the United Nations in the 1940s. Ownership of Tudor City changed hands several times before most of the buildings became cooperatively owned in the 1980s. The 11 apartment buildings range from 11 to 32 stories and are notable for designs including gargoyles and protrusions of limestone. The complex includes two public parks, two private parks, a church, and a few businesses. New York City's Landmarks Preservation Commission declared Tudor City a historic district in 1988. In 2008 there were approximately 5000 residents.

Ben Silk

tugboats. Tugboats began running in New York Harbor shortly after the initial voyage of Robert Fulton's *North River Steamboat* in 1807. The steamboats transported people and pulled barges between New York City and Albany, cutting the travel time from four days to 36 hours. The steamboat *Nautilus* towed a large ship through New York Bay in 1818, the first recorded tug in the harbor; many tugs were equipped with towing bitts in the years to follow. The steam towing business opened up in 1824 with the revocation of Fulton's steamboat ferry monopoly and the opening of the Erie Canal a year later, leading to large increases in steamboat efficiency and affordability and the quantity of harbor and river towing. During the 1840s coal began to replace wood as fuel for steamboats. Irish immigrants played a large roll in tug operation during the era, with two such immigrants founding McAllister Tugging and the Moran Company, two of the largest tugging firms in New York City. During the Civil War, the Union army bought roughly 50 tugs from the New York City area to implement its Anaconda Plan to blockade southern ports. After the Civil War the army auctioned off its remaining tugs, and propeller tugs began to replace the old side-wheel tugs; both of these factors led to an increase in the number of tugboats in the harbor, which reached around 600 by 1900. During the 1920s many tugs converted to diesel power, though the less efficient steam tugs remained on the harbor into the 1960s.

The first tugboat unions developed during the 1880s as small independent entities segregated by the type of work its members performed. In the years before World War I many of these unions combined to become the Marine Workers Affiliation of the Port of New York. This group went on strike for three

Tugboat, 2009

days in 1918 until President Woodrow Wilson ordered arbitration; the strike led to union gains in power and effectively set up a closed shop. During the early 1930s Captain William Bradley organized the Harbor Tugboatmen's Union, which became the International Longshoremen's Association (ILA) Local 333, the dominant tugboat union in New York City. From 1946 to 1988 the ILA organized at least six harborwide tugboat strikes, each lasting between 10 and 88 days and crippling harbor commerce. During this period the volume of work for tugs in New York Harbor fell as trucking cut into tugboat business, commerce on the Hudson River declined, companies shifted their shipping to less expensive ports on the East Coast, and newer ships were less dependent on tugs for propulsion in the harbor. The power of ILA Local 333 and its membership fell after 1988, and seven of the largest tugboat companies recruited replacement crews, some from around the country, to replace the ILA members on their tugs. New York City tugboat commerce continues in the twenty-first century, with tugs transporting oil and waste and doing other jobs around the harbor.

Tully, Alice (Bigelow) (*b* Corning, N.Y., 11 Sept 1902; *d* New York City, 10 Dec 1993). Musician and philanthropist. Granddaughter of an early president of Corning Glass Works, she earned a reputation as a concert singer during the 1930s but left a more enduring mark as a patron of the arts. She promoted many musicians at salon concerts in her rambling, art-filled apartment high in the Hampshire House on Central Park and supported numerous musical organizations, often anonymously. She largely underwrote the construction of the concert hall at Lincoln Center that bears her name—it opened in 1969—and for many years chaired the board of the Chamber Music Society of Lincoln Center, which makes its home there. In 1970 she received the Handel Medallion, New York City's highest cultural award.

Albert Fuller, *Alice Tully: An Intimate Portrait* (Urbana and Chicago: University of Illinois Press, 1999)

James M. Keller

tunnels. Beneath the land and waterways of New York City lie 161 miles (259 kilometers) of tunnels. Of this total, the subway accounts for 137 miles (220 kilometers); four vehicular tunnels, two railroad tunnels, and the tunnels of the Port Authority Trans-Hudson Corporation (PATH) account for 24 miles (39 kilometers). Plans for an underwater tunnel were first developed in 1807, but the technology necessary to build tunnels through the mud and silt of riverbeds was not perfected until the late 1860s. The first attempt to construct a tunnel under the Hudson River was made in 1874 by Colonel DeWitt C. Haskin, who broke ground in Hoboken, New Jersey, for a tunnel to Morton Street in lower Manhattan. Several financial setbacks caused the project to be abandoned in 1892 after 2000 feet (600 meters) of tunnel beneath the Hudson had been constructed. In 1902 William Gibbs McAdoo took over the project, formed the New York and New Jersey Railroad (later known as the Hudson and Manhattan Railroad), and completed the tunnel along with one parallel to it, as well as a pair of tunnels between Cortlandt Street in Manhattan and Exchange Place in Jersey City. The tunnels opened in 1908–9 and later became part of the PATH system. Under the East River the piano maker William Steinway began construction in 1892 of the Steinway Tunnels (the oldest surviving tunnels entirely within the five boroughs), which were two trolley tunnels connecting 42nd Street in Manhattan with Queens that opened in 1907 and were converted to accommodate subways in 1915; these tunnels are now part of the No. 7 subway. The first subway tunnels in the city, the Broadway line of Interborough Rapid Transit (IRT), were constructed during 1900–1906 through the rocky center of Manhattan from City Hall to the northern tip of Manhattan; this project included tunnels close to the street surface in most areas but deep in the ground between 157th and Dyckman Streets because of hilly topography.

As the city's subway network expanded to provide multiple interborough routes, 13 double-track rail tunnels were built between 1908 and 1933 under the Harlem River, the East River, and Newtown Creek. During 1904–10 the Pennsylvania Railroad built two tunnels—a double one beneath the Hudson River and a quadruple one beneath the East River—both running to Pennsylvania Station; the East River tunnels also carry Long Island Rail Road (LIRR) trains. The first underwater vehicular tunnel was the Holland Tunnel, opened in 1927 beneath the Hudson River and connecting Canal Street in lower Manhattan with Jersey City in New Jersey; its ventilation system became a model for subsequent vehicular tunnels worldwide. The Lincoln Tunnel, opened in 1937, connects midtown Manhattan at West 40th Street with Weehawken, New Jersey, and at first had a single tube, to which parallel tubes were added to the north in 1945 and to the south in 1957. East River vehicular tunnels were built in 1940 (the Queens–Midtown Tunnel) and 1950 (the Brooklyn–Battery Tunnel).

During the early 1970s two new tunnel projects were started and then aborted because of the city's 1975 fiscal crisis. The Second Avenue Subway, first proposed in 1929, was built at Chatham Square, between 99th and 105th streets and between 110th and 120th streets before the tunnels were sealed. A fourth subway tunnel between Queens and Manhattan connecting East 63rd Street with Long Island City, which also included a lower level for the LIRR, was built but was unused until 1989 because of lack of connections to existing Queens subways. First opened to serve one new station in Long Island City (Queensbridge/21st Street), it was connected to the Queens Boulevard line in 2001, permitting through train service via 63rd Street between Manhattan and Queens stations. In the early twenty-first century the city's improved economic fortunes required an expansion of mass transit tunnels to accommodate new subway and commuter rail routes, and several new projects were under construction or in the final design phase, including the Second Avenue subway between 63rd and 96th streets; an extension of the No. 7 subway westward from 41st Street and Seventh Avenue (part of Times Square Station) to 34th Street and 11th Avenue; improvements to subway service in lower Manhattan; LIRR East Side access; and a second pair of New Jersey Transit rail tunnels to midtown Manhattan, terminating at 34th Street and Seventh Avenue immediately north of Penn Station.

Tunney, Gene [James Joseph] (*b* New York City, 25 May 1897; *d* Greenwich, Conn., 7 Nov 1978). Boxer. He grew up in a working-class Irish Catholic family in Greenwich Village, where he dropped out of school at age 15 to work as an office clerk. He practiced boxing at the Greenwich Village Athletic Club and turned professional in 1915. After winning the post-Armistice light heavyweight championship in Paris, he resumed his professional career, briefly holding the American light heavyweight championship in 1922 before losing it to Harry Greb and regaining it the following year. On 23 September 1926 he defeated Jack Dempsey for the world heavyweight title, which he successfully defended against Dempsey in the controversial "long count" fight of 22 September 1927 in Chicago. He later became a prominent businessman.

Steven A. Riess

Turks. Turkish-speaking Muslims from the Ottoman Empire settled in New York City in the late eighteenth century and numbered 1401 in 1900. By 1940 the figure had reached 17,663, although many were not ethnic Turks. During these years the city's Turks occupied a low position on the economic ladder. Some settled along Rivington and Forsythe streets in lower Manhattan and supported such clubs as the Turkish Aid Society on Theriot Avenue in

Unionport (dominated by Cypriot Turks) and the Turkish Cultural Alliance at 856 Broadway in Williamsburg (mostly Anatolian). After World War II many Turkish physicians, scientists, and engineers left for the United States, and especially for New York City, where the United Nations became the anchor of the local Turkish community. In 1977 the Turkish government bought 821 United Nations Plaza at First Avenue and 46th Street, which among other organizations houses the Turkish Consulate, the Turkish mission to the United Nations, and the Federation of Turkish-American Societies (formed in 1956). Turks in the early twenty-first century were dispersed throughout the five boroughs, with large concentrations in Brighton Beach, Sunnyside, and Richmond Hills in Queens.

Most of the metropolitan area's 70,000 to 100,000 ethnic Turks represent the wealthier classes of their home country. Many drive taxicabs, own filling stations and import–export firms, and work in restaurants. Few intend to return to Turkey. They take part in many groups, including the Turkish Women's League, the Turkish Cultural Alliance, and the Turkish Music Society of New York. The predominant religion is a secular brand of Islam: Anatolian Turks worship at the Fatih Mosque at 89-11 Eighth Avenue, Turkestanians at 2302 West 13th Street, and Crimean Turks at 4509 New Utrecht Avenue (all in Brooklyn). For several years Turkish law forbade Turks who took citizenship of another country to inherit property or exercise other property rights in Turkey. These laws were amended in 1985 to allow for dual citizenship, an arrangement that most Turkish-Americans found agreeable. In the early 1990s the Federation of Turkish-American Societies fought to change the use of the English term *Turkey* to its Turkish counterpart, *Türkiye* (though it was largely unsuccessful), and the city government designated as Turkish-American Week the week closest to 19 May, the Turkish Youth and Sport Holiday. The most prominent Turkish-American in the city was Ahmet Ertegun, a founder of Atlantic Records and an owner from 1970 to 1985 of the soccer team the New York Cosmos. More than 15,000 people reported Turkish ancestry in 2000.

Marc Ferris

Turner Corporation. Construction firm formed in 1902 as the Turner Construction Corporation by the engineer Henry C. Turner (1893–1954); it was originally based in Brooklyn. The firm was the first to use the Ransome method of building construction (using concrete reinforced by steel bars, rather than wood frames and masonry), and in its early years it built several notable structures, including the factory of the Robert Gair Company (the largest concrete structure until that time), the stairways for the first subway station in New York City, and Bush Terminal in Brooklyn. It eventually became one of the nation's largest builders of commercial, industrial, residential, and government buildings. During World War I the firm built several industrial buildings throughout the city, including the U.S. Army Supply Base and the U.S. Navy Fleet Supply Base in Brooklyn. Other famous city buildings constructed by the Turner Corporation include those of Bloomingdale's, Tiffany and Company, and the New-York Historical Society, and the Lexington Hotel, the Port Authority Bus Terminal, Lincoln Center for the Performing Arts, United Nations Plaza, and the current Madison Square Garden. In 2006 the New York Yankees and Tishman Speyer awarded Turner the contract to construct the new Yankee Stadium in the Bronx.

James Bradley

Turnverein. German educational society formed on 6 June 1850 by 36 exiles of the German Revolution of 1848, modeled on a society formed in Germany by Friedrich Ludwig Jahn to promote health and physical education among young men. Soon an important political institution, it supported labor unions and abolitionism. During the 1850s it helped to establish good relations between Americans and German immigrants and defended German Americans against Know-Nothings. In 1861 it organized the 20th New York Volunteer Regiment (also known as the United Turner Rifles), which distinguished itself during the Civil War in 1861 and was also the main body for assimilating Germans into American society during the Civil War and Reconstruction. From the end of the nineteenth century it focused on physical culture, and in 1891 a women's section was formed. The society was weakened by anti-German sentiment during World War I and by a sharp reduction in the number of German immigrants. During the late 1920s it adopted English as its official language to broaden its membership. Weakened further by the stock market crash of 1929 and World War II, it did not regain financial stability until after the war. In September 1986 it merged with the Mount Verein Turners and dedicated a new building in Throgs Neck.

Stephen D. Engle

Turtle Bay. Neighborhood on the East Side of Manhattan (2000 pop. *ca* 20,000), bounded to the north by 53rd Street, to the east by the East River, to the south by 43rd Street, and to the west by Lexington Avenue. It was named for the Deutal Bay farm, which originally covered 86 acres (35 hectares) of land surrounding a cove, shaped like a knife blade (*deutal* in Dutch), that contained turtles. Initially an area of small farms and country houses, Horace Greeley and Edgar Allan Poe lived there. The cove was filled in after the Civil War and brownstones were built, many of which were converted to tenements and rooming houses during the late nineteenth century to house European immigrants who worked in breweries, factories, and slaughterhouses by the river. Turtle Bay Gardens and Beekman Place were built in the 1920s (as some brownstones were converted to town houses), followed by the United Nations in the 1950s; United Nations Park stands on what was once Turtle Bay. Most of the housing consists of luxury apartment buildings, renovated brownstones, and town houses. The population is mostly young and affluent and includes many diplomats. East 49th Street between Second and Third avenues is officially named Katharine Hepburn Place after the actress who purchased one of the town houses in 1932. Other well-known residents have included the writer Kurt Vonnegut and the composers Irving Berlin and Stephen Sondheim.

Val Ginter

Tuxedo. Name formerly applied to New Brighton.

TWA. See Trans World Airlines.

Twain, Mark [Clemens, Samuel (Langhorne)] (*b* Florida, Mo., 30 Nov 1835; *d* Redding, Conn., 21 April 1910). Novelist and short-story writer. He began a career as a journalist in 1862 and went on his first lecture tour in 1866, speaking about his experiences in Hawaii, where he had been a travel correspondent for the *Union* (based in Sacramento, California). His first book, *The Innocents Abroad* (1869), an account of a boat trip to the Mediterranean, made him nationally well known. In 1871 he moved to Hartford, Connecticut. During this period Twain wrote his best-known works: *The Adventures of Tom Sawyer* (1876), a novel modeled on his childhood experiences living on the Mississippi River; *The Prince and the Pauper* (1881), a historical romance for children; *Life on the Mississippi* (1883), about his experiences as a riverboat captain in the 1850s; *Adventures of Huckleberry Finn* (1884), a companion to *Tom Sawyer;* and *A Connecticut Yankee at King Arthur's Court* (1889). He formed his own subscription firm (1884) that issued *Huckleberry Finn* as its first publication and invested heavily in the Paige typesetting machine. Both ventures failed, leaving him bankrupt in 1893–94. To pay his debts Twain sent his family to Europe and spent the winter in a single room at the Players Club (of which he was a charter member). In 1895 he embarked on a five-year speaking tour of the world, and in 1900 he returned with his family to New York City, where he was welcomed as a hero. The family rented an apartment at 14 West 10th Street and lived at Wave Hill in Riverdale (from 1901) and 21 Fifth Avenue (1904–8). Twain frequented

the Century, the Lotos, and the Metropolitan clubs, particularly enjoying his walks up Fifth Avenue to the mansion of his friend Andrew Carnegie on 92nd Street. He retired to a small farm in Redding, Connecticut, in 1908.

Anthony Gronowicz

Tweed, William M(agear) "Boss" (*b* New York City, 3 April 1823; *d* New York City, 12 April 1878). Political leader. His middle name was almost certainly Magear (his mother's maiden name) but is often given incorrectly as Marcy. Born in his family's home at 1 Cherry Street (now the site of the approaches to the Brooklyn Bridge in Manhattan), he left school at age 11 to learn chair making from his father and was later apprenticed to a saddler; he also studied bookkeeping for a time, was a clerk at a mercantile office in the city, and worked as a bookkeeper and later a partner in brush shops at 206 and 357 Pearl Street. He married Mary Jane C. Skaden on 18 September 1844, and they lived for two years with her family at 193 Madison Street. Standing about 6 feet (1.8 meters) tall and weighing nearly 300 pounds (136 kilograms), Tweed was famous for his free and easy manners, ample-though-coarse humor, and jovial swagger. In 1848, at the invitation of state assemblyman John J. Reilly, he helped to form a new fire company, no. 6; it was named the Americus Engine Company and its symbol was a fierce Bengal tiger, later adapted by Tweed for Tammany Hall. He became the foreman in 1849 and through the company, which was known as the Big Six, was introduced to municipal politics. After unsuccessfully seeking election as a Democratic assistant alderman in 1850, he won a seat in the following year as an alderman representing the seventh ward.

In 1852 Tweed joined his brother Richard in the family's chair-making business and was elected to the U.S. House of Representatives. After serving a single term he was appointed to the Board of Education and in 1856 to the Board of Supervisors of New York County. By 1858 he was a member of the general committee of Tammany Hall and the undisputed leader of the seventh ward. He and his well-trained ward heelers, district leaders, and block captains built a power base by courting Catholics and helping to feed, clothe, and shelter immigrants and the poor at a time when there were few agencies to help. Although he had little knowledge of the law, he was certified as a lawyer by his friend George Barnard in 1860 and opened a practice at 95 Duane Street. Despite his defeat in the election for sheriff in 1861 he was an astute politician. Shortly after the election he was named chairman of the Democratic General Committee of New York County, and on 1 January 1863 he was chosen to lead the general committee of Tammany Hall. He earned the nickname "Boss" after becoming grand sachem of the society in April. He then formed a smaller executive committee, which eventually wielded much more power than the general committee, and had himself appointed deputy street commissioner. In the following year he bought a controlling interest in the New York Printing Company, which became the city's official printer, and was paid lavishly for the work it performed. He also bought the Manufacturing Stationers' Company, which sold supplies to the city at inflated prices, and used his law practice to extort large sums that were disguised as legal fees for services rendered.

Tweed began wearing a large diamond in his shirtfront and turned to real estate to invest the enormous sums that he received in the form of kickbacks. Among his properties was a fashionable brownstone at 41 West 36th Street that he bought in 1866, and by the late 1860s he was one of the city's largest landowners. About this time he helped Jay Gould and Jim Fisk in their battle with Cornelius Vanderbilt for control of the Erie Railroad. Elected to the state senate in 1867, he pushed the Erie Classification Bill through the state legislature to legalize stock issued fraudulently by Gould and Fisk; they rewarded him with a large block of stock and a seat on the board of directors. Recognizing that he needed the support of his constituents to remain in power, he prevailed on the municipal government to provide more orphanages, almshouses, and public baths; helped to set up the Manhattan Eye and Ear Hospital; introduced a bill in the state legislature to fund parochial schools; sought to increase state appropriations to private charities; and fought for greater home rule for New York City. He also made himself the commissioner of public works. As the chairman of the senate committee on cities he oversaw the passage of a new charter for the city in 1870 that replaced the Board of Supervisors with a new Board of Audit. This body, consisting essentially of a group of associates known as the Tweed Ring, siphoned off staggering amounts of money from the many bond issues that were passed, and from 1869 to the end of 1871 the city's debt tripled and municipal taxes climbed accordingly.

Tweed owned a mansion at Fifth Avenue and 43rd Street and a stable on 40th Street where he kept his carriages and sleighs. By 1871 he was on the board of directors of the Harlem Gas Light Company, the Brooklyn Bridge Company, and the Third Avenue Railway Company and was president of the Guardian Savings Bank. To keep control of their own fortunes and funds belonging to the city, he and his confederates organized the Tenth National Bank. He also widened Broadway and fought to preserve a site for the Metropolitan Museum of Art in Central Park.

His fortunes soon changed, owing partly to the efforts of Thomas Nast, who exposed the corruption of Tweed and his associates in a series of cartoons. Evidence of the ring's corruption was passed to the *New York Times,* which published a series of damning articles from 8 July 1871, and in August Tweed began transferring his real estate holdings and other investments to family members. After his reelection as chairman of the general committee of Tammany Hall, he was served with an arrest warrant on 26 October; he nonetheless won reelection as a state senator in November and planned to return to Albany until his criminal indictment and arrest in December. At the end of the month he was deposed as grand sachem and expelled from the Tammany Society. His trial began on 7 January 1873 and ended in a hung jury. At a second trial, begun on 19 November, he was convicted on 204 of 220 counts, ordered to pay a fine of $12,750, and sentenced to 12 years in prison. When asked his occupation by prison officials, he replied, "Statesman." He was released after a year when a judge ruled the sentence excessive but was immediately rearrested on a civil charge and imprisoned on Ludlow Street. On 4 December 1875 he escaped to New Jersey during a visit to his family at 647 Madison Avenue. A civil trial in February 1876 ended in a judgment of $6 million against him. Using the alias John Secor, he fled to Florida and Cuba before reaching Spain, where the authorities sent him back to the city. He was returned to prison on 23 November. Toward the end of 1877 he disclosed many details of the ring's activities to a special committee of the Board of Aldermen. After Tweed's death from pneumonia in prison, Mayor Smith Ely refused to fly the flag at City Hall at half-staff.

Tweed Courthouse. Municipal building in Manhattan. In 1858 architect John Kellum designed the building for a site where an eighteenth-century almshouse had stood. The city's Board of Supervisors appropriated about $13 million for construction between 1862, when William M. "Boss" Tweed became the board's president, and 1871, when investigations into corruption toppled Tweed. The city completed the classical Victorian structure of gray Massachusetts marble in 1878 and used it as a courthouse until 1926, then as offices, and since 2002 as headquarters for the Department of Education. It is both a national and city landmark (1974, 1984).

Mary Elizabeth Brown

Tweed Ring. Corrupt group of politicians associated with Tammany Hall who controlled the government of New York City during the 1860s. Its leader, William M. "Boss" Tweed, was influenced by the dictatorial style of Mayor Fernando Wood and the notorious Common Council of the early 1850s, known as the Forty Thieves. From 1866 to 1871 the ring controlled Tammany Hall, the municipal government, the county government, the judicial system, the governorship, and the Board of Audit, which supervised all city and county expenditures after its formation by the charter of 1870 (a reform document supported by Tweed that gave the city home rule). In manipulating the board Tweed was aided by Mayor A. Oakey Hall, Comptroller Richard B. Connolly, and Peter B. Sweeny, head of the Department of Public Works. In July 1871 the *New York Times* charged that the ring had defrauded the city of millions of dollars; these allegations, along with mounting taxes and rising municipal bonded debt, swept the Tweed Ring from power and disgraced its members.

20th Century Limited. Express passenger train of the New York Central Railroad, running from Boston and New York City to Chicago in 15.5 hours and inaugurated on 15 June 1902 by George Henry Daniels, a patent medicine salesman turned passenger agent. The train followed the "water level route," which consists of the shores of Lake Michigan, Lake Erie, the Erie Canal, and the Hudson River, and traveled through Albany. It offered a barber shop, secretarial services, and onboard telephone in addition to the legendary red carpet treatment at its terminals. The train traveled as many as seven sections, of which the first to depart was called the Advance 20th Century. In 1938 the train was redesigned in a streamlined style by Henry Dreyfuss and until 1958 only Pullman cars were used, some of which carried passengers through to Los Angeles. Over the years such notables as Joan Crawford, William Randolph Hearst, J. P. Morgan, and Theodore Roosevelt rode the Century, and it became an institution in passenger rail travel. Service ceased on 2 December 1967; Amtrak's Lake Shore Limited follows a similar route.

Edward Hungerford, *The Run of the Twentieth Century* (New York: New York Central Lines, 1930); Lucius M. Beebe, *20th Century: The Greatest Train in the World* (Berkeley, Calif.: Howell–North, 1962); Karl R. Zimmerman, *20th Century Limited* (Minneapolis, Minn.: MBI, 2003)

twenty-four-dollar purchase. Transaction in which William Verhulst, governor of New Netherland, reportedly bought the island of Manhattan from Indians of the Wappinger Confederacy for 60 guilders' worth of trading goods (equivalent to $24), satisfying a Dutch law requiring settlers to buy their land from the Indians. The sale is said to have taken place by the end of the summer of 1626 and is usually credited to Verhulst's immediate successor, Peter Minuit. No deed of sale survives; a clever fake remains on file in the state archives at Albany.

James E. Mooney

"21" Club. Restaurant at 21 West 52nd Street, between Fifth and Sixth avenues. Opened in 1922 as a speakeasy by Jack Kriendler and Charles Berns and popularly known as Jack and Charlie's, it was the most expensive and fashionable of the nightclubs that served alcohol during Prohibition. It became famous for a secret door to a wine cellar (in the basement of 19 West 52nd Street) that let it hide 2000 crates of wine from police raids. It changed addresses several times, moving from Greenwich Village to Washington Place to 49th Street to its current address. In addition to costly drinks, the establishment offered unusually good food and had a dance floor and orchestra; it was much favored by members of Café Society and aging celebrities. The "21" Club was renovated in 1987 and remained one of the city's most popular restaurants in the early twenty-first century.

James E. Mooney

Twin Parks. Housing project on several sites in the central Bronx; it includes Twin Parks West, which lies along Webster Avenue south of Fordham Road, and Twin Parks East, along Southern Boulevard south of the Bronx Zoo. The project was the result of a study sponsored during 1966–67 by the J. M. Kaplan Fund on scatter-site high-rise housing for people of low and middle incomes. Construction was largely subsidized by the New York State Urban Development Corporation. The development was named for Bronx and Crotona parks and included new schools and community centers in Tremont, West Farms, and Belmont. Most of the buildings were designed by such young architects as Richard Meier and were completed between 1973 and 1975.

Gary D. Hermalyn

Twin Towers. See World Trade Center and September 11.

Two Bridges. Housing project on the Lower East Side of Manhattan, covering 10 blocks between the Manhattan and Williamsburg bridges and bounded to the north by Cherry Street, to the east by Montgomery Street, to the south by South Street, and to the west by Market Slip. Completed in 1967 at a cost of $44 million, it has more than 1400 units in several towers and three-story buildings. Drugs and crime afflicted Two Bridges in the 1980s but later decreased through the efforts of various community organizations. It has traditionally been an immigrant neighborhood, first populated by Europeans, then peoples from Latin America and, into the twenty-first century, the Chinese. In 2003 it was added to the National Register of Historic Places. The area slowly began to improve during the early twenty-first century.

James Bradley

Typhoid Mary. Nickname of Mary Mallon (*b* 23 Sept 1869; *d* New York City, 11 Nov 1938), a carrier of typhoid fever. She was first recognized as a healthy carrier in 1904 after an outbreak of the disease in a household in suburban Oyster Bay, New York, where she was employed as a cook. For the next three years she continued to work as a cook in several residences, until she was traced to one on Park Avenue and institutionalized at Riverside Hospital on North Brother Island (1907–10). She was released after promising not to work as a cook and to report regularly to the city's Department of Health. But she promptly disappeared and for the next five years worked in restaurants, hotels, and resorts in and around New York City, sometimes under an assumed name. In February 1915 she caused a serious outbreak of typhoid fever at Sloane Hospital for Women. In the following month she was apprehended and reinstitutionalized on North Brother Island, where she spent the rest of her life. In all, she was implicated in 47 cases of typhoid fever and three deaths.

Uhl, Anna Behr (*b* Würzburg [now in Germany], 13 Feb 1815; *d* New York City, 1 April 1884). Newspaper publisher. She lived in Niagara County before moving to New York City where with her husband Jacob Uhl, a printer, she bought the small weekly newspaper *New Yorker Staats-Zeitung*. Under their direction it began publishing daily and achieved influence in local and national affairs. She was the sole manager from her husband's death in 1852 until her marriage in 1859 to her assistant Oswald Ottendorfer (*b* Moravia, 26 Feb 1826; *d* 15 Dec 1900). Known for their philanthropy, the two made donations to the German Hospital, the Astoria House for Aged Women, and the Ottendorfer Branch of the New York Public Library.

Ukrainian Museum. Museum at 222 East Sixth Street in Manhattan, founded in 1976 by the Ukrainian National Women's League of America. The folk art collection of more than 4000 items contains regional costumes, needlework, and textiles including kilims (flat, woven rugs with traditional designs), as well as ceramics, woodwork, metalwork, and *pysanky* (traditionally decorated Ukrainian Easter eggs). Most objects date from the late nineteenth century and the early twentieth. The museum also has a photographic archive of the past 100 years of Ukrainian immigration to the United States.

Carol V. Wright

Ukrainians. Ukrainian immigration to the United States began in the late 1870s, mostly from economically depressed mountainous border districts between Austrian Galicia and the Subcarpathia and Presov region of Hungary. After passing through the Port of New York, the majority of immigrants went to work as miners in the anthracite region of northeastern Pennsylvania, where they became known as Ruthenians. In 1894 political differences with immigrants from Subcarpathia led the Galicians to form the Rusky Narodny Soiuz (now the Ukrainian National Association) and many other organizations. As national consciousness spread during the late nineteenth and early twentieth centuries, immigrants from Austrian Galicia and Bukovina adopted the new national name Ukrainian; immigrants from Subcarpathia continued to use the name Ruthenian.

Ukrainian cultural institutions developed slowly in New York City because of the transitory character of the city's early Ukrainian immigrants. Although small localized societies like the Sisterhood of St. Olga (1898) and the Brotherhood of St. Nicholas (1899) were organized, community life among Ukrainians in the city did not flourish until 1905, the year that the city's Ukrainians, virtually all of whom were Byzantine rite Catholics (Uniates), purchased a Baptist chapel at 322 East 20th Street in Manhattan; this was refurbished and named St. George's Ukrainian Catholic Church. When the first Ukrainian bishop, Soter Ortynsky, arrived in 1907, his first pontifical Mass in the United States was celebrated in St. George's Church. The parish moved to 24 East Seventh Street in 1911, when a larger church was purchased from a Methodist congregation. St. George Church and the surrounding neighborhood became a major hub for Ukrainian Americans in New York City.

Immigrants to the United States from Galicia, who feared Polish rule, dramatically increased in number after World War I. They developed organizations to protect their cultural and religious traditions, encourage Ukrainians to become loyal citizens of the United States, and work toward an independent, democratic Ukraine. In the 1920s the means of achieving these goals became a source of serious conflict among Ukrainian Americans in New York City, as communists, socialists, monarchists, and nationalists struggled for support. The postwar period also saw the establishment of the Ukrainian Autocephalous Orthodox Church in the United States and the arrival of Bishop John Theodorovich from eastern Ukraine (1924); the first parish, St. Vladimir's, was organized in 1926 at 334 East 14th Street in Manhattan.

In the 1930s about 50,000 Ukrainian Americans lived in New York City. St. George's Catholic Church, the community's largest institution, had a membership of more than 1000 families, and the Orthodox Church of St. Vladimir had 225 families. Periodicals such as the *Ukrainian Quarterly* (beginning 1944), published by the Ukrainian Congress Committee of America, were launched after World War II to provide Americans with reliable information about the Ukraine. After the war Ukrainians from displaced-persons camps in Europe refused to return to their homeland while it was under the control of the Soviet regime. Assisted by volunteer agencies, about 100,000 Ukrainians immigrated to the United States and nearly 15,000 settled in metropolitan New York. Most were college graduates and professionals from urban areas, whose transition to the United States was aided by well-established Ukrainian American urban communities. As a group they were instrumental in organizing scholarly societies such as the American branches of the Shevchenko Scientific Society and the Ukrainian Academy of Arts and Sciences. Ukrainian Americans in New York City numbered more than 100,000 in the early twenty-first century, forming the largest community outside Ukraine. They were then the 13th largest group of newcomers.

unbuilt projects. Over the centuries, hundreds of plans proposed for New York City have not been realized because of political, technological, or financial obstacles. Many of the more grandiose schemes have been related to transit, and a number of projects that did not succeed influenced later projects that did. A bridge over the Hudson River was first proposed in 1805. The plan called for a timber pontoon crossing designed by Colonel John Stevens that would extend for more than 1 mile (1.6 kilometers) between Hoboken (New Jersey) and West 11th Street in Manhattan. An underground rapid transit system for the city was proposed as early as 1866 by the engineer Egbert L. Viele, who intended to build an arcade 15 feet (4.6 meters) beneath Broadway, through which trains powered by steam locomotives would transport passengers from the Battery to Harlem. This project was defeated by William M. "Boss" Tweed, who feared that it would end the kickbacks that he received from the city's surface transport companies. But several features of Viele's plan were resurrected by William Barclay Parsons, who designed the Broadway line for the Interborough Rapid Transit company when the city finally built a subway some 40 years later: among these were the basic route of the system and Viele's innovative four-track arrangement, which allowed for separate express and local trains in each direction.

In 1868 Andrew Haswell Green invited British artist Benjamin Waterhouse Hawkins to create dinosaur models for a proposed Paleozoic Museum in Central Park. Hawkins, who had built full-size dinosaur models based on skeletal findings for the 1854 Crystal Palace Exhibition in London, traveled to New York City, set up a studio in the park, and got to work on a 39-foot (12-meter) hadrosaur. However, by 1871 Hawkins had run afoul of Tweed and his Tammany cohorts, who had taken control of the park. Tweed sent his thugs to Hawkins's studio, where they smashed his models and buried them somewhere in the park; the museum remained unbuilt, and the remains of the models were never found.

The demand for housing occasioned by immigration in the late nineteenth century and the early twentieth inspired several proposals for planned developments. Among those that failed was Utopia, intended as a cooperative town in north central Queens for Jews from the Lower East Side. The developers acquired land in 1905 and received a loan from the New York Mortgage and Security Company to grade the streets and stake out lots, but they abandoned their plan when they were unable to secure more funds.

Several large-scale unbuilt projects date from the 1930s and 1940s. The original plan for the Empire State Building would have given midtown Manhattan an unusual airport: it provided for special mooring facilities for dirigibles near the top of the skyscraper, on the 102nd story, and lounges, ticket agencies, and baggage rooms on the 86th. Although two blimps briefly made contact with the "mooring mast" in 1931, the fanciful scheme was abandoned, and the facilities on the 86th and 102nd stories became observation decks open to the public. A plan for a bridge between Battery Park in Manhattan and Hamilton Avenue in Brooklyn was put forth in 1939 by Robert Moses and a design was submitted by Othmar H. Ammann. The bridge was vigorously opposed by residents and politicians, and the Brooklyn–Battery Tunnel was built instead. The United Nations in 1946 considered building its headquarters in Flushing Meadow Park in Queens, and designs for a complex were drawn up by the architects Wallace K. Harrison, Louis Skidmore, and Aymar Embury II. The organization eventually rejected Queens in favor of its current site in Manhattan when the land was donated by John D. Rockefeller, Jr.

In 1960 Buckminster Fuller, inventor of the geodesic dome, and Shoji Sadao designed a climate-controlled transparent dome that would stretch over midtown Manhattan, covering 50 blocks; the materials would be lifted into place by helicopter. Fuller thought the dome's construction costs would be offset by savings in energy bills and the elimination of snow-removal costs. Fuller also envisioned a redevelopment plan for Harlem that involved high-rise structures built above existing buildings, thus preventing residents from being displaced during construction; seen in the context of Moses's urban renewal plans of the 1960s, it might not have been a bad idea. Several years earlier, Fuller had created a domed stadium at the request of Walter O'Malley, owner of the Brooklyn Dodgers, although many believed that O'Malley never wanted the stadium and was already planning the team's move to Los Angeles.

One project that accomplished more for the city through its failure than it would have through its success was a plan to construct an expressway through lower Manhattan. Outlined on the city's official map from 1941 to the late 1960s, the plan virtually froze development along a path 2.5 miles (4 kilometers) long while community groups campaigned against it, and as a result much of the unique cast-iron architecture of SoHo was preserved. Other proposals were defeated much more quickly, including one in 1957 to demolish Carnegie Hall and build a skyscraper in its place. Among the more contentious development projects of the 1970s and 1980s was Westway, proposed in 1972 as a replacement for the crumbling West Side Highway between the Battery and 42nd Street. The plan called for extensive landfill along the Hudson and construction of a park, an incinerator, and a bus depot. Opponents of the project argued that it would damage the quality of the air and the ecology of the Hudson, and they eventually prevailed in the courts. Plans for Westway were terminated in 1989. In the first decade of the twenty-first century, plans for a grandiose Guggenheim Museum in lower Manhattan and for a huge stadium for the New York Jets professional football team failed to reach fruition.

unemployment movements. Protests by the unemployed in New York City date back to the colonial period. When an American embargo on shipping in 1808 put many sailors out of work, the affected workers led protests in the streets, displaying placards demanding work or bread. Eventually the city responded by setting them to work leveling Murray Hill with shovels: this was the first public works relief project in the United States. In 1837 an angry crowd shouting slogans of the Working Men's Party and the Locofocos mobbed a flour warehouse owned by Eli Hart at Broadway and Washington Street to demand that the city provide relief. Rallies of the unemployed in 1854 attracted large numbers of mechanics and laborers to meetings in Tompkins Square Park and City Hall Park; after months of demonstrations the city announced that construction of Central Park would soon begin, giving work to thousands of laborers. During a severe economic depression in the 1870s many thousands of the unemployed turned out for rallies, speeches, and parades at which they decried temporary soup lines offered by private charities as insufficient and demanded more public works projects. A committee on safety threatened to seize food for the hungry and forward to the city any bills that it received; flyers were circulated in English and German, and French immigrants who had taken part in the revolution of 1848 and the Paris Commune argued that workers were entitled to public works projects. In response Mayor William F. Havemeyer ordered a large number of police officers to attack a peaceful rally in Tompkins Square Park and arrest labor leaders.

The city charter was amended in 1893 to forbid "outdoor relief," or direct food subsidies and rent relief for the unemployed. This attempt to curb unemployment failed, and with each succeeding economic crisis protests by the unemployed increased. During the depression of 1913 they invaded churches to protest the inadequacy of private charity and the need for public works. Under the leadership of the Industrial Workers of the World (IWW) and the young organizer Frank Tannenbaum, they demanded a minimum wage on public works projects, an eight-hour day, and a public employment bureau. The largest movement of the unemployed was formed during the Depression. The socialist organizer David Lasser in 1935 formed the Workers' Alliance of America, which later cooperated with programs of the New Deal. During this period councils of the unemployed and the Workers' Alliance of America sought to reshape public policy and attitudes. Following the example of the IWW, this movement emphasized the dignity of workers and criticized any relief system that threatened to make outcasts of aid recipients. Hospitals first reported deaths from starvation in 1931, and the unemployed soon raided stores, warehouses, and delivery trucks. In Harlem and other working-class neighborhoods residents mobilized to protect the indigent from being turned out into the streets by organizing rent strikes and forcibly resisting evictions.

By the 1960s movements of the unemployed had been largely superseded by movements for welfare rights. Groups advocated a guaranteed income, helped welfare recipients to file grievances and to obtain subsidies for furniture and clothing, and engaged in picketing and sit-ins at welfare offices; many of their most militant leaders were women. The National Welfare Rights Organization in New York City had 4030 members before the movement faded in 1969.

Kathleen Hulser

United Nations Children's Fund

[UNICEF]. Agency formed in 1946 as the United Nations International Children's Emergency Fund to help children in Europe and China recover from World War II. It became a permanent agency of the United Nations in 1953, focused on Asia, Africa, the Middle

East, and Latin America. The principal activities of the organization include providing food, clean water, health care, and education to children and women, especially in regions affected by natural and other disasters, and promoting self-sufficiency through long-term development. Its offices are at 3 United Nations Plaza in Manhattan.

Shan Jayakumar

Unificationists. Members of the Family Federation for World Peace and Unification (formerly the Holy Spirit Association for the Unification of World Christianity, and commonly the Unification Church), formed in 1954 in Korea by the evangelist Sun Myung Moon; also sometimes called Moonies (considered derogatory by members). The church was registered in New York City on 4 October 1972. In 1975 it bought the former New Yorker Hotel (4 West 43rd Street), which became its national headquarters and a center for its world mission. Moon was also rumored to control the Manhattan Studios at 311 West 34th. The unificationists published three newspapers: the *New York City Tribune* (1976–91), the anti-communist *Noticias del mundo* (1980–), and the *Sae Gae Times* (1982–). Moon gave a number of public addresses in the city, including a "God Bless America" celebration at Yankee Stadium in 1976. He also conducted a marriage ceremony at Madison Square Garden in 1982 for more than 2000 couples (many of whom he had brought together), an event intended to promote world peace. During the same year he stood trial in the city for tax evasion; he was convicted and served a 13-month prison term in Danbury, Connecticut. The Unification Church had about 3000 members in the city in 1992 and operated two churches in Manhattan (one in Harlem) and one each in Brooklyn, the Bronx, Queens, and Staten Island. In 2008 Moon appointed his youngest son, Hyung Jin Moon, to be the new leader of the Unification Church and the worldwide Unification movement; his daughter In Jin Moon heads the U.S. church and Lovin' Life Ministries, based in New York City. In the early twenty-first century the church's headquarters remained at 4 West 43rd Street.

Walter Friedman

Uniformed Sanitationmen's Association. Labor union, formally known as Local 831 of the International Brotherhood of Teamsters. Formed in 1935 by John J. DeLury, it became the first union recognized by the city as an exclusive bargaining agent for its members in August 1958. From 2 to 10 February 1968 it called a strike that halted garbage collection and left more than 110,000 tons (99,790 metric tons) of refuse on the sidewalks and streets. In 2007 the Uniformed Sanitationmen's Association secured a contract for roughly 6500 workers in the Department of Sanitation that included a 17 percent wage increase and a new paid holiday (Martin Luther King, Jr., Day).

Steven H. Corey

Union Carbide. Chemical manufacturers. It was formed in 1898 as the Union Carbide Company on 42nd Street by entrepreneurs from Chicago soon after the discovery of acetylene, merged in 1917 with Carbon Corporation (formed in 1876), and took its current name in 1922. Soon one of the country's most prosperous chemical and plastics manufacturers, it developed the electric battery, the refrigerator, various carbon and metal products, and antifreeze. For decades it was among the most profitable firms in New York City, and it had more than a dozen plants and offices there by the 1950s. In 1960 the firm built a 52-story skyscraper at 270 Park Avenue designed by the firm of Skidmore, Owings and Merrill. Union Carbide left the city for suburban Connecticut in the early 1980s. On 6 February 2001 the Dow Chemical Company acquired Union Carbide.

James Bradley

Union Club. Men's social club formed in 1836. It met in a building at 343 Broadway from 1837 and made several moves over the next century: in 1842 to the former home at 376 Broadway of its member William B. Astor, in 1850 to 691 Broadway, in 1855 to a building at Fifth Avenue and 21st Street (the first building in the city designed as a clubhouse), in 1903 to Fifth Avenue and 51st Street (where it occupied a building designed by Cass Gilbert and John du Fais), and in 1933 to 101 East 69th Street (designed by Delano and Aldrich). The Union Club is one of the oldest and most prestigious clubs in New York City, and many of the younger clubs are descended from it.

James E. Mooney

Union League Club. Club formed in 1863 to support the Union cause in the Civil War. It evolved to include a library and gallery of art and military trophies. The first three clubhouses were at 26 East 17th Street (1863), at Madison Avenue and 26th Street (1868, the Jerome Mansion), and at Fifth Avenue and East 39th Street (1881). Early functions included the raising and sponsorship of black regiments in the Civil War and the organizing of events such as the Sanitary Fair. In 1870 members of the club were involved in establishing the Metropolitan Museum of Art; the club also helped found the American Red Cross and build the Statue of Liberty. Less than a decade after its founding the club had a membership of 1400, the largest in New York City. In 1931 the architectural firm of Morris and O'Connor designed a new clubhouse in a neo-Georgian style at 37th Street and Park Avenue in Murray Hill. The club began admitting women in the 1980s.

James E. Mooney

Union Place. Name applied during the 1820s to Cypress Hills.

Union Porcelain Works. Pottery manufacturer. It was opened in 1863 by Thomas C. Smith at 300 Eckford Street in Greenpoint, near the East River. The mainstay of its business was a heavy, white porcelain used for hotel chinaware and house trimmings. It became internationally known for a number of large-scale pieces designed by the sculptor Karl L. H. Müller for the Centennial Exposition in Philadelphia in 1876. The Union Porcelain Works ceased operations about 1922. Examples of its work are displayed at the Metropolitan Museum of Art.

Alice Cooney Frelinghuysen

Unionport. Neighborhood in the eastern Bronx, bounded to the east by Westchester Creek, to the west by the Bronx River, to the south by Castle Hill and Soundview, and to the north by Westchester Avenue. The first area of development was near a port along Westchester Creek that is no longer used. Throughout the nineteenth century the housing consisted mostly of one-family frame houses, many of which remained into the twenty-first century. In 1851 the Village of Unionport was settled west of Westchester Avenue between Westchester Creek and what became Castle Hill Avenue; the streets were numbered, the avenues lettered from A to E. The village was annexed to New York City in 1895, and the streets and avenues were renamed (after early settlers) so that they would not be confused with those of surrounding neighborhoods. The extension of the Lexington Avenue subway in 1920 led to the construction of a few brick apartment buildings. In the 1960s several streets were obliterated when an interchange was built connecting the Bruckner Expressway, the Cross Bronx Expressway, and the Hutchinson River Parkway. In the early twenty-first century the population was mostly Latin American.

John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

unions. See Labor.

Union Square. Park and neighborhood in Manhattan bounded by 14th Street to the

Union Square, 2009

south, 21st Street to the north, Third Avenue to the east, and Sixth Avenue to the west. It was one of the few open spaces designated on the 1811 grid mapping out Manhattan. It was used as a potter's field until 1815 when the graves were removed and an iron fence erected. At that time the oval-shaped area became known as Union Place because it lay at the conjunction of several roads, some of them at unusual angles. Much of the surrounding land was purchased by real estate developer Samuel B. Ruggles, who campaigned for the open space to become a public square in the 1830s, and in 1833 it was purchased by the city. Union Square became a highly desirable residential area, as wealthier residents moved north to avoid the increasingly dense population in lower Manhattan. The park, filled with a grand fountains and walks, opened in 1839 and quickly became the center for civic celebrations of all kinds, such as the grand opening of the Croton water system in 1842. It was one of the first areas to have gaslights in the 1840s, and by the 1850s it was surrounded by more than 40 hotels in the neighborhood. In 1854 the Academy of Music opened at 14th Street at the southeast corner of the square. Numerous Civil War parades and rallies were held at Union Square, including one that attracted more than 100,000 in support of the Union cause.

By the 1860s the neighborhood was also changing into a commercial hub featuring the most desirable stores. In 1862 A. T. Stewart opened his great cast-iron department store, and by the 1870s, when Tiffany's opened, the park was redesigned and refurbished according to plans by Frederick Law Olmsted and Calvert Vaux. The fashionable shopping district later known as the Ladies' Mile started at Union Square and continued up Broadway. Toward the end of the nineteenth century the nature of the square changed as the wealthy continued to move uptown, followed by a commercial exodus of the more expensive retail establishments. The square was transformed into a manufacturing district, as evidenced by the presence in the 1880s of six sewing machine companies. The nation's first Labor Day was celebrated in the square on 5 September 1882, and from that time the square became a working-class meeting place. Also in the 1880s electric lights were installed in Union Square, and in the 1890s the first cable car ran along Broadway on its west side.

By the early twentieth century the area was filled with booksellers and inexpensive clothing stores such as Kleins and Ohrbach's. The square was taken apart during subway construction and the establishment of an extensive underground concourse in the 1920s. Numerous political and protest meetings were held in Union Square by permit, including those of the Industrial Workers of the World and various unions, such as those of garment workers. Many unions, such as the International Ladies' Garment Workers' Association and the Amalgamated Clothing Workers of America, established headquarters around the square, as did the American Civil Liberties Union. Labor rallies attracted large crowds during the 1930s, such as one on May Day 1937 that drew 70,000, but by the 1950s such meetings became scarce. The square emerged again as a place of political meeting and protest during the 1960s, such as when young men burned their draft cards to protest the Vietnam War. By the 1970s Union Square had become neglected and the area run down; the park was popular with drug dealers and homeless people. But a turnaround started during the 1980s, followed by 20 years of major improvements of the square, as new residential and commercial construction transformed the area around it. Many of the old buildings were declared historic, the park was cleaned up and redesigned, and by the twenty-first century the square and the neighborhood had once again become an attractive and popular

Memorial in Union Square, ca *15 September 2001*

area. Although Union Square is no longer usable for public meetings, it has retained its reputation as a place for public expression, and many memorials are set up casually there. For instance, after the destruction of the World Trade Center towers by terrorists on 11 September 2001, the square became a magnet for people who wanted to place expressions of remembrance. It is also the home to a greenmarket four days a week and a large holiday fair.

Statues in Union Square include ones of George Washington (Henry Kirke Brown, 1856), Abraham Lincoln (Brown, 1868), the Marquis de Lafayette (Frédéric-Auguste Bartholdi, 1876), and the Independence Flagstaff (Anthony de Francisci, 1926).

Lisa Keller

Union Theological Seminary. Seminary established in Lenox Hill in 1836 by New School Presbyterians. Originally named the New York Theological Seminary, its founders eschewed strict adherence to confessional standards, embraced revivalism, and emphasized the experiential aspects of the Reformed tradition. The seminary attracted such respected figures as Edward Robinson, Henry Boynton Smith, and Philip Schaff and became affiliated with the United Presbyterian Church in the United States of America in 1870. It resumed its independence in 1892 after the church tried and suspended Charles A. Briggs, a faculty member who was one of the first biblical critics. By the time it moved in 1910 to a Gothic quadrangle just north of Columbia University in Morningside Heights, the seminary was nondenominational. Among its faculty were many distinguished theologians, including Arthur Cushman McGiffert, Henry Sloane Coffin, Henry P. Van Dusen, Reinhold Niebuhr, Paul Tillich, Robert T. Handy, and Raymond E. Brown. In the 1970s it became known as a center of liberal theology after James H. Cone and Beverly Wildung Harrison joined the faculty. In the early twenty-first century Union Theological Seminary remained known for its ecumenism and theological inclusiveness.

Randall Balmer

Unisphere. Large, hollow, stainless-steel globe in Flushing Meadows–Corona Park. It was designed by landscape architect Gilmore D. Clarke and built and donated by U.S. Steel as the symbol of the World's Fair of 1964–65, with its theme "Peace through Understanding." The largest globe in the world, it is 140 feet (42.7 meters) tall, has a diameter of 120 feet (36.6 meters), and is estimated to weigh 900,000 pounds (400,000 kilograms). In 1994 the globe and its surroundings, including its reflecting pool and fountains, were renovated at a cost of $3 million. In 1995 it was designated a New York City landmark.

Unisphere, 2009

Unitarian Universalists. Unitarian Universalism stems from the formerly separate Unitarian and Universalist churches. Such Universalists as John Murray gave sermons in New York City as early as 1795, and in 1796 a Universalist church opened in reaction against the Calvinistic concept of arbitrary salvation and damnation. Unitarianism in New York City began in earnest after William Ellery Channing of Boston gave a sermon to a small gathering in the city after the ordination of Jared Sparks in Baltimore in May 1819.

Later in the same year a Unitarian church was formed as the First Congregational Church of New York City (later renamed All Souls Church). The congregation was mostly from New England and rejected the traditional doctrine of the Trinity. A meetinghouse was built on Chambers Street, and the congregation engaged as its minister William Ware, the brother of Henry Ware, of Cambridge, Massachusetts. He served the church for 15 years and later became well known for his novels about the Roman Empire. His successor was Henry Whitney Bellows, who took over after graduating from the Harvard Divinity School. During his 43-year career Bellows became known nationally for his sermons and for his work as the president of the U.S. Sanitary Commission during the Civil War. All Souls Church counted among its members the writers Herman Melville, William Cullen Bryant, and Catharine Sedgwick and the illustrator Nathaniel Currier.

With the blessing of the First Church a second church opened farther uptown in 1825; this became known as the Church of the Messiah and later the Community Church of New York City. Among its ministers were Minot Savage and Robert Collyer, both known for their oratory, and later the social activists John Haynes Holmes and Donald Harrington. Unitarian societies were organized in Brooklyn in 1833 and Staten Island in 1852. There were eventually seven Universalist churches in Manhattan, including one in Harlem and another called the Church of the Divine Paternity (1838) at 160 Central Park West, which for a time was led by Edwin Chapin; it was later renamed the Fourth Universalist Society. The All Souls Universalist Church of Brooklyn opened in 1845.

After Bellows's death All Souls Church was led successively by the hymn writer Theodore Chickering Williams, the social reformer Thomas Slicer, and William Laurence Sullivan, a former Catholic priest who had become

a Unitarian after the papal decrees on infallibility. Under Sullivan, All Souls Church wrote President Woodrow Wilson a letter of support at the beginning of World War I; the Community Church under Holmes, a pacifist, never supported the war. All Souls moved to a building at 80th Street and Lexington Avenue in 1932 during the tenure of Minot Simons, Sullivan's successor. In the following years the church was led by Laurance I. Neale, a layman appointed minister by the congregation, Walter Donald Kring, and F. Forrester Church.

The American Unitarian Association and the Universalist Church of America merged to form the Unitarian Universalist Association in 1961. In the mid-1990s the Community Church was known for its political activism; All Souls was known for its conservatism in religious matters and its social activism (it was one of the largest churches on the East Side seeking social reform). Only two Universalist congregations have survived into the twenty-first century: All Souls at 80th and Lexington and the Fourth Universalist Society at 76th and Central Park West. A third remaining church, All Souls Universalist Church of Brooklyn, merged in 1998 with the Bethlehem United Church to become All Souls Bethlehem Church, a congregation that, in the early twenty-first century, represented Unitarian Universalism, the United Church of Christ, and the Disciples of Christ.

Walter Donald Kring, Colin J. Davis

United Association of Plumbers. Labor union. Its international organization is dominated by its branch in New York City, known initially as Local 2 and later renamed Local 463. Well-known members in the city have included George Meany, head of the American Federation of Labor–Congress of Industrial Organizations (AFL–CIO). The headquarters of the union are at 21 East 26th Street.

United Baltic Appeal. Organization formed in New York City in 1966 to promote independence in the Baltic countries and preserve their culture. It sponsors seminars, festivals, and internships, maintains a library and a speakers' bureau, and produces *BATUN News,* a semimonthly publication devoted to current events in the Baltic countries, relevant activities at the United Nations, and organizational news. After Estonia, Latvia, and Lithuania became independent in 1991, the organization evolved into an information center. In the early twenty-first century the Baltic Association to the United Nations (BATUN), a division of United Baltic Appeal, continued to work on behalf of the three nations. The organization is based in the Bronx.

Vladimir Wertsman

United Brotherhood of Carpenters. Labor union formed in New York City in 1881 by Peter J. McGuire. It was preceded by a number of unions formed by carpenters in the early nineteenth century. The union fought aggressively for the eight-hour workday and eventually dominated the carpentry trade. In the early twenty-first century the union represented carpenters, cabinetmakers, millwrights, pile drivers, latherers, framers, floor layers, roofers, drywallers, and workers in the forest-products industry and related industries.

Robert A. Christie, *Empire in Wood: A History of the Carpenters' Union* (Ithaca, N.Y.: Cornell University Press, 1956), 102–36

Colin J. Davis

United Cerebral Palsy of New York City. Charitable organization formed in 1946 by parents in New York City to help their children with cerebral palsy. As the incidence of prenatal cerebral palsy decreased, the group began to serve people with other developmental disabilities, including mental retardation. The expansion of its goals led to a tripling of its size during the 1980s. United Cerebral Palsy of New York City maintains a network of affiliates throughout the world. Its headquarters are at 105 Madison Avenue.

Sandra Opdycke

United German Trades [Vereinigte Deutsche Gewerkschaften]. German central labor body formed in New York City in the early 1880s and associated with the new German labor and socialist newspaper *New Yorker Volkszeitung.* In 1882 it joined the Central Labor Union, an ethnically diverse labor organization that became one of the most powerful in the city, and in 1888 it sponsored the United Hebrew Trades, the first major Jewish labor organization.

Stanley Nadel

United Hatters, Cap and Millinery Workers International Union. Labor union formed in 1934 when the United Hatters of North America and the United Cloth Hat, Cap and Millinery Workers International Union combined their operations. The merger was brought about by a desire on the part of the unions to end their jurisdictional battles during a slump in the hat trade occasioned by the Depression. The New Deal caused further consolidation in New York City and elsewhere, and by 1947 the union had 45,000 members, more than two-thirds of all workers in the industry. Over the next 25 years production rapidly shifted overseas and membership dropped by two-thirds. Its survival threatened, the union merged with the Amalgamated Clothing and Textile Workers of America in 1981.

Donald Robinson, *Spotlight on a Union: The Story of the United Hatters, Cap and Millinery Workers International Union* (New York: Dial, 1948); David Bensman, *The Practice of Solidarity: American Hat Finishers in the Nineteenth Century* (Urbana: University of Illinois Press, 1985)

Ronald Mendel

United Hebrew Charities. Confederation of five German Jewish relief associations formed in 1874 to help eastern European Jewish immigrants adjust to the United States; among its supporters were Jacob Schiff and Adolph Lewisohn. It had an immigration bureau that represented Jewish immigrants arriving at Ellis Island, and it established an employment bureau on the Lower East Side as well as a loan fund. It also offered vocational training to the children of immigrants; scholarships were tendered to students enrolling in the Hebrew Technical Institute. While newcomers sought work or business opportunities, they could obtain free lodging, food, and medical services. The organization also provided burial care without charge and operated the National Desertion Bureau, which addressed the major problem of fathers deserting their families. It was the sponsor for the Industrial Removal Office and the Jewish Immigrant Information Bureau, which worked to persuade recent immigrants to leave the city for other parts of the country by offering them employment and better housing. By 1917 the United Hebrew Charities was absorbed into the Federation of Jewish Philanthropies of New York.

Jeffrey S. Gurock

United Hebrew Trades [UHT; Fareynikte yidishe geverkshaftn]. Federation of predominantly Jewish trade unions formed in 1888 by 80 radical intellectuals in New York City. It was modeled after the United German Trades. The federation encouraged the spread of labor unionism by organizing new unions, directing strikes, negotiating with employers, interceding on behalf of workers, and helping immigrant employees gain membership in the unions of the American Federation of Labor. In 1909 it planned a strike by shirtwaist makers that gave rise to mass strikes in the garment industry, and it mustered material and public support for striking cloak makers in the following year. Only 5000 workers belonged to the 41 member locals in 1909, but by 1913 it had grown to more than 200,000 members in 107 locals. The UHT sponsored the Trade Union Immigration Bureau to channel immigrants into the unionized branches of their trades; it also took part in the labor-oriented relief commit-

tee for the devastated Jewish populations of eastern Europe after World War I, and it aided the Jewish trade union federation in Palestine from the 1920s. As Jewish membership fell in the affiliated unions, the United Hebrew Trades declined in importance, maintaining only a tenuous existence by the late twentieth century.

Harry Lang and Morris C. Finestone, eds., *Gewerkschaften* (New York: United Hebrew Trades of the State of New York, 1938); Aaron Antonovsky, *The Early Jewish Labor Movement in the United States* (New York: YIVO Institute for Jewish Research, 1961); Morris U. Schappes, "The Political Origins of the United Hebrew Trades, 1888," *Journal of Ethnic Studies* 5 (1977)

Daniel Soyer

United Hospital Fund. Charitable organization formed in New York City in 1879 as the Hospital Saturday and Sunday Association to collect charitable donations for the treatment of indigent patients as well as to promote economy in hospital management. The fund took its present name in 1916, expanded its operations throughout the city in 1920, and in 1935 awarded its first grants to women's hospital auxiliary committees. In addition to its own charitable contributions, the fund is an agent for the Greater New York Fund. In 2007 the United Hospital Fund awarded $2.42 million in grants.

Brian Greenberg

United House of Prayer for All People. Christian Pentecostal denomination founded in 1919 in Massachusetts and incorporated in 1927 in Washington, D.C., by Bishop Charles Manuel "Sweet Daddy" Grace (?1881–1960); in New York City the United House of Prayer for All People is located at Frederick Douglass Boulevard between 124th and 125th streets in Harlem. It is known for its "shout band," the McCollough Sons of Thunder Brass Band, which has worked with David Byrne and played at Carnegie Hall, Lincoln Center, and the White House, among other venues.

Sharon Wilkins

United Independent Broadcasters. Original name of the Columbia Broadcasting System.

United Insurance Company of the City of New York. Firm of insurers, organized under a deed of settlement on 3 April 1787 as the first insurance company in New York City. It received a charter from the state legislature in 1798 to provide fire, marine, and life insurance, as well as property insurance for goods and buildings. The name was changed in 1806 to the Mutual Assurance Company, and in 1809 the firm was reorganized as a stock company. In 1846 it was given the name Knickerbocker Fire Insurance Company, by which it became well known. It was dissolved in 1890.

Robert J. Gibbons

United Irish Counties Association. Federation of Irish organizations formed in New York City in 1904. Based in the Bronx, the association has delegates from the 32 county societies and from two other fraternal organizations and provides a forum for Irish Americans to discuss political matters. Its annual *Feis* (cultural festival) draws thousands of participants and features competitions in Gaelic recitation and traditional music and dance.

See also Irish.

John J. Concannon

United Irishmen [United Irish Society]. Political organization formed in Belfast in 1791 in support of an independent Ireland. Although it began mainly as a Presbyterian movement, Catholics joined from 1795, making this the only time in Irish history when substantial representation from the two religious groups worked together to bring about change. In 1798 its activities culminated in a futile rebellion that led to the execution, imprisonment, or forced emigration of many members. Of those imprisoned, several of the most prominent later moved to New York City, including Thomas Addis Emmet, William James MacNeven, Michael Hora, and William Sampson. There they formed the Irish Emigrant Society and became active members of the Friendly Sons of St. Patrick; they also began a tradition of stimulating support in the city for Irish independence.

William McGimpsey

United Jewish Appeal [UJA]. Philanthropic organization formed in 1939. Its aims were to rescue Jews from distressed lands and resettle them in Israel, and to support Jewish communities around the world through educational, rural settlement, and other programs. In 1974 the UJA combined its fund-raising activities with those of the Federation of Jewish Philanthropies. In 1999 the UJA merged with the Council of Jewish Federations and United Israel Appeal to create a large umbrella organization named United Jewish Communities, representing 155 Jewish federations and 400 independent Jewish communities in North America. In 2009 the organization changed its name to the Jewish Federations of North America; it is based in Manhattan.

United Nations. International organization located on the East Side of Manhattan, bordering the East River and extending from 42nd to 48th streets. Its aim is to promote global peace, security, and economic development; the basic structure was agreed to in 1944 at the Dumbarton Oaks Conference. New York City was chosen as the site of the organization despite strong competition from San Francisco, Boston, and Philadelphia, in part because it was the preferred site of the first secretary general, Trygve Lie, and in part because the Soviet Union threatened to boycott the organization if it were on the West Coast. In its early years, several arms of the

United Nations, 2009

United Nations were established in temporary sites in and around the city: at Hunter College in the Bronx (now Lehman College), on the grounds of the World's Fair of 1939–40 at Flushing Meadows Park, and in an old gyroscope factory at Lake Success, New York. In 1946 John D. Rockefeller, Jr., donated to the United Nations 17 acres (7 hectares) of land in Turtle Bay that he had purchased from William Zeckendorf for $8.5 million. The city agreed to contribute $5 million toward clearing the land of its slaughterhouses, cattle pens, and tenement houses; to resettle 270 residents; and to give the United Nations street and waterfront rights. In the following year an international team of architects led by Wallace K. Harrison began construction. The 39-story Secretariat Building (1950) includes the domed General Assembly Hall, the Conference Building, and the Dag Hammarskjöld Library. More than 190 member states have missions to the United Nations in New York City. The city provides police protection for diplomats and grants tax exemptions to diplomats and property of missions to the United Nations. The grounds of the organization are not considered part of the United States and are not bound by any national, state, or city laws; the organization has its own security service and fire unit, which coordinate with the New York City police and fire departments. Although the United Nations was the focus of some troubled politics during the cold war, its relations with its host city have on the whole been harmonious; in addition to drawing about half a million tourists each year and raising revenue, the organization has helped New York City to maintain its international prominence. The United Nations has about 5000 employees in the city.

Lauren Markoe

United Negro College Fund. Nonprofit organization formed on 13 May 1944 at the Waldorf–Astoria Hotel by several private black colleges. Its principal organizer was Frederick Douglass Patterson, president of the Tuskegee Institute, which in 1943 had a tiny endowment and a deficit of $50,000. Under Patterson and William J. Trent, Jr., the fund raised $100,000 during its first campaign; half was contributed by the Julius Rosenwald Fund and the General Education Board, the other half by various colleges. Crucial support came from John D. Rockefeller, Jr., who gave money and offered to use his influence on the fund's behalf. Headquarters were set up in New York City, which was chosen for its importance as a financial center. In the early twenty-first century the United Negro College Fund had 39 member colleges, administered more than 400 scholarship and internship programs, and helped more than 60,000 students each year.

Eric Wm. Allison

United States. Passenger liner weighing 53,329 gross tons, designed by the naval architect William Francis Gibbs. Known for its speed and safety and built during the decline of passenger ships, it had the capacity to hold 1928 passengers. It broke all Atlantic speed records on its maiden voyage, embarking from New York City on 3 July 1952 and arriving in Bishop Rock, England, three days, 10 hours, and 40 minutes later, making the trip in 10 fewer hours than the record previously held by the *Queen Mary.* As most transatlantic passenger services were taken over by airplanes, in 1969 the SS *United States* was retired and docked in Philadelphia. Norwegian Cruise Line purchased it in 2003 with hopes of restoring it as a cruise ship, but the company abandoned the plans in 2009 and put the ship up for sale. In March 2010 it was reported that despite a nonscrapping provision in the original terms of sale, bids were being accepted from scrappers.

Frank O. Braynard

United States Attorney's Office. The United States attorney is an official of the U.S. Department of Justice who prosecutes federal cases and represents the United States in civil and criminal litigation in New York City and its environs. The first U.S. attorney in New York City was Richard Harison, appointed on 26 September 1789, whose first victory resulted in a net gain to the federal government of $95; most of his cases were admiralty decisions. In April 1814 the Southern District of New York was formally created, with a jurisdiction that extended to Albany, and the Northern District was formed for the rest of the state. Imprecise lines of administration and difficulties in communication before the Civil War helped to make the U.S. attorney for the Southern District of New York virtually independent. The growth of the Port of New York led to the formation on 25 February 1865 of the Eastern District, consisting of Long Island (including Brooklyn and Queens) and Staten Island. During the late nineteenth century cases dealing with equity, bankruptcy, and crime accounted for the bulk of the caseload. U.S. attorneys in the city remained highly independent and were often nationally known, even after the U.S. Department of Justice was formed on 1 July 1870. Among the most visible New York U.S. attorneys during this period were William Price (1834–49), who looted the office, as well as several future cabinet officers: Edwards Pierrepont (1875, later attorney general), Elihu Root (1883–86, later secretary of war and secretary of state), and Henry L. Stimson (1906, later secretary of war). The Southern District failed to win convictions against Samuel J. Tilden on income tax charges (1876–81) and Harry Daugherty for malfeasance while serving as attorney general of the United States (1922–23). It did, however, handle 25,728 criminal cases between 1927 and 1930, of which 23,167 dealt with violations of the 18th Amendment (which established Prohibition). In 1951 the office won the case of *Dennis v. United States* (341 U.S. 494) before the U.S. Supreme Court. The office of the Eastern District refuted a claim by the Good Humor company that it invented the ice-cream pop (1932); argued the case of *Schechter Poultry Company v. United States* (1935) before the U.S. Supreme Court, which ended in the overturning of the National Industrial Recovery Act of 1933; and brought Rudolf Abel to trial for espionage (1957). Among those who launched political careers after serving as U.S. attorney were Thomas E. Dewey in the 1930s and Rudolph W. Giuliani in the 1980s, who both mounted vigorous efforts against organized crime. In the mid-1990s and into the early twenty-first century, New York City remained the busiest area of federal litigation in the country. Under the leadership of U.S. Attorney Mary Jo White, who began serving in 1993, the office added to its successful track record of major international terrorism prosecutions and investigations, including the 1993 bombing of the World Trade Center, the 1998 bombings of the U.S. embassies in East Africa, the indictment of Osama bin Laden, and the attacks of 11 September 2001. In the early twenty-first century the U.S. attorney had offices at 1 St. Andrew's Plaza (Southern District) and 225 Cadman Plaza East (Eastern District).

George J. Lankevich

United States Life Insurance. Firm of insurers. It was formed with $100,000 in capital in 1850, at a time when New York City was emerging from a cholera epidemic. The first president of the firm was Frederick Sheldon, and the first home office was at 27 Wall Street. In 1852 the firm moved to larger offices at 40 Wall Street, and by the turn of the century it had $20 million in life insurance policies in force. It weathered the Depression and World War II with conservative business practices. In 1952 more than 70 percent of its outstanding stock was purchased by the Continental Insurance Company, which in turn sold a large number of shares to the Continental Assurance Company. This restructuring was followed by tremendous expansion. In 1966 United States Life sponsored the formation of its parent company, U.S. Life Holding Corporation, of which it became the largest among many subsidiaries. In the early twenty-first century, United States Life Insurance had its headquarters at 125 Maiden Lane in Manhattan.

Chad Ludington

United States Trust. Bank chartered in 1853 as a specialist in trusts for individuals and corporations. During an era when stock port-

folios were increasingly used to build wealth, it was the first institution of its kind in the country. The bank had offices at 45 Wall Street for more than a century before moving in 1989 to 114 West 47th Street, which remained its headquarters into the early twenty-first century. Bank of America acquired United States Trust as its private wealth management arm in 2006.

Nancy V. Flood

universities. See Colleges and universities.

University Building. Structure erected in 1833–36 on the northeastern corner of Washington Square by the University of the City of New York (now New York University). Its principal designer was James Dakin, who was assisted by Ithiel Town, Alexander Jackson Davis, and two professors at the university. Built of white marble in the English Collegiate Gothic style, the building had a symmetrical plan comprising a central chapel flanked by wings terminating in four corner towers. The building was effectively the first artists' enclave in Greenwich Village: from the outset the upper stories were specifically set aside as artists' studios, and over the years there were more than 60 tenants, including Samuel F. B. Morse (1835), Eastman Johnson (1858–72), and Winslow Homer (1861–71). The building was demolished in 1894 to make way for a new campus and commercial buildings.

Annette Blaugrund

University Club. Private club founded in 1865 by alumni of Harvard, Yale, and Columbia as a private social and intellectual group. It first held meetings at Columbia University's Law School and later moved to a town house at 26th Street and Madison Avenue. In 1899 it moved to its present location at 1 West 54th Street, along Fifth Avenue, in an Italian Renaissance Revival structure designed by McKim, Mead and White. Standing seven stories tall behind a three-story facade, the building has been described by the critic Paul Goldberger as McKim's best surviving work and by Harmon Goldstone of the Landmarks Commission as one of the great buildings of the city. After its move the club began maintaining a library and one of the largest private art collections in New York City. In 1980 the building was added to the National Register of Historic Places; in 1987 the club admitted its first female members. In the early twenty-first century the club had more than 4000 active members.

Jessica Montesano

university clubs. In New York City university clubs became an important force in the latter half of the nineteenth century, usually as an outgrowth of alumni associations. In 1865 Harvard became the first university to have quarters given over to a club in the city. The University Club was formed in the same year, and its membership was open to degree holders from colleges and universities and the military and naval academies, as well as recipients of honorary degrees. Toward the end of the nineteenth century, clubs were formed by the alumni of different schools, including Yale and Princeton universities. Typically university clubs were especially attractive to recent graduates, who then gravitated toward other clubs in the city as their careers and interests became more clearly focused. More university clubs were established during the first half of the twentieth century despite the wars and the Depression, during which some clubs shared facilities and even memberships (as Yale and Princeton did during World War I). With suburbanization and different patterns of family living, all but the most select clubs saw a decline in membership and activity by members in the clubhouses between 1970 and 2000, although the clubs continued to be used for business and social purposes at lunchtime. After the turn of the twenty-first century, with the general revival of urban living, the clubs once again began to prosper.

James E. Mooney, Kenneth T. Jackson

University Heights. Neighborhood in the northwest Bronx, lying on a ridge and bounded to the north by Fordham Road, to the east by Jerome Avenue, to the south by Burnside Avenue, and to the west by the Harlem River. Originally part of Fordham Manor, the area was known as Fordham Heights at the time of the American Revolution. Small forts above the Harlem River formed part of the British defenses of New York City and were the site of several skirmishes. A few fine estates were built during the mid-nineteenth century. The area was renamed University Heights after New York University moved most of its operations there from Greenwich Village in 1894. For the next 80 years the university dominated the neighborhood, much of which was covered by the campus and its many residential buildings. The Hall of Fame for Great Americans (1901) was dedicated on campus and became a popular attraction. The opening of the Jerome Avenue elevated line (1918) and the Grand Concourse subway (1933) spurred the construction of apartment buildings: University Avenue became one of the prime residential streets in the borough. Children and grandchildren of European immigrants moved to the area from Manhattan and soon accounted for most of the population.

During the 1960s and 1970s many older residents moved to the suburbs and the population became predominantly Latin American and black. The university sold its campus to the city in 1973 to be used by Bronx Community College. Many apartment buildings south of the campus were abandoned by their landlords and ravaged by fire. Many of the immigrants who settled in University Heights in the late twentieth century were Dominican, and there were large numbers of Jamaicans and Guyanese, as well one of the largest concentrations of Vietnamese and Cambodian refugees in New York City. The University Heights Bridge, which connects the neighborhood to upper Manhattan, celebrated its centennial in 2008.

Peter Derrick

University of the City of New York. Original name of New York University.

University Parish of St. Joseph. Roman Catholic parish. It was founded in 1829 as St. Joseph's Church. Located at 371 Avenue of the Americas, its Greek Revival building was designed by John Doran and built during 1833–34. Reverend Thomas Farrell began the Academia movement at the parish. The church was restructured in 2005; renamed the University Parish of St. Joseph, in the early twenty-first century it served the Catholic communities of Cooper Union, New School, New York University, and Pace University.

Kate Lauber

University Settlement. First settlement house in the United States, opened in 1886 at 146 Forsyth Street on the Lower East Side as the Lily Pleasure Club (a boys' club) by Stanton Coit (1857–1944), a divinity student influenced by the Social Gospel movement and the structure of Toynbee Hall in London. It was renamed the Neighborhood Guild in 1887 and took its current name in 1891. In 1898 the rapidly growing settlement moved to 184 Eldridge Street, where it has continued to focus on the needs and acculturation of immigrants on the Lower East Side, serving various educational, civic, recreational, social service, and research functions. A model for more than 400 settlements in New York City and elsewhere, University Settlement has been responsible for a number of innovations later adopted by community and government organizations, including kindergartens, branch libraries, and public baths. It was also a hub of political reform from which leaders such as Charles B. Stover, Carl Schurz, Robbins Gilman, Nicholas Murray Butler, and Seth Low campaigned for safer tenements, better working and sanitary conditions, parks and playgrounds, and the abolition of child labor. Over time the settlement has developed a health clinic, cultural and antipoverty programs, a senior citizens' center, an early mental health clinic, day care, youth counseling, and classes in home management. The University Settlement has a summer camp that opened in Beacon, New York, in 1911. Eleanor Roosevelt taught dance at the settlement, which Franklin

D. Roosevelt called a "landmark in the social history of the nation."

Jeffrey Scheuer, *Legacy of Light: University Settlement's First Century* (New York: University Settlement, 1985)

Jeffrey Scheuer

Upjohn, Richard M(ichell) (*b* Shaftesbury, England, 7 March 1828; *d* New York City, 3 March 1903). Architect. He moved to New York City with his family as an infant; he later worked in his father's firm, Richard Upjohn and Sons, and helped to design many buildings in the city, among them Trinity Church Wall Street (1846), Mechanics Bank (one of the first buildings using rolled-iron beams, 1854), Trinity School (1895), and Madison Square Presbyterian Church (1904). He also designed the main entrance gate at Green-Wood Cemetery (1838).

James E. Mooney

Upper East Side. Neighborhood in Manhattan, bounded to the north by 96th Street, to the east by the East River, to the south by 59th Street, and to the west by Fifth Avenue. Synonymous with wealth since the early twentieth century, its first permanent structures were large frame houses lining the East River; many residents attended St. James Church (Episcopal) at 71st Street and Madison Avenue (1810), the oldest surviving building in the neighborhood. Hamilton Park was planned in 1811 as an English residential square and consisted of two sections, one bounded by 68th Street, Fourth Avenue, 66th Street, and Fifth Avenue, the other by 69th Street, Third Avenue, 68th Street, and Fourth Avenue. Until the 1840s most of the neighborhood was common land and pastures. The settlement extended as far east as 66th Street and Lexington Avenue in 1851 and as far north as Madison Avenue and 86th Street in 1860, by which time the opening of Central Park gave it a distinct identity. Transportation was provided by omnibuses until horsecar service on rails was extended along Madison Avenue after the Civil War. Streets were laid through Hamilton Park in 1868, and the German Hospital went up at Fourth Avenue and 77th Street in the following year. The area soon became known as Lenox Hill.

Construction of the Metropolitan Museum of Art on Fifth Avenue began in 1880, and there was scattered development along the avenue as the museum took shape. In 1878 and 1880 elevated lines were opened along Third and Second avenues, respectively, which were soon lined with brownstones; most residents were immigrants from Germany, Ireland, and Bohemia. In 1888 Fourth Avenue was renamed Park Avenue, about the same time that Louis Comfort Tiffany, Josiah M. Fiske, Herman O. Armour, and other magnates built palatial homes on or just off Fifth Avenue. The elegant status of the area was confirmed when Caroline Astor had a château built at Fifth Avenue and 65th Street in 1893, and by 1900 such wealthy industrialists as the Schermerhorns, the Vanderbilts, and the Rhinelanders were moving into the area and building opulent townhouses. A luxury apartment building at 998 Fifth Avenue designed by the firm of McKim, Mead and White (completed in 1912) became a model for developments along Madison Avenue, where row houses were demolished or had their lower floors converted into elegant shops; Park Avenue attracted wealthy residents after the railroad tracks running along it were buried by the New York Central Railroad between 42nd and 96th streets. West of Park Avenue many stables and carriage houses were erected, as were exclusive clubs like the Metropolitan Club (1 East 60th Street), the Harmonie Club (6 East 60th Street), the Knickerbocker Club (2 East 62nd Street), the Colony Club (62nd Street and Park Avenue), and the Union Club (69th Street and Park Avenue). Apartments became fashionable after World War I.

The Lexington Avenue Interborough Rapid Transit Company subway was completed through the area in 1918, by which time the neighborhood had a large population of immigrants from central and eastern Europe. Yorkville, centered at 86th Street between Lexington and Second avenues, was for many years the focus of German cultural activity in the city and a center of both Nazi and anti-Nazi activity and propaganda throughout the 1930s; a Hungarian section of Yorkville around Second Avenue and 80th Street underwent a marked increase in population after the Hungarian Revolution of 1956; and First Avenue between 67th and 74th streets was known as "Czech Broadway." The Second Avenue elevated was razed in 1940; the Third Avenue elevated line was razed in 1956, leading to luxury apartment house construction all through the neighborhood. Real estate prices rose after 1970, and brownstones became highly desirable. Since the 1980s, well-to-do immigrants have moved to the Upper East Side from China, the United Kingdom, the Philippines, France, Israel, India, Ireland, Iran, and Brazil.

In the early twenty-first century the Upper East Side is still the heart of the Silk Stocking District. Its postal zone, 10021, is perhaps the wealthiest in the United States. No single demographic group predominates: there are Christians and Jews, a few Puerto Ricans and Latin Americans to the north, and even a few remaining Germans, Czechs, and working-class residents, who live east of Lexington Avenue. One prominent mansion from the turn of the twentieth century, that of Henry Clay Frick, covers the block between 69th and 70th streets and Fifth and Madison avenues. It is now a museum devoted to Frick's art collection. Another surviving estate, at 91st Street and Fifth Avenue, was the home of Andrew Carnegie and is now the Cooper–Hewitt Museum.

Anthony Gronowicz

Upper Manhattan Empowerment Zone. Area in upper Manhattan designated for economic revitalization. In 1994 President Bill Clinton designated El Barrio, central Harlem, parts of Washington Heights, and Inwood as the Upper Manhattan Empowerment Zone, one of nine "empowerment zones" in the nation to receive federal and state tax incentives and financial assistance for fledgling business investment. The program offered reimbursement for broker fees if businesses relocated to main thoroughfares in upper Manhattan, tax breaks for hiring residents of the empowerment zone, and low-rate loans to encourage new investment in underserved neighborhoods. In the first 10 years of operation, the Upper Manhattan Empowerment Zone invested $159 million in revitalizing neighborhoods and attracting businesses north of 96th Street. By the early twenty-first century, upper Manhattan had become one of the fastest-growing residential areas in New York City. The numbers of housing units, population, and median income level were all rising at high rates. From the standpoint of goods and services, however, upper Manhattan had more underserved households than the rest of Manhattan.

Penelope Gelwicks

Upper New York Bay. Center of New York Harbor, at the northern end of a route 17 miles (27 kilometers) long that leads from open ocean to the mouth of the Hudson River at the southern tip of Manhattan Island. The waterway continues northward from Lower New York Bay, passing through the Narrows into Upper New York Bay. Upper New York Bay is at its widest at the confluence of the Hudson and East rivers and the Kill van Kull. Kill van Kull opens into Arthur Kill on the north side of Staten Island, and it then becomes its western boundary and the passageway leading south to the Port Newark–Elizabeth Marine Terminal. Most container traffic that once used the piers of Brooklyn and Manhattan shifted to that New Jersey facility by 1990. To the east, in Brooklyn, is another of the bay's commercial tributaries, the Gowanus Canal. Upper New York Bay is 5 miles (8 kilometers) long from the Battery to Staten Island and 4 miles (6.5 kilometers) wide from Brooklyn to New Jersey; it may be seen almost in its entirety from the Staten Island Ferry. At the entrance to Upper New York Bay a number of sights are clearly visible, including the striking Manhattan skyline, Liberty Island, and the Statue of Liberty; just to the west is Ellis Island, as well as New Jersey's growing commercial panorama, from

Bayonne to Hoboken; and to the southwest, close to Staten Island, is the former Coast Guard base, Governors Island, with its many historic landmarks.

Gerard R. Wolfe

Upper West Side. Largely residential neighborhood in Manhattan (2000 pop. *ca* 250,000) between the Hudson River to the west and Central and Morningside parks to the east, and running north from 59th Street to 125th Street. (By another definition, the area ends at 110th Street and does not include Morningside Heights.) Called Bloemendaal ("flowering valley") by Dutch and Flemish settlers, under the British the area was known as "the End" or "the West End" and was the site of farms and country homes. The Battle of Harlem Heights was fought on 16 September 1776 on land that is now part of Barnard College at 118th Street. After the Revolution the property of many Tories was confiscated and villages formed, among them Harsenville (near the present 71st Street), Striker's Bay (near 90th), Bloomingdale Village (near 100th), and Manhattanville (at 125th). Outings by sleigh and carriage up the Bloomingdale Road (now Broadway) were popular. The Bloomingdale Insane Asylum was built on farmland now part of Columbia University. Edgar Allan Poe spent summers in Bloomingdale, where he composed "The Raven" in 1844. George Pope Morris's poem "Woodman, Spare That Tree" (1848) was inspired by an encounter in Striker's Bay.

Development of the area did not commence in earnest until after trolley service was introduced in 1878, followed a year later by the opening of the Ninth Avenue El (which was shut down in 1940). To add to the area's appeal, in the 1880s numbered avenues were given more romantic names: Eighth Avenue above 59th Street was renamed Central Park West, Ninth became Columbus Avenue, 10th was first called Holland and finally Amsterdam, and 11th and 12th were renamed West End Avenue and Riverside Drive. Businesses and tenements were built on Columbus and Amsterdam, row houses went up on cross streets, and Riverside Drive, Broadway, and finally Central Park West became well known for their large apartment houses. The most fashionable avenue was, and remains, Central Park West. What has been called the avenue's "distinctive silhouette" began to appear when the city's first grand luxury apartment house, the Dakota, opened on 72nd Street in 1884; it was so named because it was remote from the most populated part of the city. Standing in similar splendid isolation was the American Museum of Natural History at 79th Street. Central Park West attracted more construction around the turn of the twentieth century, including the New-York Historical Society, the New York Society for Ethical Culture Hall, the Second Church of Christ Scientist, the intimate Hotel des Artistes, Congregation Shearith Israel (the new home of the city's oldest Jewish congregation), and several commanding apartment buildings. Development was so sporadic at first that the West Side Tennis Club maintained five clay tennis courts on Central Park West at 89th Street before moving to Forest Hills, Queens. A German American Jewish social organization, the Progress Club, built its clubhouse on the lot in 1903. Later came the avenue's four famous twin-tower apartment buildings built during the 1930s: the Century (25 Central Park West), the Majestic (116 Central Park West), the San Remo (145 Central Park West), and the El Dorado (300 Central Park West). These and other large apartment buildings received such care over the decades that even during the great building boom of the late twentieth century, only two of them were torn down and replaced.

The extension of the Interborough Rapid Transit subway line (now the Nos. 1, 2, and 3 trains) up Broadway in 1904 opened the Upper West Side to serious development, which was later bolstered when the Independent line (the A, B, C, and D trains) was built under Central Park West in the 1930s. The large neighborhood took on a distinctive identity: mostly middle and working class, ethnically mixed (with a large African American population until it moved to Harlem in the 1920s), and popular among people in the arts, the theater, literature, commerce, sports, and politics. The area became famous for its social tolerance and political activism.

After World War II the Upper West Side declined as entire districts were seized by crime, poverty, drugs, and disease. The writer Theodore H. White wrote in his memoir, *In Search of History,* that after living in war-torn Europe, he did not fear walking outside at night until he moved to Central Part West at 84th Street in 1953. There were riots and gang wars like those in the play and film *West Side Story,* filmed in the early 1960s in the slums that were soon razed for housing, for Lincoln Center, and for Fordham University's Manhattan campus. Another, less successful urban renewal project of that time was the 17-building Frederick Douglass Houses that Robert Moses built between 100th and 104th streets.

During the 1970s the city and developers proposed a redevelopment plan along the bank of the Hudson called Westway. It was rejected for environmental and financial reasons, and Donald Trump and other developers proposed transforming the railroad yards near 72nd Street into an immense commercial–residential complex. (The 16-building project, much trimmed and known as Trump Place or Riverside South, was under completion in the early twenty-first century.) As crime decreased in the 1980s, the Upper West Side became a desirable residential area. Real estate prices rose, and developers built luxury apartment towers. Efforts were also made to protect classic buildings. In 1990 the West Side/Central Park West Historic District between 59th and 86th streets was given landmark status.

In the late twentieth century, a large number of immigrants settled in the neighborhood, about one-fifth from the Dominican Republic and a smaller number from Haiti, the United Kingdom, China, Canada, the Middle East, and France. The Upper West Side's historic diversity is visible also in its houses of worship, including B'nai Jeshurun and Lincoln Square Synagogue, First Baptist Church, Holy Trinity Lutheran Church, the Cathedral of St. John the Divine, Corpus Christi Church, the New York Buddhist Church, the Manhattan Temple of the Church of Jesus Christ of Latter-Day Saints, and the Interchurch Center, home of the National Council of Churches.

Bounded by three large parks, the Upper West Side also contains many smaller green areas, including Damrosch Park at 62nd Street, the Straus Park and Memorial Fountain at 106th Street, the largely McKim, Mead and White–designed campus of Columbia University at 116th Street, and Sakura Park at 122nd Street. The area's historic access to the water by ferries and boating clubs along the Hudson is now limited to the 79th Street Boat Basin. Besides Columbia, there are many other educational institutions in the Upper West Side, including Trinity, Collegiate, Calhoun, and St. Hilda's and St. Hugh's; the Juilliard and Manhattan schools of music and the arts; Fordham University; Barnard College; and Jewish and Union Theological Seminaries.

John Rousmaniere

Urban, Joseph (*b* Vienna, Austria, 26 May 1872; *d* Yonkers, New York, 10 July 1933). Architect and stage designer. Trained in Vienna, he was part of the turn-of-the-century Jugendstil movement, which applied modernist principles to architecture and theatrical design. Immigrating in 1911 to the United States, where he first designed sets for the Boston Opera, Urban was brought to New York City in 1914 by Flo Ziegfeld to design the Ziegfeld Follies. From then until his death in 1933, Urban worked in architecture, theater, and film, creating striking stage designs for the Metropolitan Opera and the Broadway stage. Productions included the annual Ziegfeld Follies revues, the Metropolitan Opera's presentations of, among others, *Don Giovanni, Parsifal, Lohengrin, The Tales of Hoffman, Faust,* and *Don Carlo,* and musical comedies ranging from *The Garden of Paradise* (1914) to *Rio Rita* (1927) and *Whoopee* (1928). In the early 1920s he was hired as a set and lighting designer for William Randolph Hearst's Cosmopolitan Pictures, where his design work included *Heliotrope* (1920), *Enchantment* (1921),

Buried Treasure (1922), *The Young Diana* (1922), and *Under the Red Robe* (1923).

Urban was an important ambassador for European innovations in theatrical design, bringing the so-called "new stagecraft" to the United States and laying the groundwork for the more radical modernist work of the middle years of the century. His sophisticated designs, distinguished by intense color and innovative use of light, were influential during the 1920s and 1930s. The color "Urban blue," named for him, is still in use.

Although some of Urban's architectural commissions were in Florida (for example, Mar-A-Lago, the home of Marjorie Merriweather Post, and the Palm Beach Bath and Tennis Club) and elsewhere in the United States, his most important architectural work was done in New York City, where he designed the original building for the New School for Social Research (on West 12th Street), the Central Park Casino (later destroyed), the Ziegfeld Theatre (on Sixth Avenue), and the William Randolph Hearst Building on the corner of 57th Street and Eighth Avenue.

Randolph Carter and Robert Reed Cole, *Joseph Urban: Architecture, Theatre, Opera, Film* (New York: Abbeville Press, 1992); Arnold Aronson, et al., *Architect of Dreams: The Theatrical Vision of Joseph Urban* (New York: Columbia University, 2000)

Jean Ashton

Urban Development Corporation

[UDC]. Public authority formed in 1968 by the state legislature of New York to initiate, finance, construct, and manage building projects of all kinds. It was empowered to override local zoning ordinances and building codes, issue building permits, sell $1 billion in tax-exempt bonds (later increased to $2 billion), lend and grant money to subsidiaries, take land by condemnation, and sell, lease, and retain real property. The corporation had a mandate to stimulate the economy of New York State, provide employment, increase the housing stock, and construct public facilities; it was soon perceived as a powerful vehicle for promoting development in New York City. The first head of the UDC, Edward J. Logue, used its broad powers to launch more than 100 housing projects comprising 32,000 units statewide, as well as many nonresidential projects. At Roosevelt Island and elsewhere the corporation undertook the first developments of new towns under public auspices since the New Deal.

In 1975 the UDC became the first major issuer of municipal bonds since the Depression to default on its obligations. Its insolvency was caused by a depressed real estate market; a "fast-track" construction process that allowed problems to go undetected, thus escalating construction costs; high-risk financing techniques; a cutoff of federal aid; and the revocation of a state commitment to guarantee its loans. When the extent of its financial troubles became apparent at the end of February, the corporation had $134.5 million in short-term debt coming due and needed $370 million to complete projects comprising more than 20,000 residential units. The corporation was eventually rescued by the Savings Bank Association, the Property and Liability Insurance Fund, and a group of commercial banks, but its long-term debt of more than $1 billion did not regain its investment-grade credit rating. The staff was cut by 75 percent, Logue was replaced in 1975 by Richard Ravitch, and the corporation turned away from public housing and toward economic development. In 1976 it aided Donald Trump's development of the Grand Hyatt Hotel by purchasing construction materials on his behalf, thus freeing Trump from the sales tax. Similar methods were used to subsidize the renovation of the Marriott–Marquis Hotel in Times Square, the South Street Seaport, and a brewery in Brooklyn. After Ravitch was replaced in 1977 by Richard Kahan, the corporation took over the development of Battery Park City, which had been long delayed and encumbered by debt, as well as of the New York City Convention Center (later named the Javits Convention Center); it also helped to convert the Federal Archives Building in Manhattan, renovate the Farberware plant in the Bronx, and develop Fordham Plaza. After a prison bond referendum was defeated in 1981, it began to finance and construct prisons. In 1995 the UDC was renamed the Empire State Development Corporation. In 2002, after the terrorist attacks of 11 September 2001 on the World Trade Center, a new subsidiary of the corporation was formed, the Lower Manhattan Development Corporation, and was given primary responsibility for coordinating the reconstruction of the area.

Owen D. Gutfreund

Urban League. See National Urban League.

urban psychology. Specialty in the behavioral sciences that focuses on the study of the effect city living has on individuals. The Kitty Genovese murder of 13 March 1964 in Kew Gardens, where 38 witnesses ignored the screams of the murdered woman because they "just did not want to get involved," led several New York City psychologists to test different theories of whether such noninvolvement is a product of city life. These included Stanley Milgram's field experiments on "stimulus overload," Philip Zimbardo's tests of anonymity and deindividuation, Harry Kaufmann's surveys on cognition, and Bibb Latane and John Darley's lab experiments on "diffusion of responsibility." Milgram's now-classic 1970 essay "The Experience of Living in Cities" enunciated and defined the new specialty of urban psychology, which has since become a vibrant new specialty.

Harold Takooshian

Urey, Harold C(layton) (*b* Walkerton, Ind., 29 April 1893; *d* La Jolla, Calif., 6 Jan 1981). Nobel Prize–winning scientist. He joined the faculty of Columbia University in 1929 and during the next 15 years he taught, wrote a number of books, and edited the *Journal of Chemical Physics.* He won the Nobel Prize in chemistry in 1934 for discovering deuterium and was later responsible for separating isotopes of uranium for the atomic bomb project. Urey eventually left Columbia for the University of Chicago.

James E. Mooney

Uris Buildings Corporation. Real estate development firm formed by brothers Percy Uris (*b* New York City, 19 Aug 1899; *d* Palm Beach, Fla., 20 Nov 1971) and Harold Uris (*b* New York City, 26 May 1905; *d* Palm Beach, Fla., 28 March 1982). It built luxury apartment towers in Manhattan before the Depression and 17 office towers containing more than 13 million square feet (1.2 million square meters) of space after World War II. It also built the New York Hilton at Rockefeller Center (1963), headquarters for J. C. Penney (1964) and International Telephone and Telegraph (1961), and office buildings at 60 Broad Street (1962), 1290 Sixth Avenue (1962), and 55 Water Street (1972). It became the largest publicly owned real estate firm in the country; after Percy's death, Harold sold it to the National Kinney Corporation in 1973. Uris Hall at the Graduate School of Business of Columbia University is named for Percy Uris.

Marc A. Weiss

U.S. Custom House [Alexander Hamilton U.S. Custom House]. Erected in 1907 at Bowling Green on the site of Fort Amsterdam (demolished 1790) and Government House (demolished 1815), it housed the offices of the Collector of Customs of the Port of New York, the headquarters of Custom Collection District no. 10, and several other customs and federal departments until 1973 when the Customs Service moved into the World Trade Center. The Custom House building is an imposing, monumental granite structure designed by Cass Gilbert in a beaux-arts style replete with maritime, commercial, and national symbols. Forty-four Corinthian columns surround the building, each with the head of Mercury, the god of commerce, and a dolphin or seashell in its capital. The facade is further embellished by statues. Four figures by Daniel Chester French represent the continents of Asia, Europe, Af-

U.S. Custom House, 1938

rica, and North America. The 12 statues along the cornice depict the commercial centers of the ancient and modern worlds: Greece, Rome, Phoenicia, Genoa, Venice, Spain, Holland, Portugal, Denmark, Germany, England, and France. The attic balustrade is broken by a giant cartouche bearing the seal of the United States. This is flanked by winged female figures of war and peace and topped by a federal eagle. Murals by Reginald Marsh decorate the walls of an interior rotunda. The building was designated a National Historic Landmark in 1976. In October 1994 it became the site of the George Gustav Heye Center of the National Museum of the American Indian. In the early twenty-first century it also houses the U.S. Bankruptcy Court for the Southern District of New York.

Mollie Keller

U.S. Customs Service. Arm of the Department of Homeland Security charged with collecting duties on goods entering the United States. Established by the fifth act of the First Congress of the United States in 1789, it provided the largest part of the government's revenue before the income tax was imposed in 1913, and it remained the second-largest source of revenue supporting the federal government into the early twenty-first century. The Customs Service was placed under the direct supervision of the nation's first Treasury secretary, New Yorker Alexander Hamilton. In the first year that the service was in operation, the Port of New York was the largest of 59 collection districts in 11 states, and the service accounted for the largest federal presence in the city. It employed a collector, a naval officer (or deputy collector), and a cadre of inspectors, surveyors, weighers, measurers, and crews for revenue-cutters (small boats used by customs officers to carry them to ships in the harbor). The Customs Service collected $2 million in revenue during its first year, and by 1835 it had paid down the national debt accumulated during the Revolution and before the ratification of the Constitution.

The removal of a customs collector for embezzlement in 1798 marked the beginning of a long period of corruption, which was encouraged by the sheer size of the port and the large volume of goods passing through it, and essentially institutionalized by the excesses of the spoils system under President Andrew Jackson. Apart from Moses Grinnell, whose honesty cost him the collectorship in 1870, all collectors and many subordinates between 1829 and 1877 used their positions to enrich themselves. The corrupting influence of the service even tainted prominent New Yorkers: Samuel Swartwout, scion of an old Dutch family, fled to England in 1838 with $1 million obtained illegally from the Customs Service; Philip Hone, whose diaries commented on society in New York City, asked that his son succeed him as a naval officer (deputy collector) so that his family could recoup the fortune that it had lost in the panic of 1837.

In 1853 the Port of New York was collecting almost three-quarters of all customs revenue in the country, and 700 vacant positions at the Custom House in the city attracted 27,000 applicants. Chester A. Arthur was the customs collector from 1871 to 1878 before becoming president of the United States. He was sympathetic toward the spoils system, ignored the corrupt activities in his office, and allegedly earned income as a customs collector that was several times greater than what he earned as a lawyer: by one account he made $50,000 a year from 1871 to 1873. (At the same time the customs collector Herman Melville brought home $4 a day to supplement his income from writing.)

Many attempts at federal reform found the Custom House in the city an inviting target. There were sporadic plans to make the operations of the Customs Service in the city more professional and rational, but all failed until the investigations in 1877 of the Jay Commission (led by John Jay, a descendant of the chief justice). The report of the commission inspired President Rutherford B. Hayes to dismiss Arthur and institute the civil service reforms approved during the administration of President Ulysses S. Grant, including competitive examinations and the freeing of all offices from political patronage. After 1879, when the first examinations were held in New York City, the reputation and performance of the Custom House improved markedly. The Pendleton Act (1883), passed during Arthur's presidency, reestablished the Civil Service Commission and ensured that there would be no return to the old ways.

A more prudent and professional service proved essential in the twentieth century, as the Customs Service was increasingly called on to enforce notions of morality as well as trade laws. Customs agents had the primary responsibility for enforcing the restrictive Chinese Immigration Act (1882), which predated the formation of the Immigration and Naturalization Service. Between 1915 and 1917 customs agents monitored belligerent ships, searched for contraband, and impounded arms and matériel purchased by foreign nations. When Congress declared war on 7 April 1917 the customs collector Dudley Malone impounded the 27 German and Austrian ships then in port and interned the 1100 enemy aliens aboard. During Prohibition customs officers worked with the Federal Bureau of Investigation to seize illegal alcohol: they not only had to search foreign ships in the harbor for forbidden spirits but also to watch out for and interdict small boats ferrying cases of liquor ashore from mother ships floating in the "rum rows" 3 miles (5 kilometers) off the coast of New Jersey. The Customs Service also worked with the U.S. Post Office to enforce pornography laws: in 1933 its agents confiscated as obscene rotogravure reproductions of the frescoes in the Sistine Chapel and copies of James Joyce's *Ulysses*. In 1945 the service began to focus on interdicting illegal exports of arms and high technology.

During the nineteenth century, the Custom House frequently moved throughout lower Manhattan to meet the growing volume of work under its jurisdiction. By the early 1890s the 55 Wall Street location proved inadequate, and Congress authorized the construction of a new Custom House, which was to be located at Bowling Green, the same location as the original Dutch Custom House and the first U.S. Custom House. The contract was awarded to Cass Gilbert, a prominent young New York City architect. In 1907 the Custom House was relocated to 1 Bowling Green, a historical structure now known as the Alexander Hamilton U.S. Custom House. In 1973 the U.S. Custom House relocated to the newly built 6 World Trade Center, with satellite offices at the John F. Kennedy (JFK) Airport and the piers in Brooklyn and with 1500 employees working for the agency. Unhindered by the need for search warrants, it continued to examine goods and passengers entering New York City from abroad and to enforce federal laws governing the importation of controlled substances, forbidden foods, and counterfeit currency. In 2008 it collected $5.9 billion in revenue at JFK Airport, the Port of New York, and the Port of New Jersey.

After the World Trade Center was destroyed by the terrorist attacks of 11 September 2001, Custom House officials and offices were relocated throughout the metropolitan area. The subsequent creation of the Department of Homeland Security in the fall of 2002 led to a dramatic reorganization of federal law enforcement agencies. The new U.S. Customs and Border Protection agency, created on 1 March 2003, adopted a number of new responsibilities, such as the inspectional functions of the former U.S. Immigration and Naturalization Service, the U.S. Border Patrol in its entirety, and the Plant Protection and Quarantine programs from the Animal and Plant Health Inspection Service (APHIS) in the Department of Agriculture. Though this department is centrally based in Washington, D.C., in the early twenty-first century the New York City field office included offices at the 1 Bowling Green location.

US Open (tennis). Tennis tournament. The first United States Open tennis championships, or US Open, were held in Newport, Rhode Island, in 1881 and were exclusively for amateur men; a separate tournament was held for amateur women. In 1915 the tournament relocated to the West Side Tennis Club in Forest Hills, Queens, and was played there until 1921, before moving to Philadelphia. In 1924 the tournament moved back to the West Side Tennis Club, and in 1968 the inaugural season of the "open era" of tennis began there, meaning all players (professional or amateur) were eligible to compete. That same year the tournament combined the separate men's and women's tournaments and held them simultaneously. The tournament continued to be held in Forest Hills until 1978, when it moved to its permanent location at Flushing Meadows–Corona Park in Flushing, Queens, known as the Billie Jean King National Tennis Center. Until 1997 the main court and matches were played at Louis Armstrong Stadium within this tennis complex. However, in 1997 Arthur Ashe Stadium, named after the 1968 US Open champion, was opened. This became the largest outdoor tennis venue in the world, with a seating capacity of 24,000; Louis Armstrong Stadium became the location of court number two. In 2005 all courts in the center were given blue inner courts and green outer courts, in an attempt to make the ball more visible to the audience.

The US Open is the fourth and final tournament of tennis's "Grand Slams," following the Australian Open, the French Open, and Wimbledon, all of which are regulated by the International Tennis Federation. It is annually held in August and September over a two-week period and consists of championships in men's and women's singles and doubles, and mixed doubles. It is the only tournament of the Grand Slam that features final-set tiebreakers; the other events continue play in the final set until a winner is determined. In 2006 the US Open became the first Grand Slam to use instant replays for challenging disputed calls.

Compiled by Frank Nestor

U.S. Sanitary Commission. Organization formed in 1861 by the Unitarian minister Henry Whitney Bellows and the urban sanitation expert Elisha Harris, both directors of the Women's Central Association of Relief in New York City, along with two physicians, W. H. Van Buren of the College of Physicians and Surgeons and Jacob Harsen of the New York Lint and Bandage Association. The four traveled to Washington, D.C., in May to assess the preparedness for the Civil War of the U.S. Medical Bureau. Convinced that the bureau was incapable of maintaining the health of Union soldiers, they chartered the sanitary commission, approved by executive order of President Abraham Lincoln on 13 June, to organize the national distribution of sanitary information and material relief to Union soldiers. Bellows was president of the commission and George Templeton Strong its secretary; members of the executive committee, including Van Buren, Oliver W. Gibbs, Cornelius Agnew, and Charles J. Stille, met in New York City every day of the war except Sundays. The general secretary of the commission was Frederick Law Olmsted, who from his office in Washington, D.C., oversaw the gathering of statistics, the implementation of dietary reforms to prevent scurvy, and construction of the first pavilion hospitals to prevent contagion. Largely through the efforts of the Women's Central Association of Relief, the commissioners raised more than $15 million to buy supplies and pay teamsters, doctors, nurses, and cooks. The commission succeeded in restructuring the outmoded U.S. Medical Bureau and in promoting public health measures that reduced mortality and greatly eased soldiers' suffering, but Olmsted's position eventually was undermined by political rivalry with Secretary of War Edwin Stanton and the U.S. Medical Bureau, and by competition with the Christian Commission, a private evangelical aid society formed in New York City in November 1861. He resigned in August 1863, after which the influence of the commission declined; it was officially terminated by Bellows in April 1878. Information gathered by the U.S. Sanitary Commission during the Civil War helped further the work of the International Red Cross (1863); the Public Health Association, formed in New York City by Harris in 1872; and the American Association of the Red Cross (1881).

U.S. Ship Canal. See Harlem River Ship Canal.

U Thant Island. See Belmont Island.

Utopia. Proposed neighborhood in north central Queens, covering a tract of 50 acres (20 hectares) east of 164th Street between Jamaica and Flushing. The land was acquired in June 1905 by the Utopia Land Company, which planned to build a cooperative town for Jews from the Lower East Side. The streets were named for those on the East Side, including First and Second avenues and Ludlow, Hester, Division, and Essex streets; there were to be several industries and a large cooperative store. The developers received a loan from the New York Mortgage and Security Company to grade the streets and stake out lots, but abandoned their plan after they were unable to secure more funds. Although the development was never realized, it inspired the name of Utopia Parkway.

Vincent Seyfried

V

Valachi, Joseph [Cago, Joe] (*b* New York City, 22 Sept 1903; *d* El Paso, Tex., 3 April 1971). Organized-crime figure and informer. He was born and brought up in East Harlem and was a low-ranking criminal in the Mafia under the name Joe Cago. While serving a term in Atlanta Federal Prison in 1962 he became convinced that he was marked for execution by Vito Genovese, the head of an organized-crime family in New York City, and decided to reveal what he knew of the Mafia to the U.S. Department of Justice, becoming the first person ever to violate the Mafia's code of silence. He later testified on the same subject before an investigatory committee of the U.S. Senate (September–October 1963) and wrote an account of 300,000 words, which although of questionable accuracy on some points provides extensive information on organized crime. Valachi made current the term *Cosa Nostra,* insisting that the word *Mafia* was used only by outsiders. He died while serving a sentence of life imprisonment for murder.

Peter Maas, *The Valachi Papers* (New York: HarperCollins, 2003)

See also Organized crime.

Warren Sloat

Valentine, David T(homas) (*b* Eastchester, N.Y., 15 Sept 1801; *d* New York City, 25 Feb 1869). Public official and publisher. After moving to New York City in 1815 he worked as a grocer's clerk and through political contacts became the clerk of the marine court in 1826, deputy clerk of the Common Council in 1830, and clerk of the council in 1842. In 1841 he compiled and published the first edition of his *Manual of the Corporation of the City of New York,* a compendium of historical material with illustrations. The book proved popular and Valentine published an annual edition until 1867. The other major title published under Valentine's name, *History of the City of New York* (1863), was actually the work of his aide William I. Paulding.

Stephen Weinstein

Valentine, Lewis J(oseph) (*b* Brooklyn, 19 March 1882; *d* ?New York City, 16 Dec 1946). Police commissioner. During the administration of Mayor John Purroy Mitchel (1914–18) he took part in raids by "confidential" squads on brothels and gambling joints being protected by corrupt policemen. From July 1926 to December 1928 he led a similar squad that was formed shortly after the election of Mayor James J. Walker. Appointed police commissioner by Mayor Fiorello H. La Guardia in September 1934, he caused an immediate controversy when he publicly ordered his officers to "muss up" professional criminals. He retired in September 1945. Valentine was credited with greatly improving the efficiency, honesty, and morale of the police force. He wrote a memoir, *Night Stick* (1947).

George A. Thompson, Jr.

Valentine's Manual. See Valentine, David T.

Valentine–Varian House. Historic house at 3266 Bainbridge Avenue in the Bronx. The two-story structure was built about 1758 of local fieldstone with wood details by Isaac Valentine, a blacksmith and farmer. It was sold in 1791 to Isaac Varian and remained in his family until 1905. Bought in 1965 by the Bronx County Historical Society, it was moved across the street from its original site, restored as the society's headquarters, and designated a city landmark in 1966. The Valentine–Varian House is the only remaining house that once lined the Boston Post Road and is one of few of its style that survives in the Bronx.

Eric Wm. Allison

Valentino, Rudolph [di Valentina d'Antonguolla, Rodolfo Alfonzo Raffaello Pierre Filibert Guglielmi] (*b* Castellanata, Italy, 6 May 1895; *d* New York City, 23 Aug 1926). Silent-film actor and sex icon. Born to a middle-class Italian family in the year cinema was invented, he left home at a young age, going first to Paris and ultimately to New York City in 1913. He started out working as a waiter, dancer and, reportedly, gigolo. After earning some fame in New York City as a taxi dancer at Maxim's, he ventured to California, where his sex appeal and stage presence earned him appearances in 14 major silent films (during the last seven years of his life), such as *The Four Horseman of the Apocalypse* (1921) and *The Sheik* (1921). Valentino became a Hollywood celebrity, bearing such nicknames as the Great Lover. He died abruptly in New York City after surgery for appendicitis and ulcers; his funeral was attended by more than 100,000 mourners—most of them women, who allegedly began rioting in the streets.

Cecilia Magnusson

Vallee, Rudy [Vallée, Hubert Prior] (*b* Island Pond, Vt., 28 June 1901; *d* North Hollywood, Calif., 3 July 1986). Singer. Brought up in Vermont and Maine, he taught himself to play the saxophone at an early age and changed his forename in honor of his favorite saxophonist, Rudy Wiedoeft. He played in several bands while attending Yale University (bachelor's degree in philosophy, 1927) and in 1928 formed the Connecticut Yankees, a dance band that performed at the Heigh Ho Club in New York City. He achieved success soon after he began singing over the radio station WABC in February 1928. For the next 10 years his variety show, *The Fleischmann's Yeast Hour* (*The Royal Gelatin Hour* from 1936 to 1939), broadcast on Thursday evenings, was heard by millions of listeners. He sang such tunes as "My Time Is Your Time" and "I'm Just a Vagabond Lover," amplifying his singing voice with a hand-held megaphone. In addition to his radio programs he frequently performed at the Villa Vallee (which later became the Copacabana) at 10 East 60th Street. He also appeared on stage and in several Hollywood films. Although his popularity faded after World War II, he enjoyed a revival in the 1960s as an actor in the Broadway and screen versions of *How to Succeed in Business without Really Trying.* His published writings include *Vagabond Dreams Come True* (1930), *My Time Is Your Time: The Story of Rudy Vallee* (1962), and *Let the Chips Fall* (1975).

Robert Sanger Steel

Van Anda, Carr (Vattel) (*b* Georgetown, Ohio, 2 Dec 1864; *d* New York City, 28 Jan 1945). Newspaper editor. He studied mathematics at Ohio State University and spent 16 years at the *Sun.* In February 1904 he joined the *New York Times* as its managing editor and quickly distinguished himself when his staff became the first to cover the destruction of the Russian fleet by Japan in 1904–5. He gained further recognition for the newspaper's coverage of the sinking of the *Titanic* in 1912 and of World War I, which he charted with such acumen that his reporters often reached the scene of battle before the armies did. He also published detailed accounts of the discoveries of the North and South poles and of the theories of Albert Einstein (whose error in transcribing an equation he once detected). His knowledge of Egyptian hieroglyphics led him to expose a forgery that had misled Egyptologists into believing that King Tutankhamen had been assassinated. An indefatigable worker, Van Anda retired from the *Times* in 1925 and spent the rest of his life studying science.

Harrison Salisbury

Van Arsdale, Harry (Jr.) (*b* New York City, 23 Nov 1905; *d* Queens, 16 Feb 1986). Labor leader. The son of an electrician, he joined Local 3 of the International Brotherhood of Electrical Workers in 1925 and became its business manager in 1933, a position he held until 1968. An innovator, he expanded his local into allied fields; developed Electchester, a cooperative workers housing project in Queens; and led a strike that won construction electricians a 25-hour workweek. In 1959 he was elected the first president of the New York City Central Labor Council of the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), making him the city's most powerful labor leader. His influence peaked during the 1960s when he formed a close alliance between the

900,000-member council and Governor Nelson A. Rockefeller and Mayor Robert F. Wagner. Van Arsdale played an important role in the unionization of public employees, hospital workers, and taxi drivers (serving as the first president of their union) and intervened on behalf of labor in many strikes. Well-known in business circles, he pressed for public works spending and served on many state, local, and federal boards. He remained head of the Central Labor Council until his death.

Gene Ruffini, *Harry Van Arsdale, Jr.: Labor's Champion* (Armonk, N.Y.: Sharpe, 2003)

See also American Federation of Labor.

Joshua B. Freeman

Van Cortlandt, Philip (*b* New York, 21 Aug 1749; *d* Croton-on-Hudson, N.Y., 5 Nov 1831). Political and mercantile leader; son of Pierre Van Cortlandt. He served as an officer in the American Revolution, became a founding member of the Society of the Cincinnati, and was a commissioner of forfeiture for the Southern District, in which capacity he was responsible for the breakup and sale of confiscated Loyalist holdings in New York City and surrounding counties. He later served in the U.S. Congress (1793–1809). Although his family continued to engage in regional and international commerce on a large scale, its political influence waned after the death in 1812 of Vice President George Clinton.

Louis E. DeForest, *The Van Cortlandt Family* (New York: Historical Publication Society, 1930); Jacob Judd, comp., *Van Cortlandt Family Papers* (Tarrytown, N.Y.: Sleepy Hollow Restorations, 1976–80)

Jacob Judd

Van Cortlandt, Pierre (*b* New York City, 21 Jan 1721; *d* Croton-on-Hudson, N.Y., 1 May 1814). Political and mercantile leader; grandson of Stephanus Van Cortlandt. He was a member of the general assembly (1768–74) and served on every major provincial council and congress during the revolutionary period before assuming the presidency of the Committee of Safety. Under Governor George Clinton he was the first lieutenant governor of New York State, from 1778 to 1795. He accompanied George Washington on his triumphal entry into the city in November 1783.

Jacob Judd, comp., *Van Cortlandt Family Papers* (Tarrytown, N.Y.: Sleepy Hollow Restorations, 1976–80)

Jacob Judd

Van Cortlandt, Stephanus (*b* New Amsterdam, 7 May 1643; *d* New York City, 25 Nov 1700). Mercantile and political leader. The son of Oloff Stevense Van Cortlandt (circa 1610–84), who was stationed in New Amsterdam in 1638 as a soldier employed by the Dutch West India Company and soon began a career as a merchant, he became the first native-born mayor of New York City in 1677. In addition to expanding the family's overseas trading operations he opened a brewery, as well as a sugar mill that is believed to have been a notorious prison when the British occupied New York City during the American Revolution. His sister Catherine (1652–1730) married into the Philipse family, as did his brother Jacobus (1658–1739), whose branch of the family became associated with the lands now making up Van Cortlandt Park.

Jacob Judd, comp., *Van Cortlandt Family Papers* (Tarrytown, N.Y.: Sleepy Hollow Restorations, 1976–80)

Jacob Judd

Van Cortlandt Park. Public park in the northwestern Bronx, occupying 1122 acres (454 hectares). It is the fourth largest park in New York City. Originally a part of the estate of the Philipse family, the land was sold to Jacobus Van Cortlandt on his marriage in 1691 to Eva Philipse, daughter of Frederick Philipse I. The Van Cortlandt mansion was built of stone in 1748 by Frederick Van Cortlandt, grandson of Oloff Stevense Van Cortlandt, and was at various times during the American Revolution the headquarters for General George Washington and General William Howe; it is now near Broadway and West 242nd Street and is the oldest house in the Bronx. Vault Hill nearby holds the family gravesites. In 1776 Augustus Van Cortlandt, the city recorder, moved the municipal records to his father's vault there to hide them from the British army. Indian Field in the northeast section of the park marks the graves of the Stockbridge Indians who fought on the American side in the Revolution and fell in a

First, 23rd, and 71st regiments camping in Van Cortlandt Park, 1917

Van Cortlandt Park, Mill Pond

battle with Hessians and Tories in 1778. The first Croton Aqueduct, built in the 1840s, forms a walkway, as does the right-of-way of the Putnam Division of the New York Central Railroad (1881–1984). The park's most popular area, the Parade Ground (opened in 1888), was originally used by the National Guard and is now a center for baseball, football, soccer, cricket, and hurling. Members of the Van Cortlandt family lived in the mansion continuously until 1889, when they sold the building and the surrounding lands to the city for a public park. In 1895 the Van Cortlandt Golf Course became the first municipal golf course in the nation, followed by the Mosholu Golf Course nearby. Playgrounds and a stadium were added in the 1930s and a large swimming pool complex opened in 1970. Despite the intrusion of the Henry Hudson and Mosholu parkways and the Major Deegan Expressway in the 1930s and 1940s, the park still has a bird sanctuary, two nature walkways, a bridle path, the nation's leading cross-country track, picnic areas, and a tree and shrub nursery maintained by the parks department.

Lloyd Ultan

Van Dam, Rip (*b* Albany, *ca* 1660; *d* New York City, 10 June 1749). Merchant and interim governor. After moving to New York City at the age of 20 he became a prominent shipbuilder and trader. He gained notoriety by resisting the restrictions on trade imposed by Governor Richard Coote, earl of Bellomont, against which he and other merchants petitioned the king of England. From 1693 to 1696 he held a seat on the Board of Aldermen and in 1699 he was elected to the provincial assembly, where he became the leader of the opposition party. Lord Cornbury appointed him in 1702 to the provincial council, of which he eventually became president. He served as interim governor of the colony of New York from 1731 (on the death of Governor John Montgomerie) until his replacement in the following year by the king's appointee William Cosby, with whom he had a bitter dispute after refusing to surrender half the salary he had earned as governor. During legal proceedings in 1733 he was expelled from the provincial council by Cosby, who was then near death, and while he fought to regain his position the council named as acting governor George Clarke; Van Dam maintained that he was still a member of the council and that his seniority entitled him to the governorship. When armed conflict seemed imminent, orders arrived in 1736 from England naming Clarke the lieutenant governor. Van Dam never held another political office.

Edward T. O'Donnell

Vanderbilt, Cornelius (*b* Staten Island, 27 May 1794; *d* New York City, 4 Jan 1877). Entrepreneur, grandfather of industrialist William K. Vanderbilt. He attended school in Port Richmond on Staten Island until the age of 11, when he went to work on his father's lighter in New York Harbor; he later bought a boat and set up a passenger and freight ferry service between Staten Island and Manhattan. During the 1830s he lived on Stone and Madison streets and East Broadway. After assembling a small fleet of vessels that worked around New York City, he offered service to Albany and undercut his competitors. A millionaire by 1846, he built a mansion on Staten Island and a townhouse on Washington Place that became his principal residence. He captured most of the traffic to California during the gold rush by reducing the fare between New York City and San Francisco. At about age 70 he merged three railroad lines operating between the city and points upstate into an efficient line offering dependable service; he then formed one of the largest transportation networks in North America. During the panic of 1873 he paid dividends as usual and issued contracts to build Grand Central Terminal that led to the employment of thousands of workers. By the end of his life Vanderbilt had a fortune of more than $100 million, most of which he left to family members. He also gave money to the Church of the Strangers in New York City, where a friend was pastor.

James E. Mooney

Vanderbilt, Gloria (Morgan) (*b* New York City, 20 Feb 1924). Fashion designer, painter, actress, and writer. She was born an heiress to the dynasty founded by her great-great-grandfather, the financier Commodore Cornelius Vanderbilt, and when her father died in 1925 she inherited a trust fund of about $4 million. At the age of 10 she became the focus of one of the nation's most notorious child custody cases when her parental aunt, Gertrude Whitney, accused her mother of neglect and sued for custody. After a highly publicized trial, during which she was widely referred to as the "poor little rich girl," she was turned over to Whitney's care. As an adult she embarked on successful careers as a painter, actress, writer, and fashion designer while remaining active as a member of fashionable society. Beginning in the 1970s, she licensed the use of her name on a variety of fashion items—eyeglasses, perfume, and clothing—and later appeared in television commercials promoting her products. Vanderbilt attracted considerable media attention for her marriages: successively, to the Hollywood agent Pasquale di Cocco (1942), the conductor Leopold Stokowski (1945), the film director Sidney Lumet (1956), and the writer Wyatt Cooper (1963). In 1996 she published *A Mother's Story,* a book about the suicide of her son.

Robert Sanger Steel

Vanderbilt, William K(issam) (*b* Staten Island, 12 Dec 1849; *d* Paris, 22 July 1920). Industrialist and sportsman; grandson of Cornelius Vanderbilt. With his brothers Cornelius and George he was educated by private tutors and at schools in Switzerland. He later worked for the Hudson River Railroad and by 1877 was a vice president of the New York Central and Hudson River Railroad; after six years he left to direct other railroads owned by his family. His marriage to Alva Ertskin Smith in 1875 helped him to gain acceptance in elite circles; they were divorced in 1895 and in 1903 he married Anna (Harriman) Sands Rutherfurd. After his brother Cornelius's death in 1899 he left many of his positions in the railroads to manage the family's immense holdings; in 1903 he resigned as executive director of the New York Central and allowed direction of it to pass to the Pennsylvania Railroad, but he retained control through ownership. An avid sportsman, he sailed in the America's Cup race and owned many Thoroughbred racehorses. Vanderbilt also established the Vanderbilt Clinic, supported the Metropolitan Opera Company and Columbia University, and collected paintings that he bequeathed to the Metropolitan Museum of Art.

James E. Mooney

Van der Donck, Adriaen (*b* Breda, Dutch Republic, *ca* 1618; *d* New Netherland, 1655). Popular representative. After studying law at Leiden University, he took a position as *schout,* or law officer, at Rensselaerswijck, a fief within the Dutch colony of New Netherland that surrounded present-day Albany, New York. Three years later he moved south, where Peter Stuyvesant, director-general of New Amsterdam, was facing conflict with its residents. Stuyvesant had followed the orders of the West India Company, which ran New Netherland for profit rather than as a settlement colony, and the residents were demanding rights as Dutch citizens. Van der Donck, the only lawyer in the colony, became their leader, writing petitions to the States General, appealing to ancient authorities and to new principles and rights. Stuyvesant arrested him and threatened to try him for treason. On his release, Van der Donck led a delegation to The Hague, where he spent four years presenting the case of New Netherland and arousing popular interest in the colony. He did not achieve his ultimate aim—having the government take control of the colony to strengthen it before the English could invade—but the States General did grant New Amsterdam a municipal charter. Thus, when the English took over in 1664, many Dutch features remained in effect in New York City, ensuring that it would develop along a different trajectory from that of other cities in British North America. Van der Donck returned to New Netherland in 1653 where he made his home on a tract of land north of Manhattan that he had received in 1645 in payment for negotiating an Indian treaty. His

unofficial title of *yonkheer,* or young landowner, eventually transferred to the land, and it is to this that the city of Yonkers owes its name.

Russell Shorto

Vanderlip, Frank A(rthur) (*b* Aurora, Ill., 17 Nov 1864; *d* New York City, 29 June 1937). Banker. As an assistant secretary of the Treasury from 1897 to 1901, he arranged the Spanish–American War Loan. His work caught the attention of James Stillman, the president of National City Bank, who in 1901 made him its vice president, a position he retained until he became president in 1909. He helped to plan the Federal Reserve System and in 1911 formed the National City Company, a nationwide bank holding company and securities affiliate of the National City Bank that was not subject to the restrictions of the National Bank Act. His most important achievements were the establishment of branches overseas, beginning in Buenos Aires in 1914, and the acquisition in 1915 of the branches of the International Banking Corporation in the Far East. A volunteer during World War I, he led the War Savings Certificates Committee from 1917 to 1918. A group led by James A. Stillman (son of James Stillman) and William Rockefeller forced him to resign in 1919. He lived in suburban Scarborough-on-Hudson, New York.

Van Der Zee, James (Augustus) (*b* Lenox, Mass., 29 June 1886; *d* Washington, D.C., 15 May 1983). Photographer. He became interested in photography while still in his teens and moved in 1905 to New York City. In 1916 he opened his first photography studio on 135th Street near Lenox Avenue in Harlem. During the 1920s Van Der Zee was closely associated with several figures in the Harlem Renaissance and worked as Marcus Garvey's official photographer (1921–24). He moved his studio first to 2069–77 Seventh Avenue and then to 272 Lenox Avenue, where he continued to take portraits. Retired and forced into poverty, he was rediscovered at the age of 82. He was the largest individual contributor to the Metropolitan Museum of Art's 1967 photographic exhibition *Harlem on My Mind*, which documented life in Harlem; the exhibition opened in January 1969 and brought him international recognition. In 1970 the Metropolitan added 60 of his prints to its permanent collection, and an institute was formed in his name to promote the work of young minority photographers. Van Der Zee received the first Pierre Toussaint Award from the New York Archdiocese in 1978.

Rodger C. Birt

Van Doren, Carl (Clinton) (*b* Hope, Ill., 10 Sept 1884; *d* Torrington, Conn., 18 July 1950). Literary critic, historian, and editor, brother of literary critic Mark Van Doren. He attended Columbia University in 1908 to complete work on his PhD and in 1911 accepted a teaching position there in American literature and history. After working briefly as the headmaster of the Brearley School in 1916–18, he was the literary editor of the *Nation* in 1919–22. Van Doren became an influential literary figure in New York City by supporting young, modern writers. His published writings include an authoritative biography of Benjamin Franklin (1938).

Robert Morrow

Van Doren, Mark (Albert) (*b* Hope, Ill., 13 June 1894; *d* Torrington, Conn., 10 Dec 1972). Literary critic; brother of Carl Van Doren. After receiving his PhD at Columbia in 1920 he joined his brother as a member of the university's English department until 1959. A gifted and influential professor, he taught for 39 years: his students included the poet John Berryman and the writer and Trappist monk Thomas Merton. He wrote fiction and criticism, and received the Pulitzer Prize for his poetry in 1940. Van Doren's published writings include critical studies of John Dryden (1920) and Nathaniel Hawthorne (1949), several books of poetry, novels, and a play, and *Liberal Education* (1943). A teaching award at Columbia is given each year by the students in his honor.

Robert Morrow

Vanity Fair. Name used by four magazines published in New York City. The first appeared from 1859 to 1863, and the second was a glossy publication inspired by such pulp magazines as *Police Gazette.* The third and best-known was published for more than 20 years by Condé Nast, who acquired the rights to the name for $3000, bought out the magazine *Dress* (a competitor of his own fashion magazine *Vogue*), and from 1913 published *Dress and Vanity Fair;* he sought a wide readership by covering fashion, the arts, and sports as well as humorous pieces. His dissatisfaction with the first four issues of the magazine led him to engage Frank Crowninshield, an editor of eclectic tastes. The magazine, known by its abbreviated name, published the work of Robert Benchley, Dorothy Parker, Robert E. Sherwood, Donald Ogden Stewart, Clare Boothe, John Peale Bishop, Edna St. Vincent Millay, Edmund Wilson, Gertrude Stein, Aldous Huxley, Noël Coward, Ferenc Molnar, Tristan Tzara, and Colette. It was difficult for *Vanity Fair* to retain its readers during the Depression, and in an effort to broaden its appeal Crowninshield began to publish articles by Walter Lippmann and engaged Jay Franklin and Henry Pringle as members of the editorial staff in 1932. The magazine was nevertheless merged with *Vogue* in 1936. A fourth magazine named *Vanity Fair* was introduced by Condé Nast Publications in March 1983 and as of 2009 had a circulation of more than 1.1 million.

American Humor Magazines and Comic Periodicals (Westport, Conn: Greenwood, 1987)

Brenda Wineapple

Van Nest. Neighborhood in the central Bronx, bounded to the north by Park Avenue and the Esplanade, to the east by Bronxdale Avenue, to the south by East Tremont Avenue, and to the west by Bronx River Parkway. The first European settlers were members of the family of Pieter Pietersen Van Neste, who settled in the area in 1647. A railroad station was built to accommodate visitors to the Morris Park Racecourse. The area remained farmland until the 1870s, when it was divided into 1700 lots for development by the Van Nest Land Improvement Company. A nexus of trolley lines nearby in West Farms led to the construction of one-family frame houses; the streets were named for members of the Van Neste family. The first apartment buildings were constructed in the 1920s. In addition to a large Italian and Irish population, in the 1980s Van Nest and its environs attracted some new immigrants from Jamaica, the Dominican Republic, Guyana, India, and China. After 2000 it still consisted of single-family homes, although many had been converted into apartments.

Gary D. Hermalyn

Van Vechten, Carl (*b* Cedar Rapids, Iowa, 17 June 1880; *d* New York City, 21 Dec 1964). Critic and novelist. He graduated from the University of Chicago and worked as a music critic for the *New York Times* and the *New Music Review;* he was also a photographer and patron of Harlem Renaissance artists. After 1920 he abandoned criticism for fiction. An avid collector of books and memorabilia, he donated the Van Vechten Collection of books and manuscripts to the New York Public Library. Van Vechten's published writings include the novel *Nigger Heaven* (1926), an autobiography (1932), *Fragments from an Unwritten Autobiography* (1955), and *Between*

Friends (1961). For many years he lived on Central Park West.

James E. Mooney

Van Wyck, Robert A(nderson) (*b* New York City, 1849; *d* Paris, 13 Nov 1918). Mayor. A graduate of Columbia Law School, he was elected judge of the City Court in 1889 and became its presiding judge. He was nominated for mayor in 1897 by Richard Croker, the leader of Tammany Hall, and prevailed against divided opposition to become the city's first mayor after the great consolidation of the five boroughs into one huge municipality. While in office he engaged in questionable practices: he was accused of accepting $500,000 of stock in the American Ice Company but cleared of any wrongdoing by Governor Theodore Roosevelt in 1900. Such scandals became the focus of the election of 1901, in which Van Wyck was defeated by the Republican reformer Seth Low. He lived at 135 East 46th Street.

James E. Mooney

Varela, Felix (*b* Havana, 1788; *d* St. Augustine, Fla., 18 Feb 1853). Religious and political reformer. He taught from 1811 to 1820 at San Carlos Seminary in Cuba, where he modernized the curriculum and wrote a number of texts, and was ordained a Roman Catholic priest in 1812. An advocate of republicanism and Cuban independence, he served in the Spanish legislature, the Cortes, until 1823. As a political refugee he moved to New York City in 1824 and continued to promote republicanism and Cuban independence through the newspaper *El Haberno.* He became a diocesan vicar general, wrote articles, edited a number of short-lived Catholic newspapers, published a children's catechistic periodical, and defended Catholicism against nativism. In 1825 he became the pastor of Christ Church, holding services in the basement of the Church of St. Peter until 23 March 1827, when services were moved to Christ Protestant Episcopal Church at 41 Ann Street. Eventually the congregation divided into two branches; Varela became the pastor of one that he named the Church of the Transfiguration, which occupied the former Reformed Scots Presbyterian Church on Chambers and Park streets after a rededication on 31 March 1836. Varela financed the church with his own money, as most of the congregants were poor residents of the Five Points. In 1850 he moved for health reasons to St. Augustine, but he continued to aid the parish financially until his death. The parish is now at 23–29 Mott Street.

Mary Elizabeth Brown

Varèse, Edgar(d Victor Achille Charles) (*b* Paris, 22 Dec 1883; *d* New York City, 6 Nov 1965). Composer. He moved to New York City in December 1915 and formed the International Composers' Guild in 1921. Many of his major compositions were given their first performances in the city, including *Hyperprism* (1922–23) for winds and percussion, *Ionisation* (1931) for percussion ensemble, *Density 21.5* (1936) for solo flute, and *Nocturnal* (1961) for soprano, bass chorus, and small orchestra. After failing in the 1930s to gain a large following for his music, which he termed "organized sound," he turned his attention to early music; in 1943 formed the Greater New York Chorus, which he led until 1947; and taught at Columbia University in 1948. In the 1950s he gained critical recognition for his work with electronic music and in particular for his compositions *Déserts* (1954), for chamber orchestra and tape, and *Poème électronique* (1958), for tape alone. During his last years he lived at 189 Sullivan Street. Varèse's music is often uncompromisingly dissonant and yet accessible because of its colorful instrumentation, which relies heavily on brass and percussion.

Fernand Oullette, *Edgar Varèse* (New York: Orion, 1968)

Barbara L. Tischler

Varian, Isaac L(eggett) (*b* New York City, 25 June 1793; *d* Peekskill, N.Y., 10 Aug 1864). Mayor. An ally of Tammany Hall, he was known for his honest character as an alderman and mayor during the 1830s and early 1840s. A dispute over his selection as the chairman of a meeting of Tammany Hall in the autumn of 1835 led to the formation of the Locofocos, an egalitarian faction of the Democratic Party.

James E. Mooney

Varick, James (*b* Newburgh, N.Y., 1750; *d* New York City, 22 July 1827). Religious leader. A shoemaker and the father of four children, he joined the John Street Methodist Episcopal Church but became disillusioned by the racism of white congregants. After withdrawing in 1796 he helped to form a congregation that became legally established in 1801. He was ordained in 1820 while leading efforts to form the African Methodist Episcopal Zion Church, of which he was elected bishop in 1822 and 1826. He was also an advocate for racial equality for African Americans in New York City; he was active in the New York African Society for Mutual Relief, founded in 1808, and served as vice president of the New York African Bible Society, founded in 1817.

Benjamin F. Wheeler, *The Varick Family* (Mobile, Ala.: n.pub., 1906)

Dennis C. Dickerson

Varick, Richard (*b* Hackensack, N.J., 25 March 1753; *d* Jersey City, N.J., 30 July 1831). Mayor. He moved to New York City in 1775 and enlisted as a captain in the Continental army, where he was an aide-de-camp to Benedict Arnold from 1777 to 1780; he later was cleared of complicity in Arnold's treasonous activities and in 1781 became George Washington's secretary. He was the city's recorder from 1784 to 1789, the speaker of the state assembly in 1787–88, and the state attorney general in 1788–89. In 1789 he helped to codify the state's statutes and as a Federalist was appointed mayor by Governor George Clinton. Republicans later criticized his use of marketing and tax-licensing fees, and he was swept out of office in 1801 after a bitter campaign. A street in lower Manhattan is named after him.

David William Voorhees

Variety. Weekly publication. Launched in 1905 by Sime Silverman to cover the vaudeville circuit, it later expanded to include coverage of motion pictures, radio, and television. The publication was controlled by Silverman's descendants until 1990, when Gerard A. Byrne became the publisher. In 1987 *Variety* was acquired by Reed Business Information, a division of Reed Elsevier. As of 2008 the magazine had a circulation of more than 31,000 and covered entertainment worldwide, including theater, home video, and cable television. It is known for a breezy, jargony style of writing and in particular for such memorable headlines as "Wall Street Lays an Egg" (30 October 1929) and "Sticks Nix Hick Pix" (17 July 1935).

varnishes. See PAINTS, DYES, AND VARNISHES.

vaudeville. Popular American entertainment in the nineteenth and early twentieth centuries. Entertainment in nineteenth-century New York City appealed to specialized audiences: opera attracted the middle and upper class, minstrel shows and melodramas the middle class, and variety shows in concert saloons the working class. After the Civil War, with the population expanding in both numbers and diversity, producers wanted to attract wider audiences and gain bigger profits. Vaudeville's broad appeal in the post–Civil War era came from its attempt to attract both men and women from different economic and social groups by presenting everything from minstrel shows to comedians to dancers in dedicated theaters. The first vaudeville performer was Tony Pastor, a singer in concert saloons during the Civil War who experimented with different formats into the 1870s. In 1881 he moved his operations to a theater in Tammany Hall (near Union Square in the heart of the theater district), where he reworked old variety shows to preserve their vitality but removed what he called their "cigar-smoking and beer-drinking accompaniment." Soon his audiences ranged from newsboys to middle-class women and leaders of Tammany Hall.

From the 1880s to the 1920s theaters were grand and alcohol was usually banned, contributing to vaudeville being the most popular form of theater in the United States. It attracted performers who worked in other forms of popular entertainment, including variety shows, minstrelsy, melodrama, the street performances of the Bowery, and eventually motion pictures and television; material was adapted for vaudeville from these genres (Pastor was especially influenced by the theater of the Bowery), and music was often provided by musicians from Tin Pan Alley. Managers of vaudeville theaters cultivated audiences that included men and women, native-born and immigrant, from the working class and the middle class, but they were often segregated racially, as was typical of the era. B. F. Keith and E. F. Albee, circus managers from New England, were among the first to plan nationwide tours for which they helped to develop a particularly wholesome form of vaudeville. They opened the first of their many theaters in the city on Union Square in 1893 and in 1900 established a national booking system with headquarters in the city. Despite strikes by performers in a union called the White Rats in 1900 and 1916–17, Keith's office eventually controlled nearly all the most highly sought-after bookings. Times Square became the heart of vaudeville in the city in 1913 after Albee opened the Palace Theatre at 47th Street and Seventh Avenue; the theater soon became the center of Keith's operations, which ran a booking office upstairs.

At this time New York City was the national center of vaudeville. Links from the city to transport lines across the country were useful in planning national tours, and many booking agencies made their headquarters in the city, which was often the first stop on the tours. There were vaudeville theaters in virtually every part of the city, ranging from celebrated ones in Times Square, to those catering to an entire borough (the Royal Theater and the National Theatre in an area known as the Hub in the Bronx), to small theaters in residential neighborhoods (Loew's Avenue B Theatre on the Lower East Side and Fox's Folly Theatre in Williamsburg). A "subway circuit" took shape along subway lines to the outskirts of the city and ran from the Fordham Theatre (owned by Keith) in the Bronx to the Albee Theatre and other points in Brooklyn. Acts by nationally known performers (or their imitators) could tour within the city for weeks. Many performers including Eddie Cantor and Sophie Tucker lived in the city and began their careers singing and dancing on street corners and on the stages of minor theaters. The chances of becoming successful in vaudeville were slim, but performers were attracted by the possibility of achieving national renown and earning high salaries (as much as $2500 a week in 1915). Many who became successful were immigrants and members of the working class.

Mainstream culture was changed immensely by vaudeville, which offered a commercial venue for ethnic cultural forms. Offerings were broad and included such songs as "My Yiddisha Mama" (performed by Tucker) and "Maggie Cline, the Irish Queen." Performances before mixed audiences of songs like "Cyclonic Eva Tanguay" and demonstrations of strength by Eugene Sandow and others helped to break down Victorian notions of propriety. African American performers such as Eubie Blake and Bert Williams used vaudeville bookings to build their careers and their artistic influence and paved an important path in the entertainment industry.

With the onset of the Depression and the increasing popularity of sound motion pictures, the Palace became a movie house in 1932 and theatrical vaudeville in New York City ceased. Former vaudeville performers such as Groucho Marx, Fanny Brice, and James Cagney adapted their routines to musical theater, radio, film, and television.

Robert W. Snyder, *The Voice of the City: Vaudeville and Popular Culture in New York* (New York: Oxford University Press, 1989)

See also Theater, §§4–5.

Robert W. Snyder

Vaux, Calvert (*b* London, 20 Sept 1824; *d* Brooklyn, 18 Nov 1895). Landscape designer and architect. He moved to the United States in 1850 to work with Andrew Jackson Downing, a collaboration that lasted until Downing's death in 1852. After moving to New York City in 1856, Vaux worked with Frederick Law Olmsted to win the city competition to design Central Park. The two would later design Prospect and Fort Greene parks. After this partnership ended in 1872 Vaux began his own architecture practice. An adherent of reformist ideas current among his contemporaries, he undertook commissions for the Metropolitan Museum of Art, the American Museum of Natural History (with Jacob Wrey Mould), the townhouse of Samuel J. Tilden in Gramercy Park, and several lodging houses and industrial schools for the Children's Aid Society. Vaux drowned under mysterious circumstances in Gravesend Bay in 1895. His book *Villas and Cottages* (1857) details an array of his domestic architecture and helped shape an ideal of American domesticity for decades.

Rick Beard

Vega, Bernardo (*b* Cayey, Puerto Rico, 14 Jan 1885; *d* San Juan, Puerto Rico, June 1965). Cigar worker (*tabaquero*), political activist, editor, writer. In 1899 he participated in the formation of La Federacion Libre de Trabajadores (the Free Federation of Workers), the first large-scale organization of the working class in Puerto Rico. In 1915 he became a charter member of La Socialista (the Socialist Club), which had been recently founded in his hometown of Cayey. In 1917 he carried this leftist perspective to New York City, where the dialectics of nationalism and socialism mingled with that of colonial liberation for a complex discourse that appeared in local Spanish newspapers and commentaries. From 1927 to 1931 he edited the weekly Spanish-language newspaper *El Grafico,* and in 1948 he led the Hispanic division of Henry A. Wallace's presidential campaign. In the 1950s Vega returned to Puerto Rico, where he led the island's independence movement. In the late 1940s Vega wrote his memoirs, *Memoirs of Bernardo Vega: A Contribution to the History of the Puerto Rican Community in New York,* but the book was not published until 1977.

Linda Delgado

Veiller, Lawrence (Turnure) (*b* Elizabeth, N.J., 7 Jan 1872; *d* New York City, 30 Aug 1959). Housing reformer. Soon after graduating from City College of New York, he became the most important figure in housing reform in the United States. An ardent critic of the dumbbell, or "old law," tenements that were built throughout the city after 1879, he led a campaign for a new tenement code in 1901 requiring that designs include an open court, thus providing more light and air to back rooms that had once opened onto narrow airshafts. As the deputy commissioner of the New York City Tenement House Department (1902–4) and secretary of the Tenement House Committee of Charity Organization (1900–1901), and as an organizer of the National Housing Association (1910) and its first director, he transformed the housing-reform movement from a series of local efforts into a national project managed by professionals. In 1921 he played an important role in drafting the Standard Zoning Law of the U.S. Department of Commerce, which with minor modifications was adopted by most communities during the following 10 years. Toward the end of his career Veiller was often criticized by younger experts for relying heavily on restrictive legislation rather than public action to ensure the quality of housing.

Roy Lubove, *The Progressives and the Slums: Tenement House Reform in New York City, 1890–1917* (Pittsburgh: University of Pittsburgh Press, 1962)

Vereinigte Deutsche Gewerkschaften. See United German Trades.

Verplanck, Gulian C(rommelin) (*b* New York City, 6 Aug 1786; *d* New York City, 18 March 1870). Writer and political leader. Born to a wealthy family from the Hudson River

Valley, he graduated from Columbia College in 1801. For his role in the commencement riot of 1811 at Columbia he received a stiff fine in mayor's court from DeWitt Clinton, provoking him to write a number of satirical pieces on Clinton and his associates under the name Abimelech Coody. In 1818 Verplanck published "The Bucktail Bards," political satire aimed at Clinton, and he became well known for writing political pamphlets. He was also a biographer, literary critic, and student of religion and served in the state assembly (1820–23), the U.S. Congress (1825–33), and the state senate (1838–41). In 1834 he narrowly lost the first direct mayoral election, in which he ran as a Whig. Verplanck helped to form the Century Association and was its president from 1857 until 1864 when he was forced to step down because of his affiliation with the Copperheads.

Evan Cornog

Verrazano [Verrazzano]**, Giovanni da** (*b* Val di Greve, Italy, *ca* 1485; *d* ?West Indies, *ca* 1528). Navigator. On behalf of France he led an expedition to the northeastern coast of North America in 1524 trying to find the Northwest Passage to Asia; he traveled from Cape Fear in North Carolina to Cape Breton of Nova Scotia and was the first European known to sail into New York Harbor and Narragansett Bay. He made note of the Hudson River. He met native tribes such as the Narragansett and sailed along Staten Island, Long Island, and Block Island on the same voyage, claiming the territory he discovered for France. The Verrazano–Narrows bridge across the Narrows, where he lay anchor on his journey, was completed in 1964 and is named for him. In 1909 a bronze statue of him was dedicated at Battery Park after the city's Italian community, spurred by Carlo Barsotti, editor of *Il Progresso Italo-Americano,* contributed funds for its creation. It is believed that Verrazano was eaten by cannibals in the West Indies.

James E. Mooney, Henry B. Cooper

Verrazano–Narrows Bridge. Suspension bridge across the Narrows between Staten Island and Brooklyn, opened in November 1964. It is named for the Italian explorer Giovanni da Verrazano, who sailed into the bay in 1524, probably the first European to see New York Harbor. A bridge across the Narrows had been proposed for more than 80 years and planned for nearly 15 when construction began in September 1959. The project was put in motion by Robert Moses, chairman of the Triborough Bridge and Tunnel Authority, who overcame opposition that was particularly intense in the Bay Ridge section of Brooklyn because of the displacement of some 8000 residents. The bridge was the 66th in New York City over navigable waterways and the last of eight in the city designed by the Swiss engineer Othmar H. Ammann. Its towers are 623 feet (190 meters) tall and rest on steel and concrete caissons sunk into man-made islands of sand; the anchorages are concrete wedges more than 100 feet (30 meters) tall set into the ground at Fort Hamilton in Brooklyn and Fort Wadsworth in Staten Island. The roadway has two levels and is suspended from four steel-wire cables with a diameter of 36 inches (91 centimeters). Computers were used to calculate the stresses to which all parts of the bridge would be subjected while the roadbed sections were hoisted into place and anchored to the cables. On its opening day Moses called the bridge a "triumph of simplicity and restraint." In the following years it spurred considerable development in Staten Island. The toll plaza in Staten Island is the starting point for the New York City Marathon. By 2009 the bridge was being crossed each day by 200,000 vehicles, and it had become a commercial colossus, generating more than $1 million every 24 hours.

Ellen Fletcher

vest pocket parks. Small parks, often built on vacant lots wedged between buildings. They became popular in New York City when open space became scarce in the 1960s. Many of the parks were developed with funds from the city, state, and federal governments and were used as parks only until the lots were built on. Often they were built at the urging of community groups and charitable organizations: examples include the Clinton Community Garden at 48th Street between Ninth and 10th avenues and the Dream Street Park at Lexington Avenue and 124th Street, a result of the efforts of the Creative Arts Workshop for Homeless Children. In a few cases private endowments for construction and maintenance gave rise to small parks that endured, such as Paley Park at 53rd Street between Fifth and Madison avenues, and Greenacre Park at 51st Street between Second and Third avenues. Vest pocket parks exist as sitting areas, community gardens, and playgrounds for neighborhoods that have little open space. The Liz Christie Garden at Houston Street and Second Avenue in Manhattan, which dates back to the early 1970s, is the oldest operating community garden in the city.

Jonathan Kuhn

Veterans Administration (VA) medical centers. Veterans honorably discharged from the armed forces receive medical care from three facilities in New York City operated by the Department of Veterans Affairs (formerly the Veterans Bureau, then the Veterans Administration, or VA). The Bronx VA Medical Center, opened in 1922 in an abandoned orphanage, moved in 1981 to a facility at 130 West Kingsbridge Road with 350 beds, including 120 beds in a skilled nursing unit. The Brooklyn VA Medical Center, originally the Manhattan Beach Veterans Administration Hospital, occupies a complex with 1000 beds that was built in 1950 at the southern end of Brooklyn facing the Narrows at Fort Hamilton. It also administers the VA Extended Care Center in St. Albans in Queens (opened in 1974), formerly the St. Albans Naval Hospital, which has 425 beds and offers skilled nursing and intermediate

Varrazano–Narrows Bridge, 2009

care. The facilities in the Bronx and Brooklyn conduct research and offer a range of services including dental care. The New York Department of Veterans Affairs Medical Center (1954) at First Avenue and 24th Street in Manhattan was one of 150 centers built by the Veterans Administration nationwide in the 1950s. It has 492 beds (a large addition was completed in the early 1990s), is affiliated with the New York University School of Medicine, and is recognized for its research. The center provides emergency surgery and other medical care, has one of the few units in the veterans' health care system for the treatment of AIDS, receives referrals for open-heart surgery from other centers throughout the Northeast, and has a strong rehabilitation program.

Sandra Opdycke

Veterans Affairs, U.S. Department of. For a discussion of hospitals maintained by this department and by its predecessor, the Veterans Administration, see Veterans Administration (VA) medical centers.

Viacom. Entertainment and communications firm formed in 1970 by the Columbia Broadcasting System (CBS) to comply with federal regulations preventing networks from owning cable television systems. Over the years the firm acquired such cable systems as Showtime/The Movie Network, Nickelodeon, and MTV, as well as television and radio stations. After a long takeover attempt by the investor Carl Icahn, the firm was bought in March 1987 by National Amusements, a chain of movie theaters owned by Sumner Redstone. Viacom in March 1994 acquired Paramount Communications along with one of its most valuable properties, the Madison Square Garden sports and entertainment complex (including the New York Knickerbockers and the New York Rangers), which it then resold in August of the same year for $1.1 billion. As of 2008 Viacom was based at 1515 Broadway in Times Square. Among its subsidiaries are the noted book publishers Macmillan and Simon and Schuster.

James Bradley

Victory Arch. Monument erected in 1919 at the urging of Mayor John F. Hylan to honor the city's war dead. Originally intended as a patriotic gesture in support of U.S. involvement in World War I, it remained unfinished at the time of the November 1918 armistice and was reenvisioned as a victory monument. It stood on a site straddling Fifth Avenue at 24th Street formerly occupied by the Dewey Arch, by which it was partly inspired. The 100-foot-tall (30-meter-tall) memorial was modeled after the tripartite Arch of Constantine in Rome and included an honor court with allegorical figures of Peace, Justice, Power, and Wisdom. Relief panels commemorated American military, industrial, service, and patriotic contributions to the war. Architect Thomas Hastings used wood and plaster for the memorial, assuming that the arch would subsequently be rebuilt in a more permanent form. Arguments over who was to receive the commission and who was to pay for it doomed completion of the project, and the arch was eventually razed.

Kenneth T. Jackson

Viele, Egbert Ludoricus (*b* Waterford, N.Y., 17 June 1825; *d* New York City, 22 April 1902). Cartographer and civil engineer. After graduating from the U.S. Military Academy and serving in the Mexican War, he drafted plans for Central Park. The Greensward plan of Frederick Law Olmsted and Calvert Vaux was chosen through a competition, but Viele contended that the others had copied his own plans for the park. He also filed suit for compensation for the plans he was hired to create before the competition was announced. He was awarded $8000. Despite this rocky start, Viele was appointed the chief engineer for the park's construction in 1856. He also engineered Prospect Park in Brooklyn, another project of Olmsted and Vaux. He joined New York's Seventh Regiment and served as the captain of the Engineer Corps during the Civil War. During the war he authored *Handbook for Active Service,* a volume that was popular with both Confederate and Union soldiers. After resigning from military service in 1863, he moved back to New York City. He was appointed president of the city's parks department in 1884, and also served in the U.S. Congress. He mapped the city's natural waterways and soil deposits in great detail. The Viele Map, published in 1874, is still referenced by engineers and architects today.

Penelope Gelwicks

Egbert L. Viele

Viking Press. Firm of book publishers formed in 1925 by Harold K. Guinzburg and George S. Oppenheim at 30 Irving Place. It developed a reputation for both literary excellence and distinction in design, benefiting especially from the expertise and distinguished list that it acquired by taking over B. W. Huebsch's imprint during its first year. Among the writers whom it published were D. H. Lawrence, John Steinbeck (*The Grapes of Wrath,* 1939), James Joyce (first American edition of *Finnegans Wake,* 1939), Lillian Hellman, Arthur Miller (*Death of a Salesman,* 1949), Rebecca West, Malcolm Cowley, and Saul Bellow. In 1975 the firm was acquired by Penguin Books, which retained Viking as a hardcover imprint. Viking Penguin is at 375 Hudson Street in Manhattan.

See also Book publishing.

Eileen K. Cheng

Village Gate. Nightclub. For 36 years it operated as a two-level nightclub at the corner of Bleecker and Thompson streets in Greenwich Village. Art D'Lugoff opened the club in 1958 in the basement of 160 Bleecker Street. Patrons entered the original basement club through a large metal gate on Thompson Street, which gave the venue its name. D'Lugoff later purchased the street and upper levels of the building, which became known as the Terrace Café and the Top of the Gate, respectively. Countless jazz, folk, rock and roll, poetry, and comedy greats gave debuts and seminal performances on all levels of the venue, including Nina Simone, Thelonious Monk, Miles Davis, Stan Getz, Art Blakey, Aretha Franklin, The Byrds, Allen Ginsberg, Woody Allen, Bill Cosby, and "National Lampoon's Lemmings," a comedic musical revue that featured John Belushi, Chevy Chase, and Christopher Guest. Because of rising costs, the loss of a preferential rent rate, and the unwillingness of big stars to play small venues, the Village Gate shut down in 1994. A CVS Pharmacy opened in the lower level that same year, and in 2008 a new music venue called Le Poisson Rouge opened in the upper level. The old Village Gate sign remains.

Breanne Scanlon

Village Vanguard. Jazz club. Located at 178 Seventh Avenue South between West 11th Street and Waverly Place in Greenwich Village, it was originally opened on Charles Street by Max Gordon (1903–89), a Lithuanian immigrant, as a night club. In 1957 the Vanguard adopted an all-jazz policy. The club has pristine acoustics because of its unusual triangular shape. Its unpretentious atmosphere in a small basement room creates an intimate ambience conducive to improvisation. The club attracted the best jazz artists of the time, including Miles Davis and Charles Mingus.

It has also been the recording site for more than 100 jazz titles, including classic albums by Sonny Rollins, Bill Evans, and John Coltrane. While many jazz clubs closed as jazz began to wane in popularity during the 1960s, the Vanguard continued to thrive, becoming a venue for the avant-garde. The Vanguard Jazz Orchestra, led for 25 years by Thad Jones and Mel Lewis, performed at the Vanguard every Monday night from 1966 to 2008. Gordon remained the owner of the club until his death, when his wife, Lorraine Gordon, took over the club's management.

Kathy J. Ogren, Nicholas Kelly

Village Voice. Weekly newspaper launched on 26 October 1955 by the publisher Ed Francher along with his editor Dan Wolf, the columnist Norman Mailer, and the writer John Wilcox; it occupied offices on University Place in Greenwich Village. Intended as a countercultural response to the "vulgarities of McCarthyism," it covered life in Greenwich Village, reformist politics in New York City, the civil rights and peace movements, and culture, especially Off-Broadway theater and the avant-garde. Jules Feiffer joined the staff in 1956 as its first editorial cartoonist. The *Voice* attracted a national readership as an exponent of "new journalism," which eschewed any pretense of journalistic objectivity and emphasized advocacy reporting. In the late 1960s it became an innovative leader in investigative journalism, particularly through the work of Jack Newfield, who revealed corruption among officials in city government and executives; this coverage made the *Voice* an important force in electoral and reform politics. It also covered the arts, including film reviews by Andrew Sarris and opinion pieces by such writers as Nat Hentoff. The newspaper was acquired successively by Carter Burden (1970), Clay Felker, publisher of *New York* (1974), Rupert Murdoch (1977), and Leonard Stern (1985, for more than $55 million). In the 1980s it moved its offices to Broadway near Union Square. The *Voice Literary Supplement,* an insert launched in 1981 and published 10 times a year, was made available by subscription in 1989. Among those who have contributed to the *Voice* are the writers Alexander Cockburn, Richard Goldstein, Eliot Fremont-Smith, Erika Munk, Ellen Willis, Joe Conason, and James Ridgeway and the cartoonists Mark Alan Stamaty and Stan Mack. In 1991 the newspaper moved its offices to 33 Cooper Square. In the early twenty-first century its circulation was about 250,000.

Marjorie Harrison

Villard, Oswald Garrison (*b* Wiesbaden, Germany, 13 March 1872; *d* New York City, 1 Oct 1949). Newspaper publisher and civil rights advocate. Grandson of abolitionist William Lloyd Garrison, founder of the *Liberator,* and son of Henry Villard, a newspaperman turned railroad owner. In 1881 he bought the *New York Evening Post* and the *Nation.* When his son joined the *Post* in 1897, he resolved to make both newspapers worthy followers of the *Liberator,* and under his leadership in the early twentieth century they became staunch advocates of civil rights. In 1909 he played an important role in forming the National Association for the Advancement of Colored People: he wrote the call for the National Negro Conference held in New York City on 31 May and 1 June, where the plans for a permanent organization were formulated. With Rollo Ogden, editorial page editor of the *Post,* he made the newspaper progressive and anti-imperialist. During World War I he was attacked for being insufficiently anti-German. When the war ended, he sold the *Post,* which was in debt, and turned his attention to the *Nation,* which he continued to edit until his retirement in 1933. Villard was a member of the Cosmopolitan Club in New York City, an interracial group. A consistent pacifist, in later years he opposed World War II. Villard's published writings include *Some Newspapers and Newspaper-Men* (1923), *Prophets True and False* (1928), *Our Military Chaos* (1939), and a biography of John Brown (1943).

Michael Green

Villard houses. Six brownstone houses built in 1882–83 on property that was purchased by the railroad magnate Henry Villard on Madison Avenue between 50th and 51st streets. The architect Joseph M. Wells of McKim, Mead and White skillfully organized the houses around a central courtyard to create the appearance of an Italian palazzo. Villard reserved the largest house for himself, but his residency was cut short when he declared bankruptcy in 1883 and the house was purchased by Whitelaw Reid. In 1980 the property was sold to Harry B. Helmsley, who preserved some of the interiors as part of the Helmsley Palace Hotel. The northern wing of the courtyard, not part of the hotel, is the home of the Municipal Art Society, the Architectural League, and an urban bookstore.

William C. Shopsin, *The Villard Houses* (New York: Viking, 1980)

Elliott B. Nixon

Vincent Astor Foundation. Charitable organization formed in 1948 by Vincent Astor (1891–1959). During his lifetime the foundation annually contributed about $175,000 to such organizations as the Astor Home for Children in Rhinebeck, New York; the New York Public Library; and New York Hospital. His widow, Brooke Astor, became the head of the foundation in 1960. Under her leadership the foundation focused exclusively on making donations in New York City in such diverse fields as animal care, botanical gardens, community economic development, health care, homelessness, housing development, historic preservation and church renovation, vocational education, and zoos. Between 1969 and 1985 the foundation's annual giving averaged $7 million and included grants from its principal, which surpassed $100 million in 1972 but was reduced to $20 million by 1985, when the trustees agreed to make grants only from the foundation's income and to focus on projects in literacy and housing. The foundation had authorized grants totaling approximately $200 million when it closed in 1997.

Kenneth W. Rose

Vinegar Hill (i). Name formerly applied to New Brighton.

Vinegar Hill (ii). Neighborhood in northwestern Brooklyn (2009 pop. *ca* 5000), bounded to the north by the East River, to the east by the Brooklyn Navy Yard, to the south by Sands Street, and to the west by Bridge Street; it was once called Irishtown. A large tract of land was bought from the Sands brothers in 1800 by John Jackson, who named part of it Vinegar Hill after the battle waged in 1798 during the Irish Revolution. The neighborhood was only eight square blocks. Sands Street, the main artery, was adjacent to the navy yard and in its heyday was lined with bars, gambling dens, and brothels. During World War II industries in the neighborhood prospered. The population was working class and lived in nineteenth-century row houses. After the war major industrial firms in the area included Brillo (makers of steel wool) and Boorum and Pease. The Commandant's House, a city, state, and National Historic Landmark and once home to Commander Matthew C. Perry, was built in 1805. It housed the commandant of the Brooklyn Navy Yard from 1806 until its conversion to a private residence in 1966, when the navy yard was decommissioned. In the twenty-first century Vinegar Hill remains a quaint neighborhood with few stores or restaurants.

Stephen Weinstein

Viñoly, Rafael (*b* Montevideo, Uruguay, 1944). Architect. By age 20 he was a founding partner of Estudio de Arquitectura, one of the largest design studios in Latin America.

In 1978 he moved to the United States and briefly guest-lectured at Harvard University Graduate School of Design. A year later he moved to New York City where in 1983 he founded Rafael Viñoly Architects PC, with offices also in London and Los Angeles. His first big project in the city was the John Jay College of Criminal Justice (1988), and he later worked on projects like Jazz at Lincoln Center (2004) and the Brooklyn Children's Museum (2008). A recipient of several prestigious awards for his international projects, Viñoly was chosen in 2008 to design the New York University campus in Abu Dhabi to be opened in 2012.

Cecilia Magnusson

Visiting Nurse Service of New York [VNSNY]. Voluntary home care agency. The largest not-for-profit home care agency in the United States, it was formed in 1944 when the nursing services of the Henry Street Settlement acquired independent status and moved to 107 East 70th Street. Since that time, VNSNY has provided a variety of services for the acute and chronically ill, mothers and newborns, children and adolescents, mentally ill, hospice patients, and the elderly in their homes. Continuing in its founder Lillian Wald's tradition of social reform and political activism, the VNSNY's Center for Home Care Policy and Research was created in 1993. In 2005, with a budget of more than $900 million, the staff of 2450 nurses made more than two million home visits to more than 115,000 people.

Karen Buhler-Wilkerson

Vitagraph Company. Open-air, rooftop motion picture studio opened in 1898 by American Vitagraph in the Morse Building at 140 Nassau Street. The film *Burglar on the Roof* was produced at the studio during its first year. In 1900 the company moved its offices to 110–16 Nassau Street and then opened a glass-enclosed studio in 1906 at 15th Street and Locust Avenue in Flatbush. Under the ownership of J. Stuart Blackton, Albert E. Smith, and William Rock, the facilities expanded rapidly between 1906 and 1915. Warner Brothers purchased American Vitagraph in 1925 and used the studio for many of its Vitaphone short subjects before closing it in 1939; it continued to process film there even after the National Broadcasting Company (NBC) bought the studio in 1952 and began using it for color television broadcasts. Interiors of Elia Kazan's *On the Waterfront* (1954) were shot in the studio. Part of the facility was bought by Yeshiva University in 1962, although NBC continued to use sections of it into the 1990s.

Charles Musser

Vladeck, Baruch Charney [Charney, Baruch] (*b* Dukora, Belarus, 1886; *d* New York City, 1938). Journalist and public official. Well known as a revolutionary orator in Russia, he arrived in the United States in 1908 and settled permanently in New York City in 1916. He worked first as the city editor and from 1918 as the general manager of the *Jewish Daily Forward*. From 1917 to 1921 he served on the Board of Aldermen, representing Williamsburg as a socialist. He was the host of a weekly radio program that the *Forward* had on WEVD and led the Jewish Labor Committee from its founding in 1934; in the same year he was appointed to the New York City Housing Authority. In 1937 he was elected as a candidate of the American Labor Party to the City Council, where he led the coalition supporting Mayor Fiorello H. La Guardia. In recognition of his interest in public housing, a housing project on the Lower East Side bears his name.

Daniel Soyer

Vogue. Weekly magazine launched in 1892 by Arthur Turnure and Harry McVickar. Intended for the elite of New York City, it was first edited by Josephine Redding; McVickar left shortly after 1900. The magazine increasingly emphasized fashion, and circulation rose steadily, reaching 25,000 by 1907. During the same year Turnure died and Marie Harrison, his sister-in-law, became the editor. In 1909 the magazine was bought by Condé Nast. Under Edna Woolman Chase from 1914 it became the leading publication in fashion, known for its sleek look. In addition to news about fashion it published innovative art and photography and experimented with new color techniques, types of paper, and methods of reproduction. In 1936 it absorbed Nast's unprofitable magazine *Vanity Fair,* and Frank Crowninshield, a former editor of *Vanity Fair,* joined its staff. Jessica Daves succeeded Chase in 1948, and after Nast's company became part of Advance Publications (led by S. I. Newhouse) Diana Vreeland left *Harper's Bazaar* to take over as the editor in 1962. She herself was succeeded in 1971 by Grace Mirabella, who added features about fashion for working women and saw circulation rise to more than 1.2 million, which is still the level in the early twenty-first century. In 1988 S. I. Newhouse, Jr., appointed Anna Wintour as the editor of the magazine; she set out to reach a younger audience. In 2009 the documentary film *The September Issue* presented an insider's view of Wintour and others working on the September 2007 issue of the U.S. edition of *Vogue* (at the time, the largest issue ever published, with more than 800 pages). In the twenty-first century the magazine was published in 19 countries, with circulation of about 1.3 million.

Mary Ellen Zuckerman

Voorhees Technical Institute. Private postsecondary school formed in 1881 as the New York Trade School by the architect Richard T. Auchmuty (1831–93). Specializing at first in the building and mechanical trades, it benefited from the financial support of Auchmuty and J. P. Morgan and from a charter granted by the state legislature in 1892; by 1900 it was able to expand its offerings to include blacksmithing, tailoring, tinsmithing, gas fitting, printing, and electrical engineering. After World War I the most popular courses were in automobile mechanics, plumbing and heating, electrical engineering, and sheet metal work. The school moved to Second Avenue between 66th and 67th streets in 1930 and added new programs in air conditioning and lithography. Veterans of World War II brought enrollment to a peak of 4106 in 1949. In 1961 the school began offering associate degrees and changed its name in honor of the industrialist and trustee Enders M. Voorhees. It moved to 450 West 41st Street in 1963. After discontinuing its apprenticeship program in the following year, it was absorbed in 1971 by the New York City Community College of Applied Arts and Sciences, which maintained the campus until 1987 and in the same year gave the name Voorhees Hall to its own engineering technology building at 186 Jay Street in Brooklyn.

Marc Ferris

Vorse (O'Brien), Mary Heaton (*b* New York City, 11 Oct 1874: *d* Provincetown, Mass., 14 June 1966). Journalist and feminist. One of a number of radical authors attracted to the Greenwich Village of the early 1900s, Vorse published her first novel, *The Breaking-In of a Yachtsman's Wife,* in 1908. A member of the Liberal Club and Heterodoxy Club, an early feminist organization, Vorse became known as one of the best labor journalists of her time, writing on child and general labor issues and infant mortality. In New York City, she wrote for *The Masses,* where she served as an editor until its closing in 1918; she also wrote for the *New Masses,* the *New Republic, Harper's,* and other publications. Vorse wrote 18 works of fiction, which were widely read at the time. An active member of the woman suffrage movement, Vorse was influential in the founding of the Woman's Peace Party in 1915. In the same year she was one of the founding members of the Provincetown Players, a group of radical

poets and playwrights whose work centered around Greenwich Village.

Nathan Morgante

Vreeland [née Dalziel]**, Diana** (*b* Paris, *ca* 1905; *d* New York City, 22 Aug 1989). Fashion editor and socialite. She moved to New York City with her family at the beginning of World War I and married Reed Vreeland at St. Thomas Church on 1 March 1924. From 1936 she wrote a fashion column called "Why Don't You?" for *Harper's Bazaar,* and she was the fashion editor of the magazine from 1937 to 1962. She and her husband mixed in the highest social circles, and she was well known for hosting parties in her red-themed apartment at 550 Park Avenue, where she entertained friends that included Cole Porter, Andy Warhol, Oscar de la Renta, and Jacqueline Onassis. She exerted a profound influence on American fashion as the editor of *Vogue* from 1962 to 1971 and as a consultant to the Costume Institute of the Metropolitan Museum of Art from 1971 to 1989. She wrote her autobiography, *D.V.,* in 1984. She is considered as one of the inspirations for Lauren Weisberger's best-selling 2003 novel *The Devil Wears Prada* and Meryl Streep's character in the 2006 film.

Caroline Rennolds Milbank

W

WABC. Radio station. It began broadcasting as WJZ in October 1921 from Newark, New Jersey, under the auspices of Westinghouse; within a few months it opened a studio at the Waldorf–Astoria in Manhattan. In 1924 the station was purchased by the Radio Corporation of America and moved to Aeolian Hall on 42nd Street, from where it broadcast news, entertainment, sports, and coverage of political events, including the Democratic National Convention of 1924. When the National Broadcasting Company was formed in 1926, WJZ became the flagship station for its Blue Network. It was acquired in 1943 by Edward J. Noble and renamed WABC. When rock and roll became popular in the 1960s, WABC was known as an innovator, in its brand of programming known as "top 40," characterized by a limited playlist (consisting only of the 40 best-selling records); and in its staff of disc jockeys whom the station heavily advertised as "personalities," its frequent contests and promotions, and its policy of broadcasting selections requested by listeners (mostly teenagers). By 1968 the station had captured 25 percent of the radio audience in the metropolitan area, a huge share in a highly competitive market. Its best-known disc jockey was perhaps Bruce Morrow, known as Cousin Brucie. Competition from stations on the FM band prompted a change to an all-talk format in February 1982. Since then, WABC has often been accused of a conservative bias in its commentators, though the station maintains that its shows are driven by ratings, not a political agenda. WABC broadcasts at a frequency of 770 kHz.

Erik Barnouw, *The Tower of Babel: A History of Broadcasting in the United States* (New York: Oxford University Press, 1966); Bruce Morrow and Laura Baudo, *Cousin Brucie: My Life in Rock 'n Roll Radio* (New York: William Morrow, 1987)

JillEllyn Riley, Rachel Sawyer

Wadleigh High School. Secondary school opened in 1897 as Girls' High School on East 12th Street; the first public high school for girls in Manhattan. It took its current name in 1900 to honor Lydia F. Wadleigh (?1818–88), the superintendent of Normal College (later Hunter College) and an advocate of public schools for girls. In 1902 Wadleigh High School moved to 114th Street west of Seventh Avenue, where it remained until it closed in 1954. In the early twenty-first century the building was occupied by Wadleigh Secondary School for Performing and Visual Arts.

Erica Judge

Wagner, Robert F(erdinand) (Bobby) (*b* New York City, 6 Jan 1944; *d* San Antonio, Tex., 15 Nov 1993). Public official. Son of Mayor Robert F. Wagner (II) and grandson of Senator Robert F. Wagner (I), he was educated at Harvard College (BA 1965) and Princeton University (MPA 1969). He was a member of the City Council (1973–77), and from 1977 to 1984, via appointments by Mayor Edward Koch, he served as chairman of the City Planning Commission and then as deputy mayor for policy (and chairman, Health and Hospitals Corporation). From 1986 to 1989 he was president of the New York City Board of Education. After leaving government service in 1989, he was vice chairman of Louis Harris Research, chairman of the Citizens Union, and an adjunct professor at Columbia University.

Jameson W. Doig

Wagner, Robert F(erdinand) (i) (*b* Nastätten, Germany, 8 June 1877; *d* New York City, 5 May 1953). Senator, father of Robert F. Wagner (II). He immigrated to the United States and settled in New York City in 1886. His political career began in Yorkville, where he joined the Tammany Society. He won election to the state assembly in 1904 and the state senate in 1908 and was a justice of the New York State Supreme Court from 1918 to 1926. After gaining the support of Tammany Hall, he was elected to the U.S. Senate in 1926. In office he became known as a leading spokesman for urban liberalism and the New Deal: he sponsored the National Labor Relations Act of 1935, the Social Security Act of 1935, and the Public Housing Act of 1937.

Chris McNickle

Wagner, Robert F(erdinand) (ii) (*b* New York City, 20 April 1910; *d* New York City, 12 Feb 1991). Mayor, son of Robert F. Wagner (I) and father of Robert F. "Bobby" Wagner. He graduated from Yale College, Yale Law School, and Harvard Business School and was elected to the state assembly (1938–41), resigning to join the Army Air Corps and serve in North Africa during World War II. Under Mayor William O'Dwyer he served as tax commissioner (1945–47) and commissioner of housing and buildings (1947–49). He was elected borough president of Manhattan (1950–53) on the Democratic and Liberal lines, and in 1953 he was elected mayor of New York City as a Democrat, winning reelection in 1957 by a landslide after an unsuccessful campaign for the U.S. Senate in 1956 against Jacob K. Javits. In 1961 Democratic officials opposed his reelection after he split with Carmine DeSapio, leader of Tammany Hall; but with support from Herbert H. Lehman, Eleanor Roosevelt, and other reformers, he won a decisive victory in the Democratic primary against Arthur Levitt and then won the general election against his Republican opponent, Louis Lefkowitz. His wife, Susan Edwards Wagner, died during his third term, and citing the claims on him of his sons he declined to seek a fourth term. In 1969 he ran for mayor again, narrowly losing the Democratic nomination to Mario Procaccino in a four-way primary.

As mayor Wagner launched the largest municipal public housing program in the nation and authorized city workers to establish unions with formal powers. He prided himself on his commitment to everyday people, appointed blacks and Puerto Ricans to senior municipal positions, approved local legislation forbidding racial discrimination in housing (1957), and installed the first black Democratic Party leader in New York City (J. Raymond Jones, 1964). Critics accused him of indecisiveness; supporters applauded his subtle effectiveness and his unusual ability to forge consensus on controversial issues.

Robert F. Wagner (ii), 1954

Wagner College. Private four-year liberal arts college in Staten Island, on a wooded campus of 86 acres (35 hectares) atop Grymes Hill and overlooking New York Harbor. It was founded in Rochester, New York, in 1883 as the Rochester Lutheran Proseminary and was associated with the Evangelical Lutheran Church in America. In 1884 the college was refounded as Wagner Memorial Lutheran College. Owing in part to the influence of Frederic Sutter, a prominent German Lutheran pastor in Staten Island from 1907 to 1971, it moved in 1918 to the Cunard estate in Staten Island and was rededicated in honor of George Wagner, whose father helped to finance the first campus. In its early years at the new location the college was a six-year German gymnasium with 16 students and one professor, which prepared young men for a bilingual German-English ministry. Women

were first admitted in 1933. The school was renamed Wagner Lutheran College in 1952 and retained its Lutheran affiliation into the twenty-first century. In 1959 it took its current name as an indication of its desire to be a liberal arts college open to the general public. Wagner began recruiting more aggressively in the 1980s and undertook improvements in its computer and athletic facilities. In the early twenty-first century Wagner enrolled about 2000 undergraduate students and offered programs in the arts, business, literature, law, finance, and the health professions; about 300 students were enrolled in graduate programs in business, nursing, education, and bacteriology. The campus architecture is an eclectic blend of neo-Gothic halls, mansions, cottages, and modern buildings.

Howard R. Weiner

waiters. Until the early nineteenth century waiters in New York Cit usually worked as specialized servants in rich households or in inns and taverns that also ran on a household scale. But before even the Civil War, Delmonico's, Astor House, Howard House, and the St. Nicholas, Metropolitan, and Fifth Avenue Hotels had scores, even hundreds, of employees on staff. At the ends of their shifts, many of these waiters went across town to working-class saloons and neighborhoods.

Unlike other members of the working class, waiters retained personal connections to customers, acting stately, buffoonish, casually rude, sexual, or invisible according to customers' tastes. These tastes shifted over time; for example, minstrel-like black waiters slowly fell out of favor over the course of the twentieth century, and sexy white female waiters gained popularity. Rituals of service such as uncovering dishes, uncorking bottles, and receiving tips gave form to these relations, as did offers of preferred tables, friendlier smiles and conversation, better cuts of meat, and other extra services. Customers returned tips, business advice, and a level of respect often lacking in other service jobs. In the 1930s diners also began to lend their support to waiters' labor unions.

During the nineteenth century the Hotel and Restaurant Employees Union (HRE, then Hotel Employees and Restaurant Employers Union [HERE], and recently joined with the Union of Needletrades, Industrial, and Textile Employees Union [UNITE HERE]) was dominated by bartenders. Despite multicity strikes in 1853 and 1893, the majority of waiters in New York City and elsewhere remained unorganized, whether they worked for big companies or family restaurants. Through the early twentieth century unions affiliated with the Industrial Workers of the World organized competing unions with little lasting success; their combative approach made it difficult to cultivate support among customers. Victory came to New York City's waiters' unions in the 1930s after a spell of domination by the Dutch Schultz mob was broken by District Attorney Thomas E. Dewey. Communist organizers Jay Rubin and Michael Obermeier took control of several New York locals of hospitality workers, including Local 1, a sometimes corrupt union of waiters. In a series of strikes and negotiations that lasted into the 1940s, they forced most large, established employers of waiters to recognize their unions. HERE and its New York locals lost their communist affiliations soon afterward but remained a force in the labor movement. Through much of the twentieth century female waiters built particularly strong locals and used them as incubators of female leadership. At the same time, the huge number of restaurants in New York City, the traditional transience of waiters trying to break into other careers, and the questionable immigration status of many waiters made it difficult to maintain union dominance or protect the rights of workers. The struggle between union waiters and antiunion employers in the city continues.

Wakefield. Neighborhood in north central Bronx, bounded by Westchester County, East 233rd Street, and the Bronx River. Initially part of Eastchester, the land was surveyed in 1855 and named for the estate where George Washington was born. Shortly after its incorporation as a village it was annexed to New York City in 1895. Growth hastened during the 1920s after the Interborough Rapid Transit extended its subway to White Plains Road, where a local shopping district soon took shape. Wakefield was one of the first areas of the Bronx to attract large numbers of immigrants after immigration was liberalized in 1965. Almost all the immigrants who settled there in the 1980s were blacks from the Caribbean, and of these nearly two-thirds were from Jamaica; many of the rest were from Guyana, the United Kingdom, and Antigua–Barbuda. The neighborhood is an ethnically diverse area of one- and two-family houses with some apartment buildings, as well as industrial facilities near the Bronx River.

Lloyd Ultan

Wald, Lillian (D.) (*b* Cincinnati, 10 March 1867; *d* Westport, Conn., 1 Sept 1940). Public health nurse, reformer, and settlement worker. Wald grew up in Rochester, New York, and moved in 1889 to New York City to attend the New York Hospital School of Nursing. In 1893 she and Mary Brewster, her comrade from nursing school, devised a plan to live in the Lower East Side and care for sick neighbors in their homes. Their expanding activities in the neighborhood led to the formation in 1895 of the Henry Street Settlement. As the first modern public health nurse, Wald was instrumental in securing reforms in health care, education, recreation, industry, and housing. She worked with the Metropolitan Life Insurance Company to establish a nationwide insurance payment scheme for home nursing care that provided more than one billion home visits between 1909 and 1952. In 1912 she was responsible for the creation of the first national nursing service in the United States, the American Red Cross Public Health Nursing Service. With Robert Hunter and J. G. Phelps Stokes she helped to form a state Child Labor Committee in 1902; she also helped found the New York Women's Trade Union League in 1903 and the Children's Bureau in the U.S. Department of Labor in 1912. Wald persuaded Columbia University in 1910 to establish the first university department of nursing. In 1933 she retired from the Henry Street Settlement and moved to her country home in Westport, Connecticut, where she died in 1940. In 1971 a bronze bust of Wald was placed in the Hall of Fame for Great Americans at New York University.

Karen Buhler-Wilkerson

Walden School. Private elementary and secondary school opened in 1914 on East 60th Street as the Children's School by the progressive educator Margaret Naumburg. It changed its name in 1917 and moved to 88th Street and Central Park West in 1933. A student of Freudian psychology, Naumburg rejected formalist education and stressed the emotional side of learning and the need to unleash children's innate curiosity. Students at the school were encouraged to express themselves through the arts and to call teachers by their first names (a practice extended even to the prominent educators Lewis Mumford and Ernst Bloch). The school merged with the New Lincoln School in 1988 to form the New Walden–Lincoln School, which closed in 1991.

Alfonso J. Orsini

Waldensians. Adherents of a sect formed in the late twelfth century by dissident Catholics dedicated to apostolic poverty. New York City became the site in the 1890s of one of the few congregations formed by them in the United

States. Many of the Waldensian immigrants were of Italian origin. The congregation was formerly at 2 East 82nd Street in Manhattan, with denominational offices at the Interchurch Center. The Waldensians no longer have a space in the city.

Giorgio Tourn et al., *You Are My Witnesses: The Waldensians across Eight Hundred Years* (Turin: Claudiana, 1989)

Mary Elizabeth Brown

Waldheim. Name formerly applied to a development in downtown Flushing, bounded to the north by Sanford Avenue, to the east by Murray Street and 156th Street, to the south by Rose Street, and to the west by Kissena Boulevard. The area was once the site of Allan MacDonald's estate of 10 acres (4 hectares), which was bought in June 1903 by the Wallace–Appleton Company. The thick woods in the area inspired the name of the development, where the wealthy built large houses on lots of 40 by 100 feet (12 by 30 meters). In 1916 the developers declared bankruptcy, and the name ceased to be used because of anti-German sentiment.

Vincent Seyfried

Waldo, Samuel Lovett (*b* Windham, Conn., 6 April 1783; *d* New York City, 16 Feb 1861). Collaborator with William Jewett in the most successful portraiture partnership of the era. He trained at the Royal Academy and in 1809 settled in New York City. With Jewett, who became his apprentice in 1814 and his partner in 1817, he painted many portraits and attracted the support of wealthy patrons in New York City. The prolific association lasted until 1854, when Jewett retired to Bergen Hill, New Jersey.

Carrie Rebora Barratt

Waldorf=Astoria. Hotel that first opened on Fifth Avenue between 33rd and 34th streets and then later on Park Avenue. It originally consisted of two separate hotels designed by Henry J. Hardenbergh and erected by feuding cousins: the Waldorf (1893, 11 stories), built by William Waldorf Astor on the site of his father's mansion, and the Astoria (1897, 16 stories), built by John Jacob Astor IV on the site of his mother's mansion to the north. German Renaissance details unified the facades of the two buildings, and they functioned as a unit and were connected by a corridor, hence the original hyphen in the name Waldorf–Astoria, which later became the double hyphen. The opulently furnished hotel had about 1300 rooms and was the largest and grandest hotel in the city during the 1890s. Its 40 public rooms provided members of elite society with an alternative to holding social events in their own homes, and tourists and local residents often watched fashionable ladies pass through Peacock Alley, the corridor to the main entrance on 34th Street.

In 1929 the first Waldorf–Astoria was demolished to allow for construction of the Empire State Building, and the present 47-story building was built on the block between Park and Lexington avenues and between 49th and 50th streets. Designed by the firm of Schultze and Weaver in a restrained art deco style, it opened in 1931 and was the world's largest and tallest hotel at the time. In 1949 the Hilton Hotels Corporation assumed management of the hotel. Famous residents of the Waldorf=Astoria have included Herbert Hoover (after his presidency), Cole Porter, and Prince Rainier and Princess Grace of Monaco. It is the only hotel to have been the residence of three five-star generals: Dwight Eisenhower, Douglas MacArthur, and Omar Bradley. In 1982–88 the Waldorf=Astoria underwent extensive interior restoration; it was recognized as a New York City landmark in 1993. In the twenty-first century it contains three restaurants, five lounges, a fitness center and spa, 40 function rooms, and 1416 guest rooms, including 181 rooms in its upper section, a "boutique hotel" known as the Waldorf Towers. It remains one of the world's largest art deco buildings.

An enduring legacy of the original Waldorf Hotel is the Waldorf salad, a mixture of apples, grapes, celery, and mayonnaise (walnuts were added later) created between 1893 and 1896 by the hotel's maître d'hôtel, Oscar Tschirky.

May N. Stone

Walker, James J(ohn) (*b* New York City, 19 June 1881; *d* New York City, 18 Nov 1946). Mayor. Born at 110 Leroy Street in Manhattan, Walker attended St. Joseph's Parochial School, St. Francis Xavier, and New York Law School. At the insistence of his father, a former district leader associated with Tammany Hall, he gave up a career as a songwriter to become a lawyer. He was elected to the state assembly (1909) and the state senate (1914). As the floor leader (1921–25) he oversaw the passage of Governor Alfred E. Smith's progressive legislation while personally promoting bills to legalize prizefighting and Sunday baseball. George W. Olvany, leader of Tammany Hall, and Edward J. Flynn, leader of the Bronx, chose Walker to oppose Mayor John F. Hylan in the election of 1925; meanwhile, the Democratic Party leaders of Brooklyn, Queens, and Staten Island remained loyal to Hylan. Walker won the ensuing primary with Smith's help and then swept the general election. Slim, elegant, and always ready with a wisecrack, "Jimmy" Walker became a symbol of the jazz age. During his first term he appointed an incorruptible police commissioner, unified the city hospitals, and argued successfully before the U.S. Supreme Court for the preservation of the nickel subway fare. While mayor he continued to live in his childhood home in Greenwich Village at 6 St. Luke's Place. In the mayoral election of 1929 he overwhelmingly defeated Fiorello H. La Guardia. He ultimately caused his own downfall by secretly accepting large sums of money from businessmen seeking municipal contracts and by conducting an affair with the actress Betty Compton, whom he later married. Investigations by Samuel Seabury (1930–32) resulted in formal charges against him and a hearing before Governor Franklin D. Roosevelt. On 1 September 1932 Walker resigned and left for Europe. He planned to seek vindication at the polls in November, but he lost the support of Tammany Hall after the Roman Catholic hierarchy intervened. He returned to New York City and lived at 132 East 72nd Street. In 1940 La Guardia appointed him an impartial arbitrator for the garment industry. About 1944 Walker moved to 120 East End Avenue, where he remained until the end of his life.

Frank Vos

Walker, Madame C. J. [Breedlove, Sarah] (*b* Delta, La., 23 Dec 1867; *d* Irvington, N.Y., 25 May 1919). African American businesswoman. From 1905 she sold a beauty cream and hair products marketed to African American women; her business savvy helped her

become one of the most prominent entrepreneurs at the time. She moved to New York City in 1914 and bought a Harlem townhouse at 108–10 West 136th Street, where she lived and operated a beauty salon. After her death the business was taken over by her daughter A'lelia Walker (1885–1931), who became one of the wealthiest women in Harlem and sponsored grand functions for musicians, actors, and writers on 136th Street, at 80 Edgecombe Avenue in Sugar Hill, and at her villa in suburban Westchester County; Langston Hughes wrote that A'lelia Walker's death, more than any other event, marked the end of the Harlem Renaissance.

Marc Ferris

Walker, Ralph Thomas (*b* Waterbury, Conn., 28 Nov 1889; *d* 17 Jan 1973). Architect. He served an apprenticeship, studied at the Massachusetts Institute of Technology, and worked in several places before moving in 1916 to New York City, where after World War I he joined the firm of McKenzie, Vorhees, and Gmelin (renamed Vorhees, Gmelin, and Walker in 1926). During the 1920s he designed monumental art deco skyscrapers in lower Manhattan for such clients as Western Union and the New York Telephone Company. Among his most important works were the Barclay-Vesey Building at 140 West Street (1926) and a tower for Irving Trust at 1 Wall Street with subtle faceting and a limestone exterior. A leading figure in architecture from the mid-1920s, he was a well-known writer on contemporary building, an editor of the architectural journal *Pencil Points,* and a president of the American Institute of Architects; the institute in 1957 named him Architect of the Century. After World War II he produced innovative designs for research centers and received large commissions from various institutions and corporations. Walker also developed a photographic process used in the motion-picture projection technique called Cinerama.

Carol Willis

walking tours. The earliest recorded walking tours in New York City occurred in the middle of the nineteenth century and amounted to little more than sensational excursions into the city's poorest quarters, particularly the Five Points. Well-known visitors often took such tours, including Charles Dickens during his visit to the city in 1842, an experience he described in his work *American Notes.* Abraham Lincoln, on his 1860 visit to speak at Cooper Union, also toured the Five Points, as did a group of senators in 1883 as part of an investigation into the status of American workers. In the early twentieth century the city's leading guide was Chuck Connors, a colorful character who led well-heeled customers, including Sir Thomas Lipton and members of the German royal family, on sensationalized "slumming" tours of Chinatown and the Lower East Side.

Walking tours of a more reputable sort, taking as their theme the architecture, history, and culture of New York City, became regular features in the mid-1950s. In 1955 the Municipal Art Society established the first series of walking tours, many of which were led by the architectural historian Henry Hope Reed. In 1975 architectural historian Gerard Wolfe published *New York: A Guide to the Metropolis; Walking Tours of Architecture and History,* a work which quickly became the leading guidebook for walking tours.

As interest in walking tours soared in the 1980s and 1990s—a growing number of institutions, including the Lower East Side Tenement Museum and the 92nd Street Young Men's Hebrew Association (YMHA), and private companies such as Big Onion Walking Tours and Joyce Gold Historical Tours, began offering an ever-widening range of tours. These included ethnic excursions on the Lower East Side, tours of pubs in Greenwich Village, nature walks in Central Park, and architectural studies of lobbies in midtown, as well as tours on themes such as ghosts, sex, food, crime, and politics. Steady increases in tourism and public interest in New York City history in the 1990s and 2000s led to continued growth of the industry. By 2009 more than 50 independent operators and companies and 20 institutions offered 100 public walking tours per week in warmer months, not to mention hundreds of excursions for private groups.

Seth Kamil and Eric Wakin, *The Big Onion Guide to New York City: Ten Historic Tours* (New York: New York University Press, 2002); Gerard R. Wolfe, *New York: Fifteen Walking Tours; An Architectural Guide to the Metropolis,* 3rd edn (New York: McGraw-Hill Professional, 2003)

Edward T. O'Donnell

Wallabout. An obsolete name for a neighborhood in northwestern Brooklyn, bounded to the north by the East River, to the east by Nostrand Avenue, to the south by Park Avenue, and to the west by Grand Avenue. Local Native Americans called the area Rennegackonck after a small creek that fed into the bay; it was later named Waal-bogt (meaning "bend in the inner harbor") by Dutch settlers. Walloons settled in 1637 on 335 acres (135 hectares) of land bought by Joris Jansen de Rapalje. During the American Revolution tens of thousands of Continental soldiers were imprisoned aboard the *Jersey* and dozens of other rotting British prison ships moored in Wallabout Bay; the conditions were horrible and thousands of soldiers died. In 1801 the federal government built the Brooklyn Navy Yard, of which a section at Flushing and Clinton avenues was sold to the City of Brooklyn in 1890 to form the Wallabout produce market; this remained in operation until the beginning of World War II. Most of the neighborhood is now occupied by the Brooklyn Navy Yard in the twenty-first century.

Edwin G. Burrows, *Forgotten Patriots: The Untold Story of American Prisoners during the Revolutionary War* (New York: Basic, 2008)

Stephen Weinstein

Wallace Foundation. Charitable organization with headquarters in New York City formed in 2003 when the DeWitt Wallace–Reader's Digest Fund and the Lila Wallace–Reader's Digest Fund were merged. It focuses on three areas: education, afterschool learning, and the arts. DeWitt and Lila Acheson Wallace, founders of the Readers Digest Association, established several family philanthropies in the 1950s that evolved into the current Wallace Foundation. In the early twenty-first century its offices were at 5 Penn Plaza.

Waller, Fats [Thomas Wright] (*b* New York City, 21 May 1904; *d* Kansas City, Mo., 15 Dec 1943). Pianist and composer. The son of an assistant pastor at the Abyssinian Baptist Church in Harlem, he began his career in 1918 by winning a talent contest at the Roosevelt Theatre. He performed at rent parties in the 1920s and commemorated their lively ambience in the song "The Joint Is Jumpin'" (1937); he was also a resident organist at the Lincoln Theatre and played in many nightclubs and at the Apollo Theater. He enjoyed considerable success on Broadway, notably with *Hot Chocolates* (1929). Waller recorded his own material and versions of other popular songs in a distinctive, humorous style. His best-known songs, many with lyrics by Andy Razaf, include "Ain't Misbehavin'" (1929), "Honeysuckle Rose" (1929), and "Jitterbug Waltz" (1942). From 1939 to the end of his life he lived at 147-15 Village Road in Jamaica, Queens. He died of pneumonia near Kansas City, Missouri, on a cross-country train trip.

Kathy J. Ogren

Wall Street. A small street in lower Manhattan that runs for less than a mile (1.6 kilometers) between Broadway and the East River along what was originally the northern edge of New Amsterdam. About 1653 a small wooden wall was built there as protection against possible attacks by the Indians, the New Englanders, or the British. The weak wall was never tested in battle before the British demolished it in 1699. The street itself later became famous when its junction with Broad Street became the site of the New York Stock Exchange. Wall Street eventually became synonymous with high finance, and the term came to refer not so much to the narrow street itself as to a type of business.

Wall Street, 2009

Wall Street has been the site of one major tragedy. On 16 September 1920, just as the bells of Trinity Church struck noon, a terrorist bomb exploded beside J. P. Morgan and Company at 23 Wall Street, killing 33 persons, mostly clerks and stenographers, and injuring more than 400. Those responsible were never identified, but scars from the explosion remain visible in the stonework of the Morgan Guaranty Trust Company. The attack on the World Trade Center of 11 September 2001 took place just a few blocks from the corner of Broadway and Wall Street. In the first decade of the twenty-first century, and especially after the global financial meltdown that began in 2008, Wall Street became even more famous around the world for its association with investment banking and sophisticated financial instruments that only experts could begin to understand. Much of the activity took place far from lower Manhattan, but the term "Wall Street" was continuously invoked as a synonym for high finance and excessive risk taking.

Kenneth T. Jackson

Wall Street Journal. Daily newspaper. Its forerunner was the *Customer's Afternoon Letter,* a bulletin about stock activity printed five days a week by Charles Henry Dow (1851–1902) and Edward Jones (1856–1920), who from 1882 operated a financial news service in a basement at 15 Wall Street. The current name dates to 1889. Initially the newspaper sold for 2 cents a copy, consisted of four pages, and published only railroad and crop conditions and Dow's index of leading stock prices. By the late 1890s the circulation reached 7000. In 1902 Dow sold the publication to C(larence) W(alker) Barron, who increased the length to 20 pages and added news correspondents in major cities. Circulation rose from 18,750 in 1920 to 52,000 in 1928 but fell to less than 30,000 during the Depression. Among the most influential writers was Bernard Kilgore (1908–67), a reporter who moved to New York City from San Francisco in 1932 and was known for describing complex economic issues in clear, simple terms (in several press conferences President Franklin D. Roosevelt referred reporters to his work). Under Kilgore's leadership in later years coverage was broadened, and in 1957 the *Journal* became the first national daily business newspaper with a circulation of more than half a million. Robert Feemster, who worked for the *Wall Street Journal* from 1933 to 1962, took a more aggressive approach to promotion. Strong leadership was provided by a number of managing editors, including William Henry Grimes and Warren Phillips, as well as Ed Coney, whose articles about corruption on Wall Street in the early 1960s were the first in the *Journal* to win a Pulitzer Prize; he also introduced the column "Heard on the Street," in which Daniel Dorfman investigated a speculative frenzy on Wall Street during the late 1960s. Under William F. Kirby, Fred Taylor, and Larry O'Donnell in the 1970s the newspaper placed its emphasis on the basics of business and economics. During Ronald Reagan's presidency the editors became the country's leading defenders of "supply-side" economics. In late 1982 a reporter, R. Foster Winans, leaked inside information from forthcoming columns to the stockbroker Peter Brant; Winans was sentenced to 18 months in prison but the *Journal* suffered no loss of credibility. By 1991 the *Wall Street Journal*'s circulation had grown to about two million. In addition to its main edition, it publishes the *Asian Wall Street Journal* (1976) and the *Wall Street Journal Europe* (1983). In 2007 News Corporation, headed by Rupert Murdoch, acquired the newspaper for $5 billion from the Bancroft family. The paper has undergone many changes, including the addition of photographs. In the twenty-first century worldwide circulation remained around two million and the *Journal* had about a million subscribers to its online newspaper.

Walter Friedman

Walsh, Mike [Michael] (*b* Cork, Ireland, 4 May 1810; *d* New York City, 17 March 1859). Political leader. As the head of the Spartan Association in the Bowery and the editor of a radical newspaper, the *Subterranean,* he became a critic of capitalism and a defender of workers. After years as an insurgent in the Democratic Party, he was elected to the state assembly in 1846, where he unsettled his colleagues with his reform proposals and flamboyance. Elected to the U.S. Congress in 1852, he joined with southerners seeking to foster an alliance between slaveholding planters and northern workers. This decision along with his abiding racism undermined his radical populism. After leaving office in 1855 Walsh drank heavily and drifted in and out of New York City on various business ventures.

Sean Wilentz

Wanamaker's. Firm of retailers. Originally based in Philadelphia, it expanded to New York City in 1896 when John Wanamaker (1838–1922) purchased the six-story "Iron Palace" on Broadway between Ninth and 10th streets from Hilton, Hughes and Company, along with the stocks, stables, and goodwill of the late A. T. Stewart. Reopened as Wanamaker's on 16 November 1896, it was soon one of the leading department stores in the city. On 24 September 1907 Wanamaker dedicated an adjacent 14-story emporium (1905), which had 32 acres (13 hectares) of retail space, an auditorium with 1300 seats, and a huge restaurant. The two buildings were linked by the three-tiered "Bridge of Progress." Wanamaker's was sold in 1955 and destroyed by fire, just before its scheduled demolition, on 14 July 1956.

David B. Sicilia

W. and J. Sloane. Firm of carpet and furniture retailers. It began in 1853 as a modest shop selling carpets and "floor cloth," opened at 245 Broadway by William Sloane (1810–79), a young Scottish weaver who had moved to New York City in 1834. After building the business himself he was joined for about a decade by his brother John Sloane. William Sloane bought a fine collection of Oriental rugs during the Centennial Exposition in Philadelphia in 1876, sold them to wealthy customers in New York City, and moved his shop farther up Broadway. He later contracted with a weaving firm in India and was the only dealer in Oriental rugs in the United States to have his own East Asian supplier. After his death his nephew, also named William Sloane, took over the business and made it the best-known and most exclusive rug store in the city. In 1891 an upholstery and decorating department was added. The store followed the carriage trade uptown and maintained several addresses on Fifth Avenue; later it opened branches throughout the country. In 1985 Sloane's began to suffer financially and in the following year it closed its store in Manhattan.

Leslie Gourse

Warburg, Felix M(oritz) (*b* Hamburg, Germany, 14 Jan 1871; *d* New York City, 20 Oct 1937). Philanthropist; brother of Paul M. Warburg. Born to a leading Jewish family of bankers, he moved to the United States in 1894. He became a partner of Kuhn, Loeb and Company in 1897 and remained with the firm to the end of his life. He is best known for his support of more than 50 philanthropic organizations, including the Educational Alliance, the Henry Street Settlement, the Juilliard School, the New York Association for the Blind, the Symphony Society, and Teachers College. In 1917 he was a founder of the Federation for the Support of Jewish Philanthropies; he was its first president and later its chairman. Warburg was also a prominent spokesman for American Jewry. His mansion at 1109 Fifth Avenue is now the site of the Jewish Museum.

Theresa Collins

Warburg, Paul M(oritz) (*b* Hamburg, 10 Aug 1868; *d* New York City, 24 Jan 1932). Banker, brother of philanthropist Felix M. Warburg. He was simultaneously a partner of the firm of M. M. Warburg in Hamburg and the firm of Kuhn, Loeb and Company in New York City. In 1907 he began publishing his views on monetary reform, and in 1911 he helped to draft the plan for a central bank sponsored by Senator Nelson W. Aldrich. He became the vice chairman of the original Federal Reserve Board in 1914 but resigned in 1918 after one term so that his German origin would not be an issue affecting his reappointment. In 1921 he formed the International Acceptance Bank (merged in 1928 with the Bank of Manhattan Company). During the spring of 1929 Warburg often warned of an impending worldwide economic disaster because of excessive credit in the United States.

Theresa Collins

Ward, John Quincy Adams (*b* Urbana, Ohio, 29 June 1830; *d* New York City, 1 May 1910). Sculptor. While most of his peers studied neoclassical sculpture in Europe, he moved to New York City in 1861 to perfect his technique and obtain commissions for public monuments in bronze. His *Indian Hunter,* considered an exemplar of realism and artistic excellence, was the first statue by an American to be installed in Central Park (completed 1866, unveiled 1867); its success led to many other commissions in the city and elsewhere. Before 1890 he enjoyed a virtual monopoly on public commissions in the city, where his works included the Seventh Regiment Memorial (1869), *Shakespeare* (1870), and *The Pilgrim* (1884) for Central Park; *George Washington* (1883, Wall and Nassau streets); *William Earl Dodge* (1885, Bryant Park); *Memorial to Alexander Lyman Holley* (1889, Washington Square Park); *Horace Greeley* (1890, City Hall Park); *Henry Ward Beecher* (1891, Columbus Park, Brooklyn); and *Integrity Protecting the Works of Man* (1903, with Paul Wayland Bartlett), the pediment of the New York Stock Exchange. His work helped to establish a professional standard in sculpting and encouraged commissions in unprecedented numbers. He lived for many years at 119 West 52nd Street.

Michele H. Bogart

Ward Hill. Neighborhood in northeastern Staten Island, lying on a hill overlooking New York Harbor and New Jersey. It is named for Caleb T. Ward, who bought the hill in 1826 and in 1844 built a brick and stucco mansion in the Greek Revival style with a two-story portico and Ionic columns. Located at 141 Nixon Avenue, it became known as the Caleb T. Ward House and was designated a landmark in 1978. Elegant houses surround the hill; the population includes many professionals. The area is mainly residential, with shops nearby in Tompkinsville and Stapleton. It is about a mile from the ferry terminal.

Marjorie Johnson

wards. Governor Thomas Dongan's charter of 1686 divided New York City into six wards: North, East, West, South, Dock, and Out. A seventh ward was added in 1731 and given the name Montgomerie, after Governor John Montgomerie. In 1791 the Common Council voted to replace the names of the wards with numbers.

For two centuries the ward was the smallest political unit of New York City. Each ward elected an alderman and an assistant alderman to the Common Council, and in the seventeenth and eighteenth centuries also such lesser officials as tax assessors, tax collectors, and constables. After 1800 the city experienced an explosive growth in population, and wards increasingly became centers of political power and sometimes corruption. New wards were added as the city expanded northward or as the population density of older wards required their subdivision: the

Growth of the Ward System, 1683–1895

(Wards from which parts were taken to form other wards are given in parentheses.)

1683 North, East, West, South, Dock, and Out wards
1731 Montgomerie Ward
1791 Wards assigned numbers to replace original names
1803 Eighth and ninth wards
1808 Tenth ward
1825 Eleventh and twelfth wards
1827 Thirteenth ward (tenth), fourteenth ward (sixth and eighth)
1832 Fifteenth ward (ninth)
1835 Sixteenth ward (twelfth)
1837 Seventeenth ward (eleventh)
1846 Eighteenth ward (sixteenth)
1850 Nineteenth ward (twelfth)
1851 Twentieth ward (sixteenth)
1853 Twenty-first ward (eighteenth), twenty-second ward (nineteenth)
1873 Twenty-third and twenty-fourth wards (annexed territory of lower Westchester)
1895 Territory annexed from Westchester County added to twenty-fourth ward

Compiled by Edward T. O'Donnell

city had 17 wards in 1845 and 22 by 1853. Tammany Hall emerged by 1850 as an organized political "machine," an important element of which was the ward boss, or ward heeler, often a saloonkeeper who functioned as the local provider of patronage, dispenser of cheer and charity, and vote gatherer. The ward boss gained more power as the city expanded its efforts in the areas of police and fire protection, sanitation, and street and sewer construction, creating patronage positions that the ward boss could trade for votes. Wards were more than political units: many were notable for their wealth or poverty, culture, crime, ethnic makeup, population density, or economic activity. In the nineteenth century 15 of the 22 wards in Manhattan occupied the area south of 14th Street, the center of the city's economic activity and its most densely populated area. When the ward system was at its height in 1855, the state census showed that whereas the proportion of foreign-born inhabitants in the city was 52 percent, the figures for individual wards ranged from 34 and 41 percent in the "American" wards (the ninth and the 15th) to 70 percent in those with large numbers of immigrants (the fourth and the "bloody ould" sixth). The fifth, sixth, and eighth wards were home to most of the city's free blacks.

By 1850 critics of municipal government focused on the ward system as the primary source of corruption and inefficiency. To begin with they noted the unequal representation on the Common Council brought about by great differences in the population of individual wards. Although wards were never uniform either in population or in area, the city's growth after 1800 had led to unprecedented disparities: wards uptown were larger in area than those downtown, and the most heavily populated ward in 1855, the 17th, had more than 15 times as many inhabitants as the least heavily populated, the second (at the heart of the business district downtown). Reformers also condemned ward politics. From their perspective ward politicians were too parochial, too committed to "bargain and sale" as the basic principle of conducting public business, and too concerned with their own neighborhoods rather than the city as a whole. Implicit in this attack was a desire on the part of the reformers to reduce the power of ethnic and working-class leaders of Tammany Hall.

In the end reformers failed in their broader goal of reducing the influence of Tammany Hall, but they did succeed in eroding and finally eliminating the ward system and the unequal representation that characterized it. New charters in 1853 and 1857 replaced the wards with districts, which were used to elect members of both the state legislature and the bicameral City Council but otherwise had a smaller administrative role than the wards did. Although politically vestigial after 1857, ward boundaries were maintained, largely for the purposes of administering public schools and conducting the state and federal censuses. In 1871 a new law organized the public school system under a single superintendent, a board of education, and 25 boards of ward trustees, who were laypeople appointed by the Board of Education. The addition to the city in 1874 of a part of Westchester County gave the city its last two wards. In 1896 a group of reformers led by Nicholas Murray Butler of Columbia University succeeded in eliminating the ward trustees and centralizing the school system. From this time wards were politically insignificant, but they were never formally abolished, and the city charters continued to define their boundaries until 1938, when the charter for the first time made no reference to wards at all.

Brooklyn also used the ward system. At the time of its incorporation as a city in 1834 its charter divided the city into nine wards, each of which elected one representative for a two-year term to a board of aldermen. In addition to constituting the city's legislative branch, aldermen were responsible for administering certain functions within their wards, such as employing street cleaners and raising the funds with which to pay them, and acting as justices of the peace in criminal proceedings. Brooklyn was divided into 19 wards by its charter of 1857 and into 25 by that of 1877; at the time of its incorporation into New York City in 1898 it had 32 wards.

James F. Richardson

Wards Island. An island of 255 acres (103 hectares) at the northern end of the East River; it is legally part of Manhattan. Purchased from the Indians in 1637 by the Dutch governor-general Wouter van Twiller, it was sold as farmland after the American Revolution to the brothers Jasper and Bartholomew Ward. After the island was acquired by the city in 1955 it was used successively for a potter's field, a hospital for destitute immigrants, an auxiliary immigration station, and the City Asylum (an early mental institution). The asylum later became the Manhattan State Hospital and then the Manhattan Psychiatric Center; one of its buildings is now occupied by a men's shelter. The island became the site in 1937 of one of the largest sewage disposal plants in the world, and later of the training school for the city's fire department. Much of the island is now a park, accessible from Manhattan by a footbridge over the Harlem River. Wards Island is connected by landfill to Randalls Island and is traversed by the Triborough Bridge and the Hell Gate Bridge. The island is also home to Wards Island Park, with popular athletic fields, picnic areas, and spectacular views.

Gerard R. Wolfe

Ware, James E. (*b* New York City, 12 July 1864; *d* New York City, 4 April 1918). Architect. After receiving his education in New York City he worked in the office of R. G. Hatfield. In 1878 he designed a model tenement that won a competition sponsored by the magazine *Plumber and Sanitary Engineer;* based on the railroad apartment, this had a floor plan shaped like a dumbbell, with a corridor between front and rear rooms that allowed for airshafts. The design became the model for the Tenement House Act of 1879. His design for tenements surrounding a courtyard won second place in a competition sponsored by the Improved Housing Council in 1896; it was built as the First Avenue Estate in 1900 and helped to inspire the "new law" of 1901 requiring that lots for tenements measure at least 100 feet (30 meters) square. Ware also designed the Osborne (1885) at West 57th Street and Seventh Avenue, one of the city's first high-rise apartment buildings.

Richard Plunz, *A History of Housing in New York City* (New York: Columbia University Press, 1990)

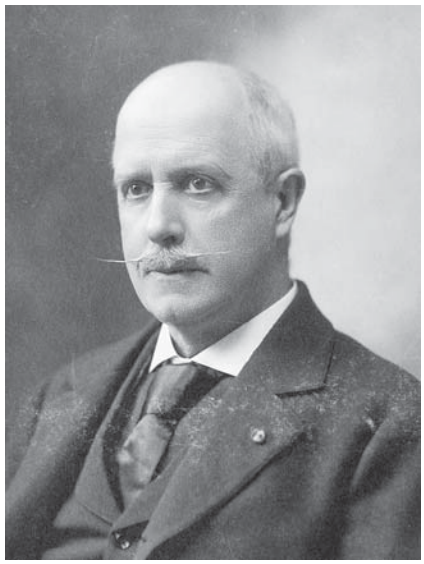
Edward A. Eigen

warehouses. New York City became a center of warehousing in its earliest days. The Dutch West India Company began construction of five stone warehouses shortly after the settlement of New Netherland, on what is now Whitehall Street between Bridge and Stone

streets. During the late seventeenth century several buildings were used as warehouses on Great Queen Street (now Pearl Street), and in 1797 a warehouse constructed on Furman street between Cranberry and Orange streets was operated by Jonathan Thompson. By the early nineteenth century warehousing districts emerged on South Street and along the East River in Brooklyn to meet the demands of the area's growing port traffic. In conjunction with the dredging of the Atlantic Basin in Brooklyn, the Atlantic Warehouses were constructed in 1844 at the initiative of Colonel Daniel Richards. The increased use of steam-powered vessels, which navigated the western part of the harbor more effectively than sail ships, encouraged the growth of warehousing on the Lower West Side of Manhattan. By 1850 there were as many warehouses in this district as around South Street.

Federal regulations enacted in 1842, 1846, and 1854 that exempted export goods from customs duties encouraged the use of bonded warehouses, and New York City accounted for more than half of all goods kept in such warehouses in the United States during the second half of the nineteenth century. At the same time the storage of household goods grew in importance in the city. John Morell introduced systematic business practices to warehousing and became a prominent figure in the development of the trade. After his warehouse was destroyed by fire in 1881, warehouses constructed of fire-resistant materials became increasingly common in Manhattan. Warehousing activity began shifting from Manhattan to Brooklyn as the cost of property rose and traffic became more congested. Major warehousing complexes emerged in Brooklyn with the founding of Bush Terminal by Irving T. Bush in 1895 and of the New York Dock Company in 1901, and most warehouses in New York City became concentrated along the shoreline in Brooklyn between the Brooklyn Bridge and Bush Terminal. From about 1950 warehousing shifted steadily to New Jersey because of the rise of container shipping and the land required for single-story warehouses, which were replacing multi-story warehouses.

New York City retained a huge inventory of warehouses through the early twenty-first century, although their use was often varied. Some were converted into retail or wholesale centers, housing, artistic developments, small manufacturing centers, or even historically preserved sites. The New York City Department of Consumer Affairs mandates that a person or business must have a storage warehouse license if storing consumers' goods for compensation. The self-storage industry is exempt.



David F. Mitch

Warhol, Andy [Warhola, Andrew] (*b* Pittsburgh, 6 Aug 1928; *d* New York City, 22 Feb 1987). Painter and filmmaker. He graduated from the Carnegie Institute in 1949 and moved to New York City, where he dropped the last letter of his surname. For about six years he gained success as a freelance commercial artist for clients ranging from Glamour to I. Miller Shoes, living in a townhouse on Lexington Avenue with his mother. From 1960 Warhol found acclaim as an artist, experimenting with comic-strip motifs and using the silkscreen process to produce repetitive images in *Campbell's Soup Cans* (1962) and portraits of Marilyn Monroe, Jacqueline Kennedy, and Elvis Presley. He was considered a leader in the pop art movement. In 1963 he opened a studio called the Factory on 47th Street where he used methods of mass-production to make silk-screened images; he later moved operations to 33 Union Square West. He also made experimental films—about 650 between 1963 and 1968—including *Sleep* (1963), a six-hour film depicting writer John Giorno sleeping; *Empire* (1964), an eight-hour film of the the Empire State Building; and *The Chelsea Girls* (1966), which was considered controversial for its eroticism.

Warhol cultivated fame and eccentricity, wearing a silver wig and attracting legions of followers to his Factory. In 1968 Warhol was shot by writer Valerie Solanas in 1968 and recuperated for a year; in 1969 he launched *Interview* magazine. In 1971 a social exhibition, "Portraits of the 70s," filled the fourth floor of the Whitney Museum of American Art. During the 1980s Warhol supported several young artists, including Keith Haring and Jean-Michel Basquiat; a collaboration with Basquiat produced Warhol's first hand-painted work in years. In 1984 he gave his original films to the Museum of Modern Art for a collaborative project with the Whitney Museum of American Art to preserve, catalogue, and rerelease them. Warhol died from complications following gall bladder surgery at New York Hospital–Cornell Medical Center; his memorial service at St. Patrick's Cathedral attracted over 2000 people. Warhol is famous for his comment that in the future everyone would be "famous for fifteen minutes."

James E. Mooney, Kate Lauber

Waring, George E(dwin), Jr. (*b* Pound Ridge, N.Y., 4 July 1833; *d* New York City, 29 Oct 1898). Agriculturist, sanitary engineer, street-cleaning commissioner, and author. He studied "scientific agriculture" at the model farm of James Jay Mapes near Newark, N.J. (1853), and managed Horace Greeley's farm in Chappaqua, N.Y. (1855–57); he became "agricultural engineer" of Central Park in August 1857. To counteract waterlogged soil, he buried cylindrical drainage-tile lines throughout the park; he also installed the four elm rows that framed the Mall. During the Civil War he served as a major in the Garibaldi Guards (the 39th New York Volunteers)

Jacob A. Riis, Colonel George E. Waring, Sanitation Supervisor *(ca 1895)*

and as a colonel in 4th Missouri Cavalry. After the war he eventually gained prominence as an authority on household sanitation and town sewerage. His pioneering system of small-pipe sanitary sewers, first built in Memphis in 1880, was widely adopted despite engineering controversy. In 1881 he reworked the plumbing of the White House in Washington, D.C., and shortly thereafter did the plumbing of the Villard house in New York City at the northeast corner of Madison Avenue and 50th Street. Appointed New York City commissioner of street-cleaning by reform mayor William L. Strong in January 1895, he transformed a lackluster department into a merit-based, white-uniformed force—the famous White Wings—that got the city's streets "really clean" for the first time in history; he also attempted the nation's first systematic waste recycling system. Waring contracted yellow fever while studying sanitary conditions in Cuba for President William McKinley after the Spanish–American War and died in New York City. Altogether, he wrote 15 books, including three European travel accounts, and compiled the massive *Report on the Social Statistics of Cities* (1886, 1887) for the United States Census Bureau.

Martin V. Melosi, *The Sanitary City: Urban Infrastructure in America from Colonial Times to the Present* (Baltimore: Johns Hopkins University Press, 2000)

Jon A. Peterson

War Memorials. Monuments that mark wars and those who served or died in them. The city's (and nation's) first memorial, located at St. Paul's Chapel, was dedicated in 1776 to General Richard Montgomery, first officer to fall in the Revolution. Like much civic sculpture of its time, it was produced in France,

and embodied the heroic iconography of late eighteenth-century Europe. Two early influential works were J. G. Batterson's 1857 General Worth funerary obelisk and crypt at Madison Square and the 1856 equestrian statue of Washington by Henry Kirke Brown and J. Q. A. Ward in Union Square, the first of the nation's memorials to adapt imperial scale and imagery to American ideals. Notable early Civil War funerary columns include the Irish Brigade memorial at Calvary Cemetery (1865) by John G. Draddy; the tribute to the Union Hebrew dead at Salem Fields; and the city's memorial on Battle Hill (1865) by Draddy and Batterson. These works helped legitimize new forms of memorial iconography, including the blessing of angels, ethnic mottos and symbols, strong decorative programs, realistic soldier statuary, lists of battles fought, and bas-relief narratives of war.

American memorial imagery took a new direction in Ward's Seventh Regiment Memorial (1869). His iconic rendering of the common soldier (*The Sentry*) on a solitary pedestal was widely emulated in both North and South, and thereafter the naturalistic hero figure remained integral to the American war memorial until the 1930s. Other notable Civil War tributes include John Duncan's Soldiers' and Sailors' Arch at Grand Army Plaza in Brooklyn, with its beaux-arts bronze sculptural groups of the *Army* and *Navy* (1901) by Frederick MacMonnies; and the Soldiers' and Sailors' Monument (1902) in Riverside Park by Stoughton and Stoughton and Paul M. DuBoy, modeled on the ancient Athenian Choragic Monument of Lysicrates. A pair of collaborative works by Augustus St. Gaudens and architect Stanford White, of Admiral David Glasgow Farragut (1881) at Madison Square Park, and of William Tecumseh Sherman (1902) in Manhattan's Grand Army Plaza, brought an unprecedented aesthetic and spiritual refinement to the hero figure and his setting, and so became an inspiration for the statues and memorials that apotheosized the American World War I remembrance after 1918.

World War I memorials include ten "Doughboys"; six female Victory and Angel statues bestowing the blessings of Peace and Hope; the Ridgewood Tholos bas-reliefs of Anton Schaaf; and the *Dawn of Glory* (1923) by Pietro Montana. The language of sacrifice and immortal memory were joined in these tributes to decoration and detail, and an emotional honesty about the American hero in warfare. These formal works were complemented by a new, popular embrace of public works memorials, and especially tree memorials. Seven thousand such trees were planted with memorial plaques in Brooklyn alone, and memorial groves rose in Central Park, Pelham Bay Park, and Hero's Park in Staten Island.

The era of 1918–32 saw the fading of nineteenth-century European monumentality. It also marked the last sustained effort to create an American war memorial canon and mythos of ideals, memory, and exaltation of purpose. These trends would be short-lived, however, as the influence of European modernism through the 1930s replaced naturalism and the figure with abstract and minimalist form, and the city, at the behest of Robert Moses, sought to limit impending World War II memorials to an approved design, one per borough. Only the Brooklyn tribute (1948, Constable and Gilmore et al., with sculptor Charles Keck) was ever completed according to his plan. Many traditional, small, deeply felt neighborhood shrines subsequently appeared after the Korean armistice in 1953.

Reflecting a decline in civic, political, and artistic support for the memorial arts, few major tributes materialized after the federally sponsored East Coast Memorial in Battery Park (1963), by William Gehron and Gilbert Seltzer, with sculptor Albino Manca. Three more recent works have sought to reimagine the war memorial using a postmodern vocabulary. The Korean War Veterans Memorial (1993) by Mac Adams enlarges the soldier figure to enormous size, rendering him as a cartoon-like cutout, *The Universal Soldier,* while nearby at the National Merchant Mariners Memorial (1991) by Marisol, a tableau of shipwrecked sailors combines with kinetic art, as a drowning man stretches out his hand for help while the tide submerges and resurrects him twice each day. At the Vietnam Veterans Memorial (1985), by William Britt Fellows and Peter Wormser, a Manhattan corporate plaza is combined with an ancient votive way, memorial stele, and a hallowed precinct for communion with the fallen. This is also the last city tribute utilizing language to evoke a deepened understanding of war, sacrifice, and forgiveness. More than a quarter of all monuments in New York City parks, 270, are war memorials, ranging from plaques to statues to arches.

Donald Martin Reynolds, *Monuments and Masterpieces: Histories and Views of Public Sculpture in New York City* (New York: Macmillan, 1988); Cal Snyder, *Out of Fire and Valor: The War Memorials of New York from the Revolution to 9-11* (Piermont, N.H.: Bunker Hill, 2005)

Cal Snyder

Warner–Lambert. Firm of pharmaceutical manufacturers. Formed in Philadelphia in 1856 as the William R. Warner Company, a maker of pharmaceuticals and cosmetics, it was taken over in 1908 by Gustavus A. Pfeiffer and Company, makers of patent medicine in St. Louis. It moved its headquarters and manufacturing facilities to New York City in 1916 and expanded by acquiring other companies, including the cosmetics firms Hudnut and DuBarry. In 1938 it established the Warner Institute for Therapeutic Research in New York City. Elmer Holmes Bobst became the president of the firm in 1945. He acquired the firm Lambert, manufacturer of the oral antiseptic Listerine (1955); the Emerson Drug Company, manufacturer of Bromo-Seltzer (1956); Smith Brothers, American Optical, Schick Shaving, the American Chicle Company (1962), and Parke, Davis and Company (1970). The firm changed its name in 1970 to Warner–Lambert Pharmaceutical Company and merged with Pfizer in 2000.

David J. S. King

wars. See American Revolution, Civil War, Spanish–American War, World War I, and World War II.

Warwick Hotel. Thirty-six-story hotel at the corner of 54th Street and Sixth Avenue in Manhattan, built in 1927 by William Randolph Hearst as an elegant retreat for the actress Marion Davies. At the time it was one of the tallest apartment hotels in the world. Over the years residents of the hotel have included Cary Grant, who lived on the 27th floor at intervals during the 1960s, and the Beatles, who favored the hotel because it lacked a large lobby and offered privacy. With its purchase in 1980 it became part of the Warwick International Hotels chain and was renamed Warwick New York Hotel.

Kenneth T. Jackson

Washington, George (*b* Bridges Creek, near Fredericksburg, Va., 22 Feb 1732; *d* Mount Vernon, Va., 14 Dec 1799). First president of the United States and commander in chief of the Continental army. He briefly visited New York City in February 1756, in May 1773, and in June 1775 shortly before taking command of the Continental army. During his defense of Manhattan against the British in 1776 his headquarters were at the Mortier House (at the present site of Charlton Street between Varick and MacDougal streets) and at the Morris–Jumel Mansion. The campaign proved disastrous when his forces were routed in the Battle of Long Island (26–31 August) and again in the loss of Fort Washington (16 November), and he retreated with the remainder of his forces across New Jersey. On Evacuation Day (25 November 1783) he returned triumphantly to the city to observe the final departure of British troops, and he bade an emotional farewell to his officers at Fraunces Tavern on 4 December. He returned to the city just before his inauguration at Federal Hall as the first president of the United States on 30 April 1789, took up residence on Cherry Street, and from February to August 1790 lived in larger quarters at 39 Broadway, where his wife, Martha, supervised a household that included 21 servants, among them seven slaves. After the national capital was moved to Philadelphia, he left New York City for the last time in October 1790. Washington's

name is borne by more than a dozen of the city's streets and avenues, several neighborhoods, and two bridges. Statues depicting him are at Federal Hall and Union Square, and an arch honoring him stands in Washington Square Park. The earliest known use of the term *New Yorker* in a published work is contained in a letter that he wrote in 1756.

Robert I. Goler

Washington Bridge. Bridge spanning the Harlem River between West 181st Street in Manhattan and University Avenue in the Bronx, originally called the Harlem River and Manhattan Bridge. Designed by Charles C. Schneider and Wilhelm Hildebrand under the direction of William McAlpine and William Hutton, it was built of steel, cast iron, and wrought iron, with arched masonry approaches, and was the first arched bridge to use plated girders. When the bridge opened in 1889 it was referred to as the "glory of the Harlem River" and was considered one of the finest steel arched bridges in the United States. The bridge was named in 1889, the year of its completion, to commemorate the centenary of George Washington's inauguration. The Washington Bridge is the third-oldest standing bridge in New York City, after the High Bridge and the Brooklyn Bridge.

Gary D. Hermalyn

Washington Heights. Neighborhood in northern Manhattan, bounded to the north by Dyckman Street, to the east by the Harlem River, to the south by 155th Street, and to the west by the Hudson River. Two ridges run north and south through it; during the American Revolution the Continental army erected Fort Washington on the summit of the western ridge at what is now Fort Washington Avenue between 181st and 186th streets. Outlying forts included Fort Tryon in what became Fort Tryon Park, Cock-Hill Fort on Inwood Hill, and Fort George at what is now 192nd Street and Audubon Avenue; these were captured by British and Hessian forces after a battle in 1776. Most of the area was poor farmland, sometimes called Harlem Heights in the eighteenth century. It soon became a choice location for country estates of wealthy New Yorkers because of its spectacular views, and by the 1870s it was known by its current name. Although some estates were sold for development in the late nineteenth century, much of the area was rural as late as 1900.

In 1904 the Broadway subway line reached 157th Street in the southern end of Washington Heights; by 1906 it passed through the neighborhood to points farther north. Rapid development followed and several major complexes were built, including Columbia–Presbyterian Medical Center, museums and scholastic institutions at Audubon Terrace, and Yeshiva University. In 1912 the Polo Grounds stadium was built near the Harlem River between 155th and 157th Streets beneath Coogan's Bluff. Inexpensive apartment buildings were added in the southern and eastern sections, more expensive ones in the west and the north; eventually Broadway divided poor and working-class areas to the east from middle-class areas to the west. This division persisted even as the ethnic composition of the neighborhood changed. The southern boundary was not so clearly defined: in the 1930s it was at times placed as far south as 135th Street, while some white residents placed it farther north to distinguish the neighborhood from Harlem. The Eighth Avenue subway was completed on the west side of the neighborhood in 1932.

Washington Heights appealed to many residents because of its convenient transit, plentiful housing, and parks (developed on land formerly occupied by estates). A large number of Greeks and Irish settled there, as did many Jews, who increased in number during the Nazi regime. During the 1930s and 1940s such right-wing groups as the Christian Front and Irish gangs defaced synagogues and assaulted Jewish youths. The number of anti-Semitic incidents declined after World War II owing to increased policing, interfaith cooperation, and the forceful condemnation of attacks on Jews and synagogues voiced by local Christian leaders.

By the early 1960s many Irish and Jews had left the neighborhood, which became predominantly black, Puerto Rican, and Cuban. It was the site in 1965 of the assassination of Malcolm X, who was shot while addressing a rally at the Audubon Ballroom. After the mid-1960s Dominicans increased in number, but they had little political power because most tended to abstain from U.S. politics. No neighborhood in New York City attracted more immigrants in the 1980s than Washington Heights. Almost all were Latin American, and more than three-quarters were Dominican. By 1990 the Dominican community in Washington Heights and Inwood was the largest in the United States. District lines were redrawn in 1991 to give Dominicans a better chance of being represented on the City Council, and in the same year Guillermo Linares became the first elected official of Dominican ancestry in the United States.

In the mid-1990s problems evident in many neighborhoods were especially acute in Washington Heights: poverty, overcrowded schools and housing, entrenched drug trading accompanied by a high murder rate in the southern and eastern sections, and troubled relations between residents and the police (in the summer of 1992 there were several days of rioting when a police officer fatally shot a drug dealer). The neighborhood nevertheless retained a bustling business district, and the parks remained intact. The site of the assassination of Malcolm X was incorporated into an 11-story building housing a biotechnology research center affiliated with Columbia University, retail space, and a community mental health clinic. By the latter part of the 1990s vigorous policing, changes in the drug trade, and an increased sense of stability in the neighborhood reduced crime. In the twenty-first century Dominicans remain prominent in the heights but are noticeably more integrated into the politics and government of the city. At the same time, increased safety and a tight housing market have brought new residents and substantial white gentrification to the area. In 2007 the neighborhood was depicted in the musical *In the Heights,* which depicted the area as a striving, vigorous neighborhood defined by its Latinos and Latinas.

Robert W. Snyder

Washington Irving High School. Secondary school opened in 1902 as the Commercial High School for Girls at 36 East 12th Street. It took its current name in 1906 and moved to 40 Irving Place in 1913. The last remaining single-sex public high school in New York City, it began admitting boys in the autumn of 1986 and changed its focus from nursing, secretarial studies, and child care to international studies and foreign languages. Distinguished alumnae of Washington Irving High School include the actress Claudette Colbert and the fashion designer Norma Kamali. In 2010s its enrollment was around 1500 students.

Erica Judge

Washington Market. Market built in 1812 on Washington, Fulton, and Vesey streets. The country's largest food market by 1858, it was condemned in 1859 because it caused traffic jams and was unregulated and rife with corruption. At the end of the Civil War a separate wholesale produce market emerged and ran about a dozen blocks north of Vesey Street to North Moore Street. The market on Washington, Fulton, and Vesey streets was rebuilt in 1883–84, became primarily a retail market, and was remodeled in 1915 and again in 1935; the retail section was closed by the city in 1956, and the wholesale market was demolished and replaced by the Hunts Point Market in the Bronx in 1967.

Suzanne R. Wasserman

Washington Square Park. Public park in Manhattan, bounded by Waverly Place (Washington Square Park North), University Place (Washington Square Park East), West Fourth Street (Washington Square Park South), and MacDougal Street (Washington Square Park West). The area was once a marsh fed by Minetta Brook near a Sappokanican Indian settlement and was used from 1797 to 1826 as a potter's field and as a place for public hangings. In 1827 the city acquired the land for a public park, and exclusive development hastened in the surrounding community. After the parks department was established in 1870, Washington Square was improved: monuments were erected to Giuseppe Garibaldi in 1888 east of the Central Fountain and to Alexander Lyman Holley in 1890 west of the fountain; and a temporary arch commemorating the inauguration of George Washington, erected in 1889, was replaced in 1895 by a permanent arch designed by Stanford White. Sculptures by Hermon MacNeil and Alexander Stirling Calder depicting Washington as the commander in chief were added about 20 years later. The park was bisected by Fifth Avenue until the 1960s, when the through-street and bus turnaround were closed off and a fountain became a public meeting place where folk musicians and other performers entertained local residents, students at New York University, and tourists from around the world. In December 2007 the parks department began a multiyear reconstruction project; the plans included increased green space, restoration of the fountain and several monuments, and construction of an outdoor stage.

Washington Square Park, 2009

Washington Square United Methodist Church. Romanesque Revival church designed by Charles Hadden and built before the Civil War at 135 West Fourth Street. Its 1901 Odell organ was not electrified but rather retained the rare original console (tubular pneumatic action). The church was called the "Peace Church" for its stance against the Vietnam War; it was also known for its support of New York City's gay community. Paul M. Abels, its pastor from 1973 to 1984, was the first openly gay minister of a major Christian congregation in the United States, and in 1985 the church was the first site of the Harvey Milk School for lesbian and gay youth. In 2004 the congregation sold the building, which converted into apartments.

Sharon Wilkins

Wasserstein, Wendy (*b* New York City, 18 Oct 1950; *d* New York City, 30 Jan 2006). Playwright. She grew up in Flatbush and on the Upper East Side, graduated from Mount Holyoke College, and studied at the Yale School of Drama. Her works gave voice to a generation of successful, well-educated women who struggled to fit into a man's world and weren't always successful in their personal lives. She wrote autobiographical essays for the magazine *New York Woman* and also contributed to *Harper's* and *Harper's Bazaar.* Her first successful plays, *Uncommon Women and Others* (1977) and *Isn't It Romantic* (1984), were drawn from childhood experiences. Wasserstein is best known for *The Heidi Chronicles* (1989), which won a Pulitzer Prize and a Tony Award for best play in 1989, and *The Sisters Rosensweig* (1992), in which the main characters are based on herself and her family. Other Broadway plays included *An American Daughter* (1997) and *Old Money* (2000). She also adapted a screenplay, *The Object of My Affection* (1998); wrote children's books, including *Pamela's First Musical* (1996); and personal essays, including *Bachelor Girls* (1990) and *Shiksa Goddess: Or, How I Spent My Forties* (2001).

Janet Frankston

Watchogue. Name applied to Bloomfield before the 1870s. The area was called Merrell Town during the early nineteenth century, after Ike Merrell, who owned a large farm known for its magnificent oak trees. A conjectural etymology is that after several trees were stolen, the farm became known as Watch Oak Farm, and that the name was soon used for the entire settlement and eventually became corrupted to Watchogue.

James Bradley

water. The drinking water system of New York City may be its most valuable capital asset. In 2009 the system supplied an average of 1.1 billion gallons of water a day to roughly nine million residents of the city and neighboring counties. In its current form the system includes an upstate watershed of nearly 2000 square miles (5200 square kilometers), 19 collecting reservoirs, 346 miles (557 kilometers) of aqueducts and tunnels, and 5814 miles (9355 kilometers) of distribution mains and pipes. This extensive network, in which water is transported almost exclusively by gravity, has been the envy of municipal water providers around the world and is recognized as an engineering marvel.

1. Early Sources of Water

During the colonial period, American Indians and Dutch and English settlers drew

Standpipe, 2009

water from clear ponds and streams and from freshwater wells on Manhattan Island. Clean water was plentiful for those living in what later became the city's other boroughs. But by the time of the American Revolution New Yorkers were struggling to secure an adequate supply of pure water. From the eighteenth to the mid-nineteenth century residents of Manhattan relied principally on four sources for their water supply. One was the COLLECT, a pond occupying 48 acres (19 hectares), with wetlands lying to its south, around what is now Foley Square. By the 1780s, however, its water quality had begun to decline because of the dumping of garbage and waste from tanneries and other industries. Not surprisingly its use as a water supply fell off, and in 1803 the city began filling it in.

Local wells were another early water source. The first public well was sunk by the English in 1666 at the fort on Manhattan's southern tip. Reliance on underground supplies increased throughout the eighteenth century, and by 1809 the city had 249 pump-operated public wells. Residents also drew on private wells. As early as the mid-eighteenth century, however, some wells had already been contaminated by seepage from cesspools and street runoff. Among the more interesting of the well-water ventures was the Manhattan Company, originally envisioned by public officials as a provider of pure waters from north of the city. The company's founders, including Aaron Burr, obtained a state charter for a water company in 1799, which, not incidentally, allowed it to establish banking operations. The company's water supply purposes were never realized: its primary source was a modest existing well near the Collect, the mostly wooden mains reached only a small portion of the city's residents, and the water quality was poor. But the financial component of the company evolved into what later became the Chase Manhattan Bank.

Natural springs furnished a third water supply from colonial times through the mid-1800s. A popular source was the Tea Water spring, whose pump was located just east of the present Chinatown. For decades this source provided high-quality water for drinking and cooking. Affluent New Yorkers purchased this water from private dealers whose "Tea Water Men" carted it around in large casks and sold it by the bucket. By the 1780s water from the Tea Water spring had dropped in quality, but it was still considered the best on Manhattan Island until the arrival of waters from upstate in 1842. Cisterns, or tanks for collecting rainwater, served as a fourth water source during this period. Although sometimes relied upon for drinking, water from household cisterns was used primarily for bathing, cleaning, and other domestic chores. As urban activities increased, cistern water quality deteriorated from dust and cinder fallout. Still, in an effort to help meet the needs of firefighting, the city built 40 public cisterns between 1817 and 1829.

2. The Croton System

By the 1830s the inadequacies of the city's patchwork supply had become apparent, and most residents still relied on well water. By this time the connection between bad water and typhoid fever, yellow fever, and cholera epidemics had been made; in 1832 more than 3500 New Yorkers perished in a CHOLERA outbreak. The need for water for fire protection also reached a crescendo after fires in 1776 and 1828 and the Great Fire of 1835, which leveled 20 blocks and destroyed nearly 700 buildings. In 1835 the Common Council placed the issue before the voters, who approved by a 3–1 margin a referendum calling for damming the Croton River in Westchester County and funneling the collected water to a desperate city. Under state authorization, city officials raised construction funds and authorized water commissioners to acquire land and water rights outside city limits for a new water system. In 1842 the CROTON AQUEDUCT was put into service, which carried water more than 40 miles (64 kilometers) to a receiving reservoir, now the site of the Great Lawn in Central Park. The arrival of pristine water from the Croton Reservoir triggered the great water celebration of 1842, complete with parades, fireworks, music, and fountains shooting plumes of water 50 feet (15 meters) into the air.

For the next 75 years an expanding Croton system was the main source of water for residents of Manhattan. In the 1840s many New Yorkers who had not yet connected their residences and businesses to the Croton supply were opening fire hydrants without authorization to draw water for their daily needs. The widespread installation of private baths, fixed washbasins, and flush toilets beginning in the 1850s, along with a continuing upswing in population, led to mounting water usage. The original Croton system was unable to keep pace with the growing demand. One result was the construction of a new and larger receiving reservoir in Central Park, completed in 1862. (This reservoir, now surrounded by a popular running track, was taken out of service in 1991.) From 1866 to 1911 the city dammed new water sources in Putnam and Westchester counties and linked them to the Croton system. Ultimately, 12 new reservoirs had been placed in service: Boyd Corners (1873), Middle Branch (1878), East Branch (1891), Bog Brook (1892), Titicus (1893), West Branch (1895), Amawalk (1897), Muscoot (1905), New Croton (1905), Cross River (1908), Croton Falls (1911), and Diverting (1911). In 1890 the New Croton Aqueduct was put into operation. Mostly an underground pressure tunnel, it provided more than three times the capacity of the original aqueduct.

By the time this system was completed, the city had already outgrown it, as population increased dramatically, the Bronx was annexed, and the city's consolidation in 1898 brought the number of residents to almost 3.5 million. Consolidation, among other benefits, helped head off water problems in the newly incorporated boroughs. Queens and Staten Island had historically derived their water from underground wells. But by the time of consolidation these sources were inadequate. The only remnant of their service is the former Jamaica Water Supply Company, now city-owned, which has wells that in 2007 were providing a portion of the water consumed by about 100,000 residents of southeastern Queens. The Bronx relied on local sources until the completion of the Croton system, which eventually supplied the borough with nearly all its water. In Brooklyn, residents depended mostly on local wells and cisterns until 1859, when its Ridgewood public water supply system began delivering stream-fed surface waters collected on the southern shore of Long Island. By the late nineteenth century the rapid growth of Brooklyn strained the Ridgewood supply, and many wells were being polluted by the intrusion of seawater. Brooklyn in fact voted to join New York City in part to tap into its enviable supply of upstate water.

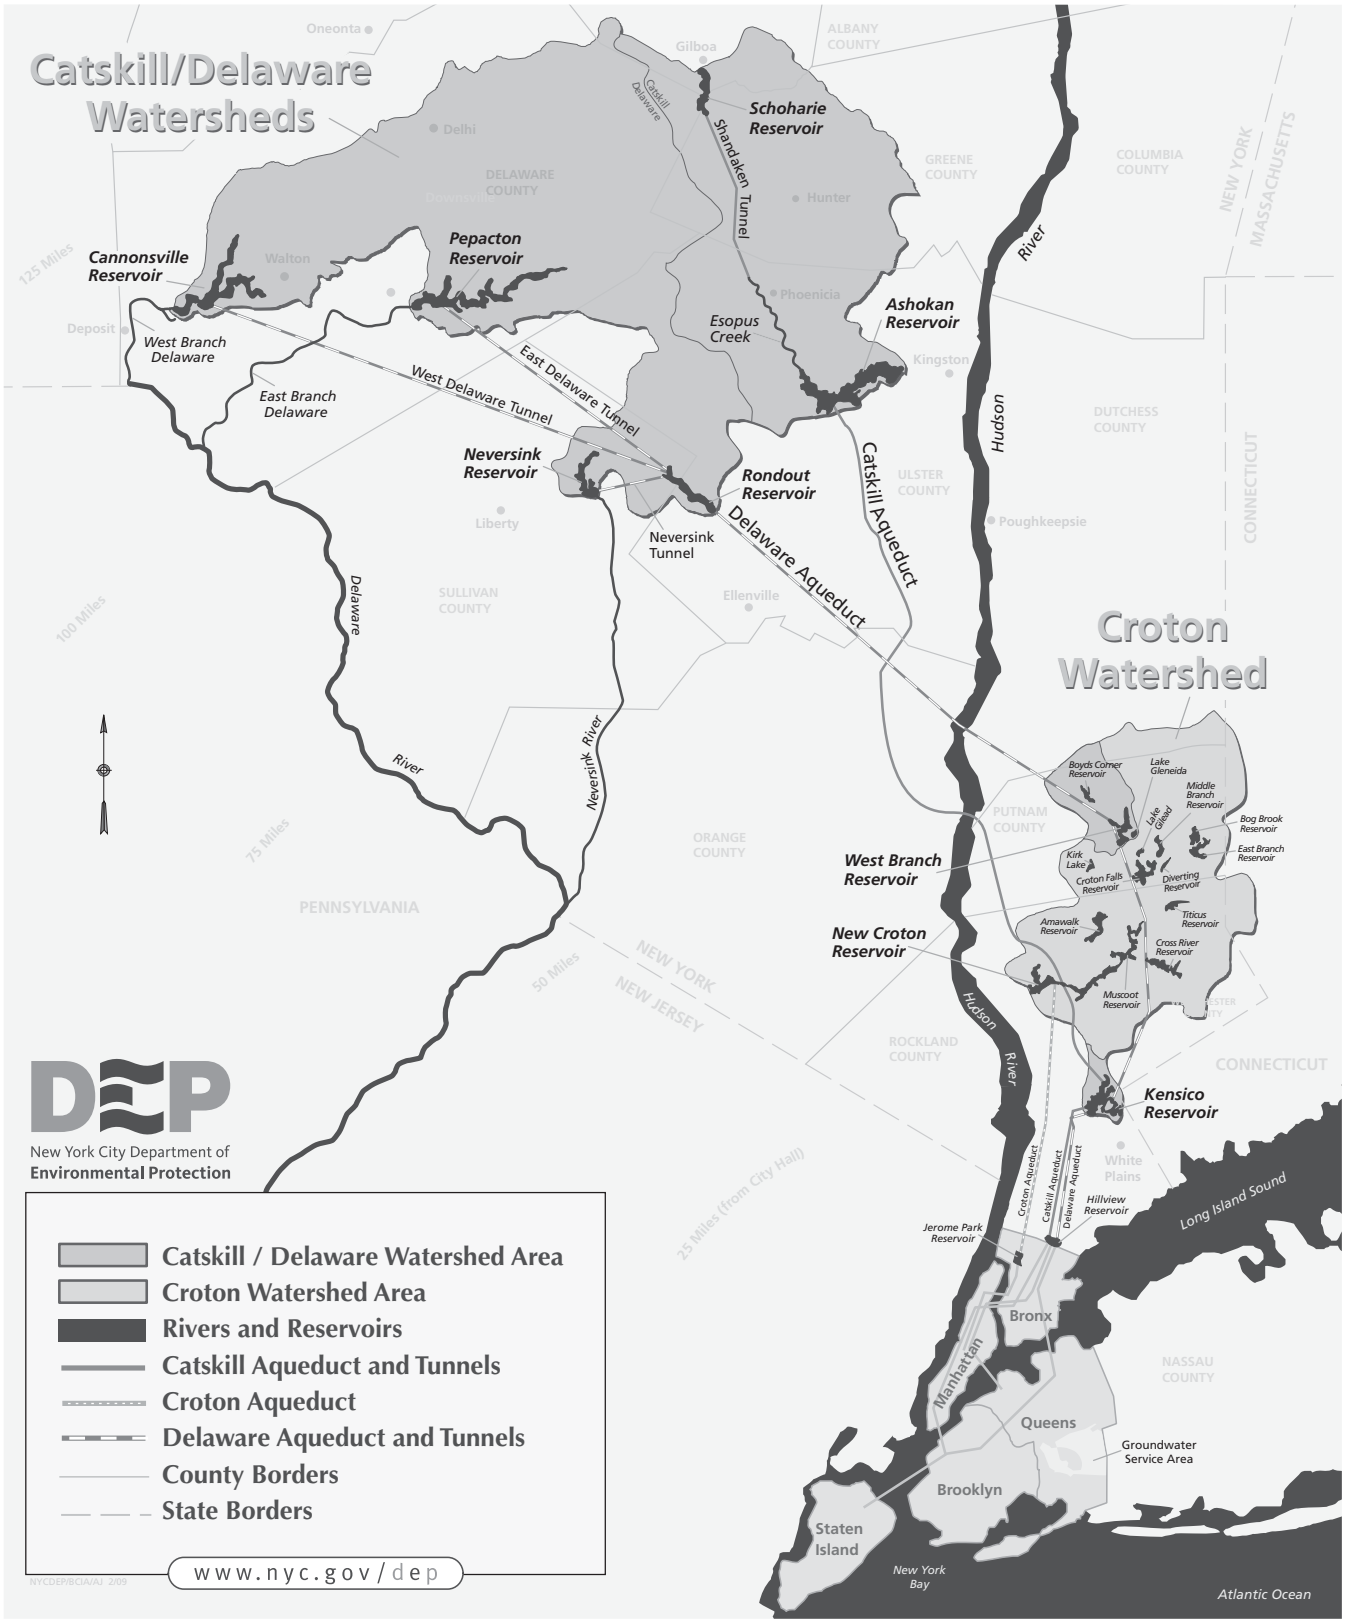
3. The Catskill and Delaware Systems

The continuing search for new water sources led planners to the Catskill Mountains, as far as 125 miles (201 kilometers) north of Manhattan. At first some officials proposed that the city obtain water from the Catskills by contracting with a private firm, the politically influential Ramapo Water Company. The city's comptroller, Bird S. Coler, successfully opposed the plan on the grounds that it would be too expensive and would leave the city dependent on private interests. Instead the state legislature passed a law in 1905 creating a new public board of water supply, with broad authority to condemn land and build new reservoirs and aqueducts. Construction of the huge Catskill system began in 1907, and by 1917 clean mountain water from the Catskills was flowing into all five boroughs.

The centerpiece of the system was the Ashokan collecting reservoir (placed into service in 1915) on Esopus Creek in Ulster County, a facility holding at full capacity more water than all the reservoirs in the Croton system combined. The city also began operating three distribution and storage reservoirs for the Catskill system: the Kensico and the Hillview in Westchester County (1915) and the Silver Lake Reservoir (1917) on Staten Island (later replaced by underground storage tanks). Water flowed from the Ashokan to the Hillview through the Catskill Aqueduct (92 miles [148 kilometers]), which included grade-level, covered trenches and a circular tunnel with a diameter of 14 feet (4.3 meters) that plunged 1100 feet (335 meters) beneath the surface of the Hudson River near Storm King Mountain. Construction of the Catskill system ended shortly after a second reservoir, the Schoharie, at the intersection of

Ashokan Reservoir, 1916

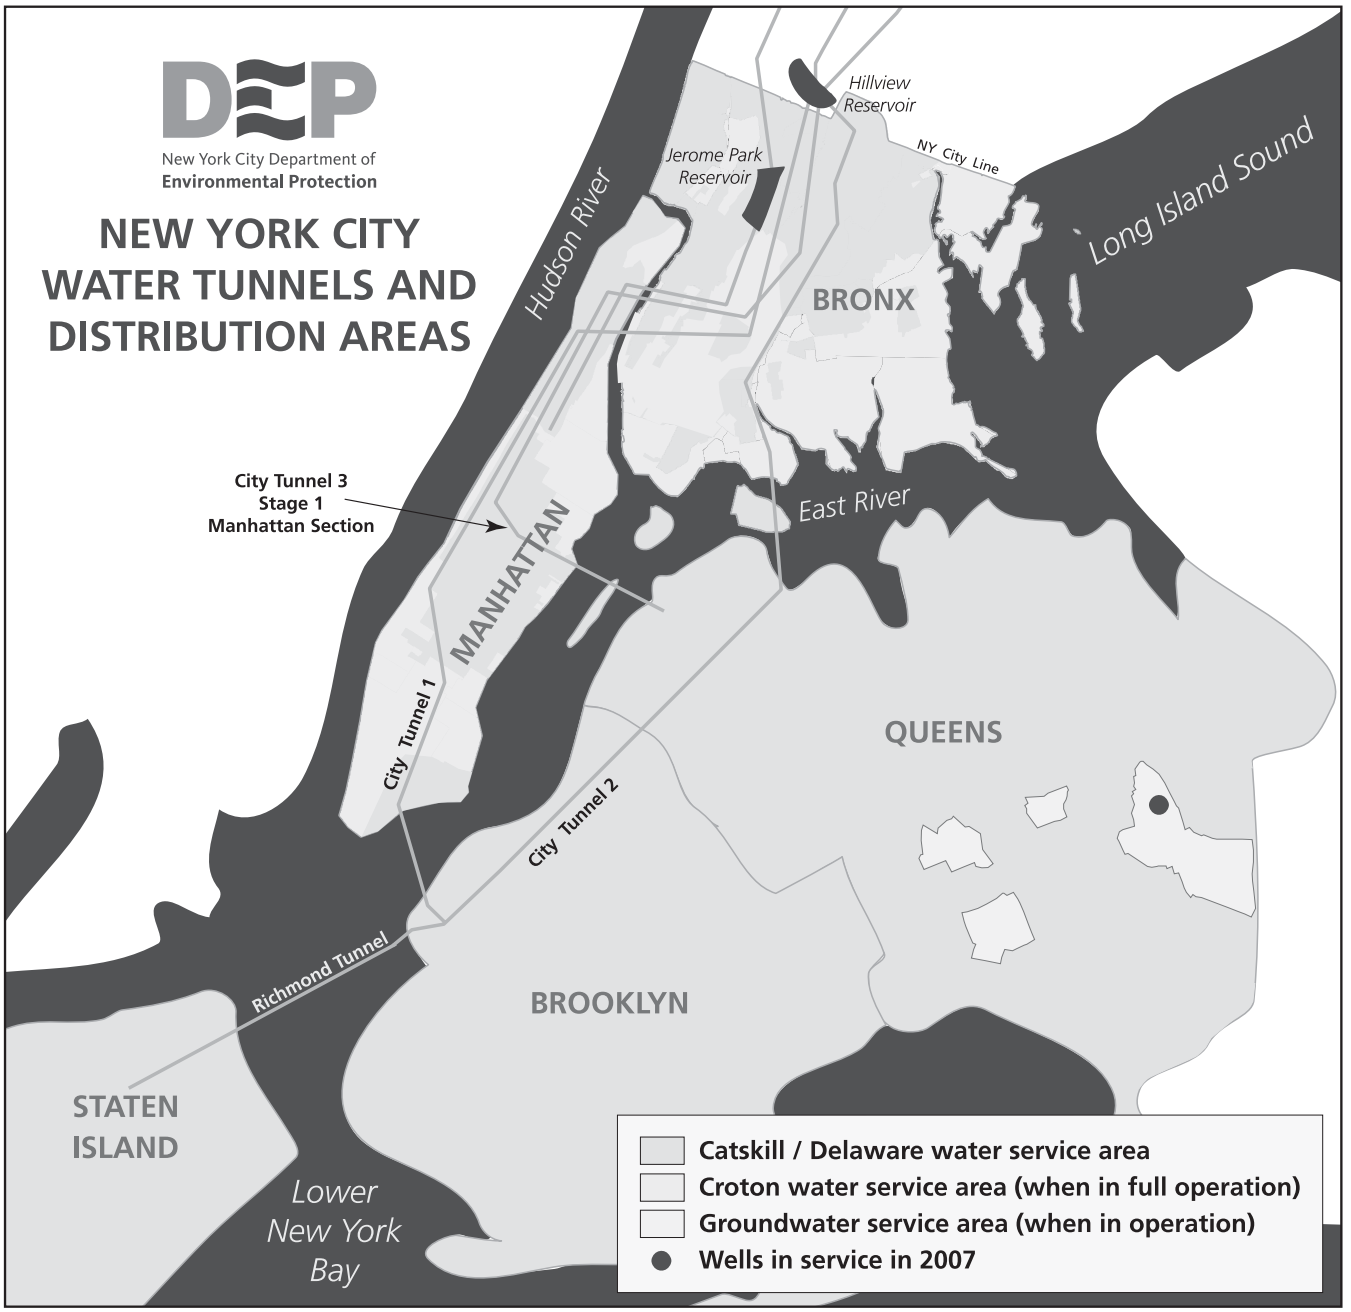
Schoharie, Delaware, and Greene counties, was placed into service in 1926. Like the Croton system before it, the Catskill system had a profound effect on upstate communities in the watershed. To make way for the Ashokan Reservoir, for example, seven villages were submerged, their nearly 2000 residents resettled, and about 2800 bodies reinterred. This pattern was repeated to a lesser degree during the construction of the Schoharie Reservoir and the city's Delaware system reservoirs. In part because of these contentious beginnings, relations between watershed communities and New York City were strained.



Even after the Catskill system was completed, demand for water in the city continued to rise. As early as 1921 the Board of Water Supply was looking to the Delaware River watershed, in the western Catskills, as a new source. New Jersey and Pennsylvania asserted that the Delaware was an interstate waterway and objected to a diversion of its water by New York. But in 1931 the U.S. Supreme Court allowed the city to withdraw as much as 440 million gallons (1666 million liters) a day from the Delaware River, as long as it maintained flows to protect downstream fisheries and downriver water systems in New Jersey and Pennsylvania. Under a later modification of this ruling, the city was permitted to increase its daily withdrawals to 800 million gallons (3028 million liters). Financial woes delayed the start of construction of the new Delaware system until 1937. The first of its reservoirs, the Rondout in Ulster and Sullivan counties, was put into regular service in 1951. To deliver water from the Delaware system the city constructed a new aqueduct 85 miles (137 kilometers) long from Rondout to the Hillview Reservoir. This aqueduct was bored through deep rock, 300 to 1000 feet (90 to 300 meters) below ground level. The city next brought into service the Neversink (Sullivan County) Reservoir in 1953 and the Pepacton (Delaware County) Reservoir in 1955. In 1964 it began drawing water from the Cannonsville Reservoir in Delaware County, the final piece of the giant Delaware system and the last reservoir added to the city's water supply network.

Early in the twenty-first century, the roughly 580 billion gallons (2196 billion liters) in the three reservoir systems at full capacity could theoretically satisfy the city's drinking water demand for an entire year, when the city derived 10 percent of its water from the Croton system, 40 percent from the Catskill system, and 50 percent from the Delaware system. Water from the Croton reservoirs travels through the New Croton Aqueduct into the Jerome Park Reservoir in the northern Bronx; both the aqueduct and the reservoir are directly linked to the city's trunk mains. Waters from the Catskill and Delaware aqueducts ordinarily pass through the Hillview Reservoir just north of the city limits in Yonkers before entering water tunnels no. 1 (1917) and no. 2 (1936), which also feed into trunk mains. The trunk mains in turn carry water into smaller distribution mains that connect to service lines running into private homes and apartment buildings. About one-fourth of the city's water mains that were in service in 2009 had been installed before 1930 and were made of unlined cast iron; these mains accounted for the bulk of the most disruptive of the 600 or so water-main breaks (usually small) that were occurring annually throughout the city. At the beginning of the twenty-first century the city had been replacing about 60 miles (96.5 kilometers) of water mains every year.

4. Recent Developments



The newest addition to the water network is city tunnel no. 3, which will increase the system's capacity to deliver water throughout all five boroughs, enhance reliability, and allow officials to inspect and repair tunnels nos. 1 and 2 for the first time since they went into service in the first decades of the twentieth century. The tunnel is being constructed in stages, with the first stage, completed in 1998, running 13 miles (20.9 kilometers) from the Hillview Reservoir through the Bronx and northern Manhattan into Queens. Stage 2, connecting the new tunnel in Queens to Brooklyn and Staten Island, is expected to be placed into service in 2013. At a projected total cost of more than $6 billion, the tunnel is among the largest capital building projects in the city's history. Digging for the third water tunnel began in 1970, and the entire project is not expected to be completed before 2025. During the first 37 years of construction, more than 5000 tunnel workers, called Sandhogs, worked on the project, including at least 24 who lost their lives during excavation and tunnel building.

More than 170 years after officials began developing the upstate water system, the city continues to confront two persistent water-related challenges. The first is the availability of an adequate supply. Between 1960 and 1990, during which time the consumption of water from the upstate reservoirs increased by more than 25 percent, the city experienced three severe droughts (1963–67, 1980–81, and 1985). These prompted city managers to step up water conservation activities beginning in the mid-1980s. Measures included more sophisticated leak-detection efforts and implementation of a local law allowing only water-saving toilets, showerheads, and other plumbing fixtures to be sold or installed in New York City. At the same time the city began a long-term program to place water meters in individual homes and apartment buildings so that property owners would pay for the amount of water actually used rather than flat rates. In part as a result of such initiatives, total city water consumption fell from an average of 1.5 billion gallons (5.7 billion liters) a day in 1990 to an average of 1.1 billion gallons (4.2 billion liters) a day by 2007. Since the late 1980s two leaks in portions of the concrete-lined Delaware Aqueduct in Ulster and Orange counties have been sending between 15 and 36 million gallons (56.8 and 136.3 million liters) of water a day to the surface, according to city estimates. City officials have maintained that there is little risk of a near-term tunnel failure, but with concerns growing they began contingency planning and preparatory work for aqueduct repair in 2004. In addition, global warming also poses serious long-term risks for the city's water supply. According to climate scientists, rising temperatures will mean more days over 90 degrees, greater demand for water during hot summer months, disruptive changes to precipitation patterns in the watershed region, and increased evaporation from city reservoirs, all of which—along with

projected increases in city population—are likely to strain existing supplies in the coming decades.

The second recurring issue is that of water purity. Historically, drinking water from the city's upstate reservoirs has been high in quality and has consistently met federal and state health standards. But increased residential and commercial development, especially in the Croton watershed, has contributed significant storm-water runoff into rivers and streams that feed the upstate reservoirs. In addition, by the early 1990s more than 100 sewage plants were discharging treated wastewaters into watershed tributaries. As a result of these and other conditions, water quality in some reservoirs had begun to slip. To help protect against waterborne disease, the city agreed in 1998 to construct a large filtration plant to cleanse water from the Croton system. Filtration of Croton system water had

been contemplated for decades before the U.S. Environmental Protection Agency (EPA) determined in the early 1990s that Croton filtration was necessary for city compliance with the federal Safe Drinking Water Act. Still, the siting of the plant at the Mosholu Golf Course in Van Cortlandt Park was controversial. The projected cost of the facility, originally estimated at $660 million in 1998, had jumped to approximately $2.8 billion a decade later. The city expects that the plant, designed to treat up to 290 million gallons (1098 million liters) of water a day by filtering microbiological contaminants, will also alleviate intermittent problems with color, odor, and taste and enhance the dependability of the Croton supply. The facility was scheduled to begin operating in 2012.

In an effort to prevent pollution at its source and stave off filtration for the much larger Catskill and Delaware systems, the city in the early 1990s began efforts to implement a watershed protection strategy. In 1992 city environmental protection commissioner Albert Appleton launched a cooperative program with upstate farmers to reduce agricultural runoff into watershed tributaries. By 2008 more than 450 participating farms had implemented best management practices. But an upstate coalition objected to new city rules governing other watershed activities and sued to block their implementation. In 1997 city, state, and watershed stakeholders signed a milestone accord, brokered by Governor George Pataki, that bridged the impasse. The upstate-downstate watershed agreement provided for the city's acquisition from willing sellers of critical land parcels around reservoirs and tributaries, for city-funded upgrades to watershed sewage plants, and for the application of new rules governing storm-water discharges and other polluting activities in the watershed. New partnership programs to benefit watershed communities were also funded as part of the city's 10-year, $1.5-billion watershed protection initiative. In response to the city's commitment to implementing these and other programs and to continuing to meet water-quality standards, the EPA granted the city a filtration waiver for the Catskill and Delaware systems. The EPA issued a 10-year renewal of that waiver, adding additional requirements, in 2007. By then the costs to construct massive filtration facilities

for the Catskill and Delaware systems had been estimated at $10 billion or more, providing a further incentive for successful implementation of the watershed protection approach.

water fountains. Public drinking fountains became common after completion of the Croton Aqueduct in 1842 brought a plentiful supply of clean water to the city. Individuals and private organizations funded fountains during the nineteenth century, especially temperance reformers, who believed that residents would drink less alcohol if they had ready access to cold, fresh drinking water. In 1888 Henry D. Cogswell (1820–1900), a San Francisco dentist and temperance reformer, built an ornate fountain in Tompkins Square Park. The American Society for the Prevention of Cruelty to Animals (ASPCA) installed dozens of fountains for people and animals from the time of its founding in 1866. The Hooper Fountain (1894), funded at the bequest of newspaperman John Hooper, provided water for people, horses, and dogs at 155th Street and Edgecombe Avenue and was landmarked in 1992. An ice water fountain was installed at the main post office on Eighth Avenue at 34th Street in 1880. In 1906 there were fewer than 50 such fountains in the city. Robert Moses installed fountains in city parks after he became parks commissioner in 1934; by the early twenty-first century parks contained more than 2400 fountains, although a survey in 2000 found many inoperable and needing repair.

Water fountain, 2009

Kate Lauber

waterfront development. New York City's waterfront developed in a pattern similar to that in most North American cities (with the exception of Chicago): dock building augmented by warehouses for shipping (1647–1980s), followed by peripheral railroad lines and factories (1846–1911), highways constructed over or replacing railroad tracks (1898–1950s), and housing and recreational facilities (1980s to the present) supplanting or reusing abandoned piers, warehouses, and factories.

The first wave of waterfront development began on the East River in Manhattan with the construction of Schreyer's Hook Dock near today's South Street Seaport. The port and its related activities were the city's economic engine. In 1814 Robert Fulton inaugurated regularly scheduled steam ferry service to Manhattan from what is now known as Fulton Landing in Brooklyn, introducing waterfront transportation activities to that area. The advent of steam allowed the port to expand to Manhattan's West Side along the Hudson River and catapulted New York City to national shipping supremacy.

In the mid-nineteenth century streets, private warehouses, and docks formed the edges of Manhattan below 42nd Street and much of Brooklyn's East River waterfront between Fulton Landing and Red Hook. By building tracks on existing streets behind the piers, railroads such as the Hudson River Railroad (opened in 1846 on Manhattan's 12th Avenue linking New York City with Albany) boosted commerce. Soon tracks lined the waterfronts of Brooklyn, the west Bronx, and Staten Island's north shore. Easy access to transportation by both land and sea paved the way for factories producing iron, sugar, pianos, and paper between and beyond the waterfront warehouses in all of the boroughs except the Bronx.

Twentieth-century technological improvements added another stratum and a new structure to the city's waterfront. Given the need to accommodate the widespread use of cars and trucks after World War I, the Hudson River and East River shorelines provided cheap land and minimal disruption for building highways. Construction on East River Drive began in 1929, followed two years later by the elevated West Side Highway. Expansion of this system continued on the periphery of Manhattan, Brooklyn, and portions of Queens and the Bronx into the 1950s.

During the Great Depression the federal government financed public housing projects along the water; shipping activities had moved elsewhere. From the Vladeck Houses on Manhattan's Lower East Side (1940) to Red Hook in Brooklyn and Queensbridge in Queens (1937), subsidized housing provided jobs and apartments with waterfront views. This pattern expanded into the Bronx in the 1970s with the construction of the state-subsidized Harlem River Park Towers on the Harlem River.

In the 1960s containerization caused the decline of the city's port economy and opened the door to higher class housing and recreational use of the waterfront. The needs of huge deep-draft ships rendered the city's narrow finger piers obsolete. In addition, jet aircraft created a new land use in the marshes of Jamaica Bay in Queens and the Long Island Sound waterfronts, reduced passenger ship travel, and left even more piers useless.

Between 1960 and 1980, despite city studies encouraging growth at the edge, the combination of vain hope for port revival and a sagging economy caused waterfront development to come to a virtual standstill. But there were inroads in upscale housing. The opening of the Verrazano–Narrows Bridge (1964) caused a single-family housing boom along the shores of Staten Island. A private developer used state Mitchell–Lama funds to build Waterside on the East River in Manhattan (1965), and the state created 92 acres (37 hectares) of landfill to begin Battery Park City (1968). In 1977 the city Landmarks Preservation Commission formed the Fulton Ferry Landing Historic District, the state opened a small park, and artists moved into former warehouse lofts. Thus began the slow transformation of the area between the Brooklyn and Manhattan bridges into an office and residential community.

By the early twenty-first century, helped by a combination of public policy and a robust economy, New York City's waterfront has been largely transformed into a residential/recreational resource. The Waterfront Revitalization Plan (1982) required public access in any new waterfront project. The demise of the controversial Westway building project by 1990 was followed by city and state investment in a 5-mile-long (8-kilometer-long) waterfront park on the Hudson River from the Battery to 59th Street that includes the reuse of many outmoded piers. In place of Manhattan's once vibrant port economy, private developers sought financing for luxury apartment houses and offices designed by architects such as Richard Meier and Frank Gehry. Donald Trump's Riverside South opened on platforms above the former Hudson River Railroad yard. In Queens, a César Pelli–designed high-rise apartment tower initiated the redevelopment of Queens West. Under the aegis of the Port Authority of New York and New Jersey, the city, and the state, a former landing for freight bound to and from Long Island became Gantry Plaza Park. More luxury apartment towers with accompanying parkland were in the works from Queens West northward along the East River. In Brooklyn, old warehouses on the Red Hook peninsula were transformed into mixed-use housing, shops, and light manufacturing businesses. In 2006 the city's

Department of Planning rezoned 134 blocks along the Williamsburg/Greenpoint East River waterfront from manufacturing to residential. Thus began the transformation of Brooklyn's vacant, industrial waterfront into luxury housing with required low-income components and parkland. On Piers 1–6, built by the Port Authority of New York and New Jersey in 1950 to replace turn-of-the-century shipping facilities, the city and state made plans for an innovative 1.3-mile (2.1-kilometer) park running from Atlantic Avenue to the Manhattan Bridge.

Ann L. Buttenwieser

Waterfront Priest [Corridan, John M.] (*b* New York City, 15 June 1911; *d* New York City, 1 July 1984). Reformer, priest, and teacher. He was born in Harlem, attended New York University's School of Commerce, and then studied theology, becoming a Jesuit priest in 1945. Subsequently appointed the associate director of the Xavier Institute of Labor Relations on West 16th Street, he encountered rampant corruption among longshoremen on the docks, where gangsters, with the cooperation of union officials, often took kickbacks for jobs. His exposure of the corruption led to congressional hearings and the formation of the watchdog Waterfront Commission in 1953. He became known as the Waterfront Priest, which is also the title of a 1955 biography by *New York Times* reporter Allen Raymond. The role of Father Barry in the classic film *On the Waterfront* was loosely based on Corridan. He went on to teach economics and theology and served as hospital chaplain in Brooklyn from 1967 until 1981.He is buried in Jesuit Cemetery in Auriesville, Montgomery County, New York.

Nicholas Kelly

Watering Place. Name applied in colonial times to Tompkinsville.

Waters, Ethel (*b* Chester, Pa., 31 Oct 1896; *d* Los Angeles, 1 Sept 1977). Singer. She moved to Harlem during World War I. Her first performance in New York City came with a one-week engagement at the Lincoln Theater followed by an appearance in *Hello, 1919!* at the Lafayette Theater in Harlem. She made her debut on Broadway in 1927 as the lead in the all-black production *Africana,* written by Earl Dancer and Donald Heywood. In 1933 the songwriter Irving Berlin heard her sing "Stormy Weather" at the Cotton Club and invited her to act in his play *As Thousands Cheer;* she made many appearances on stage, in films, and on television during the next three decades. She is best known for her performances of the songs "Dinah" (recorded in 1926); "Black and Blue" (1929), by Andy Razaf, Fats Waller, and Harry Brooks; "Harlem on My Mind" (1933), by Berlin; and "Stormy Weather" (1933), by Harold Arlen. She sang with the evangelist Billy Graham from 1960 to 1975. Waters was one of the first black singers to achieve widespread popularity and also among the first to blend jazz and popular music. With Charles Samuels she wrote *His Eye Is on the Sparrow* (1951).

Loren Schoenberg

water tanks and towers. Elevated water storage and distribution devices. New York City is one of very few large U.S. cities that primarily depend on gravity to distribute water through rooftop water tanks. The city's water supply does not have sufficient pressure to lift water to upper stories of taller buildings. Because pressure increases with height, structures taller than seven stories have rooftop storage tanks that are fed by pumps and that feed the building below by gravity.

The first large water tank is believed to be one put up in 1800 by Aaron Burr's Manhattan Company on Chambers Street. With Doric columns and a statue of Oceanus, this free-standing iron and masonry 132,600-gallon (501,945-liter) tank stood 15 feet (4.5 meters) above the street and was fed from a well by a 3.5-foot-diameter (1-meter-diameter) standpipe and a horse-driven pump. The company was soon making a profit providing water to clean city streets and to suit the needs of 1400 home subscribers. By 1830 an elevated tower almost twice as large and charged by a steam pump was erected at Broadway and 13th Street. After water began to flow into the city through aqueducts from Croton and other upstate reservoirs in the 1840s, water pressure was sufficient to supply the typical low building. The Highbridge Water Tower, with a height of 185 feet (56.3 meters) and capacity of 47,000 gallons (177,814 liters), was built in 1872 at 174th Street and Amsterdam Avenue to provide hilly northern Manhattan with water that crossed the Harlem River over the High Bridge Aqueduct. The Highbridge Water Tower still stands.

Water tower, 2009

The technology and appearance of water tanks have changed little over the years. Lower buildings still are not required to have them. Most tanks are constructed like barrels, with wooden staves, while some are made of steel. Most wooden tanks contain 5000 to 10,000 gallons (18,927 to 37,854 liters) of water, need regular maintenance, are covered to keep birds out of the water, and usually are replaced about every 25 years. The city had only two manufacturers and servicers in 2007, Isseks Brothers, founded in 1890, and the Rosenwach Tank Company, founded in 1896. The city is expected to continue to be dependent on its distinctive tanks and towers until (and if) pumps are installed throughout the city's water system.

J. N. Hazelhurst, *Towers and Tanks for Water Works* (New York: Wiley, 1901)

John Rousmaniere

waterways. The waterways of New York City were the reason for the city's founding and an important asset in its growth and development. Their rich marine life was a source of food to the Indians and early colonists. Henry Hudson wrote eloquently of the ample, sheltered harbor, and the early Dutch colonists took advantage of its deep, ice-free waters. The strategic importance of New York Harbor was recognized by the British, who before the Battle of Long Island in the late summer of 1776 were able to assemble in the protected waters of Lower New York Bay a gigantic fleet of 32 men-o'-war and 400 supply ships, as well as their huge army of 32,000 (at the time this was the largest gathering of warships in history). After the American Revolution and well into the twentieth century the harbor was crisscrossed by an extensive network of ferries. The port's strategic importance prompted the government to build defensive forts along the major waterways leading into the harbor. The Brooklyn and Manhattan docks remained important in world commerce until after World War II, when the growth of container shipping redirected most traffic to New Jersey, especially Port Newark–Elizabeth and to a lesser extent the western shore of the Hudson River. Some commercial shipping remained along the waterfront in Brooklyn between Erie Basin and Brooklyn Heights.

Over the years the waterways of New York City became polluted and the marine life virtually disappeared. Efforts by the city and surrounding communities in the 1970s and

1980s to control the dumping of raw sewage and toxic waste produced favorable results, and many of the fish species returned. In the early twenty-first century the Hudson River remained an important link for waterborne traffic to points as far upstate as Albany; among the vessels that navigated its waters were the Staten Island Ferry, excursion boats to the Statue of Liberty and Ellis Island, and around Manhattan, water taxis, new and faster ferry lines to Queens and New Jersey, a few tourist boats from the South Street Seaport, and private passenger yachts.

New York Harbor has 65 square miles (168 square kilometers) of inland waterways and 772 miles (1242 kilometers) of direct shoreline, of which more than 580 miles (933 kilometers) are within the corporate boundaries of New York City. The most important commercial waterways are Lower New York Bay, Upper New York Bay, and Newark Bay; the tidal estuaries Kill van Kull, Arthur Kill, Gowanus Canal, and, in the East River, Newtown Creek, an oily and polluted tidal inlet 4 miles (6.5 kilometers) long that separates Brooklyn from Queens; Long Island Sound (an important means of access to the harbor, connecting the Atlantic Ocean with the East River); and the Hudson River. Other waterways include Gravesend Bay, Jamaica Bay, Flushing Bay, Little Neck Bay, and Raritan Bay, the tidal estuary Harlem River (including Spuyten Duyvil Creek), the Hackensack River, the Passaic River, the Raritan River, the Bronx River, Rockaway Inlet, the Gowanus Canal (not a canal but a drab, polluted tidal tributary of Gowanus Bay within the Upper Bay, adjacent to Erie Basin), and several creeks, rivulets, inlets, and small streams.

Gerard R. Wolfe

Watson, John B(roadus) (*b* Greenville, S.C., 9 Jan 1878; *d* New York City, 25 Sept 1958). Psychologist. He was a professor of experimental and comparative psychology at Johns Hopkins University (1908–22). In 1913 he announced the principles of behaviorism, stressing the predominant role of training and environment in shaping human behavior and minimizing the importance of heredity. His belief that external "reinforcements" rather than heredity or inner character determine human actions drew considerable criticism from many who saw his approach as overly mechanistic. He nevertheless continued to advance his theories, drawing support from his own experiments as well as from the work of Edward L. Thorndike at Columbia University, B. F. Skinner at Harvard University, and Ivan Pavlov in Russia. His contentious and highly publicized divorce and remarriage led to his dismissal from Johns Hopkins in 1922. He then moved to New York City, where he entered the growing field of advertising and used behavioral principles to analyze what motivated consumers; he rose rapidly in the field and in 1924 became a vice president at the firm of J. Walter Thompson. In the late 1920s he also resumed his scholarly work: he gave lectures part time at the New School for Social Research, conducted new experiments in the field of child psychology, and published many articles. Watson became a vice president in 1934 of the William Esty Company, an advertising agency, where he remained until his retirement in 1945.

Sandra Opdycke

Watson, Jr., Thomas J. (*b* Dayton, Ohio, 14 Jan 1914; *d* Greenwich, Conn., 31 Dec 1993). Businessman. He moved to Manhattan in 1937 to work as a salesman for International Business Machines (IBM). In 1952 he was elected president of the company and four years later became its chief executive officer, succeeding his father. Watson, Jr., oversaw the transformation of IBM's typewriters to computers and seemed to recognize early the importance of electronics. He also moved IBM's headquarters out of Manhattan, relocating them in Armonk, New York. He stepped down as chairman and CEO in 1971, though he remained a member of the company's board until 1984. From 1979 to 1981 he took a leave from IBM to serve as the U.S. ambassador to the Soviet Union, advocating for nuclear arms reduction. *Fortune* magazine called him the "greatest capitalist who ever lived."

Thomas J. Watson, Jr., and Peter Petre, *Father, Son & Co: My Life at IBM and Beyond* (New York: Bantam, 1990)

Jessica Montesano

Wavecrest. Southwestern section of Far Rockaway in southeastern Queens, bounded to the north by the tracks of the Rockaway subway line, to the east by Beach 20th Street, to the south by the Atlantic Ocean, and to the west by Beach 32nd Street. The land was purchased in 1878 by Charles H. Cheever and an association of investors from Manhattan. It consisted of 80 acres (32 hectares) of upland and was enclosed as an exclusive park with lodges and gate entrances. Building began in 1880, with the "cottages" originally ranging in value from $5000 to $50,000. The owners were obviously wealthy: railroad presidents, insurance executives, and investors from Wall Street. After World War I the estates were broken up, streets laid out, and apartment buildings erected. The name is obsolete except for use by a few stores and the housing development Wavecrest Gardens.

Vincent Seyfried

Wave Hill. Estate and public garden on 28 acres (11 hectares) overlooking the Hudson River in Riverdale in the Bronx. A gray stone mansion built in 1843 by the lawyer William Lewis Morris was purchased as a summer home by the publisher William Henry Appleton in 1866, who added greenhouses and exotic gardens and during the summers of 1870 and 1871 rented the estate to the family of Theodore Roosevelt. The financier George W. Perkins acquired the property in 1893, assembled a large wooded parcel around it, and in 1910 added an underground recreation building with a bowling alley. He rented the stone house to Mark Twain (1901–3) and then to Bashford Dean, an ichthyologist at the

Wave Hill, 1965

American Museum of Natural History (1909); Dean built the Armor Hall as a private museum adjoining the main building. After Perkins died in 1920 his wife Evelina Ball Perkins lived in Glyndor, a smaller house on the property. The stone house was later rented to the conductor Arturo Toscanini (1942–45) and to the British delegation to the United Nations (1950–56). At the suggestion of parks commissioner Robert Moses, the Perkins and Freeman families in 1960 deeded Wave Hill to the City of New York, which made it into a botanical garden and nonprofit center for the study of the arts and nature.

Michele Herman

weather. The weather in New York City is controlled largely by the jet stream, a strong westerly wind that meanders across the middle latitudes of North America at an altitude of 25,000 to 45,000 feet (7600 to 13,700 meters), usually passing north of the city over northern New York State and southern Quebec but occasionally dipping as far south as the Carolinas. Its movement causes the confluence of warm, moist air from the tropics and cold, dry air from the polar regions. Low and high pressure systems, carried by the jet stream, move through the metropolitan area quickly in winter and more slowly in summer. The primary storm track runs from the Great Lakes and down the St. Lawrence Valley to the Atlantic provinces of Canada after sweeping through Quebec, New York State, and New England, its storm systems usually lasting only a few days and accompanied by fronts that bring shifting winds and a change of weather.

A second important storm track carries storms from the Gulf of Mexico and the Southeast up the Atlantic seaboard from the Carolinas to Maine, including northeasters in winter and tropical storms and hurricanes in summer and autumn. These systems rarely last more than 24 to 36 hours but supply much of the city's precipitation, which amounts to an annual average of 44.12 inches (1122.6 millimeters) and is spread fairly evenly throughout the year: an average of 3.38 inches (85.9 millimeters) falls each month in winter, 3.91 inches (99.3 millimeters) in spring, 3.68 inches (93.5 millimeters) in summer, and 3.74 inches (95.0 millimeters) in autumn. The driest month is February, with 3.13 inches (79.5 millimeters), and the wettest is March, with 4.22 inches (107.2 millimeters), when air from the warming south clashes with Arctic air. About 28.8 inches (73.2 centimeters) of snow falls each year, and snowstorms producing 10 inches (25.4 centimeters) or more occur about once every three to four years. Humidity varies widely, averaging 72 percent at 7:00 a.m. and 56 percent at 1:00 p.m. annually at the Central Park Observatory.

Proximity to several rivers and the Atlantic Ocean causes wind speeds to be higher than those in many landlocked areas. According to the anemometer at the Central Park Observatory, which stands 68 feet (20.7 meters) above ground level, the average wind speed is 9.4 miles (15 kilometers) an hour; the windiest month is March, the calmest ones are July and August, and the prevailing direction is northwest from November to April and southwest from May to October. Arctic blasts from the Canadian tundra can lower the temperature to less than 0°F (−17.8°C), and southwest winds can drive it above 100°F (37.8°C). The average annual temperature is 54.5°F (12.5°C), and average winter and summer temperatures differ by 45.3°F (25.2°C), from 31.5°F (−0.3°C) in January to 76.8°F (24.9°C) in July. During the coldest period of the year, from about 10 December to 4 March, the average temperature is 38°F (3.3°C) or colder, and during the warmest period, from about 7 June to 12 September, the average is 70°F (21.1°C) or warmer. The temperature–humidity index, a measure of human comfort, often rises above 75 in summer.

The climate of the metropolitan area warmed and cooled after the end of the last ice age (about 12,000 B.P.). A "climate optimum," or period of warmth, occurred about 5000 B.P. and was followed by fluctuations in temperature. After 1000 C.E. a period of cooling culminated in the "little ice age" between 1650 and 1850, when temperatures were about 2° to 3°F (1.1° to 1.7°C) cooler than those of the early twenty-first century. The severest winters of the eighteenth century were those of 1740–41 and 1779–80. During both, the Hudson and East rivers froze over, and in the winter of 1779–80 (known as "the hard winter") New York Bay became so solidly frozen for five weeks that the British were able to drag heavy cannon over it to fortify outposts against American attacks.

Extreme weather included hurricanes. On 3 September 1821 the center of the Cape May–Long Island Hurricane passed over part of the city near Jamaica Bay, blowing down thousands of trees in the metropolitan area. The high tide, estimated at 9 feet (2.7 meters) above normal, set a record and caused flooding at the Battery and in much of downtown Manhattan. This was the first indication of a hurricane coming up the coast from North Carolina. According to one report, "Everywhere, so far as heard from outside the Capes and in the Chesapeake Bay, the wind blew with great fury, producing an almost unprecedented heavy sea." The storm capsized a ferry boat in Philadelphia, killing 20 people. Within a few hours thousands of New York City roofs were blowing off houses, and hundreds of ships were dragging anchor or snapping their cables. In the hurricane's dangerous right-hand sector lay the approaches to New York City, where many vessels were approaching the city in the great funnel between New Jersey and Long Island with no knowledge that they were sailing into a storm. This storm drove the ship *Elizabeth* ashore at Fire Island, killing the American writer Margaret Fuller Ossoli.

The first continuous series of weather observations in the city was made by William Laight and his son Henry Laight at various places in lower Manhattan between 1788 and 1836; a trustworthy series was undertaken in 1822 by the U.S. Army Hospital at Fort Columbus on Governors Island, and from 1826 to 1863 the academies Union Hall in Jamaica and Erasmus Hall in Flatbush gathered information about the weather for the New York State Regents.

By the mid-nineteenth century the first weather maps were printed in New York City's newspapers. The city opened the Central Park Observatory and began collecting data in 1869, and a federal weather station was opened in lower Manhattan by the U.S. Signal Service in 1870; this was taken over in 1891 by the U.S. Weather Bureau. During the coldest month of the nineteenth century, January 1857, the average temperature was 19.7°F (−6.8°C), the East River froze solid, and Long Island Sound was icebound for 30 days. A storm known as the "cold storm" struck on 18 January and continued through the next day, leaving 12 inches (30.5 centimeters) of snow as temperatures hovered at about 0°F (−17.8°C) before dropping to −9°F (−22.8°C) on 24 January. In September 1882 two tropical storms dropped 15.44 inches (392.2 millimeters) of rain in the area in 13 days.

The city's best-known storm, the blizzard of 1888, began a few minutes after midnight on 12 March when rain changed to snow; the temperature dropped to 6°F (−14.4°C), a gale-force wind rose, and 21 inches (53.3 centimeters) of snow fell, most of it during a period of 16 hours. Enormous drifts caused most activities to be suspended until the morning of 15 March, and the East River froze over. Hundreds of power and telephone lines were toppled, leading the utilities to lay new lines beneath the street. Successive storms in March 1896 dropped 30.5 inches (77.5 centimeters) of snow, the largest amount recorded for one month.

The first decades of the twentieth century witnessed many severe storms. On 8–9 October 1903 a dissipating tropical storm dropped 11.63 inches (295 millimeters) of rain. During a coastal storm on 1 March 1914 the extremely low barometric pressure of 28.37 inches (960.7 millibars) was recorded. The severest winter of the modern period was that of 1917–18: the average temperature was 25.7°F (−3.5°C), with a low of −13°F (−25.0°C) in December, −4°F (−20.0°C) in January, and −6°F (−21.1°C) in February; New York Harbor became clogged by ice floes, and 27.3 inches (69.4 centimeters) of snow fell in December and January. The earliest snowflakes observed by a weather reporter occurred on 10 October 1925. In

February 1934 the average temperature was 19.9°F (−6.7°C), only 10 days had a maximum above 32°F (0°C), and there was a freeze every night. On 9 February a temperature of −15°F (−26.1°C) was recorded at the Central Park Observatory. Summers were unusually hot during the 1930s, and on 9 July 1936 the temperature reached 106°F (41.1°C). When the western edge of the Long Island–New England Hurricane swept the city on 21 September 1938, the barometer dropped to 28.62 inches (969.2 millibars), and 4.05 inches (102.9 millimeters) of rain fell. The wind blew at 35 miles (56 kilometers) an hour, a gust of 80 miles (128 kilometers) an hour was recorded by an anemometer 454 feet (138 meters) above the Battery, and the tide surging in from Long Island Sound rose 9 feet (2.7 meters) in the East River, causing flooding; most subways stopped running, and power outages were widespread.

Extreme weather conditions continued to visit the city occasionally. In a severe storm that began on 26 December 1947, snow fell at a rate of 2.8 inches (7.1 centimeters) an hour during part of the afternoon; it drifted during the evening and at night, when the wind rose to 30 miles (48 kilometers) an hour. By the next day 26.4 inches (67.1 centimeters) of snow had fallen, and traffic was immobilized for three days; the winter brought 63.2 inches (160.5 centimeters) of snow, setting a record. During the "great Appalachian wind storm" on 25 November 1950 the wind speed averaged 26.6 miles (42.6 kilometers) an hour for 24 hours. A sustained wind of 70 miles (112 kilometers) an hour was recorded, a gust of 90 miles (144 kilometers) an hour hit Idlewild Airport, and high tides closed La Guardia Airport. On 15 October 1954 a gust of 113 miles (181 kilometers) an hour was recorded by an anemometer 484 feet (147 meters) above the Battery during Hurricane Hazel, the center of which passed over Pennsylvania.

Drought conditions during the 1960s forced the city to restrict the use of water. Between 1961 and 1966 precipitation averaged only 80 percent of normal: it fell to 0.14 inches (3.6 millimeters) during the driest month (October 1963), and in December 1964 the reservoirs fell to 26 percent of capacity (compared with a normal figure of 73.2 percent of capacity). The driest year was 1965, with only 26.09 inches (738.9 millimeters) of precipitation. On 9–10 February 1969 a snowstorm dropped 20.2 inches of snow (51.3 centimeters) at John F. Kennedy Airport (which was completely shut down), 16.1 inches (40.9 centimeters) at La Guardia Airport, and 15.3 inches (38.9 centimeters) in Central Park. Snow was not cleared from outlying areas of the city for days, leading critics to name the storm "Mayor Lindsay's storm," with political repercussions.

In 1972 there were 67.03 inches (1702.6 millimeters) of precipitation, or 152 percent of the normal amount, yet over the winter of 1972–73, only 2.8 inches (7.1 centimeters) of snow fell in Central Park; on 6–7 February 1978 and 11–12 February 1983 storms produced 17.7 inches (45.0 centimeters) of snow total. Barometer readings reached a high of 31.08 inches (1052.2 millibars) on 12 February 1981, when a large anticyclone covered the Northeast.

One of the city's notable weather events was the winter of 1993–94, when snow and ice remained on the ground for more than two months, from 29 December to 8 March, and snowfall totaled 53.4 inches (135.6 centimeters). The greatest single storm that year of 12.8 inches (32.2 centimeters), on 11–12 February, left the winter's maximum depth of 22.0 inches (30.5 centimeters) on the ground. December averaged 0.7°F (0.4°C) above normal, January 5.9°F (3.3°C) below normal, February 3.0°F (1.7°C) below normal, and March 1.7°F (0.9°C) below normal. The winter's lowest temperature of −2.0°F (−18.9°C) occurred on 19 January. Although records were not set for snow or cold, the persistence of icy streets and sidewalks heightened the impression of an unusually hard winter.

Unusual weather patterns became frequent. Air pollution over the city caused temperature inversions that trapped heat radiated from buildings and paved surfaces, allowing temperatures to build and remain higher than those in surrounding suburbs, especially at night. Twenty of the 30 summer months between 1980 and 1989 had temperatures above average (in the warmest, August 1980, the average was 80.3°F, or 26.8°C), leading some observers to wonder whether a global warming trend was beginning. July 1999 was New York City's hottest month on record, with an average temperature of 81.4°F (27.4°C), well above the July average of 77.2°F (25.1°C). The temperature was over 90°F (32.2°C) on 18 days, 11 of them consecutive. On two nights in July 1999 the temperature never dropped below 86°F (30°C).

New York City has always experienced extremes, but they seemed especially dramatic in the late twentieth and early twenty-first centuries. The city's highest recorded temperature was 102°F (38.9°C), in July of 1966; the lowest was −4°F (−20°C), in January of 1994. Snowflakes fell on the city on 9 May 1977. When the city's temperature rose to 72°F (22.2°C) on 6 January 2007, many blamed global warming.

Weaver, [Susan] Sigourney (Alexandra)

(*b* New York City, 8 Oct 1949). Actress. The daughter of *The Today Show* creator Sylvester "Pat" Weaver, she studied acting at Stanford University and the Yale School of Drama. She started her career in New York City Off-Off-Broadway and made her film debut in Woody Allen's *Annie Hall* (1977). Her work in Ridley Scott's *Alien* (1979) immediately earned her recognition in Hollywood. She has since starred in plays in New York City, including *Hurly Burly* (1984), *The Merchant of Venice* (1987), *The Mercy Seat* (2002), and *Crazy Mary* (2007). Weaver, a three-time Academy Award nominee, continues to support and participate in the Off-Off-Broadway community alongside her husband Jim Simpson, director of the Flea Theater in Tribeca. Though she spends part of her time in Los Angeles, she defines herself as a New Yorker.

Cecilia Magnusson

Weavers. Folk-singing group formed in 1948 by Pete Seeger (*b* 1919), Lee Hays (1914–81), Ronnie Gilbert (*b* 1926), and Fred Hellerman (*b* 1927). They first performed in Greenwich Village. They became popular for incorporating traditional folk songs, contemporary topical and political songs, ballads, and love songs into their repertory; they also blended folk tunes and harmonies with the rhythms of modern popular music. In 1950 the group made its first hit recording, "Good Night, Irene" by Leadbelly; by 1953 it had sold more than four million records. "If I Had a Hammer," by Hays and Seeger, became one of the group's most popular songs. Supporters of civil rights and opponents of the cold war, the Weavers often allied themselves with the causes of the Communist Party and were persecuted by the Federal Bureau of Investigation. At the height of their popularity they were blacklisted from national television and nightclubs in New York City; their subsequent inability to obtain bookings forced them to disband in 1953, though they reformed in 1955. After Seeger left in 1958 to begin a career as a soloist, the group continued without him until 1963. The original members gave a reunion concert at Carnegie Hall in November 1980 that was shown on public television as *Wasn't That a Time* in 1982. Seeger continued his solo career and his advocacy of social change and became a strong supporter of such environmental causes as protecting the Hudson River. In the 1980s Gilbert resumed singing to give concert tours with the singer, feminist, and social activist Holly Near. Although they sang together for only a short time, the Weavers had a tremendous influence on the repertory and performance styles of American folk music.

David K. Dunaway, *How Can I Keep from Singing: Pete Seeger* (New York: McGraw–Hill, 1981)

Barbara L. Tischler

Webb, Chick [William Henry] (*b* Baltimore, 10 Feb 1909; *d* Baltimore, 16 June 1939). Drummer and leader of the Chick Webb Orchestra, one of the most popular swing bands of the 1930s. As a drummer he was admired for his speed, power, drive, tonal shadings, breaks, dynamic control, and showmanship. At the Savoy Ballroom in Harlem, where his orchestra was the house band, Webb wrote the song "Stompin' at the Savoy" (1934) with Edgar Sampson. The following year the singer Ella Fitzgerald joined the band.

Douglas Henry Daniels

Webb, William H(enry) (*b* New York City, 19 June 1816; *d* 30 Oct 1899). Son of shipbuilder Isaac Webb, co-owner of Webb and Allen shipyard on Lewis Street between Fifth and Seventh avenues, he apprenticed with his father's firm and trained abroad in Europe. Upon his father's death in 1840, Webb returned to New York City to run the shipyard. With his ability to integrate both artful design and careful construction into his vessels, he became one of the most respected naval architects of the nineteenth century. By the mid-1800s Webb and Allen employed 400 workers and produced fast clipper ships, such as the great *Young America* (1853), and packet ships, including the *Guy Mannering* (1849), which sailed between Liverpool and New York City. Webb built the ironclad warship USS *Dunderburg* (1865) for the Union navy during the Civil War. In 1889 he established and endowed the Webb Institute of Naval Architecture in suburban Glen Cove, N.Y.

Joseph Breen

Webb and Bell. Shipbuilding firm. Eckford Webb (1825–93) was one of the first shipbuilders to leave Manhattan for Greenpoint in Brooklyn as shipbuilding became a burgeoning industry in the area. He founded the firm near Newton Creek in 1850, and George W. Bell became a partner in 1856. Webb and Bell became famous for building the wooden caissons for the Brooklyn Bridge, stipulating payment in advance for the $100,274.51 bill. As the shipbuilding industry declined during the late nineteenth century, the firm focused on manufacturing oil and paint.

Kate Lauber

Weber, Max (*b* Bialystok, Russia, 18 April 1881; *d* Great Neck, N.Y., 4 Oct 1961). Painter, sculptor, and printmaker. He emigrated from Russia in 1891 and was a pupil of the noted educator Arthur Wesley Dow at the Pratt Institute. From 1905 he studied abroad: his teachers included Henri Matisse, who persuaded him to embrace modernism. After returning to New York City in 1909 he organized an exhibition in the following year of Henri Rousseau's work at Alfred Stieglitz's gallery "291." Inspired by the modern city, he produced abstract paintings (1914–15) and sculpture. He taught at the Clarence White School of Photography (1914–18) and from 1918 focused on themes of Jewish religious life. Weber developed an influential theory of the fourth dimension, a concept of a higher spiritual reality that transcended the physical world of appearances. He also wrote *Cubist Poems* (1913) and *Essays on Art* (1916). The Whitney Museum of American Art features some of his works.

Percy North, *Max Weber: American Modern* (New York: Jewish Museum, 1982)

Judith Zilczer

Weber and Fields. Team of comedians. It consisted of Joe (Joseph M.) Weber (*b* New York City, 11 Aug 1867; *d* Los Angeles, 10 May 1942) and Lew Fields (*b* New York City, 1 Jan 1867; *d* Beverly Hills, Calif., 20 July 1941), who first performed together as youths in small variety houses on the Bowery. The two specialized in knockabout routines performed in German dialect: Weber, short and stubby, was a foil to Fields, who was tall and bullying. In 1885 they formed a company presenting musical variety shows; this lasted until September 1896, when they became the proprietors of Weber and Fields Broadway Music Hall. There they presented burlesques and travesties of current theatrical productions, and the hall soon became a leading center of American theatrical activity. In 1904 the two ended their partnership; they resumed it in 1912 when they opened Weber and Fields New Music Hall and ended it again when this venture failed. Later they pursued independent careers and occasionally appeared together in vaudeville.

William Green

Webster Hall. Rental hall and later a nightclub at 119–125 East 11th Street between Third and Fourth avenues. It opened in 1886 as a hall for hire. Although it was rented for charitable and society events, it was better known for the labor unions, liberal groups, and radicals, such as Margaret Sanger and Emma Goldman, who used it for lectures, meetings, and rallies. The Progressive Labor Party and the Amalgamated Clothing Workers of America formed at Webster Hall. Starting in the 1910s, outlandish masquerade balls, the most notorious of which were sponsored by the socialist magazine *The Masses,* earned Webster Hall the nickname the Devil's Playhouse. By the late 1950s it had been converted into a recording studio for RCA Victor Records. Elvis Presley, Frank Sinatra, and Julie Andrews recorded there, as did the casts of *Hello, Dolly!* and *Fiddler on the Roof.* In the 1980s Webster Hall reemerged as a nightclub known as the Ritz. It is used early in the twenty-first century as a club and concert venue, again under its historic name, and was designated a city landmark in 2008.

Melissa Baldock

Wechsler, David (*b* Lespedi, Romania, 12 Jan 1896; *d* New York City, 2 May 1981). Psychologist. After studying with leading psychologists at universities in New York, London, and Paris, Wechsler completed his PhD in psychology in 1925 at Columbia University. In 1932 he became chief psychologist at Bellevue Psychiatric Hospital in Manhattan, a world leader among clinical psychology programs. Wechsler is best known for the debut in 1939 of his revolutionary Bellevue–Wechsler Intelligence Scale, which changed the procedure for calculating the intelligence quotient (IQ) and went beyond one IQ score to offer a 15-score "profile" of a person's abilities. He published *The Measurement of Adult Intelligence* in 1939. Since that year, the revised and expanded Wechsler test series has become a gold standard for assessing the mental abilities at three age levels: preschoolers, children, and adults. Wechsler's many awards from the American Psychological Association (APA) include clinical psychology (1960), school psychology (1973), and the APA Distinguished Professional Contribution Award in 1973.

Harold Takooshian

Wedtech scandal. Widely publicized political scandal involving a machine shop formed in 1965 by John Mariotta as the Welbilt Electronic Die Corporation at 595 Girard Avenue in the Bronx. The firm's efforts to employ members of minority groups qualified it for the "no-bid" programs of the Small Business Administration, and during the early 1980s it won an army contract for $32 million; eventually it grew into a business handling a total of $250 million in military contracts. In 1983 the firm changed its name to the Wedtech Corporation and became publicly owned. An investigation in 1984 uncovered evidence of bribery, influence peddling, misstatements made to shareholders, and the theft of millions of dollars by the firm's officers. The firm declared bankruptcy, and federal charges led to the convictions of Mariotta and about 20 government officials, including Bronx congressman Mario Biaggi and borough president Stanley Simon. Some convictions were reversed on appeal in view of the fact that star witness and former Wedtech president Anthony Guariglia had committed perjury.

Marilyn W. Thompson, *Feeding the Beast: How Wedtech Became the Most Corrupt Little Company in America* (New York: Scribner, 1990); James Traub, *Too Good to Be True: The Outlandish Story of Wedtech* (New York: Doubleday, 1990)

Val Ginter

Weegee [Fellig, Arthur H.] (*b* Zloczow, Austria [now in Poland], 12 June 1899; *d* New York City, 26 Dec 1968). Press photographer. He immigrated to the United States in 1920 and settled in New York City, where he joined Acme Newspictures in 1924. A freelance photographer from 1935, he concentrated on violent crime, accidents, and fires. In 1938 he became the only press photographer permitted to have a police radio in his automobile, a device that gave him an advantage over his competitors. Around 1940 he adopted his nickname (probably derived from the Ouija board) while working for the newspaper *PM.* He self-consciously played on his notoriety, calling himself "Weegee the Famous." He published *Naked City* (1945), a collection of his photography that later inspired a film version that took his career to Hollywood. He also made portraits of celebrities and world leaders, worked on assignment for glossy magazines, including *Vogue,* and later in his life sold his work to the Museum of Modern Art.

Weegee's New York: Photographs, 1935–1960 (New York: Schirmer–Mosel, 1982)

Madeline Rogers

Weeksville. Former neighborhood in Brooklyn, bounded to the north by Fulton Street, to the east by Ralph Avenue, to the south by Eastern Parkway, and to the west by Troy Avenue. The area was settled by blacks shortly after the abolition of slavery in New York State in 1827 and grew during and after the Civil War. It was named for James Weeks, a settler who moved there from Virginia in 1838; his property was formerly part of the vast estate of the Lefferts family. Susan Smith McKinney-Steward, the first black female physician in New York State and the third in the nation, was born in 1847 in the neighborhood, which was first shown on a map in 1849; the main street was Schenectady Avenue south of Atlantic Avenue. The residents sheltered many of the black victims of the New York City draft riots in 1863, and several soldiers who fought with the New York regiments of the United States Colored Troops came from this district. The area was once the site of the Howard Colored Orphanage Asylum, the Zion Home for Aged Relief, and the African Civilization Society. It lost its identity during the rapid growth of Brooklyn after the completion of the Brooklyn Bridge in 1883. From about 1968 the name Weeksville was revived, amid a growing interest in local history, historic preservation, and black heritage. The Hunterfly Road Houses, a city landmark at 1698–1708 Bergen Street, are the only surviving houses of a group built parallel to a seventeenth-century road. The Bethel Tabernacle African Methodist Episcopal Church (1847) and the Berean Missionary Baptist Church (1851) still serve the neighborhood; Colored School no. 2 (1847) became Public School 243 (the Weeksville School).

Weeksville, 2009

WeightWatchers. Weight-loss company. Founded in the early 1960s by Brooklyn native Jean Nidetch, the company grew out of the weekly support group meetings that Nidetch had with her friends about how to best lose weight. The company's strategy is to promote a healthy lifestyle, rather than dieting, as a way to achieve sustained weight loss. As part of the program, participants are encouraged to attend support group meetings. The Web site WeightWatchers.com was launched in 1999 and is based in New York City. In 2005 Weight Watchers International moved it headquarters to the MetLife Building at 11 Madison Avenue.

Jessica Montesano

Weill, Kurt (Julian) (*b* Dessau, Germany, 2 March 1900; *d* New York City, 3 April 1950). Composer. On 13 April 1933 his musical *The Threepenny Opera* premiered on Broadway, closing after 13 performances. With his wife, the actress and singer Lotte Lenya, he fled Nazi Germany and arrived in New York City on 10 September 1935; the two lived at the St. Moritz Hotel (50 Central Park South) before moving to an apartment at 231 East 62nd Street. During his years in New York City Weill wrote a number of successful musicals for the Broadway stage: *Knickerbocker Holiday* (1938), set in New Amsterdam; *One Touch of Venus* (1943, lyrics by Ogden Nash); *Street Scene* (1946, lyrics by Langston Hughes), set in a rundown neighborhood in New York City; *Love Life* (1948); and *Lost in the Stars* (1949). He bought a house in Rockland County in 1941 but continued to spend much time in the city. After his death *The Threepenny Opera* enjoyed great success, and the New York City Opera incorporated *Street Scene* into its repertory.

Marc Ferris

Weill Medical College of Cornell University. Medical school. Originally Cornell University Medical College, it was opened by the board of trustees of Cornell University in New York City on 14 April 1898, on the grounds of Bellevue Hospital. In 1900 it moved to a new building on First Avenue and 28th Street. The first graduating class of 58 students included 10 women. In 1912 the college became affiliated with New York Hospital; the two institutions agreed on 14 June 1927 to build the New York Hospital–Cornell Medical Center on York Avenue between 67th and 68th streets, which began receiving patients on 1 September 1932. In 2009 the school had 400 students who received clinical training at New York Hospital and other affiliated hospitals.

Comprehensive Medical Care and Teaching: A Report on the New York Hospital-Cornell Medical Center Program (Ithaca, N.Y.: Cornell University Press, 1967)

Adele A. Lerner

Weitling, Wilhelm (*b* Magdeburg [now in Germany], 5 Oct 1808; *d* New York City, 25 Jan 1871). Revolutionist. A tailor by trade, he was a prominent socialist during the 1840s. After fleeing Germany for Paris in 1837 he immigrated to the United States at the invitation of the Sozialreformassoziation, a radical German organization in New York City; there he formed the revolutionary group Befreiungsbund in 1846. An adherent of the labor theory of value, he proposed a labor exchange bank where workers would receive notes worth the value of their work. Unlike some of his contemporaries he shrank from encouraging open class warfare and saw communism and Christianity as compatible ethical systems. For this stance and his tendency to concentrate on problems of exchange rather than those pertaining to the mode of production, he was bitterly criticized by Karl Marx and Friedrich Engels but nonetheless became a popular and influential figure among radicals in New York City. He went to Germany for the revolution of 1848 and in 1850 returned to the city where he launched the German newspaper *Die Re-*

publik der Arbeiter (*The Workers' Republic*), formed the nationwide socialist organization Arbeiterbund (the Workingmen's League), and led the German labor council. After the Arbeiterbund collapsed and his newspaper ceased publication in 1855, he largely abandoned politics to work as a tailor and care for his family.

Kevin Kenny, Stanley Nadel

welfare. For a discussion of welfare in New York City see Poverty.

Welfare Hospital for Chronic Disease. Name used from 1939 to 1942 by Coler–Goldwater Specialty Hospital and Nursing Facility.

Welfare Island. Name applied between 1921 and the 1970s to Roosevelt Island.

Welles, (George) Orson (*b* Kenosha, Wis., 6 May 1915; *d* Los Angeles, 10 Oct 1985). Actor and director. After growing up primarily in Chicago, he moved to New York City in 1934, living at 319 West 14th Street in Manhattan until 1937. He toured in Off-Broadway productions and eventually established himself by directing unconventional interpretations of classic plays. In 1936, while working for the Federal Theater Project of the Works Progress Administration, he directed a modern version of *Macbeth* with an all-black cast; in 1937 he directed the "labor opera" *The Cradle Will Rock.* Welles and John Houseman formed the Mercury Theater in the same year. *Time* magazine proclaimed the 23-year-old Welles the "wonder boy" of Broadway in 1938. Aside from directing and acting, he and the Mercury Theater also had a radio show; their 1938 broadcast of H. G. Wells's *The War of the Worlds* was believed by some listeners to be an actual report of a Martian invasion. After 1940 Welles worked primarily as a director and actor. He moved to California in 1939 and became widely known for his films, including *Citizen Kane* (1941).

Frank Brady, *Citizen Welles: A Biography of Orson Welles* (New York: Scribner, 1989)

Max Seppo

Welsh. There were few Welsh residents in New York City in colonial times. Among them was Francis Lewis (1713–1802), an officer during the American Revolution and a signer of the Declaration of Independence; his son Morgan (1754–1844) became governor of New York in 1804. In 1790 Welsh immigrants accounted for 2.3 percent of the city's population. Poor harvests during the 1790s drove hundreds from Wales across the Atlantic, and the number increased after 1817 when estates in Wales were consolidated and rents and population there began to increase. Many of the Welsh who moved to the city settled near English and Scottish immigrants on the West Side and were accepted because they were British, literate, and Protestant. Welsh men often entered the building trades and quickly sought citizenship; they usually joined the Republican Party because it opposed the expansion of slavery before the Civil War and because the Democratic Party was dominated by the Irish. Welsh women became homemakers and domestic servants. Welsh immigrants were often evangelical and opened several chapels; these grew slowly because there was a shortage of ministers, the population was transient, quarrels broke out between denominations, and some members were attracted to other churches. Welsh societies were formed in 1801 by Congregationalists and in 1806 by Baptists but disbanded within a few years. After moving to the city in 1836 William Rowlands (*b* 10 Oct 1807; *d* 27 Oct 1866) revitalized the Calvinistic Methodist congregation, which moved in 1859 to a new building on 13th Street and in 1913 to 155th Street; he also launched the monthly publication *Y Cyfaill* (The Friend) and the weekly *Y Drych* (The Mirror), which by mid-century were moved to the larger Welsh center at Utica, New York.

There were 935 Welsh residents in Manhattan and 338 in Brooklyn in 1855. The minister Robert D. Thomas reported in 1872 that only half the Welsh population spoke Welsh and about a tenth attended Welsh services or took part in *gymanfas* (preaching and singing meetings) or *eisteddfods* (singing and poetry competitions). The St. David Society of the State of New York absorbed older benefit societies in 1886. Immigration decreased gradually after 1900, when there were 1686 Welsh immigrants (who had 2750 children), and more rapidly after 1914; by 1940 there were only 1296 Welsh inhabitants in the city. The Calvinistic Methodist Church in the United States merged with the Presbyterian Church in 1919, leading many former members of the congregation in the city to attend Welsh-language services at the Rutgers Presbyterian Church on 73rd Street. In the early twenty-first century the Welsh Congregational Church of New York still holds monthly services at Rutgers Presbyterian.

In March the St. David Society of New York celebrates the birthday of St. David (the patron saint of Wales) with songs and honors such distinguished Welsh Americans as Samuel Ellis, who once owned Ellis Island (his heirs sold it to New York State in 1808), and Charles Evans Hughes, the son of a Welsh Baptist minister, who became governor of New York, secretary of state under President Warren G. Harding, and chief justice of the United States.

David Maldwyn Ellis

Werblin, Sonny [David A(braham)] (*b* New York City, 17 March 1910; *d* New York City, 21 Nov 1991). Entrepreneur. He worked as a copy boy at the *New York Times* and then as an office worker at Music Corporation of America (MCA). He became a booking agent at MCA in 1934; he soon represented such performers as Johnny Carson, Elizabeth Taylor, Frank Sinatra, and Jackie Gleason. After becoming president of MCA in 1958, he led a group of investors that bought the football team the New York Titans in March 1963, which was renamed the New York Jets. In 1965 he retired from MCA to devote himself to the team, and in the same year he signed the quarterback Joe Namath to a three-year contract for $427,000, an enormous sum at the time. He also named Weeb Ewbank as head coach and general manager and built a team that won the Super Bowl in 1969. Before the beginning of the football season in 1968 he was bought out by his partners, including Leon Hess and the banker Townsend Martin, who resented the power that he wielded over the organization. Werblin took over Madison Square Garden in 1977 and also owned a share in the racetrack at Monmouth Park in New Jersey.

Janet Frankston

Wertham, Fredric (*b* Munich, Germany, 20 Mar 1895; *d* Kempton, Pa., 18 Nov 1981). Psychiatrist. He crusaded against comic books in the 1950s and argued in congressional testimony that they caused juvenile delinquency. His 1953 book *Seduction of the Innocent,* based on interviews with young offenders who said that they read comics, was scientifically flawed because he did not interview a control group of nondelinquents. Wertham studied medicine in Europe and became interested in Freudian theory. He immigrated to the United States in 1922 and moved to New York City in 1932 to direct a new psychiatric clinic for the city court system. He later became a professor of psychiatry at New York University, senior psychiatrist at the New York City Department of Hospitals, and director of a mental hygiene clinic in Harlem for mostly poor and African American patients. His article "Psychological Effects of School Segregation" was submitted as evidence in the litigation that led to the Supreme Court's 1954 decision in *Brown v. Board of Education.* Wertham first linked media entertainment to crime in his 1941 book *Dark Legend* about a young murderer who lived in a fantasy world fueled by movies, radio plays, and comics. Wertham's luridly illustrated and polemical *Seduction of the Innocent* was excerpted in *Reader's Digest* and *Ladies' Home Journal,* thereby expanding his influence. His 1954 testimony before Senator Estes Kefauver's committee investigating juvenile delinquency made a particular impact because of his medical credentials. *Seduction of the Innocent* attacked Western, science fiction, and superhero comics. It condemned the eroticization of violence as well as the "subtle atmosphere of homoeroticism which pervades the adventures of the mature Batman and his young friend Robin." Wertham's advocacy, and particularly his Senate testimony, motivated the industry

to create a Comics Code Authority, whose standards for a code seal of approval essentially killed the crime and horror genre.

Fredric Wertham, *Seduction of the Innocent* (New York: Rinehart, 1953); Marjorie Heins, *Not in Front of the Children: "Indecency," Censorship, and the Innocence of Youth* (New Brunswick, N.J.: Rutgers University Press, 2007)

Marjorie Heins

West, Mae [Mary Jane] (*b* Brooklyn, 17 Aug 1892; *d* Los Angeles, 22 Nov 1980). Actress and playwright. After making a successful debut as Baby Mae during an amateur night at the Royal Theater on Fulton Street in Brooklyn, she performed in 1911 at the Columbia Theatre on Broadway and in Ned Wayburn's production of *A la Broadway and Hello Paris.* Her distinctive manner, characterized by double entendres and suggestive movements and dress, both glorified and parodied conventional sexuality. In 1918 West incorporated her own version of the "shimmy," which she learned at black jazz clubs and cafés in Chicago, into her role as Mamie Dyne in Rudolf Friml's *Sometime.* Unable to find roles to her liking, she began to write her own plays. Her first, *Sex* (1925), was rejected by J. J. Shubert, so she produced the play herself. It opened at Daly's Theatre in 1926, and despite a ban on advertising it ran for 40 weeks until it was shut down by the Society for the Suppression of Vice. She was convicted on charges of "corrupting the morals of youth" and spent eight days in jail on Welfare Island. West's later Broadway plays included *The Wicked Age* (1927), in which she exposed the corruption of beauty contests, and *Diamond Lil* (1928), her most successful work, in which she portrayed a saloon singer on the Bowery in the 1890s. In 1932 she accepted a contract from Paramount Pictures and moved to Los Angeles. She is buried with her family in Brooklyn's Cypress Hill Cemetery.

Chad Ludington

West, Nathanael [Weinstein, Nathan Wallenstein] (*b* New York City, 17 Oct 1903; *d* near El Centro, Calif., 23 Dec 1940). Novelist. The son of Lithuanian immigrants, in 1926 after graduating from Brown University he changed his name to Nathanael West. He was introduced to a circle of writers for the *New Yorker* by a college classmate and brother-in-law S. J. Perelman. Working as a night manager at the Kenmore Hotel at East 23rd Street, he wrote his novel *Miss Lonelyhearts* (1933), which was set in Depression-era New York City. In 1933 he left New York City to pursue screenwriting in Hollywood, where he underwent periods of unemployment and wrote his highly acclaimed novel *The Day of the Locust* (1939). West died in an automobile crash and is buried in Mount Zion Cemetery in Queens.

Frank Morrow

Westbeth. Complex of several buildings in lower Manhattan, bounded to the north by Bethune Street, to the east by Washington Street, to the south by Bank Street, and to the west by West Street. Designed by Cyrus L. W. Eidlitz and others and built from 1880 to 1900, the buildings were used for research by the American Bell Telephone Company. The vacuum tube, the condenser microphone, and the transistor were all invented there. After the firm moved to New Jersey, the J. M. Kaplan Fund helped to convert the buildings into artists' housing in 1965; this marked the first conversion of industrial lofts into residential space on a large scale. The inner court as redesigned by Richard Meier and Associates is notable for its stark geometry and semicircular egress balconies.

John Voelcker

West Brighton (i). Name by which West New Brighton is sometimes known.

West Brighton (ii). Neighborhood in southwestern Brooklyn, bounded to the north by Neptune Avenue, to the east by Ocean Parkway, to the south by the Atlantic Ocean, and to the west by Stillwell Avenue; south of Surf Avenue stretches a network of narrow walks that were once crammed with restaurants, cheap hotels, carousels, roller coasters, saloons, and amusement stands. The name was most widely used during the late nineteenth century, when the blocks between West 10th and West 16th streets were among the most notorious in the nation and the first houses were built in an area known as the Gut along West First, Second, and Third streets. African Americans who worked at racetracks nearby and Jewish peddlers at the shore settled in the neighborhood. Substandard one- and two-story frame houses remained until the 1950s, when the land was cleared under urban renewal programs and used for more than 15 apartment buildings of 23 stories each, including Trump Village and the Warbasse Houses. The New York Aquarium, built in 1957 at West Eighth Street, became an important research center and tourist attraction. The 1980s saw an influx of immigrants from the Soviet Union. The hub of the neighborhood is a shopping center in Trump Village at West Fifth Street. In the early twenty-first century, recreational attractions included the ocean, the beach, Seaside Park, which offered summer concerts, and a small part of the amusement district of Coney Island.

Martha Munzer and Helen Vogel, *Block by Block: Rebuilding City Neighborhoods* (New York: Alfred A. Knopf, 1973)

Stephen Weinstein

Westchester Square. Neighborhood in the east central Bronx, centered at an intersection of the same name. English colonists from Connecticut established a village there in 1654 that was the first European settlement in what is now the Bronx. Called Oostdorp (east village) by the Dutch, it was formally acquired in 1664 by Great Britain and renamed West Chester; the settlers solidified their claims with the Indian treaty of 1692. In the following year an Anglican church was founded that is now known as St. Peter's Episcopal Church. The hamlet became a river port on Westchester Creek, and sea captains and sailors made up a sizable part of the Anglican and Quaker community. In 1776 the village suffered a weeklong cannonade from British and Hessian forces, but the Continental army dismantled a bridge over the creek, forcing the enemy to detour to Pell's Point. Fort Schuyler was built on Throgs Neck in the 1840s, and new families, chiefly Irish Catholics, settled in the area as builders, laborers, and stonemasons. During the Civil War rioters invaded the village in 1863 to destroy draft records, unaware that these were safe in Fort Schuyler. The twentieth century brought subway lines, streetcars, and buses to the area, which changed into a busy hub of commerce. In the twenty-first century the neighborhood remains an important junction, with thriving businesses, banks, shops, churches, schools, and hospitals.

John McNamara, *History in Asphalt: The Origin of Bronx Street and Place Names* (New York: Bronx County Historical Society, 1984); John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

John McNamara

West End Collegiate Church. Dutch Reformed Church in a landmark 1892 building located at 370 West End Avenue and 77th Street. Part of the oldest continually operating church corporation in the country, which was established in New Amsterdam around 1628, the Flemish-style structure, designed by Robert W. Gibson with Tiffany windows, was built during the Upper West Side residential building boom of the 1880s. It remains allied, though not institutionally affiliated, with the Collegiate School for Boys located next door at 241 West 77th Street.

Peter L. Donhauser

Westerleigh. Neighborhood in north central Staten Island bounded to the north by Forest Avenue, to the east by Manor Road, to the south by Watchogue Road, and to the west by Wooley Avenue. It was first developed in 1887 by the National Prohibition Campground Association, which purchased 25 acres (10 hectares) of land and opened Prohibition Park. The University Temple was built in 1891; an auditorium seating 4000, it attracted such nationally known speakers as William Jennings Bryan before being destroyed by fire in 1903. In 1892 the area took its present name. The Westerleigh Collegiate Institute, a private secondary school, opened in 1895. Many local

streets were named for prohibitionists and for states that voted for Prohibition. In the 1890s Westerleigh was a close-knit, upper-class neighborhood with narrow streets and one-family houses, many of which were built during the decade. Well-known residents included Isaac Funk, the editor of the *Funk and Wagnalls Encyclopedia;* the poet Edwin Markham; and the etiquette writer Amy Vanderbilt. The center of the neighborhood is Westerleigh Park; there is no commercial section. Landmarks include Westerleigh Park and its octagonal bandstand (built 1923, renovated 1990); the Immanuel Union Church; and 208 Neal Dow Avenue, a house designed by Ernest Flagg. The Westerleigh Improvement Society (1893) is one of the oldest neighborhood associations in the city.

Barnett Shepherd

Western Electric Company. Firm of telecommunications equipment manufacturers, incorporated in 1915 in New York City as a wholly owned subsidiary of American Telephone and Telegraph (AT&T). It was a successor to a concern based in Chicago that since 1882 had developed, manufactured, engineered, installed, and maintained telephone equipment and systems for AT&T and its operating companies. The firm was important in enabling AT&T to dominate American telephony and remain technologically advanced. It was also the research arm of the American Bell Telephone Company until the formation of Bell Laboratories in 1925. For many decades the company had offices on the east side of Broadway just south of City Hall Park. In 1984 AT&T was divested of its regional operating companies, and the functions of Western Electric were absorbed by the operating companies and various business units of AT&T.

George David Smith

Western Union Company. Firm established in 1851 as the New York and Mississippi Valley Printing Telegraph Company and based during its early years in Rochester, New York. It expanded rapidly by means of agreements with several railroads, which provided rights of way and lines in exchange for trained operators and priority service for railroad messages. Renamed the Western Union Telegraph Company in 1856, the firm soon commanded the most important western routes. During the 1850s liberal incorporation laws passed by the state legislature of New York allowed it to take over many small, regional companies and in doing so to reorganize the industry. With five other companies, including the American Telegraph Company, it made an agreement in 1857 to divide the market into clearly defined territories; Western Union abrogated the agreement in 1860 by obtaining a government subsidy to build a transcontinental telegraph, which by garnering large government subsidies during the Civil War gave the firm a competitive advantage. By 1866 it had acquired control of its major competitors and moved its headquarters to 145 Broadway in New York City.

After the Civil War the capitalist Jay Gould became the most formidable competitor of Western Union by building his own company that combined telegraph lines from his railroad empire with those of small companies. In 1871 Western Union acquired the Gold and Stock Telegraph Company and operated it as a subsidiary that remained the most important commercial news and market-reporting company to the end of the nineteenth century. Gould's unrelenting competition allowed him to gain control of Western Union in 1881; his consolidation of the industry reduced opportunities for small telegraph operators and led them to strike in 1883, without success. Western Union entered into exclusive agreements to transmit news for the Associated Press and messages through the national network of American District Telegraph, which it reorganized in 1901 into the alarm company that came to be known in the late twentieth century as ADT. At the same time the near-monopoly in telegraphy achieved by Western Union faced a new challenge from the long-distance telephone network of American Telephone and Telegraph, which briefly acquired control of Western Union in 1909; antitrust action soon led to the separation of the two firms. After World War II telegraphy was largely supplanted by other systems, but Western Union continued to be an important telecommunications company until the early 1980s, launching the first communications satellite and establishing one of the first electronic mail services. Later in the decade the firm abandoned most of its communications business and concentrated on financial services, including money transfers (which it began in 1871) and priority message services such as "mailgrams," an overnight mail service introduced in 1970. In 1996 the company moved its headquarters from Paramus, New Jersey, to Colorado.

Paul Israel

Westervelt, Jacob Aaron (*b* Tenafly, N.J., 20 Jan 1800; *d* New York City, 21 Feb 1879). Shipbuilder and mayor. For about 50 years he had a shipbuilding firm on the East River that produced about 200 seagoing vessels. Considered honest but weak during his term as mayor from 1852 to 1854, he introduced reforms and reorganized the police department but was widely criticized for the filthy condition of the streets.

James E. Mooney

West Farms. Neighborhood in the central Bronx, bounded to the north by Bronx Park, to the east by the Bronx River, to the south by Hunts Point, and to the west by Southern Boulevard; some of those who live east of the Bronx River also consider themselves residents of the neighborhood. From about 1812 the area was the site of paint, glass, pottery, and bleaching factories; flour mills; a sawmill; and coal yards. A large area around it was incorporated as a town in 1846 and initially named Ten Farms before being renamed for its location west of the village of Westchester. From the Civil War to the 1930s the area was a thriving river port. In 1874 the town was annexed to New York City and became part of the Annexed District, or North Side. After the subway was extended to White Plains Road, apartment buildings were constructed and shops opened; several of these were replaced during a renewal project of the 1960s. In the early twenty-first century the population is mostly Latin American, and some manufacturing and commerce continue to exist in the neighborhood.

Gary D. Hermalyn

Westfield. Former administrative district in southwestern Staten Island, bounded to the north by Fresh Kills and Richmond Creek, to the east by Gifford's Lane, to the south by Lower New York Bay, and to the west by the Arthur Kill; towns within its boundaries included Tottenville, Pleasant Plains, Prince's Bay, Woodrow, Kreischerville, Rossville, Greenridge, Annadale, and parts of Eltingville and Great Kills. The district was established after the American Revolution. It was variously called West Division and West Quarter, and the area encompassing it and Southfield was sometimes called Southside. The seat was Richmondtown, in Southfield. The district was dissolved when New York City was consolidated in 1898.

Marjorie Johnson

West Flushing. Original name of Corona.

Westies. Irish-American gang based in the Hell's Kitchen neighborhood on the west side of Manhattan. It was notorious for violent crimes mostly from the 1950s to the mid-1980s, although some sources say they have continued influence into the twenty-first century. The extent and coherence of the gang may have been exaggerated by law enforcement officials. Operating mostly from the docks of the West Side, its members successfully engaged in gambling and drug dealing

until links with the Mafia led to internal rivalries and assassinations.

T. J. English, *The Westies: Inside the Hell's Kitchen Irish Mob* (New York: G. P. Putnam's Sons, 1990; repr. New York: St. Martin's Griffin, 2006)

Joshua Brown

West Jamaica. Original name of DUNTON.

Westminster Kennel Club. Oldest dog club in New York and the best known in the nation. A group of sportsmen formed the club in 1877 "to increase the interest in dogs, and thus improve the breeds, and to hold an Annual Dog Show in the city of New York." The club is named after the Westminster Hotel in Union Square where its founders would often meet. The club's first show in 1877 featured 1201 dogs and drew an estimated 20,000 spectators to the second and third days of the competition at the Hippodrome (popularly known as Gilmore's Gardens). The show has taken place every year since, making it the second longest running annual sporting event in the United States behind the Kentucky Derby. In 1884 the competition began to be judged by officials from the American Kennel Club, an organization partially established by members of the Westminster Kennel Club and Kennel Club of Philadelphia to oversee their dog shows. Some degree of showmanship and celebrity marked the show's early years: J. P. Morgan's dogs competed with entrants claiming the Queen of England, the czar of Russia, and General Custer as their dogs' former owners or breeders. The Best in Show award was first given in 1907 to a Smooth Fox Terrier named Ch. (Champion) Warren Remedy; she would win again in 1908 and 1909 and remains Westminster's only three-time champion. Dogs must advance from the breed and group levels before becoming one of the seven finalists vying to become crowned Best in Show. As of 2008 the show featured more than 2600 dogs competing in 169 breeds. As of 2010, 45 terriers—more than twice as many as any other group—have been crowned Best in Show. All four Madison Square Gardens have hosted the event, which has been televised nationally since 1948.

Ben Silk

West New Brighton. Neighborhood in north central Staten Island sometimes referred to as West Brighton. The main streets include Richmond Terrace on the waterfront, Castleton Avenue, and Forest Avenue; Broadway and Jewett Avenue run north to south. The area was originally the site of a hunting lodge built in the late seventeenth century by Governor Thomas Dongan on his manor facing the Kill van Kull. The Kruzer–Pelton House, a rambling stone farmhouse at 1262 Richmond Terrace, and the Scott–Edwards House at 752 Delafield Avenue, were also built during the colonial period. The first factory was established near Richmond Terrace and Broadway in 1819 by Barrett, Tileson and Company of Maine; it was reorganized in 1825 as the New-York Dyeing and Printing Establishment for cleaning and dyeing cloth. Factoryville was an early name for the area, and the brick buildings, smokestacks, and pond of the factory were long the principal features. By 1840 a commercial area had developed on Richmond Terrace and Broadway near the factories and the ferry landing at Castleton. Nathan Barrett left the New-York Dyeing and Printing Establishment in 1851 and formed Barrett, Nephews and Company, which opened a factory on Forest Avenue; this merged in 1890 with New-York Dyeing and Printing, and the operations of the new firm were consolidated at Broadway, where operations continued until 1932. A post office opened in 1871 and used the name West New Brighton (after New Brighton, an earlier and wealthier suburb). The C. W. Hunt Company, a manufacturer of heavy coal-handling equipment used in ports worldwide, built a plant in 1872 near Richmond Terrace and Van Street; this became the largest factory in Staten Island before closing during the 1930s. Tompkins Department Store opened in 1877 and became the largest retail establishment in Staten Island. Calvary Presbyterian Church was formed in 1894, followed by the Church of the Sacred Heart in 1898. Castleton Avenue was extended to Port Richmond in 1911 and became the principal commercial street; the newspaper the *Staten Island Advance* had its offices at 1267 Castleton Avenue from 1913 to 1960. In 1936 the former estate of the Barrett family was made the site of the Staten Island Zoo. The local Young Men's Christian Association opened on Broadway in the 1950s. West Brighton Plaza, a complex of 400 apartments subsidized by the federal government, opened in 1962. The population of West New Brighton in 2008 was largely Italian, Irish, black, and Latin American. There were ship repair facilities on the waterfront and a wooded residential area on the southern boundary near the zoo. The West New Brighton Local Development Corporation and the Neighborhood Housing Services invigorated the community during the early twenty-first century. Lawrence C. Thompson Park and its swimming pool occupy part of the site once occupied by the New-York Dyeing and Printing factory.

Barnett Shepherd

West Nile virus. Virus discovered in Uganda in 1937; its first known case in the United States was in New York City in 1999. It can be carried by birds and spread by mosquitoes and has been known to cause severe human meningitis (the inflammation of the membranes that surround the spinal cord and brain) and encephalitis (the inflammation of the brain itself). Since 1999 the infectious West Nile virus has been detected in humans, animals, and mosquitoes in all states. In 2007, 18 New Yorkers contracted the disease; three of them died.

Jessica Montesano

West Side Highway. Popular name variously applied to the highways along the Hud-

West Side Highway, 1938

son River in Manhattan (New York State Route 9A). The name was first used for the Miller Elevated Highway (1931–48), an elevated structure along West Street and 12th Avenue that originally extended from Rector Street to 72nd Street. In its early years the highway was noted for its artwork, which included cast-metal reproductions of the seal of New York City, but it suffered from heavy traffic and deferred maintenance. On 15 December 1973 a loaded dump truck plunged through a pothole near the Gansevoort Market, and the highway was closed south of 57th Street on the southbound side and 46th Street on the northbound side. Repairs were delayed as the city and state made plans to build Westway. Most of the elevated structure was demolished in stages from 1976 to 1989; through the West Side Highway Replacement Project (1985–2001), the elevated segment between 59th Street to 72nd Street was rebuilt and remained in use, while the at-grade roads previously beneath the highway south of 59th Street were rebuilt into an at-grade urban arterial. The road was renamed for baseball player Joe DiMaggio in 1999.

The name West Side Highway is often (incorrectly) applied to the Henry Hudson Parkway, which runs north from 72nd Street over the Henry Hudson Bridge and through the Bronx to the Westchester county line. It was built in the 1930s as part of Robert Moses's West Side Improvement Project, which included the construction of Riverside Park, and is noted for its graceful curves and riverside views. The section of the Henry Hudson within Manhattan was also closed for a time in the 1970s owing to deterioration from lack of maintenance, but was repaired and restored to use in its entirety in 2001.

Rohit T. Aggarwala

West Side Tennis Club. Tennis organization formed on 22 April 1892. The 13 founders rented ground for three tennis courts on Central Park West between 88th and 89th streets. They charged a $10 initiation fee and a $10 annual fee. By the end of the first season the membership had reached 43 and two additional courts had been built, and in 1897 the club was designated the sponsor of the Metropolitan Matches of the United States National Lawn Tennis Association (USNLTA; later renamed successively the United States Lawn Tennis Association and the United States Tennis Association). In 1902 the club, now with 102 members, moved to Morningside Heights, where it rented eight courts for $20 each from Mrs. John Drexel. The club moved again in 1908 to 238th Street and Broadway, where it rented two city blocks and built 12 grass courts and 15 clay courts, as well as a two-story shingled clubhouse. In 1911 the club was invited by the USNLTA to stage the matches for the Davis Cup with Great Britain, for which the daily attendance exceeded 3000. The club then bought 10 acres (4 hectares) of land in Forest Hills, in Queens; after the 1913 Davis Cup matches were played at the old club, the best of the turf was excavated and taken to the new one in Forest Hills. In 1915 the new club at Forest Hills became the site of the nationals, called the U.S. Open, which had been held at Newport, Rhode Island, since 1881. The West Side Tennis Club was also the site of many concerts by artists including Frank Sinatra, the Beatles, Jimi Hendrix, the Rolling Stones, Bob Dylan, the Who, Diana Ross, and the Boston Pops. In 1978 the U.S. Open left Forest Hills and moved to Flushing Meadows.

Eric Wm. Allison

Westway. Controversial building project. It was introduced in 1972 by political and business leaders, who proposed to demolish the aging West Side Highway and build in its place a six-lane highway extending from the Battery to 42nd Street (with the portion north of Battery Park City placed underground), an incinerator, a bus depot, and a park; the name of the project was conceived by Deputy Mayor John E. Zuccotti. The plan won the support of Mayor Abraham D. Beame, Governor Hugh L. Carey, and Nelson A. Rockefeller, leaders of business and labor, and groups such as the Regional Plan Association. Opponents led by Marcy Benstock and the New York Clean Air Campaign argued that the proposed road would harm air quality and marine life, and that minority groups would receive an insufficient share of the construction work entailed by the project. In the first of many court hearings, Judge Thomas P. Griesa of the Federal District Court ruled on 1 April 1982 that the U.S. Army Corps of Engineers had violated environmental requirements, and he ordered federal and state officials not to expend funds on Westway. On 30 March 1989 Governor Mario M. Cuomo, originally a supporter of the project, recommended that commercial development along the planned route be banned. Westway was effectively canceled when federal officials instructed the city and state on 10 August 1990 to repay funds that had been advanced to purchase rights of way.

Paul Ramon Pescatello, "Westway: The Road from New Deal to New Politics" (diss., Cornell University, 1986)

Mark H. Rose

wetlands. Ecosystems that are both terrestrial and aquatic where the water table is usually at or near the surface and periodic saturation determines soil development, plant life, and animal life. From colonial times wetlands were believed to harbor disease and were thus considered nuisances that needed to be controlled; this attitude and the pressure to develop land around New York City led most of the wetlands in the area to be drained, dredged, filled, and built on. This trend was reversed during the 1960s as scientists demonstrated the importance of wetlands as immensely productive habitats sustaining diverse wildlife populations and as natural means of flood control and water purification. Over the objections of landowners, federal protection was extended to most American wetlands by the mid-1970s, including many of those remaining in the five boroughs. In 1975 the New York State legislature passed the Freshwater Wetlands Act, requiring the Department of Environmental Conservation (DEC) to map wetland sites of more than 12 acres (5 hectares) and to prevent any construction injurious to them. Under the state's Hudson River Estuary Management Act (1987) the DEC began mapping a focused area encompassing the city's Hudson River wetlands in an effort to prevent further loss, improve state regulatory authority, and restore and enhance wetlands. These protections had limitations in New York City's industrial harbor, however; in 1990 Exxon spilled more than 500,000 gallons of oil into the Arthur Kill of Staten Island, devastating the area's wetlands. The marshes were slowly restored, and funds from a 1994 agreement with the tanker company provided resources for acquisition of undeveloped wetlands for preservation. In 2008 the Harbor Herons Wildlife Complex on Staten Island's western shore encompassed more than 2000 acres (809 hectares) of tidal and freshwater marshes, a pond, creeks, and four islands; the area, home to the largest breeding population of colonial water birds (birds that gather in colonies) in the northeastern United States, was designated a State Bird Conservation Area in 2001. Although in the early twenty-first century the Department of Parks and Recreation has jurisdiction over 4500 acres (1821 hectares) of wetlands, these areas remain vulnerable. Some of the largest wetlands are in the Jamaica Bay Wildlife Refuge, a preserve of more than 9000 acres (3642 hectares) of land and water known for its salt marshes and shore birds. Despite legislative protections and a growing awareness among New Yorkers about the importance of the city's wetlands, Jamaica Bay's salt marshes are shrinking by about 40 acres (16 hectares) annually.

Whalen, Grover A(loysius) (*b* New York City, 2 June 1886; *d* New York City, 20 April 1962). Public official. He oversaw many ticker-tape parades as chairman of the mayor's

reception committee (1919–53); as commissioner of the Department of Plant and Structures he was the principal figure behind the formation in 1924 of the municipal broadcasting system WNYC. Appointed police commissioner by Mayor James J. Walker in December 1928, he served for 18 months, during which he zealously pursued communist organizations. In 1935 he became president of the New York World's Fair Corporation. He was featured on the cover of *Time* magazine on 1 May 1939. Whalen wrote *Mr. New York: The Autobiography of Grover Whalen* (1955).

Kenneth R. Cobb

Wharton [née Jones]**, Edith (Newbold)** (*b* New York City, 24 Jan 1862; *d* St.-Brice-sous-forêt, near Paris, 11 Aug 1937). Novelist. Related to the most prominent families in New York City, she was born at 14 West 23rd Street and spent much of her life in Europe; Lenox, Massachusetts; and Newport, Rhode Island. After the death of her father in 1882, she moved to 28 West 25th Street until her marriage to Edward "Teddy" Robbins Wharton in 1889; in 1891 she bought a house at 884 Park Avenue, though by then she spent little time in New York City. A close friend of Henry James, she was known for portrayals of New York City in which her characters negotiated the boundaries of conventional places and custom. Six of her books—*The House of Mirth* (1905), *The Custom of the Country* (1913), *The Age of Innocence* (1920; for which she won the Pulitzer Prize in 1921), *Old New York* (1924; containing four novellas spanning the 1840s to 1880s), *Hudson River Bracketed* (1929), and *The Gods Arrive* (1932)—were set in the city and treated the contradictions of its elite at a time when genteel insularity was ceding to the extremes of the Gilded Age.

Jeff Finlay, Dianna Ng

Wheeler [née Thurber]**, Candace** (*b* Delhi, N.Y., 24 March 1827; *d* New York City, 5 Aug 1923). Writer and decorator. In 1844 she married Thomas Wheeler, a successful businessman and one of the founders of the National Academy of Design. She became central to the promotion of the decorative arts in the United States, wrote many engaging articles promoting interior and exterior home decorating and gardening, helped to form the Society of Decorative Artists and the Associated Artists, and was both the director of the Women's Building at the World's Columbian Exposition in Chicago in 1893 and the head of the Women's Art Committee. Her principal home was "Nestledown," a house built in 1854 in Hollis, Queens, that until 1932 stood on the south side of Liberty Avenue between 186th and 187th streets. There she entertained such writers and artists as William Cullen Bryant, James Russell Lowell, Frank R. Stockton, Mark Twain, William Merritt Chase, John Burroughs, Albert Bierstadt, and Eastman Johnson. Wheeler's published writings include *Content in a Garden* (1901), *History of Embroidery in America* (1921), and her autobiography, *Yesterdays in a Busy Life* (1915).

Vincent Seyfried

Whig Party. Political party organized in 1834 that supported tariffs and internal improvements. It was the party of the middle and upper classes. The party elected five mayors between 1837 and 1850, owing much of its success to economic troubles, support from nativists, and divisions within the Democratic Party, its major opponent. The most influential Whig newspaper was the *New York Tribune,* edited by Horace Greeley. By embracing nativism, the Whigs ultimately helped to strengthen the Democrats, who developed a broad base of support among immigrants. The Whig Party remained an important force in city politics until it disintegrated in the 1850s.

Evan Cornog

White, Alfred T(redway) (*b* Brooklyn, 28 May 1846; *d* Harriman State Park, Orange County, N.Y., 30 Jan 1921). Housing reformer. As a student at Rensselaer Polytechnic Institute he became interested in building affordable model tenements for workers. After graduating he joined his father in a prosperous importing firm in Brooklyn and traveled frequently to London where he visited innovative model housing projects. His first effort, the Tower and Home Buildings, opened in Brooklyn in 1877 at the corner of Baltic and Hicks streets; modeled on houses built by Sir Sidney Waterlow in London and intended for well-paid and "respectable" workers, it had rents that guaranteed investors a return of 5 percent a year. White undertook several other projects that later influenced the work of City and Suburban Homes. He was also a member of several municipal commissions and was associated with a number of campaigns to improve tenements, including one to enforce building codes. As a trustee of the Russell Sage Foundation in 1920 he supported Charles Dyer Norton's efforts to draw up a regional plan, leading to the publication of the *Regional Plan of New York and Its Environs* in 1929 and 1931.

Anthony Jackson, *A Place Called Home: A History of Low Cost Housing* (Cambridge, Mass.: MIT Press, 1976)

See also Limited-dividend housing.

Stanley Buder

White, Clarence H(udson) (*b* West Carlisle, near Newark, Ohio, 7 April 1871; *d* Mexico City, 8 July 1925). Photographer. He produced some of his finest work in Ohio, where he supported himself by working as a grocer's bookkeeper. After moving to New York City in 1906 he became an influential teacher and formed the Clarence H. White School of Photography in 1914; among his pupils were Doris Ullman, Laura Gilpin, Paul Outerbridge, and Anton Bruehl. A leading member of the Photo-Secession of Alfred Stieglitz, White helped to form the Art Center, an organization for designers, and the Pictorial Photographers of America, a national organization for amateurs.

Bonnie Yochelson

White, E(lwyn) B(rooks) (*b* Mount Vernon, N.Y., 11 July 1899; *d* Brooklin, Maine, 1 Oct 1985). Essayist. *New Yorker* editor Harold Ross invited him to write for the publication in 1925; he wrote the columns "Talk of the Town" (1926–38) and "Notes and Comment" (with James Thurber). After writing the column "One Man's Meat" for *Harper's* from 1938 to 1943 he returned to the *New Yorker* in 1945, where he remained for the next 30 years. In 1959 he helped William Strunk, Jr., a professor at Cornell, to revise *The Elements of Style,* a guide to prose writing that became widely used and sold more than 10 million copies. After retiring he moved to Brooklin, Maine. White is best known for his children's stories, especially *Stuart Little* (1945) and *Charlotte's Web* (1952); he also wrote a book about New York City, *Here Is New York* (1949). His wife, Katharine Angell White, was the first fiction editor at the *New Yorker.*

Janet Frankston

White, Stanford (*b* New York City, 9 Nov 1853; *d* New York City, 25 June 1906). Architect. He was born at 110 East 10th Street. In 1878 he traveled to Europe to complete his education. When he returned he joined McKim, Mead and Bigelow as a specialist in drafting and interior design. In 1879 he became a partner in the firm, then called McKim, Mead and White, where he became known as the "master of effects." He admired European antiquities and bought many, which he often incorporated into the interiors of his new buildings. During a second trip to Europe he began to formulate a style based on the symmetrical styles of the Italian Renaissance. Named the "free classical" style in 1887, this combined features of several European styles. Primarily Italian in form, many of White's buildings were made of tawny Roman brick and decorated with terra-cotta ornaments. In his free time he also designed book covers, picture frames, and bases for statues and even decorated the city for public celebrations; a temporary arch that he designed for a parade commemorating George Washington's inauguration along Fifth Avenue was later rebuilt in stone and set in Washington Square.

At the height of his career in the 1890s White lived sumptuously, in part from the

income that he earned by importing boatloads of antiquities that he sold to clients for their grand homes. He had a studio in the tower of Madison Square Garden and for a time lived in a rented house at 121 East 21st Street and in rooms at 22 West 24th Street. By the mid-1890s he had abandoned the free classical style for the popular styles of the École des Beaux-Arts that adapted the styles of well-known European buildings; he later returned to the free classical style.

One of the most prolific architects of the late nineteenth century, White produced many designs, some drawn on table napkins. During the early 1890s he was diagnosed with renal disease, and for the rest of his life he visited doctors and sought cures in spas and bottled water. His public and private life became so lavish that he fell deeply in debt. In 1905 he was forced to relinquish his partnership and become a salaried employee. He was quite ill when he was shot and killed on the roof garden of Madison Square Garden by Harry K. Thaw, a wealthy man from Pittsburgh who suspected White of romantic involvement with his wife, Evelyn Nesbit. After a long, sensational trial, Thaw was sent to a mental institution and then allowed to go free.

Mosette G. Broderick

White, Walter (Francis) (*b* Atlanta, 1 July 1893; *d* New York City, 21 March 1955). Writer and civil rights leader. He graduated from Atlanta University in 1916 and in 1918 was appointed the assistant secretary of the National Association for the Advancement of Colored People (NAACP) by James Weldon Johnson, whom he succeeded as its executive secretary in 1931. He expanded the number of branches of the association, increased its membership to more than half a million, and helped to form the NAACP Legal Defense and Educational Fund. Because of his fair skin, blond hair, and blue eyes he was often thought to be white, which helped him to investigate 41 lynchings and eight race riots. During World War II he was a special correspondent in Europe for the *New York Post* (1943–45). He played an important role in preparing the NAACP for its victory in the school desegregation case *Brown v. Board of Education* (1954). White wrote two novels and three works of nonfiction, among them *A Man Called White* (1948).

R. L. Harris, Jr.

Whitehall Street Armed Forces Induction Center. Draft induction center. Located in the U.S. Army Building at 39 Whitehall Street in lower Manhattan, it was the largest draft induction center in the United States beginning with the peacetime drafts after World War II until 1972, when it closed. Frequent protests against the war in Vietnam took place there in the 1960s and 1970s, and hundreds of arrests included such celebrities as Dr. Benjamin Spock, Allen Ginsberg, Susan Sontag, and Jane Jacobs. Radical groups detonated bombs inside and outside of the building in 1968 and 1969, although no one was injured in either blast. The musician Arlo Guthrie described being "*in*-jected, *in*-spected, *dee*-tected, *in*-fected, *nee*-glected, and *see*-lected" at the center in his 1969 song "Alice's Restaurant Massacree."

Caleb Smith

White Horse Tavern. Tavern built in 1880 at the corner of Hudson and West 11th streets in Greenwich Village. A designated landmark and one of the few wood-framed buildings remaining in the city, it was a speakeasy throughout Prohibition and a seamen's bar until the late 1940s, when it was frequented by the Welsh poet Dylan Thomas, who stayed at the Chelsea Hotel during his visits to New York City. By the time of his death in 1953 the tavern had become a popular meeting place for young writers and artists, with a room dedicated to Thomas's memory. The tavern figures prominently in Jane Jacobs's influential book, *The Death and Life of Great American Cities* (1961).

Ann Charters

Whiteman, Paul (*b* Denver, 28 March 1890; *d* Doylestown, Pa., 29 Dec 1967). Bandleader. After moving to New York City in 1920 he organized a dance band that played at the Palais Royale. He gained popularity through his performances in Florenz Ziegfeld's *Follies* and his recording of *Whispering* (1920), the first disc to sell a million copies. During the 1920s he was the first important figure to incorporate jazz elements into popular music, and he used the nickname the "King of Jazz." In 1924, at Aeolian Hall on West 42nd Street, he gave a concert called "An Experiment in Modern Music"; this featured his own arrangements, which incorporated elements of jazz into concert music, along with the first performance of *Rhapsody in Blue* by George Gershwin. He helped to develop the role of the modern arranger by relying on the orchestrations of Ferde Grofé; he also worked with the arranger Bill Challis and performed with the cornetist Bix Beiderbecke, the saxophonist Frank Trumbauer, the bandleaders Tommy and Jimmy Dorsey, the violinist Joe Venuti, the xylophonist Red Norvo, and the singer Bing Crosby, who performed with him between 1926 and 1930 as one of the Rhythm Boys. After his popularity declined in the 1930s Whiteman worked in films and radio, and in 1943 he became the music director of the Blue Network (later the American Broadcasting Company). For many years he owned a farm in New Jersey. Whiteman is best known for introducing an attenuated brand of jazz to a wide audience and for influencing big-band arrangements.

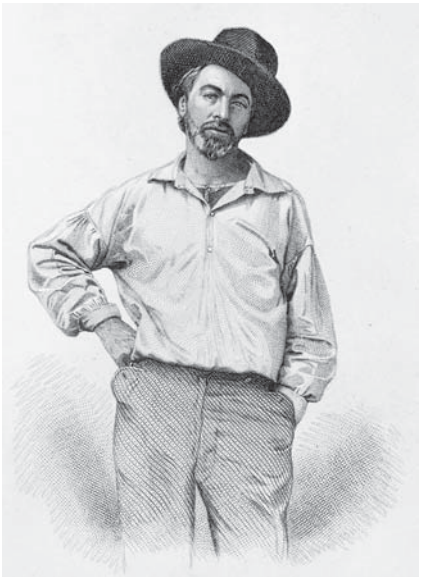
Loren Schoenberg

Whitepot. Outdated name used until 1910 to mean Rego Park and Forest Hills Gardens. It comes from the Dutch *Whiteput,* which means "hollow creek." In colonial times the Furman, Springsteen, and Boerum families owned farms along what is now Yellowstone Boulevard and Whitepot Road (now 66th Avenue). During the American Revolution British troops under General William Howe were stationed around the Dow Van Duyn House at what is now the intersection

White Horse Tavern, 2009

of Woodhaven Boulevard and 67th Avenue. The old Whitepot School House stood for years at Woodhaven Boulevard and 66th Avenue. As the area was developed, the name Whitepot became disused.

Vincent Seyfried



White Russians [White Ruthenians].

Name sometimes used before 1945 for Belarusians.

Whitestone. Neighborhood in north central Queens, bounded to the north by the East River, to the east by Clearview Expressway, to the south by Bayside Avenue and 29th Avenue, and to the west by Whitestone Expressway. The area was settled in 1645. During the American Revolution the British burned the house near 152nd Street and Seventh Avenue of the patriot Francis Lewis (a signer of the Declaration of Independence). In 1838 or 1839 Walt Whitman probably taught in a building on the west side of 11th Avenue between 12th and 13th streets, and the neighborhood was renamed Clintonville in the 1840s for DeWitt Clinton. John D. Locke, a manufacturer of tinware and copperware, moved to the area from Brooklyn in 1853 to build a large stamping works; many of his workers moved with him, and by 1860 the population reached 800. A Methodist church started in 1850, the first school opened in 1857, and the area was incorporated as a village in April 1869. A number of wealthy New Yorkers built mansions along the East River in the 1880s and 1890s. At the foot of 152nd Street and the foot of Clintonville Street were picnic parks that served steamboat excursion parties from Manhattan and Brooklyn. Stimmel's and Duer's parks had hotels, bars, dancing pavilions, and baseball grounds; crowds were often rowdy and drunken, and the resorts were closed during Prohibition. The Shore Acres Realty Company built a development called Beechhurst at the eastern end of the village in 1906, and in 1909 the trolley was extended to the area, linking it with Flushing and Bayside. During a period of rapid development in the 1920s the southern section was enlarged; streets were laid out and houses built on former farmlands. Railroad service ended during the Depression, but the right of way was used for the Belt Parkway, which was completed in 1938 and provided access to the Bronx–Whitestone Bridge (1939). After World War II a large apartment complex was built on the shore between 162nd Street and the Throgs Neck Bridge. Much of Whitestone is upper middle class; the original village and the area south of the parkway are covered by houses and tree-lined streets. The population in the early twenty-first century was around 40,000.

Vincent Seyfried

Whitman, Walt(er) (*b* West Hills, N.Y., 31 May 1819; *d* Camden, N.J., 26 March 1892). Poet. One of nine children in a family of farmers, he taught in a one-room schoolhouse briefly before pursuing a career in journalism. Working as an editor and printer in Brooklyn (1840–45), he also submitted poems and short stories to prominent journals like the *Democratic Review,* which published his first poem, "Death in the Schoolroom," in August 1841. In 1842 he left his position as the editor of the *Long Islander* to take charge of the *Aurora.* During the same year he lived in a boardinghouse at 12 Centre Street in Manhattan. He soon returned to Brooklyn, where he spent much of his career. He became the editor of the *Brooklyn Daily Eagle* in 1846, but resigned in 1847 over his support for the Free Soil Party. In 1849 he built a house at 106 Myrtle Avenue in Brooklyn and remained there for three years; he later lived at 142 Skillman Street (1854–55) and 107 Portland Avenue (1859–63). Much of his work is devoted to an appreciation of New York City, which he called "the great place . . . the heart, the brain, the focus." Celebratory images suffuse his articles about the city for *Life Illustrated* (1853) and his poems in his life's work, *Leaves of Grass* (1855), including "A Broadway Pageant," "Give Me the Splendid Silent Sun," "Crossing Brooklyn Ferry," and "Mannahatta I," a paean to the city's growth. He attributed the inspiration for his slim volume of poetry to "my life in Brooklyn and New York, absorbing a million people for fifteen years, with an intimacy, eagerness, an abandon, probably never equaled." His unrivaled passion for the city—its streets, bars, boardinghouses, and lower classes—was remembered more than 100 years later by the urban planner Lewis Mumford, who said: "Wherever one goes in New York, whether one knows it or not, one walks in the steps of Walt Whitman."

Whitney, Gertrude Vanderbilt (*b* New York City, 9 Jan 1875; *d* New York City, 18 April 1942). Sculptor and arts patron. The daughter of Alice Claypoole Gwynne and Cornelius Vanderbilt II, she was a student at the Brearley School and a debutante. After her marriage to Harry Payne Whitney, with whom she had three children, she confounded the expectations of her social position to become a sculptor in 1900. Her work was in a traditional figurative style but her sympathies were with liberal artists; she studied with James Earle Fraser at the Art Students League before taking a studio at 19 MacDougal Alley in 1907 and joining the artistic community in Greenwich Village. She bought four paintings from the historic exhibition of The Eight in 1908. She leased the town house attached to her studio (8 West Eighth Street) in 1912 and converted it into the Whitney Studio, an exhibition space that opened in 1914; in 1918 she established the Whitney Studio Club, a meeting place and gallery for young artists spurned by dealers. After World War II she received many commissions for public monuments, exhibited widely, and continued to support hundreds of artists, opening the Whitney Studio Galleries in 1928. After her personal collection was rejected by the Metropolitan Museum of Art she founded the Whitney Museum of American Art in 1930 at 8–14 West Eighth Street. Examples of Whitney's public sculptures in the city are the Washington Heights War Memorial (1921, Broadway and 168th Street) and a statue of Peter Stuyvesant (1936, Stuyvesant Square). She is buried at Woodlawn Cemetery in the Bronx.

Avis Berman

Whitney, Richard (*b* Beverly, Mass., 1 Aug 1888; *d* Short Hills, N.J., 5 Dec 1974). Financier. The son of a bank president in Boston, he attended Harvard University before taking a seat on the New York Stock Exchange at the age of 23. He became the principal brokerage agent for J. P. Morgan and Company and rose to national prominence during the crash of 1929, when he temporarily stabilized prices by buying stocks for large

banks. Elected to the first of four terms as president of the exchange in 1930, he became a symbol of conservative elements who opposed regulatory reform. In 1938 his brokerage firm declared bankruptcy, and investigators discovered that he had embezzled money from a number of customers. He pleaded guilty to embezzlement and served a sentence at Sing Sing Prison. The scandal surrounding Whitney had long-lasting effects on Wall Street by inaugurating a period of new leadership and regulatory reform at the New York Stock Exchange.

George Winslow

Whitney, William Collins (*b* Conway, Mass., 5 July 1841; *d* New York City, 2 Feb 1904). Financier. After graduating from Yale University he studied law and opened a practice in New York City where he had a house at 2 West 57th Street. A Democrat opposed to the Tweed Ring, he supported Grover Cleveland in the presidential election of 1884 and was secretary of the navy from 1885 to 1889. He returned to Manhattan where he helped to finance utilities and the Metropolitan Street Railway Company. After taking up horse breeding in Lexington, Kentucky, and Saratoga, New York, he won the English Derby and in 1902 published *The Whitney Stud,* a horse-breeding guide. At the end of his life Whitney had 10 residences, including a mansion designed by McKim, Mead and White at Fifth Avenue and 68th Street.

James E. Mooney

Whitney Museum of American Art. First museum devoted to American art of the twentieth century. It was founded in 1930 by Gertrude Vanderbilt Whitney, who promoted living artists neglected by museums and commercial galleries. After her collection of nearly 500 objects was refused by the Metropolitan Museum of Art in 1929, Whitney established her own museum with Juliana Rieser Force as the director. It occupied four town houses (8–14 West Eighth Street) and opened to the public on 18 November 1931. Contemporary and historical works were bought, and biennial and annual invitational exhibitions featured artists from all areas of the country. Hermon More was appointed director in 1948, and during his tenure the museum moved to 22 West 54th Street. He was succeeded in 1958 by Lloyd Goodrich, who oversaw the construction of a gray granite building designed by Marcel Breuer and Hamilton Smith at 945 Madison Avenue, where the museum moved in 1966. Under the direction of John I. H. Baur from 1968 to 1974, Jean and Howard Lipman donated about 200 pieces of sculpture: they became the museum's most important benefactors after the Whitney family. Thomas N. Armstrong III, director from 1974 to 1990, expanded and broadened the permanent collection. Under his direction, the Whitney partnered with the Museum of Modern Art on a massive project to research, catalogue, preserve, and screen the films of Andy Warhol. Subsequent directors have included David A. Ross (1991–97), Maxwell Anderson (1998–2003), and Adam Weinberg (2003–). The Whitney has the largest and most comprehensive collection of its kind: among its 8500 objects are works by every important American artist active in the twentieth century to the present. It has unrivaled holdings by such artists as Alexander Calder, Edward Hopper, and Reginald Marsh, as well as many examples of Charles Burchfield, Stuart Davis, Jasper Johns, Gaston Lachaise, Georgia O'Keeffe, John Sloan, David Smith, and Frank Stella. The Whitney Biennial remains one of the most significant surveys of contemporary American art. In March 2008 cosmetics executive and Whitney chairman Leonard A. Lauder donated $131 million to the museum, the largest gift in its history, before resigning his post. In May 2008, after unsuccessful attempts to expand the Breuer Building, the Whitney released plans for a second museum; designed by architect Renzo Piano, it would be on Gansevoort Street in the meatpacking district, near the redeveloped High Line. As of 2010 work on the new building had not yet begun.

Whyte, William H(ollingsworth) "Holly," Jr. (*b* West Chester, Pa., 1 Oct 1917; *d* New York City, 12 Jan 1999). Writer and editor. After graduating from Princeton University and serving with the U.S. Marine Corps, he became an editor of *Fortune* magazine in 1946. Whyte was best known for his essays and books on business and American popular culture, including *The Organization Man* (1956). Starting in the 1960s, Whyte's love of New York City drew him into urban planning as a reformer, researcher, and mentor to other urban planners such as Jane Jacobs. Whyte spent 16 years walking city streets unobtrusively observing and using stop-motion photography to examine how people behave in public spaces. Through this he developed a study of street life called the Street Life Project, and much of this research contributed to his 1988 book, *City: Rediscovering the Center.* For example, he observed that the corner of 59th Street and Lexington Avenue outside Bloomingdale's had the most daytime pedestrian traffic, and that having vendors on the street tended to increase sales in local stores, particularly if the vendors and carts sold food. In 1969 he edited New York City's Master Plan and acted as a consultant on many building and zoning projects. He helped develop vest-pocket parks and contributed to the design of the modern Bryant Park. Whyte was a distinguished professor at Hunter College of the City University of New York.

Harold Takooshian

Wilder case. Court case filed in 1973 against New York City for foster-care abuses. Since the nineteenth century, New York City's foster-care system had contracted private agencies to care for children, and laws allowed these mostly Jewish and Roman Catholic charities (90 percent in 1972) to give preference to children of their own faith. An African American girl named Shirley Wilder entered the foster-care system in 1972, at age 13, and was rejected by countless agencies based on her Protestant beliefs. With nowhere to go, she was forced into the care of the Dickensian reformatory at Hudson, New York, which was for children convicted of criminal offenses. There she was raped and put into solitary confinement when she tried to fight back. At 14, having been refused contraceptives by the Catholic foster agency, she became pregnant. That same year lawyer Marcia Lowry took up Wilder's case of neglect and abuse; she asked the courts to declare the entire statutory basis for the provision of child-welfare services in New York City unconstitutional. Drawn out for many years, the case finally ended on 22 January 1999 and was settled in her favor; three weeks earlier Wilder had died from AIDS.

Jessica Montesano

wildlife. See Fauna.

Wildlife Conservation Society. Organization promoting zoology and conservation research and education, formerly known as the New York Zoological Society. Established in 1895 by Andrew Haswell Green, Henry Fairfield Osborn, and Theodore Roosevelt, among others, the society opened the New York Zoological Park, later known as the Bronx Zoo, in 1899. In 1902 the society took over management of the New York Aquarium, later building a new facility in Coney Island. In the late twentieth century, it took over three of the city's zoos, renovating and reopening them: the Central Park Zoo (1988), the Prospect Park Zoo (1992), and the Queens Zoo (1993). The society took its current name in 1993 to reflect its emphasis on international conservation. In 2008 it began a dual-degree program with Fordham University, offering a master's degree in Teaching Adolescence Conservation Life Science.

Kate Lauber

Willets Point. Enclave of 75 acres (30 hectares), in the shadow of Citi Field, the Mets

stadium, in northern Queens. *Willets Point* was at one time the name applied to the entire 150-acre (61-hectare) Fort Totten peninsula. The area was known in the eighteenth century as Thorne's Neck, after its owner, Jacob Thorne; the land was acquired in turn by William Wilkens, David Ousterman, Charles Willets (1829), and the federal government (1857). A movement in the U.S. Congress to erect a fort opposite Fort Schuyler in the Bronx, which began when the government took title to the property, was hastened by the outbreak of the Civil War; construction began in 1862. But the invention of rifled bores in cannon made stone forts obsolete, and work was abandoned. In 1864–65 Grant Hospital treated members of the Union Army at the fort. At the behest of President William McKinley the fort was renamed in August 1898 to honor Brigadier General Joseph G. Totten, director of the Bureau of Seacoast Defense in the Department of War. In *The Great Gatsby* (1925), F. Scott Fitzgerald referred to the neighborhood as the Valley of Ashes. Early in the twenty-first century, Willets Point was also known as the Iron Triangle because of its concentration of about 250 auto-parts and repair shops.

Kenneth T. Jackson

William A. Read. Forerunner of the investment banking firm Dillon, Read.

William Cullen Bryant High School. Secondary school opened in 1889 as Long Island City High School in Smithsonian Hall at Vernon Boulevard and Fourth Street in Queens; it was the first public high school in the borough. The school moved in 1890 to the Munson Building on Astoria Avenue. In 1904 it merged with Woodside High School, moved to a new building at Academy and Reddee streets, and was renamed in honor of the poet and editor. It offered three courses of study: academic, commercial, and manual training. In 1939 it moved to 48-10 31st Avenue in Long Island City. In the early twenty-first century William Cullen Bryant High School had about 3600 students.

Erica Judge

William Morrow and Company. Firm of book publishers formed in 1926 by William Morrow at 303 Fifth Avenue. It attracted many popular authors and soon achieved success by publishing best sellers such as James Hilton's *Lost Horizon* (1935). During its early years the firm became known for the relative youth of its executives. In 1967 Morrow became a subsidiary of Scott, Foresman, and Company, which sold it in 1981 to the Hearst Corporation. In the twenty-first century it is an imprint of HarperCollins, a subsidiary of News Corporation. Among the notable books published by the firm over the years are *Coming of Age in Samoa* (1928) by Margaret Mead, *The Shoes of the Fisherman* (1963) by Morris West, *The Jewel in the Crown* (1967) by Paul Scott, *The Peter Principle* (1969) by Lawrence J. Peter and Raymund Hull, *Zen and the Art of Motorcycle Maintenance* (1974) by Robert M. Pirsig, *The Cider House Rules* (1985) by John Irving, more than 150 books by Erle Stanley Gardner (including the Perry Mason series), and the children's novels of Beverly Cleary.

Eileen K. Cheng

Williams, Alexander S. (*b* Fairfax, Nova Scotia, 9 July 1839; *d* New York City, 25 March 1917). Corrupt police captain. During the 1880s and 1890s he enjoyed good relations with gamblers and procurers and was responsible for the evolution of the Tenderloin. Known as the "clubber" for his harsh justice, he retired with a house on East 10th Street, an estate in Connecticut, and a yacht.

Joseph P. Viteritti

Williams, Bert [Austin, Egbert] (*b* Antigua, 12 Nov 1874; *d* New York City, 4 March 1922). Comedian, singer, and dancer. After beginning his career in minstrel shows, he met his partner, George Walker. Billed as "Two Real Coons," they first performed in Manhattan in 1896 and later became renowned in vaudeville. In black theater at the turn of the twentieth century they made the cakewalk popular and perfected comic routines in which Williams was "Jonah Man," the foil to Walker's dandy, much like the "Little Tramp" of his contemporary Charlie Chaplin. Williams and Walker later formed a troupe and presented the musicals *In Dahomey* (1903), *Abyssinia* (1906), and *Bandana Land* (1908). As their fame increased, they were instrumental in the creation of the first black actor's union, the Negro Society. After illness led to Walker's retirement in 1909, Williams performed briefly in vaudeville, but by 1912 he was headlining Florenz Ziegfeld's *Follies* with W. C. Fields and George M. Cohan. An international star who also made recordings and films, he was identified by his mournful signature song "Nobody." Although he was black, Williams was forced to perform in blackface so that his appearance would conform to racial stereotypes; he believed that the makeup limited the range of his roles, and he became sorrowful and bitter. Fields called him "the funniest man I ever saw, and the saddest man I ever knew." He spent the end of his life at 2309 Seventh Avenue. He is buried in Woodlawn Cemetery in the Bronx.

Robert W. Snyder

Williams, Tennessee [Thomas Lanier] (*b* Columbus, Miss., 26 March 1911; *d* New York City, 25 Feb 1983). Playwright. He grew up in Mississippi and St. Louis and after college moved to New York City in the late 1930s. There he lived at the Royalton Hotel, the Hotel Shelton (on 44th Street at the East River), and the West Side Young Men's Christian Association; he worked as a waiter at the Beggar Bar in Greenwich Village, as an elevator operator in the San Jacinto Hotel (on Madison Avenue), and as an usher in the Strand Theatre (on 47th Street and Broadway). His first play to be staged on Broadway was *The Glass Menagerie,* which in 1945 was named the best play of the year by the New York Drama Critics' Circle; the same award was given to his play *A Streetcar Named Desire* (1947), as was the Pulitzer Prize. His later works were also critically successful, including *The Rose Tattoo* (1951, Tony Award for best play and playwright), *Cat on a Hot Tin Roof* (1955, New York Drama Critics' Circle Award, Pulitzer Prize), and *The Night of the Iguana* (1961, New York Drama Critics' Circle Award). From 1948 to the early 1950s he lived at 235 East 58th Street; in his later years he spent periods at 15 West 72nd Street (1965–68), 145 West 55th Street (mid-1960s), 400 West 43rd Street (for three years from 1978), and the Hotel Élysée, at 54–60 East 54th Street (where he died). Along with Arthur Miller and Eugene O'Neill he ranks as America's most important and influential playwright. His lyrical dramas are frequently set in the American South and feature vulnerable yet vibrant characters in search of love, sexual fulfillment, compassion, and dignity in a callous world. His *Memoirs* were published in 1975.

Martha S. LoMonaco

Williamsbridge. Neighborhood in the north central Bronx, centered on Gun Hill Road and bounded to the north by East 233rd Street, to the east by Edenwald, to the south by the neighborhood of Pelham Parkway, and to the west by the Bronx River. It was named for a bridge built over the Bronx River in colonial times by John Williams, a local farmer. The area saw several battles and skirmishes during the American Revolution. A route to Manhattan was first provided in 1841 by the New York and Harlem Railroad. After Interborough Rapid Transit extended its subway to White Plains Road, the population grew rapidly in the 1920s as Italian, Jewish, and black families moved in. The neighborhood became predominantly black in the 1960s. Almost all the immigrants who settled there in the 1980s were blacks from the Caribbean. Most were from Jamaica and many of the rest were from Guyana, the United Kingdom, Antigua–

Barbuda, and the Dominican Republic. In the early twenty-first century Williamsbridge remained a largely residential area of one-family houses; there was also a low-income development, the Gun Hill Houses.

Lloyd Ultan

Williamsburg(h). Neighborhood in northwestern Brooklyn (2008 pop. *ca* 121,000), bounded on the east by the Queens County line, on the south by Flushing Avenue, on the west by the East River, and on the north by North 15th Street, then along McCarren Park's western and southern edges to the Brooklyn–Queens Expressway at Bayard Street. Originally part of the Dutch village of Boswijck, the area was chartered in 1660. On marshy land along the East River between what are now South Seventh Street and North First Street the first European settler, Jean Mesurolle of Picardy, built a farm that according to legend was a favorite boarding place of Captain Kidd. A number of Dutch, French, and Scandinavian farmers and African slaves settled in the area in 1663. A hamlet sometimes known as Cripplebush remained isolated until speculators took an interest in land up the East River from the city of Brooklyn. From 1800 Richard M. Woodhull offered ferry service from Corlear's Hook in Manhattan to the foot of what is now North Second Street; hoping to develop a town for those working in Manhattan, he bought a parcel of 13 acres (5.3 hectares) around the ferry landing and named it for Jonathan Williams, the surveyor of the area, but he declared bankruptcy in 1806 after selling only a few lots. Speculation increased after roads were built to replace roundabout tracks used by farmers. In 1818 David Dunham (who became known as the "father of Williamsburgh") opened a steam ferry and lent money to the new development, which was incorporated as the Village of Williamsburgh in 1827 and soon attracted industry; in 1852 it had a population of 31,000 and was incorporated as a city. Later its mayor, Abraham J. Berry, proposed that it be consolidated with Brooklyn; in 1855 his plan was enacted and the final "h" was dropped from the name of the neighborhood (it remains in the name of the Williamsburgh Savings Bank, which has a landmark building on Broadway).

The neighborhood became a fashionable suburb for industrialists and professionals of German, Austrian, and Irish descent. There were hotels, beer gardens, and exclusive clubs; the German section lay along Montrose Avenue and Meserole and Scholes streets. Docks, shipyards, factories, distilleries, taverns, mills, and foundries stood along the waterfront, where some of the largest industrial firms in the nation were built: the Pfizer Pharmaceutical Company (1849), Astral Oil (later Standard Oil), Brooklyn Flint Glass (later Corning Glassware), and the Havemeyers and Elder sugar refinery (later Amstar), once the largest establishment of its kind in the world.

The population grew from 105,000 in 1900 to 260,000 in 1920, a peak for recent years. After the Williamsburg Bridge opened in 1903 thousands of Jews from eastern Europe moved to the neighborhood from the Lower East Side. Lithuanian, Polish, and Russian Orthodox enclaves also developed, as did an Italian one between Bushwick and Union avenues. In July 1903 near North Eighth and Havemeyer streets hundreds of Italian residents, many from the village of Nola, held the first annual celebration in the city of a festival called the dancing of the *giglio.* Cold-water flats and six-story tenements replaced brownstones, and by 1917 the neighborhood had some of the most densely populated blocks in the city. During the early 1930s many businesses in the neighborhood declared bankruptcy and many prosperous residents left. The Jewish community continued to grow, and a large number of Jewish refugees escaping Nazism moved in and formed Hasidic synagogues and schools; there were more than 20 sects from different parts of Europe, including the large Satmar sect from Hungary and Romania, led by its rabbi Joel Teitelbaum. Manufacturing, which employed more than a million people in the city in 1950, attracted many Puerto Ricans during the following decade.

About this time scores of decaying buildings were demolished to make way for enormous public housing projects. In 1957 the construction of the Brooklyn–Queens Expressway bisected the neighborhood and destroyed more than 2200 units of low-income housing. Looting and arson left blocks of abandoned buildings, factories, and warehouses, but some housing was renovated in the 1980s. Although Pfizer and other businesses remained in the neighborhood, by 1990 manufacturing employment had decreased sharply. By this time Puerto Ricans, Dominicans, and other Latin Americans constituted about half the population, with Dominicans alone accounting for more than half the immigrants who settled in the neighborhood during the 1980s. Far smaller numbers arrived from Israel, Poland, Ecuador, and China. The neighborhood was largely overcrowded and poor, and housing remained inadequate; Latin American families often shared cramped apartments, as did Hasidic families.

A trickle of artists and musicians in the 1970s became a stream in the 1980s and early 1990s. Refugees from rising East Village rents, hipsters squatted in empty factory lofts and initiated a club scene in the vicinity of the L train stop at Bedford and North Seventh Street in Northside. The Hasidim continued to dominate Williamsburg's southernmost section, with Lee Street as their main shopping district. Latinos occupied Southside, too, and also East Williamsburg. The Polish enclave, an offshoot of Greenpoint's larger Polish community, persisted in Northside. The Italian community continued in northeastern Williamsburg.

Legacies of the waterfront's heavy industrial past also remained. In the 1990s the U.S. Superfund cleaned some pollution, but in the early twenty-first century more persists in the neighborhood. Numerous waste transfer stations still line the river, including one that handles radioactive materials, but development and gentrification proceed. The city's May 2005 rezoning plan has reclassified some industrial areas as residential. At the same time, increasing rents and new construction have displaced some longtime residents and artists. The rezoning plan, encompassing Williamsburg north of the bridge and Grand Street and west of Keyspan's natural gas facility and all of Greenpoint, provides for parks and a waterfront esplanade, permits to build high-rise apartments along the East River (when affordable housing is also developed), and retention of some light manufacturing and mixed-use zones. In June 2007, as the number of new building and demolition permits soared, the National Trust for Historic Preservation named Brooklyn's industrial waterfront an endangered historic district.

Judith Berck, Cathy Alexander

Williamsburg Bridge. Steel suspension bridge spanning the East River between Delancey Street on the Lower East Side and Marcy Avenue in Williamsburg. It was designed by Leffert L. Buck and opened in December 1903 as an alternative to the overburdened Brooklyn Bridge. During construction in 1902, Commissioner of Bridges Gustav Lindenthal employed Henry Hornbostel to improve the aesthetics of the structure. Hornbostel added ornamental detail to the towers and other sections of the bridge and designed the approach in Manhattan. The bridge remained primarily the work of Buck, however, and was criticized almost from the moment the plan was unveiled for its graceless form. The second bridge over the East River, it was constructed in seven years (half the time it took to build the Brooklyn Bridge) and was the longest and heaviest suspension bridge in the world and the first suspension bridge with towers made entirely of steel. It is 7308 feet (2229 meters) long, with a main span of 1600 feet (488 meters) suspended from four steel cables, each 1.5 feet (0.5 meter) thick. Steel latticework,

called stiffening trusses, extends between the anchorages, giving the bridge great strength (as well as its ungainly appearance). The deck of the bridge supports two subway tracks and four flanking traffic lanes. In the early twentieth century the bridge was seen as a passageway to a new life in Williamsburg by thousands of Jewish immigrants fleeing the slums of the Lower East Side.

Rebecca Read Shanor

Williamsburgh Daily Times. Original name of the Brooklyn Times–Union.

Williamsburgh Savings Bank. Savings bank chartered in Brooklyn in 1851, and acquired by the Republic National Bank of New York in 1987. Best known for its buildings, it occupied rented quarters in Williamsburgh until 1867, when it bought a site at 175 Broadway and held a design competition for its headquarters. The winning entry, submitted by George B. Post, called for a four-story building of limestone, sandstone, and marble, designed in a Classical Revival style with a monumental arched portico and an ornate cast-iron railing along the sidewalk. Construction began in 1870 and was completed in 1875; additions were made by the firm of Helmle, Hubery, and Hudswell in 1905 and by Helmle and Huberty in 1925, among them a dome crowned with an ornate lantern and a delicate weathervane. The bank bought land in 1926 at 1 Hanson Place, behind the Brooklyn Academy of Music and across the street from a terminal of the Long Island Rail Road (now demolished), and engaged the firm of Halsey, McCormick, and Helmer to design a skyscraper, which was built between October 1927 and 1 May 1929 and became known as one of the most elegant examples of a modern structure combining Romanesque and Byzantine elements. At 512 feet (156 meters) the tallest structure in Brooklyn, it was built with setbacks at the 13th and 26th stories accented by rounded arches and terra-cotta bands. Symbols of thrift were carved into the base in bas-relief; a four-faced clock, the largest in the world at the time, and a gilded dome recalling the one at 175 Broadway were also added. The interior was decorated in exquisite detail: polychrome mosaics were installed in the elevator lobby, which was separated from the marble banking room by ornate cast-iron gates; in the banking room the ceiling was built to a height of 63 feet (19 meters), three windows 40 feet (12 meters) tall were installed overlooking Hanson Place, and a mural of Brooklyn was painted on the rear wall. The city granted landmark status to the building at 175 Broadway in 1966 and to the one at 1 Hanson Place in 1977.

Eric Wm. Allison

Williamsburg Trust Company. Commercial bank in Brooklyn. Until 1922 its main branch was a building that is now the Holy Trinity Cathedral of the Ukrainian Autocephalous Orthodox Church in Exile.

William T. Davis Wildlife Refuge. First wildlife sanctuary in New York City. It was dedicated in 1929 and occupies 260 acres (105 hectares) of the Greenbelt in New Springville, near the center of Staten Island. The area was once farmland; its artesian wells, connected to the Fresh Kills Creek, supplied the island with water in the 1880s. A preservationist movement led by the National Audubon Society and William Thompson Davis, a naturalist and one of the founders of the Staten Island Institute of Arts and Sciences, prevailed on the New York City Parks Department to take over 52 acres (21 hectares) of the area in 1928. Davis paid for a fence to be built around much of the area to halt the hunting of waterfowl and pheasants. In 1955 the area was enlarged to its current size. The refuge harbors a wide range of habitats, as well as tidal marshland, freshwater wetlands, and woodlands. Opened in 1999, the United for Wildlife Rehabilitation and Education Center, located at the wildlife refuge, seeks to care for sick, injured, and orphaned wildlife and return them to the wild.

James Bradley

Willis Avenue Bridge. Four-lane bowstring truss swing bridge spanning the Harlem River, connecting First Avenue and 125th Street in Manhattan with Willis Avenue and 132nd Street in the Bronx. Intended to relieve traffic on the Third Avenue Bridge and designed by the engineer Thomas C. Clarke (who also designed the Third Avenue Bridge), it opened on 23 August 1901. The bridge measures 3212.5 feet (979 meters) in length, including approaches, and has a clear height of 25.1 feet (7.65 meters).

Willkie, Wendell (Lewis) (*b* Elwood, Ind., 18 Feb 1892; *d* New York City, 8 Oct 1944). Lawyer and presidential candidate. He lived at 1010 Fifth Avenue in 1929 when he began work with Judge John Weadcock as the general counsel for Commonwealth and Southern Corporation, a public utility holding company. Named president of Commonwealth and Southern in 1933, he became a prominent critic of President Franklin D. Roosevelt, particularly regarding public power. He resigned from the company in 1940 when he was nominated as the Republican candidate for the presidency. A moderate who rejected his party's conservative orthodoxy, he won the nomination in part because of early backing from the *New York Herald Tribune.* Soundly defeated by Roosevelt, he returned to private law practice in 1941 and became a partner of the firm of Willkie, Owen, Otis, and Reilly. Willkie remained active in politics and philanthropy in the city during his remaining years. He died at Lenox Hill Hospital.

Steve Neal, *Dark Horse: A Biography of Wendell Willkie* (Lawrence: University Press of Kansas, 1989)

James Bradley

Willowbrook. Neighborhood in south central Staten Island, lying near the Staten Island Expressway. Until development began in the 1960s it was sparsely populated farmland named for the brook that flowed through the area into the Fresh Kills. The main roads are Bradley Avenue and Forest Hill Road; the Center for Basic Research at 1050 Forest Hill Road opened in 1964 and is known worldwide for its research into the causes of mental retardation and other developmental disabilities. For many years the neighborhood was the site of the Willowbrook State School; after it ceased operations the campus was taken over in 1993 by the College of Staten Island.

Barnett Shepherd

Willowbrook State School. School for the mentally disabled in Staten Island, formally known as the Richmond Complex of the Staten Island Developmental Center. It occupied a parcel of 375 acres (151.9 hectares) on Willow Brook Road purchased in 1938 as the intended site of the New York State Department of Mental Hygiene; plans changed with the outbreak of World War II, and in 1942 the land became the site of Halloran General Hospital, the nation's largest hospital for wounded soldiers. Under the control of the Veterans Administration from 1947 to 1951 the hospital admitted mentally retarded and disabled civilians, including infants. In 1952 it was reclaimed by New York State. The hospital often received severely retarded children from other state institutions, and its population increased rapidly during the 1950s. By 1963 the facility, designed for 4200 residents, had more than 6000. The situation caused a public outcry as well as a class-action suit in 1972 against Governor Nelson A. Rockefeller, and on 30 April 1975 Judge Orrin Judd ordered the population to be reduced to 250 and the remaining residents to be transferred to other, less restrictive environments, preferably group homes. A legal and bureaucratic struggle ensued that resulted in the closing of Willowbrook in 1987. In 1989 the City University of New York acquired the property for use as a campus of the College of Staten Island.

Rachel Shor

Wilson, (Harvey) Earl (*b* Rockford, Ohio, 3 May 1907; *d* Yonkers, N.Y., 16 Jan 1987).

Columnist. In 1942 he began writing a gossip column about nightlife in New York City called "It Happened Last Night" that appeared six times a week in the *New York Post;* by the time he retired in 1983, about 200 newspapers carried his column. Wilson specialized in interviews with starlets; he never used his column to critique the city's culture or express his political opinions. While living in Manhattan, Wilson and his wife, Rosemary, known to his readers as "B.W." (for Beautiful Wife), lived in an apartment on West End Avenue.

Judith Adler Hennessee

Wilson, Edmund (*b* Red Bank, N.J., 8 May 1895; *d* Talcottville, near Rome, N.Y., 12 June 1972). Critic. He graduated from Princeton University in 1916 and after his discharge from the army in August 1919 sought a literary career in New York City. He soon moved to West 16th Street, where he remained until 1921. Wilson worked as a freelancer for *Vanity Fair* and the *New Republic,* of which he became literary editor. In the 1920s through the 1940s he had several residences in the city: 3 Washington Square North (1921–25), 229 West 13th Street (1925–29; building later renumbered), 224 West 13th Street (from 1929), 314 East 53rd Street (1933–35), 2 Lexington Avenue (early 1940s), and 14 Henderson Place (1944–45). His novel *I Thought of Daisy* (1929) depicted intellectual life in Greenwich Village; he also wrote *Axel's Castle* (1931), an influential study of literary modernism, and *To the Finland Station* (1940), perhaps the finest American treatment of the roots of communism. In his later work, much of which appeared in the *Nation,* he offered his analysis of writers both well known and obscure. He also wrote treatises on such diverse subjects as the Civil War, the Dead Sea Scrolls, and the purported evils of the income tax.

Lawson Bowling, Benjamin Yakas

Wiman, Erastus (*b* Churchville, Ontario, 21 April 1834; *d* Staten Island, 9 Feb 1904). Businessman and writer. He worked as a printer's apprentice and commercial editor for the *Toronto Globe* before joining Dun, Barlow, and Company, an American mercantile reporting agency, in 1860. The firm transferred him to New York City in 1866 and made him its general manager in 1880. In 1882 he teamed with Jay Gould to found the Great Northwestern Telegraph Company, which gained a near monopoly over Canada's telegraph services. In 1884 and 1885 he took control of the Staten Island ferry and the Staten Island Railway Company while funding a railway bridge to New Jersey. Wiman built an amusement park dubbed Erastina, made Buffalo Bill's Wild West show a hit, and in 1885 bought the New York Metropolitans, a professional baseball team, and unsuccessfully tried to transplant the team to Staten Island. He also worked to popularize Canadian sports such as lacrosse and cricket and led expeditions of New York City socialites to Montreal's winter carnival. Wiman met financial ruin in 1893; the following year Dun laid charges of forgery against him. (He was acquitted.) An 1897 run for councilman of Greater New York was unsuccessful. In addition to numerous pamphlets, he published a memoir, *Chances of Success: Episodes and Observations in the Life of a Busy Man* (1893).

Mike Woodsworth

Winchell [Winschel]**, Walter** (*b* New York City, 7 April 1897; *d* Los Angeles, 20 Feb 1972). Columnist. He worked for a number of newspapers as a drama critic before launching his gossip column "On Broadway" in the *New York Daily Mirror,* in which he carried out personal vendettas against politicians and personages in show business and coined such words as "storked" and "Reno-vated"; the column was eventually syndicated in 50 states and 11 foreign countries. He also gave weekly radio broadcasts. He lived at 870 Seventh Avenue during the early 1930s before moving to the St. Moritz Hotel at 50 Central Park South, where he remained for many years. A feud with the entertainer Josephine Baker contributed to the decline of his popularity after 1950. Originally a strong supporter of Franklin D. Roosevelt, Winchell moved increasingly to the political right in his later years. He wrote a memoir, *Winchell Exclusive* (1975).

James E. Mooney

Windels, Paul (*b* Brooklyn, 7 Dec 1885; *d* Norwalk, Conn., 15 Dec 1967). Lawyer. He graduated from Columbia College (1907) and Brooklyn Law School (1909) and served as counsel to the State Bridge and Tunnel Commission (1918–30), corporation counsel of New York City (1934–37), and chairman of the City Traffic Commission (1937–40). A Republican leader in Brooklyn, Windels was an important adviser to Fiorello H. La Guardia, for whom he provided essential financial backing and party support. He played a critical role in La Guardia's presidency of the Board of Aldermen (1920) and in his mayoral victories.

Thomas Kessner, *Fiorello La Guardia and the Making of Modern New York* (New York: McGraw–Hill, 1989)

Windows on the World. Restaurant. Opened in 1976 by Joe Baum, the 50,000-square-foot (4645-square-meter) restaurant and bar was located on the 106th and 107th floors of the North Tower of the World Trade Center. It had a glass-enclosed observatory and outdoor observation deck. Notable for its views of the city and gourmet cuisine, it underwent a $25 million renovation after the 1993 terrorist bombing of the World Trade Center. In 2000 it was the highest-grossing restaurant in the United States, with revenue of $37 million. It was destroyed during the terrorist attacks of 11 September 2001.

Windsor Hotel fire. One of the worst hotel fires in the history of New York City. It occurred on the afternoon of 17 March 1899 at the six-story Windsor Hotel on Fifth Avenue between 46th and 47th streets, known for many years as one of the most elegant hotels in the city. The fire broke out in one of the sitting rooms in the second story after a guest lit a cigar and then threw the match out the window, igniting a set of lace curtains. Although the fire spread rapidly, many guests were initially unaware of the danger because the cries of the staff were drowned out by the St. Patrick's Day parade proceeding along Fifth Avenue. Spectators eventually noticed the fire and pulled an alarm. Low water pressure hindered firefighters' efforts, and many guests jumped from upper-story windows. Within a few hours the hotel was destroyed; 33 people were killed and 52 injured, and property losses were estimated at $1 million.

Jonathan Aspell

Windsor Terrace. Neighborhood in northwestern Brooklyn, bounded to the north by Seventh Avenue and Prospect Park Southwest (formerly Coney Island Road), to the east by Prospect Park Southwest, and to the south and west by Green-Wood Cemetery. Once covered by John Vanderbilt's farm, the area was sold to developers in 1849 and became the village of Windsor Terrace in 1851. It remained a small settlement at a crossroads until 1900, when row houses were built throughout the area; many of these were occupied by Irish American workers, and a few continued to be occupied for several decades by descendants of the original owners. The gentrification of Park Slope in the 1980s led to a modest increase in the development of real estate, including several condominiums. The area remained predominantly Irish Catholic, with several neighborhood bars such as Farrell's (opened in 1933) on Prospect Park West.

John J. Gallagher

Winfield. Former neighborhood in northwestern Queens, bounded to the north by Queens Boulevard, to the east by the New York Connecting Rail Road, to the south by Mount Zion Cemetery and Maurice Avenue, and to the west by New Calvary Cemetery; it is considered part of Woodside. A hamlet was built in May 1854 by the developers from Manhattan G. G. Andrews and J. F. Kendall and named after General Winfield Scott, a hero of the

Mexican War. The Long Island Rail Road was extended to the area in 1861 and in 1870 Queens Boulevard was laid out, providing a route to Long Island City and Manhattan. The intersection of Shell Road (now 45th Avenue) and Queens Boulevard became the center of the community. A factory built of brick was used to manufacture Singer sewing machines and later metal coffins before World War I, when it became the Moisant aircraft factory. The neighborhood lay at the junction of the North Side Division and the Main Line of the Long Island Rail Road and about 1900 became known as Winfield Junction; the railroad station closed in 1929. Most of the housing consisted of small wooden-frame houses. The name Winfield became disused after the World War II.

Vincent Seyfried

Wingate. Neighborhood in north central Brooklyn (2009 pop. *ca* 12,000), lying east of Prospect–Lefferts Gardens and south of Crown Heights; it is bounded to the north by Empire Boulevard, to the east by Troy Avenue, to the south by Winthrop Street, and to the west by Nostrand Avenue. The area was long known as Pig Town for its many pig farms until it was renamed for General George Wingate High School, built on Kingston Avenue in 1954. The period between 1920 and World War II saw the gradual appearance of detached and semidetached houses and walk-up apartment buildings. On Miami, Palm, and Tampa courts during the 1920s an enclave of two-story town houses was erected: these had their entrances perpendicular to the street, facing each other across interior gardens that formed courtyards. The population in the early twenty-first century consisted mostly of eastern Europeans, Irish, and Caribbeans, with an enclave of Orthodox Jews in the northern section. The main commercial areas were on Nostrand Avenue and Empire Boulevard. There were also 8 acres (3 hectares) of parkland: Wingate Playground, Alexander Metz Playground, and All Boys Athletic Field.

Elizabeth Reich Rawson

Wise, Stephen S(amuel) (*b* Eger, Hungary, 17 March 1874; *d* New York City, 19 April 1949). Religious and political leader. Known for his skills as a speaker and organizer, he became a leader of the American Zionist movement and helped to form the Free Synagogue in New York City (1907) and the Jewish Institute of Religion (1921); he also directed the American Jewish Congress (1922). He achieved prominence for his work in municipal reform with his friend John Haynes Holmes, minister of the Church of the Messiah. From 1929 the two mounted a campaign to expose corruption in the government of Mayor James J. Walker; their efforts were vindicated in 1933 by the findings of the Saber Investigatory Commission.

Henry Feingold

WNYC. Public radio station. It includes the noncommercial radio stations WNYC-AM (820 kHz; began broadcasting 17 July 1924) and WNYC-FM (93.9 MHz; 1943). It was formed as part of the Department of Plant and Structures at the initiative of its commissioner Grover A. Whalen, originally for emergency communication. WNYC-AM was the first municipally owned noncommercial radio station in the United States. It flourished from 1934 under the administration of Mayor Fiorello H. La Guardia, who gave broadcasts every Sunday that drew large audiences. As manager of the station he appointed Seymour N. Siegel and Morris S. Novick, who developed a unique brand of programming that included classical music, news, and public affairs. Herman Neuman, music director from 1924 to 1969, inaugurated *The Masterwork Hour,* which began in 1929 as the first radio program of recorded classical music ever broadcast and continued into the 1990s, and the *American Music Festival,* an annual celebration of American music aired between Lincoln's and Washington's birthdays, first presented in 1939. A television production unit set up in 1949 to make short educational films for commercial stations led to the launch of WNYC-TV; its schedule in the following decades came to include documentaries and interviews on local affairs, hearings of city agencies, programs of the Public Broadcasting System, and programs of independent production companies to which the stations leased airtime.

Severe budget cuts in the 1970s led to the formation in 1979 of the WNYC Foundation, which by the early 1990s provided three-quarters of the operating budget of the system. Mayor Rudolph Giuliani cut WNYC from its sister television station in 1995, and the station was sold to the WNYC Foundation in 1997, becoming an independent not-for-profit operation. In 2008 the station moved from its longtime home in the Municipal Building to 160 Varick Street, near the Holland Tunnel. In the early twenty-first century the station remained the flagship station of National Public Radio in the area and included notable local shows such as *The Leonard Lopate Show, The Brian Lehrer Show,* and *Soundcheck.*

Benjamin Yakas, Kenneth Cobb

Wolfe, Thomas (Clayton) (*b* Asheville, N.C., 3 Oct 1900; *d* Baltimore, 15 Sept 1938). Novelist. He graduated from the University of North Carolina at Chapel Hill and studied playwriting at Harvard University before moving to New York City in 1923. He obtained a job at New York University (NYU) the following year and moved to the Hotel Albert on University Place, teaching English composition at Washington Square College. He completed the manuscript of *Look Homeward, Angel,* a semiautobiographical novel that is considered his masterpiece, in the spring of 1928, and Maxwell Perkins (1884–1947), the prominent editor of Fitzgerald and Hemingway at Charles Scribner's Sons, agreed to publish it. Perkins cut between one-fourth and one-third of the enormous manuscript and released it in 1929 to positive reviews. Wolfe became a literary celebrity; he resigned from NYU in 1930 and spent a year in Paris on a Guggenheim Fellowship. After living at various places in Manhattan he moved to Brooklyn Heights in 1931 but returned to Manhattan in 1935, eventually settling at the Chelsea Hotel. Scribner's also published *From Death to Morning* in 1935, which included "Only the Dead Know Brooklyn," a story narrating an encounter between two New Yorkers on a subway platform. During his years in New York City he wrote *Of Time and the River* (1935) and *The Story of a Novel* (1936). Two novels, *The Web and the Rock* (1939) and *You Can't Go Home Again* (1940), as well as a collection of short stories and chapters of an unfinished novel, were published posthumously. Wolfe described New York City as the "ecstatic Northern city." He died of complications from pneumonia at age 37.

David Herbert Donald, *Look Homeward: A Life of Thomas Wolfe* (Cambridge, Mass.: Harvard University Press, 2003)

Anthony Gronowicz, Kate Lauber

Wolfe, Tom [Thomas Kennerly, Jr.] (*b* Richmond, Va., 2 March 1931). Journalist and novelist. He received a BA from Washington and Lee University in 1951 and a PhD in

American Studies at Yale University in 1957. He first worked as a journalist at the *Washington Post* and then joined the *New York Herald Tribune* in 1962. He wrote for the paper's Sunday supplement, which became *New York Magazine.* During the 1960s Wolfe honed a style that used literary techniques more commonly seen in fiction writing. He wrote idiosyncratic pieces for *New York* and *Esquire;* under *New York* editor Clay Felker in 1965 he blasted the *New Yorker,* writing a profile of its venerable, reclusive editor William Shawn titled "Tiny Mummies! The True Story of the Ruler of 43rd Street's Land of the Walking Dead!" His first book, *The Kandy-Kolored Tangerine-Flake Streamline Baby* (1965), was a collection of such pieces; Wolfe continued to comment on New York City life in *Radical Chic & Mau-Mauing the Flak Catchers* (1970), part of which detailed a party for the Black Panthers given by Leonard Bernstein in his Park Avenue apartment. Wolfe made the transition from journalist to novelist in 1984–85 when his first novel, *The Bonfire of the Vanities,* was published in serial form by *Rolling Stone;* it was published as a book in 1987. The novel, a successful and controversial satire, presented New York as a city obsessed with money, sex, and power. In the early twenty-first century Wolfe, who lives on the Upper East Side of Manhattan, continues to publish novels and nonfiction.

Kate Lauber

Woman's Journal. Weekly newspaper launched in Boston in 1870. It became the official organ of the National American Suffrage Association in 1910 and moved to New York City in 1917. Editors for the newspaper included Mary A. Livermore, Lucy Stone, Henry B. Blackwell, Alice Stone Blackwell, and Virginia Roderick; the editorial board was composed of such distinguished abolitionists as Julia Ward Howe and William Lloyd Garrison. The *Woman's Journal* ceased publication in 1931.

Sandra Roff

woman suffrage. The right of women to vote. Although historians tend to characterize American suffragism as a middle-class phenomenon, the movement in New York City always had a more complex character. The first New York City Woman Suffrage Association was formed in 1870 by such elite women as the physician Clemence Lozier, the writer Lillie Devereux Blake, and Charlotte Wilbour, the president of Sorosis, one of the first women's clubs. Suffragists in the city were drawn to the cause of the many wage-earning women there. During a campaign in 1893–94 to have the issue of woman suffrage included at the state constitutional convention, wealthy and well-placed women from the city, including Josephine Shaw Lowell, Mary Putnam Jacobi, and Olivia Sage, argued before the legislature that upper-class women would provide responsible leadership for the masses of female voters. After this campaign failed, many of these suffragists turned to local politics, especially mayoral elections at the end of the century, and supported such reform candidates as Seth Low.

The class heterogeneity of the suffrage movement in the city and these experiences with political activism helped to produce a more modern style of activism, which eventually spread through the national suffrage movement. In 1907 Harriot Stanton Blatch formed the Equality League of Self Supporting Women, which recruited wage-earning women and adopted such tactics as mass parades and outdoor meetings. At Blatch's invitation the English suffragist leader Emmeline Pankhurst visited New York City, where audiences filled Carnegie Hall and Cooper Union to hear her speak. Blatch's style of activism attracted a great deal of publicity. By 1913 the largest suffrage parades in the country were held along Fifth Avenue, conducted with military precision and complete with banners and viewing stands for local politicians.

Carrie Chapman Catt, a former president of the National American Woman Suffrage Association, also focused her attention on the movement in New York City, where in 1909 she organized many small societies into the New York City Woman Suffrage Party. She condemned the corruption of urban political machines but used their tactics to organize members of her own party and deploy them in election districts throughout the city (by 1917 there were half a million members). Under intense pressure from suffragists, the state legislature in 1913 authorized a referendum in 1915 on whether women should vote in New York State. The city was the center of the campaign; suffragists there had a weekly newspaper that they hawked in the streets, and by November 1915 they reported spending $25,000, holding 5000 outdoor meetings and reaching 60 percent of the city's voters. The referendum was nonetheless defeated by 85,000 votes in the city and 200,000 statewide. Suffrage activists immediately embarked on a second campaign in which supporters in the city held fewer rallies but spent six times as much money as they had in 1915. Aware of mounting concern over World War I, organizers presented suffrage as an issue related to women's capacity for national service. More than money and patriotism, political support made the difference. Late in the referendum Tammany Hall let it be known that it would not oppose the suffrage measure. As a result, not only did the referendum pass in New York City, where suffrage leaders had assumed the opposition of immigrant voters, but the city accounted for the margin of victory for the whole state. And just as New York City carried the state, New York State carried the country, because its congressional delegation was now obligated to the votes of women as well as men, helping to ensure the passage of the Nineteenth Amendment to the U.S. Constitution in 1920.

Ellen Carol DuBois

Women's City Club of New York. Activist organization formed by suffragists in 1915. Its early leaders included Mary Garrett Hay, Katharine Bement Davis, Mary E. Dreier, Belle Moskowitz, Frances Perkins, Eleanor Roosevelt, Genevieve Earle, and Dorothy Kenyon. After women were given the right to vote in New York State in 1917, membership reached several thousand and the organization bought a mansion on Park Avenue designed by Stanford White. During the Depression membership fell and the organization began occupying rented space in mid-Manhattan. In the early twenty-first century it has offices at 307 Seventh Avenue and a membership of more than 800. It addresses public policy issues such as health-care reform, affordable housing, and government transparency and accountability.

Elisabeth Israels Perry

women's clubs. Some of the first women's clubs in New York City were formed during the antebellum period and the Civil War and were devoted to such causes as temperance, abolitionism, suffrage, and charity and relief. Sorosis, formed in 1868, became influential and inspired many women to undertake social, intellectual, and civic activities in their own clubs throughout the nation. These were in their heyday from the late 1860s until the late 1920s. Members were usually married, middle-class white women who had time for meetings and committee work, but some groups were formed on the basis of shared work experiences, religious convictions, and interests by women of almost every age, class, race, and ethnic background. In 1890 Sorosis invited 63 delegates from clubs in 17 states to form an alliance for mutual aid, which became known as the General Federation of Women's Clubs. Women also formed alumnae associations; patriotic societies; organizations for municipal and legislative reform; neighborhood improvement groups; girls' clubs; networks for workers and professionals; trade unions; suffrage and antisuffrage organizations; benevolent societies; sororities; groups devoted to such topics as health, music, drama, painting, and conservation; and auxiliaries to men's fraternal organizations, secret societies, and lodges.

Branches of statewide and national organizations have often found support in New York City, where their local branches contribute time and money, provide leadership and ideas, and sponsor regional, national, and international conferences: the elections and resolutions of some have led to changes in government policy, including child labor laws, the creation of juvenile courts, and compulsory schooling. Many national women's organizations have

their headquarters in the city, including in the twenty-first century Hadassah, the Daughters of Cincinnati, the National Association of Women Artists, the National Council of Jewish Women, the National Council of Women of the United States, the Women's National Republican Club, the Women's Auxiliary to the American Institute of Mining Engineers, and the Women's City Club of New York. Organizations formerly based in the city include the International Sunshine Society, the International Woman's Peace Society, the American Birth Control League, the Girls' Service League of America, the Lucy Stone League, the Medical Women's National Association, the National Consumers' League, the National Florence Crittenton Mission, and the National Emergency Committee of Near East Relief.

Karen J. Blair

Women's Hotel. Original name of the Park Avenue Hotel.

women's hotels. For several decades a number of hotels in New York City offered supervised housing to young females. The first women's hotel in the city was built in the 1870s and lasted only two months. The heyday of women's hotels was between 1940 and about 1974, when a directory listed 16 such establishments in Manhattan. Most of the residents were recent graduates of high school or college who had moved to the city to work, attend secretarial or other trade schools, or try breaking into show business. The Barbizon (1927), at Lexington Avenue and 63rd Street, was the most exclusive women's hotel and the best known; fictionalized by Sylvia Plath in her novel *The Bell Jar,* it had a swimming pool, a health club, a library, daily maid service, music studios, and an eighteenth-floor lounge with a terrace. Its residents included Grace Kelly, Candice Bergen, and Joan Crawford. The East End Hotel for Women was similarly elite, as was the Allerton, built in 1923. Originally intended for women looking for something more upscale than a boardinghouse but homier than a hotel, the Allerton housed physicians, politicians, decorators, lecturers, and store managers, who enjoyed the high-class amenities such as sewing rooms and ballrooms. Other hotels included the Martha Washington, the Webster Apartments, and the Young Women's Towne House.

Many parents agreed to have their daughters live in the metropolis only on the condition that they remain in protective surroundings. The hotels asked prospective residents to give references (the Barbizon required that one be a clergyman) and had strict rules and curfews; men were allowed only in designated lounges on the first floor or semiprivate "beau rooms." The length of a woman's stay at a hotel could range from a single day to many years: several of the original residents of the Barbizon remained for more than half a century. In 1973 the New York Commission on Human Rights deemed segregation by sex in public accommodations illegal, although hotels could legally segregate by sex if most of their guests were permanent. Webster Apartments, now The Webster, continues to house working women but also includes working college students and interns. The Barbizon admitted men in 1981 after determining that doing so was a financial necessity. In 2002 it completed conversion to luxury condominiums and was renamed the Melrose Hotel. When the Allerton was bought in 1997 its women-only restriction was lifted and the hotel was renamed the Habitat Hotel. Some more modest women's hotels operated by the Salvation Army and the Young Women's Christian Association remain in operation into the twenty-first century, as does St. Mary's Residence.

Aleeza Lubin, Jacqueline Lalley

Barbizon Hotel

Women's House of Detention. Detention center for women awaiting trial, designed in an art deco style by the firm of Sloan and Robertson and built in 1931 at Greenwich Avenue and 10th Street on the former site of the Jefferson Market Prison. It drew strong opposition from the surrounding neighborhood because the shouts of inmates could be widely heard, so it was demolished in 1973–74, at a time when correctional facilities were placed away from populated areas. The site was later used for the Jefferson Market Garden.

Nancy V. Flood

Women's House of Detention, 1943

women's magazines. As early as 1794 a magazine for women, the *New York Weekly Magazine,* was published in Manhattan. Others soon followed, including the *Lady's Weekly Miscellany* (1805–8) and the *Ladies' Literary Cabinet* (1819–22). As the city became a center of dressmaking and pattern manufacturing during the mid-nineteenth century, fashion publications were introduced there, among them Frank Leslie's *Ladies' Gazette of Fashion and Fancy Needlework* (1854–57), *Mme. Demorest's Mirror of Fashion* (1860–65), and *Harper's Bazaar* (1867–), which in addition to news about fashion printed pictures and serials. When national magazines supported by advertising became common in the late nineteenth century, the city eclipsed Philadelphia as the largest national center of women's magazine publishing. *Vogue* (1892–), which chronicled the activities and fashions of the city's elite, was bought by Condé Nast in 1909 and under the direction of Edna Woolman Chase became the nation's most important fashion journal. Others that became influential during the first decades of the twentieth century were the *Delineator* (1873–1937), the *Woman's Home Companion* (1874–1957; edited by Gertrude Battles Lane, 1911–41), *McCall's* (1876–2001), *Ladies' Home Journal* (1883–), *Good Housekeeping* (1885–), and the *Pictorial Review* (1899–1939). Advertising played an important role in the growth of these periodicals, especially that for clothing and cosmetics. The 1930s saw the introduction of *Mademoiselle* (1935–) and *Glamour* (1939–), and the homemaking magazines *Family Circle* (1932–) and *Woman's Day* (1937–). Among the most successful editors at mid-century were Otis L. Wiese (*McCall's,* 1928–58), Herbert Mayes (*Good Housekeeping,* 1942–58; *McCall's,* 1958–61), and John Mack Carter (*McCall's,* 1961–65; *Ladies' Home Journal,* 1965–74; and *Good Housekeeping,* 1975–).

Under the direction of Helen Gurley Brown from 1965, *Cosmopolitan* (1886–) shifted its focus to advise young women about sexual liberation. *Essence* (1970–) was intended for middle-class black women, and *Ms.* (1972–), edited by Gloria Steinem and published by Patricia Carbine, was one of the first feminist publications with commercial backing and nationwide circulation. By the early 1970s *Good Housekeeping, McCall's, Ladies' Home Journal, Family Circle, Woman's Day, Redbook* (1903–), and *Cosmopolitan* dominated the market, and all were edited in New York. Several magazines were introduced in the late 1980s, including *New York Woman* (1987–), *Lear's* (1988–94), and *Mirabella* (1989–2000), a fashion magazine for older women launched by Grace Mirabella after she was dismissed as the editor of *Vogue.* In the twenty-first century New York City continued to be the dominant center for women's magazines.

Mary Ellen Zuckerman

Women's Political Union. Name after 1910 of the Equality League of Self Supporting Women.

Women's Wear Daily. Fashion trade newspaper. It was established in 1910 by Edmund W. Fairchild and initially covered only trade news; from 1913 its headquarters were at 7 East 12th Street in Greenwich Village. A bureau in Paris was eventually operated by John B. Fairchild, grandson of the founder, who became known for his irreverence toward respected designers. In 1960 he took over and expanded the parent company, Fairchild Publications. Under his direction *Women's Wear Daily* began to treat a range of topics, including film, books, society, and gossip, and became known for enhancing or diminishing the reputations of the famous, for whom it coined the term "beautiful people." Fairchild promoted some designers and pointedly ignored others. In 1970 he promoted mid-length skirts by ensuring that women wearing skirts of other lengths would not be photographed for the newspaper. Circulation reportedly doubled to 800,000. Although it remains the only daily publication of the fashion industry and is virtually required reading in not only the garment industry but also social and artistic circles, its circulation was down to 162,730 in 2007. However, in the twenty-first century

it also reaches readers through its Web site, WWD.com, which includes the day's paper, blogs, a calendar, classified ads, and other services.

Leslie Gourse

Wong Chin Foo [Huang Qijgfu] (*b* China *ca* 1851; *d* after 1898). Civic leader and journalist. He moved to New York City in 1874 and was known as a compelling bilingual lecturer on Chinese customs and religion. As part of a cross-country lecture tour arranged by Madame Helena Blavatsky, founder of the Theosophical Society, Wong spoke at Steinway Hall in 1877. He was advertised as a Buddhist missionary, despite his own refutation of this description. Instead, his address confronted the stereotypes of the Chinese, which he attributed to Christian missionaries, who, he said, were propagating misinformation to obtain donations. His weekly newspaper, the *Chinese American* (Hua Mei Xin Bao), featuring articles in both English and Chinese, was launched in New York City in 1883 but lasted for only nine months. He also wrote articles for the *Atlantic Monthly, Harper's Weekly, Chautauqua, Cosmopolitan,* and the *North American Review.* In 1884 he founded the first Chinese American voters' association in the United States and advocated for political representation. In 1892 he became the founder and secretary of the Chinese Equal Rights League, the first Chinese civil rights organization in the country. In 1893 Wong left New York City for Chicago, where he reestablished his weekly newspaper and founded another Chinese Equal Rights League.

Dianna Ng

Wood, Alfred M. (*b* 19 April 1828; *d* ?Germany, 25 Jan 1871). Mayor of Brooklyn. During the Civil War he commanded the 14th Regiment of the New York State Militia and was wounded and captured in 1861 during the First Battle of Bull Run. Eventually discharged, he returned to serve as mayor of Brooklyn from 1864 to 1866.

Jerome Mushkat

Wood, Fernando (*b* Philadelphia, 14 Feb 1812; *d* Hot Springs, Ark., 14 Feb 1881). Mayor. During his early career he was a businessman, real estate speculator, and member of the U.S. Congress (1841–43). As mayor during 1855–57 and 1859–61 he became a prototypical "boss," the model for William M. "Boss" Tweed. While in office he was praised by immigrants and the poor and criticized by members of Tammany Hall, Republicans, and business leaders. He proposed innovative programs to improve the city but few passed because of the scandals surrounding him (he was convicted of defrauding investors during the gold rush), his dictatorial methods, and his reputation for politicizing the police. The state legislature, controlled by Republicans, revised the municipal charter and stripped him of his power in 1857. Scorned by Tammany Hall, he formed his own organization, Mozart Hall, and defended home rule. Before 1861 he was the city's chief defender of slavery in the South, owing to both the city's dependence on the cotton trade and his own racism. He made a notorious suggestion in 1861 that New York City become a "free city" and during the Civil War walked a fine line between loyalty and treason, eventually becoming the city's leading Copperhead. In 1867 he was again elected to the U.S. Congress, where he served to the end of his life.

Jerome Mushkat

Woodhaven. Neighborhood (2009 pop. *ca* 40,000) in southwestern Queens, bordering Cypress Hills and bounded to the north by Park Lane South, to the east by 106th and 107th streets, to the south by Atlantic Avenue, and to the west by the Brooklyn line. The area was settled in the eighteenth century and the early nineteenth by members of the Ditmars, Lott, Wyckoff, Suydam, and Snediker families. A racetrack called Union Course was built in 1821 between 78th and 82nd streets south of Jamaica Avenue; races were held there as late as 1868, often between the horses of plantation owners from the South and those of wealthy northerners. Another track, the Centerville, opened in 1825 east of Woodhaven Boulevard and south of Rockaway Boulevard and was the subject of lithographs produced in the 1850s by Currier and Ives. The area was developed as a workers' village by John R. Pitkin, who moved to Long Island from Connecticut in 1835 to build a manufacturing center in East New York. He abandoned his plan during the depression in 1837 and turned to promoting his village, Woodville, in the 1850s after persuading the railroad in 1850 to build a station. In 1853 he launched a newspaper and the few inhabitants voted to change the name of the village to Woodhaven.

A shoe factory opened in 1854, and development increased after a tinware factory was built in 1863 by Charles Lalance and Florian Grosjean, Frenchmen who improved the process of tin stamping. The factory eventually covered 11 acres (4.5 hectares). Grosjean, who managed the factory, invited French workers and built company housing. During the 1880s and 1890s the stamping works dominated the village, employing 2100 workers; it also had a feeder steel mill in Harrisburg, Pennsylvania, and branches in Chicago and Boston and supplied mess kits for soldiers during the Spanish–American War. Several residential developments were built at the end of the century: Ozone Park (1882–90), Brooklyn Hills (1889), and Forest Parkway (1900). After elevated lines reached Liberty Avenue (1915) and Jamaica Avenue (1917), thousands of Italians and Irish moved to new housing in the neighborhood, which was well known after Schmidt's Candies opened on Jamaica Avenue near 94th Street. The actress Mae West once lived on 88th Street near 98th Avenue and sang at the Union Course Tavern on nearby 78th Street. The redbrick building of the stamping works remained until 1955; in 1984–85 its former clock tower became a bank, and the site of the factory was used for a shopping mall. After 1970 the neighborhood attracted African Americans, Latin Americans, and immigrants from Guyana, Jamaica, and China. In 2009 Woodhaven was 45 percent Hispanic, 29 percent white, 14 percent Asian, and 5 percent African American, and its character remained suburban.

Vincent Seyfried

Woodhull, Caleb S. (*b* New York City, 26 Feb 1792; *d* Port Jefferson, Long Island, 16 July 1866). Mayor. He was elected mayor as a Whig in 1849 against divided Democratic opposition. Among his concerns were designating more public squares and controlling the 750 sites in the city where meat was processed. During the 1849 Astor Place Riot, his house and the Astor Place Opera House were targets of vandals.

James E. Mooney

Woodhull [née Claflin]**, Victoria** (*b* Homer, Ohio, 23 Sept 1838; *d* Bredon's Norton, Worcestershire, England, 9 June 1927). Reformer. Born to poverty, she began her career as a spiritualist and in 1868 moved to New York City, where she became a leader of the American branch of the International Workingmen's Association and edited a reform newspaper. With her sister Tennessee Claflin (1843–1923) she published *Woodhull and Claflin's Weekly,* a widely circulated reform journal, and they ran the first women's brokerage firm. In the spring of 1870 Woodhull announced her candidacy for president of the United States. She was a lecturer at venues such as the Cooper Institute. In 1871 she became the first woman to address the U.S. Congress on women's suffrage, and she made an unsuccessful and well-publicized attempt to vote in New York during the 1871 election. She was formally nominated for the presidency at Apollo Hall near Madison Square on 10 May 1872 by the new Equal Rights Party, with Frederick Douglass as her running mate (although Douglass was not present and never accepted the nomination).

A supporter of "free love" (the doctrine that the state should not interfere with sexual relations), she attacked sexual hypocrisy, most notoriously when in the early 1870s she exposed the adulterous triangle between Henry Ward Beecher, Theodore Tilton, and Elizabeth Tilton. Her actions cost her the acceptance of respectable society, her sanity, and

her residence in the United States. She moved to England in 1877.

Ellen Carol DuBois, Kate Lauber

woodlands. A large part of the New York City metropolitan area was once covered by woodlands, where coniferous and deciduous forests thrived in the rich local soils and coastal temperate climate of the region. Most of the original woodlands were destroyed as the city grew, but a few trees survived alongside buildings, in parks, and in vacant lots; in later years species adapted to the harsh city environment were planted for decoration. Much of the city is classified as an open forest (that is, the crowns of trees are not contiguous) and as an urban forest. A few modified stands of native deciduous forest survive in Inwood, Fort Tryon, Riverside, High Bridge, and Central parks in Manhattan; the New York Botanical Garden and Van Cortlandt and Pelham Bay parks in the Bronx; the Gateway National Recreation Area and Kissena, Cunningham, Forest, and Flushing Meadows–Corona parks in Queens; Prospect Park in Brooklyn; and the William T. Davis Wildlife Refuge and Great Kills, High Rock, Willowbrook, New Springville, and Blue Heron Pond parks in Staten Island. Remnants of native temperate evergreen forest are found in parts of Staten Island. There the dominant species is the needle-leaved pitch pine, which thrives in poor, acidic, sandy soils prone to drought and fire; in the absence of fire such areas generally become oak forests.

Steven D. Garber, *The Urban Naturalist* (New York: John Wiley and Sons, 1987)

Steven D. Garber

Woodlawn. Neighborhood in the north central Bronx, bounded to the north by the city of Yonkers, to the east by the Bronx River Parkway, to the south by Woodlawn Cemetery, and to the west by Van Cortlandt Park. It was settled after the railroad was extended and Woodlawn Cemetery was laid out in 1863. The village was established in 1873 by George Updyke on the former farm of Gilbert Valentine. Also known as Woodlawn Heights, it is a neighborhood mostly of one- and two-family houses with some apartment buildings, and has a predominantly Irish and Italian population. Many residents describe the neighborhood as having a suburban feel.

Gary D. Hermalyn

Woodlawn Cemetery. Four-hundred-acre (160-hectare) nonsectarian cemetery in the Bronx near the Westchester County border, bounded to the north by East 233rd Street, to the east by Webster Avenue, to the south by East 211 Street and Bainbridge Avenue, and to the west by Jerome Avenue. It was laid out in the rural style in 1863 by James C. Sidney. After the ceremonious burial of Admiral David Farragut in 1870 Woodlawn became a favorite cemetery for prominent New Yorkers. Many mausoleums, some very large, were designed by important architects, including James Renwick, Stanford White, Louis Comfort Tiffany, John Russell Pope, and Richard Morris Hunt. Because approval of the management was required for each new monument, the cemetery compiled a large collection of plans for structures and the grounds. In 2006 this collection was donated to Columbia University's Avery Architectural and Fine Arts Library. There have been more than 300,000 interments in Woodlawn Cemetery. Little space remains for burials, but facilities include new community mausoleums, a crematorium, and columbariums. Among those buried at Woodlawn Cemetery are songwriters Irving Berlin, Duke Ellington, and W. C. Handy; writer Herman Melville; dancers Vernon and Irene Castle; publisher Joseph Pulitzer; musician Miles Davis; Mayor Fiorello H. La Guardia; and members of the prominent Belmont, Goelet, Gould, and Whitney families.

Edward Streeter, *The Story of Woodlawn Cemetery* (New York: Woodlawn Cemetery, 1972); Edward F. Bergman, *Woodlawn Remembers: Cemetery of American History* (Utica, N.Y.: North Country, 1988)

Edward F. Bergman, John Rousmaniere

Woodlawn Heights. Alternative name for Woodlawn.

Woodrow. Neighborhood in south central Staten Island, lying north of the Richmond Parkway. It was a sparsely settled area of woodland and small farms until one-family houses were built during the 1970s. The early Methodist bishop Francis Asbury preached in the area in 1771, and a Methodist church was established there in 1787; the Woodrow United Methodist Church at 1075 Woodrow Road (1842) has white clapboard siding, a Greek Revival portico, an Italianate bell tower, and an adjoining cemetery and parsonage (1850). The main thoroughfares are Woodrow Road and Foster Road.

Barnett Shepherd

Woods, Granville T. (*b* Columbus, Ohio, 23 April 1856; *d* New York City, 30 Jan 1910). Engineer and inventor. He invented at least 15 improvements to make railroad travel safer and more effective, including a complete electric railway system developed in 1892 and operated at Coney Island. Sometimes known as the "Black Thomas Edison," he received many patents over his lifetime for his inventions.

Celedonia Jones

Woodside. Neighborhood in northwestern Queens, adjoining Long Island City. The area was settled in the late seventeenth century by Joseph Sackett. During the American Revolution a dry ridge known as the Narrow Passage lay near what is now Woodside Avenue and 37th Avenue and provided a route for troops and couriers; high ground that is now the site of Public School 11 was used by the British as a bivouac area and lookout. Between 1830 and 1860 John Kelly, William Schroeder, Gustav Sussdorf (all of Charleston, South Carolina), and Louis Windmuller moved to the area and built mansions. The name is derived from a series of articles titled "Letters from Woodside" written by Kelly's son, the newspaperman John Andrew Kelly. In 1861 the railroad was extended to the area, providing a connection to Manhattan. A village was developed in 1867 by Benjamin W. Hitchcock, who laid out streets and sold lots; his success encouraged other developers during the 1870s and 1880s. The population rose from 1355 in 1875 to 3878 in 1900; many moved to the area after trolley lines were extended in 1895 and a trolley terminal was built (later the Tower Square Shopping Center). More houses were erected after the extension of the elevated line in 1917, and the last open land disappeared during a period of rapid development in the 1920s. A large number of Irish families moved to the neighborhood from cramped quarters in Manhattan.

After World War II some older housing in Woodside was replaced by apartment buildings, notably Big Six Towers on Queens Boulevard and 60th Street, a cooperative housing development sponsored by New York Typographical Union no. 6. Woodside Houses, a 1357-unit public housing project, opened on 22 acres (8.9 hectares) in 1949. The large Irish population was complemented during the 1980s by immigrants from China, Colombia, Korea, Mexico, Ecuador, and the Dominican Republic, and to a lesser extent from India, the Philippines, Guyana, Peru, and Ireland. Roosevelt Avenue and Northern Boulevard are the neighborhood's principal commercial thoroughfares. In the early twenty-first century Woodside retained its special appeal because it had several subway lines, including one (No. 7) with the first rush-hour express stop in Queens. Green space in the neighborhood comes mostly from two cemeteries, St. Michael's to the north and New Calvary to the south.

Vincent Seyfried, Kenneth T. Jackson

Woodstock. Neighborhood in the southern Bronx, bounded to the north by the Boston Road, to the east by Jackson Avenue, to the south by East 160th Street, and to the west by Cauldwell Avenue. It was populated from the 1860s to the 1920s chiefly by Germans, who formed several political and social clubs and singing societies that became well known

(the Woodstock branch of the New York Public Library is one of few buildings remaining from this time). The neighborhood became the site in 1904 of the first public high school in the Bronx, Morris High School. In the early twenty-first century the population is growing but remains mostly black and Latin American.

John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

Gary D. Hermalyn

Woollcott, Alexander (Humphreys) (*b* Phalanx, N.J., 19 Jan 1887; *d* New York City, 23 Jan 1943). Theater critic. He began his career as an obituary writer for the *New York Times* (1910) and helped to organize the Algonquin Round Table. As a theater critic for the *New York Herald,* the *Sun,* and the *New York World* (1922–28) he wielded enormous power; his reviews often determined whether a play would succeed or fail. He is considered a pioneer of drama criticism for having freed the critic from the obligation to placate theater owners by reviewing all productions favorably. In his later career he became nationally known through his columns for the *New Yorker* and the radio program *The Town Crier* (on the stations of the Columbia Broadcasting System, 1929–43) for his flamboyance, outspokenness, and intimate although biting style, as well as for his sometimes mawkish enthusiasms. Woollcott lived from 1922 to 1927 at 412 West 47th Street, from 1927 to 1936 at 450 East 52nd Street, and toward the end of his life at 10 Gracie Square and 2 West 55th Street.

Edwin Hoyt, *Alexander Woollcott: The Man Who Came to Dinner* (New York: Abelard–Schuman, 1944; repr. 1968)

Brenda Wineapple

Woolsey, John Munro (*b* Aiken, S.C., 3 Jan 1877; *d* New York City, 4 May 1945). Federal judge. He graduated from Yale University and Columbia Law School and practiced in New York City until 1929 when President Herbert Hoover appointed him a U.S. District Court judge for the Southern District of New York. In 1933 he ruled in favor of Random House's right to publish James Joyce's controversial novel *Ulysses,* which had been withheld from publication because of what were deemed explicit and allegedly obscene descriptions. Woolsey concluded that Joyce had tried with "astonishing success to show how the stream of consciousness with its ever-shifting kaleidoscopic impressions" helps to reveal the "life and behavior" of the characters and that the novel was not obscene. The state appellate court upheld Woolsey's decision, and *Ulysses* was finally published legally in the United States. The decision was a landmark for freedom of the press in the United States.

David White

Woolworth, F(rank) W(infield) (*b* Rodman, near Adams, N.Y., 13 April 1852; *d* Glen Cove, N.Y., 8 April 1919). Businessman. After attending a business school in Watertown, New York, he learned in 1878 of a retail store where each item was priced at five cents. He then opened a "five-cent store" in Utica, New York, that failed. Convinced that a store with a larger selection of merchandise would succeed, he opened one in Lancaster, Pennsylvania, where some goods were sold for 10 cents. This store, the first "five and ten," prospered, and he opened many others. In 1886 he moved his headquarters to New York City to be closer to the offices of his suppliers. The firm rented a small office at 104 Chambers Street, and he lived with his family in Brooklyn. In 1896 he opened his first store in New York City, at 17th Street and Sixth Avenue. He built a 30-room mansion for himself in 1901 at 990 Fifth Avenue, near the homes of many other wealthy merchants. In 1911 he erected the Woolworth Building, the tallest structure in the world, on Broadway and Park Place in lower Manhattan. This neo-Gothic skyscraper was derided as a "cathedral of commerce," but Woolworth took the term as a compliment and began using it himself. At his death there were more than 1000 stores in the Woolworth chain, and his personal fortune was estimated at $65 million. He is buried at Woodlawn Cemetery in the Bronx.

James Brough, *The Woolworths* (New York: McGraw–Hill, 1982)

Rohit T. Aggarwala

Woolworth Building. Office building located at 233 Broadway, on the corner of Park Place in Manhattan, across from City Hall Park. It has 55 stories and is approximately 792 feet (241 meters) tall; it was the tallest building in the world from its completion in 1913 until 1929, when the Chrysler Building surpassed it. The graceful neo-Gothic building was designed by Cass Gilbert of the firm McKim, Mead and White as the new corporate headquarters for the five-and-dime stores. Woolworth paid the $13.5 million price tag in cash, more than half going toward the cost of the land. The construction consists of a masonry and terra cotta covering of a steel frame designed by engineer Gunvald Aus. Because no buildings of comparable height had ever been constructed, the design of the Woolworth Building took into account many safety precautions. The tower is built with portal braces to protect against excessive wind in a manner similar to bridge construction. The elevators underwent excessive safety testing that included dropping elevator cars filled with eggs and bottles to test the "air cushion." The building was entirely self-sufficient; it contained its own power plant, air conditioning, barber shop, restaurant, doctor's office, and swimming pool. The lobby features a three-story arcade entrance with gold-veined marble, glass mosaics, large frescos titled "Commerce" and "Labor," as well as 12 marble busts of individuals including Gilbert and Woolworth. Known as "the Cathedral of Commerce," the building opened to great fanfare on 24 April 1913. The Venator Group (the former F. W. Woolworth Company) sold the building to the Witkoff Group in 1998.

Woolworth Building, 1913

Wooster Group. Performance group. Known for avant-garde productions with unique staging and the inclusion of video and sound, the group originally took form in 1975 as an offshoot of the Performance Group. Led by Elizabeth LeCompte, Jim Clayburgh, Willem Dafoe, Spalding Gray, Libby Howes, Peyton Smith, Kate Valk, and Ron Vawter, it first became known as the Wooster Group in 1980. Self-described as a company focusing on innovative staging of both modern and classic texts, found materials, films and videos, dance and movement, multitrack scoring, and an architectonic approach to theater design, the group has been a leading player in experimentation with multidisciplinary performance.

The group's unconventional style grew in part out of the "Happenings" of the 1960s—experimental theater events that usually took place in lofts, basements, and other small spaces and generally involved improvisation and audience participation. The Wooster Group's founders were also influenced by the concept of "intermedia," as set forth in the eponymous 1965 essay by artist Dick Higgins. The group was among the first performance companies to move into SoHo during the Fluxus art movement of the 1960s, basing

themselves in a former metal-stamping flatware factory christened the Performing Garage and located at 33 Wooster Street at a time when the area was still zoned for manufacturing. It also performed at venues like St. Ann's Warehouse in Brooklyn and the Public Theater. In the early twenty-first century the group serves as the resident theater company of the Jerome Robbins Theater in the Baryshnikov Arts Center at 450 West 37th Street.

Some of the Wooster Group's most famous and controversial productions include *Frank Dell's the Temptation of St. Antony* (1987); *Brace Up!* (1990), a vaudeville adaptation of Chekhov's *Three Sisters*; *Fish Story* (1994); *To You, the Birdie! (Phèdre)* (2002); Eugene O'Neill's *The Emperor Jones* (2006); and Molière's *The Misanthrope* (2007).

Patrick Barrett

Workingman's School. Original name of the Ethical Culture Fieldston School.

Workmen's Circle [Arbeter Ring]. Fraternal order for Jewish laborers founded on socialist principles as a mutual-aid society in 1892 and reorganized as a national order in 1900. For many years, beginning about 1912, its headquarters were in the Forward Building at 175 East Broadway. The membership remained centered in New York City, where the order provided material assistance to members, took part in the labor movement, undertook cultural projects, and opened children's schools that offered instruction in the Yiddish language, Jewish history, and socialism. Membership peaked in 1925 at nearly 85,000 and then slowly declined. In 1915 Workmen's Circle helped found the city's Folksbiene Yiddish Theatre, which worked under the auspices of the organization until 1998. In the early twenty-first century it is the only remaining professional Yiddish theater group in the country and one of only four worldwide. In 2000 Workmen's Circle entered its second century; the national headquarters are at 45 East 33rd Street.

Works Progress Administration [Work Projects Administration; WPA]. Federal emergency employment and relief agency established in 1935 by President Franklin D. Roosevelt. Its initial appropriation of $4.8 billion represented more than half the total federal budget. The agency was closely associated with New York City from its inception, and much of its activity was centered there. Its national director, Harry Hopkins, had experience working in a settlement house in Manhattan and with the Association for Improving the Condition of the Poor; he also had led the New York State Temporary Emergency Relief Administration and between 1933 and 1935 the Federal Emergency Relief Administration and the Civil Works Administration, both forerunners of the WPA. Moreover, New York was the only city to have a local organization that stood on an equal footing with state organizations: Mayor Fiorello H. La Guardia gained this special treatment for the city because of his influence with Roosevelt and Hopkins, the innovative work relief projects developed by private and public welfare agencies in the city during the Depression, and the city's huge welfare burden (as the home of nearly 7 percent of all Americans on relief in 1935). By 1936 the WPA was spending about $20 million a month in the city, or one-seventh of all the funds being spent nationally; from 1935 to 1939 it had a labor force that fluctuated between 100,000 and 245,000, but because of insufficient funding it still could not provide work for all the able-bodied residents of the city who sought it: about 100,000 were on general relief when the agency was at its peak in 1936. The first local director of the WPA was General Hugh Johnson, who served only briefly. During the crucial period 1936–40 the local director was Colonel Brehon B. Somervell of the Army Corps of Engineers. The agency was renamed the Work Projects Administration in 1939.

Two-thirds of those employed by the WPA in the city worked on construction and engineering projects. In 1937–38 projects sponsored by the agency accounted for 60 percent of all construction in the city; among its developments were La Guardia Airport, the lower portion of the FDR Drive and the South Shore Drive in Brooklyn, 255 playgrounds, and 17 municipal swimming pools. The agency also refurbished Jacob Riis Park, Orchard Beach, and other beaches; developed 5000 acres (2000 hectares) of new parks, including one at a former dump and ash heap in Queens that became the site of the World's Fair of 1939–40; repaired 2000 miles (3200 kilometers) of streets and highways; demolished 5500 decaying structures to make way for public housing projects in Williamsburg, on the Lower East Side (the First Houses), and elsewhere; and built and repaired many schools, clinics, hospitals, municipal markets, and police and fire stations.

The remaining third of those employed by the WPA in the city were engaged in white-collar and professional work, which provided many services not available to residents even during the prosperous 1920s: these included adult education classes and preschool day care at 28 centers, screening and X-rays for tuberculosis for 400,000 urban residents, and dental services for the poor. Because the city had more actors, artists, musicians, and writers than any other place in the United States, it also had the largest program administered by the Federal Arts Project, between 1936 and 1938 accounting for nearly half of the 5000 people employed by artists' projects nationwide. The Federal Theatre in the city employed more than 4000 actors, dramatists, directors, and stagehands in 1938. It produced classics, new plays, and social documentaries by a troupe called the Living Newspaper; companies affiliated with it produced plays for children, marionette shows, radio plays, and German, black, and Yiddish theater. John Houseman and Rose McClendon, joint directors of the New York Negro Theatre Project, staged an all-black *Macbeth* adapted by Orson Welles, and a Yiddish *King Lear* enjoyed the longest run of any production mounted by the WPA in the city. The Federal Writers' Project engaged many writers in the city, of whom some had already been published but had fallen into disfavor (Maxwell Bodenheim and Anzia Yezierska) and others were young and largely unknown (John Cheever and Ralph Ellison). The writings supported by the project ranged from the guidebooks *New York Panorama* (1939) and *New York City Guide* (1939) to Richard Wright's novel *Native Son* (1940). The Federal Art Project supported such painters as Raphael Soyer, Stuart Davis, and Jackson Pollock, as well as sculptors, printmakers, photographers, and teachers. Murals painted under the auspices of the WPA may be seen at the New York Public Library on Fifth Avenue and 42nd Street, at Harlem Hospital, and at many municipal buildings. Berenice Abbott took thousands of photographs of New York City while associated with the project, some of which appeared in *Changing New York* (1939). Some 2000 musicians in the city belonged to groups sponsored by the Federal Music Project, including a symphony orchestra and jazz, swing, and dance bands; these performed in theaters, on the radio, and in parks.

In 1938 and 1939 the Un-American Activities Committee and an appropriations subcommittee of the U.S. House of Representatives investigated the Federal Arts Project, focusing in particular on writers, actors, and artists in the city. Members of the committees charged that the projects were dominated by communists. In 1939 the Federal Theatre was eliminated, and the other arts projects were drastically curtailed. The WPA ceased operations on 1 February 1943. In its seven and a half years the WPA in New York City provided income for 700,000 workers and their dependents, an amount equal to a quarter of the city's total population.

World Council of Churches [WCC]. Organization of nearly 350 churches in more than 120 countries, formed in Amsterdam in August 1948 after years of planning; its members include Anglican, Protestant, Old Catholic, Eastern Orthodox, and Oriental Orthodox churches. The council brings together theologians and church leaders to discuss issues and promote unity among Christian groups. The WCC United Nations Liaison Office is at the United Nations headquarters in New York City; the WCC U.S. office was in the Interchurch Center Building at 475 Riverside Drive until January 2010, when the office was closed.

Thomas E. Bird

World Financial Center. Commercial development, owned by Brookfield Properties Corporation, built on 14 acres (5.7 hectares) of landfill in Battery Park City, bounded to the north by Vesey Street, to the east by West Street, to the south by Albany Street, and to the west by the Hudson River. Rights for commercial development in the area were won in a lawsuit by the firm Olympia and York, which engaged César Pelli as the architect. His design, adapted to a master plan prepared in 1979 by Battery Park City Associates and the firm of Cooper, Eckstut, called for four postmodern towers ranging from 33 to 51 stories in height and containing 8 million square feet (743,200 square meters) of space. Ground was broken in December 1981 and construction completed in 1988. The complex includes the Winter Garden atrium, a vaulted glass and steel structure 120 feet (37 meters) high that houses restaurants and shops, and the Courtyard, a landscaped park covering 2.5 acres (1.4 hectares) along the North Cove yacht harbor, both of which are often used for performances and events. Tenants of the four towers include Dow Jones, Merrill Lynch, American Express, and the New York Mercantile Exchange (NYMEX). Various components of the development, especially the Winter Garden, were damaged in the terrorist attacks of 11 September 2001 but were later restored.

world's fairs. New York City was the site of world's fairs in 1853–54 (the first in the United States), 1939–40, and 1964–65. The iron and glass Crystal Palace (Georg Carstensen and Karl Gildemeister, architects) opened on 14 July 1853 immediately west of the Croton Reservoir in what is now Bryant Park. President Franklin Pierce spoke at the opening. Modeled after 1851's Great Exhibition at the Crystal Palace in London, the "Exhibition of the Industry of All Nations" featured 5272 exhibits of agricultural and industrial products and artworks from the United States and 22 other nations. Although paid attendance exceeded one million, the sponsors were left $300,000 in debt when the exhibition closed on 1 November 1854. The Crystal Palace burned in 1858.

The 1939 fair was in Flushing Meadow, a tidal expanse covering 1216 acres (492 hectares) along the Flushing River. Used for dumping by the Brooklyn Ash Removal Company since 1910, the site was known locally as the Corona Dumps. Parks Commissioner Robert Moses supported the fair as a way to transform the site into Flushing Meadow Park. Groundbreaking was on 29 June 1936. Mounds of refuse were leveled, and water mains, sewers, and streets were installed. Also built in conjunction with the fair were the Bronx–Whitestone Bridge, the Whitestone Expressway, the Grand Central and Cross Island parkways, the Queens Boulevard line of the Independent subway (extended to Kew Gardens on 31 December 1936), Willets Point stations for the Interborough Rapid Transit and the Long Island Rail Road, La Guardia Airport, and the Bowery Bay sewage treatment plant. Grover A. Whalen headed the nonprofit corporation, which issued $27,829,500 in 4 percent bonds due in 1941 backed by receipts from concessions, rents, and admissions (75 cents for adults, 25 cents for children), with all profits dedicated to construction of Flushing Meadow Park. New York City contributed $26.7 million to the fair, the federal

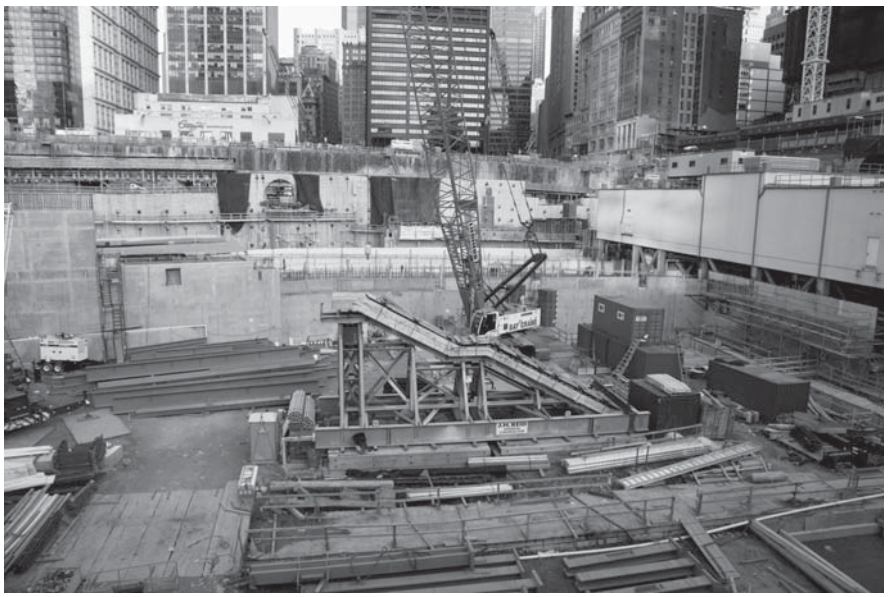
government $3 million, New York State $6.2 million, and foreign governments about $30 million. A board of design under Stephen A. Voorhees and Robert D. Kohn's "theme committee" prescribed standards for buildings and artwork. Notable statuary created for the fair included *Four Freedoms* by Leo Friedlander, *Speed* by Joseph E. Renier, *George Washington* by James Early Fraser, and *Chassis Fountain* by Isamu Noguchi. The fair opened on 30 April 1939, the 150th anniversary of George Washington's inauguration (ostensibly the rationale for the fair). The symbol was the Trylon and Persiphere (Harrison and Fouilhoux, architects), a futuristic structure that housed "Democracity" (designed by Henry Dreyfuss). Scattered across seven zones—amusement, communications, community interests, food, government, production and distribution, and transportation—were exhibits by 60 countries, the League of Nations, 33 states and territories (including Puerto Rico), federal agencies like the Works Progress Administration, and the City of New York (designed by Aymar Embury II, the building later housed an ice-skating rink, the United Nations, the city's exhibit for the 1964 fair, and the Queens Museum of Art).

A large number of consumer and industrial products were introduced to the public at the fair, including Lucite, television (the Radio Corporation of America), air conditioning (in the Carrier Corporation's igloo-shaped pavilion), color film (Kodak), nylon stockings (E. I. du Pont de Nemours), and diesel engines (in the Railroad Building). Especially popular attractions included Billy Rose's Aquacade in the New York State Pavilion; the Heinz Foods Pavilion (where visitors received a pickle-shaped pin as a souvenir); the Ford Motor Company's "Road of Tomorrow"; *Mickey's Surprise Party,* an animated film shown by the National Biscuit Company; the Life-Savers Parachute Tower, standing 250 feet (75 meters) high and later moved to Coney Island; American Telephone and Telegraph, where visitors could place free long-distance telephone calls; demonstrations of a robot by Westinghouse; the 21 model homes in the "Town of Tomorrow"; and above all "Futurama," a depiction of the world in 1960 by General Motors designed by Norman Bel Geddes, where visitors received a pin inscribed "I have seen the future."

Despite its optimistic, utopian tone, the fair reflected and was beset by the political turmoil of its time. After the outbreak of World War II the theme of the fair changed from "Building the World of Tomorrow" to "For Peace and Freedom." The Soviet Union's pavilion featured a statue of a worker 70 feet (21 meters) tall (dubbed "Joe the Worker" by fairgoers) and a model of the Moscow subway; it was demolished after the nonaggression pact between Joseph Stalin and Adolf Hitler and the site became "American Common," the scene of patriotic rallies. On 4 July 1940 a bomb exploded at the British Empire Exhibition, killing two members of the police department's bomb squad. The Japanese Pavilion, intended as a permanent structure, was set afire by vandals after Pearl Harbor. The fair was a financial disappointment: total attendance was 44.9 million, well short of the projected 100 million; only about 40 cents of each dollar invested was repaid. The highest daily attendance of 550,962 came on closing day, 26 October 1940.

After World War II Flushing Meadow Park did indeed open, maintaining landscape architect Gilmore Clarke's site plan, as did the 1964–65 World's Fair, "Peace through Understanding." Robert Moses was president of the World's Fair Corporation, which leased the park from the city and issued $29.8 million in bonds. The city also lent $24 million (never repaid). Major construction projects connected with the fair included widening the Grand Central Parkway and the Whitestone Expressway, extending the Van Wyck Expressway, and building Shea Stadium. The symbol of the fair was the Unisphere, erected by U.S. Steel, Gilmore Clarke designer. Unlike the first fair, it lacked the sponsorship of the Bureau of International Expositions. Even so, exhibitors included 80 countries, the federal government, 24 states, New York City, and 50 corporations. President Lyndon B. Johnson attended the opening, which also attracted civil rights protests led by James Farmer of the Congress of Racial Equality. Moses called the fair an "Olympics of Progress" and saw to it that the trials for the Olympic Games of 1964 were held in conjunction with the fair. Major attractions included "Futurama II" by General Motors, modeled after the popular exhibit from the first fair and depicting the world in 2064, the film *To Be Alive* shown by Johnson's Wax, demonstration models of the Picturephone at the American Telephone and Telegraph Pavilion, computers at the International Business Machines Pavilion, and the Panorama of New York City, a three-dimensional scale model in the New York City Pavilion showing every building in the five boroughs. The surprise of the fair was the popularity of the Belgian waffle. Walt Disney designed four exhibits, each featuring audio-animatronics: the Magic Skyway for Ford (the company introduced the Mustang at the fair), the "Carousel of Progress" for General Electric, "Great Moments with Mr. Lincoln" for the state of Illinois, and "It's a Small World" for Pepsi-Cola, with proceeds going to the United Nations International Children's Emergency Fund (UNICEF) (the latter three were reinstalled in Disneyland). The fair attracted more than 27 million visitors in 1964 (22 April to 18 October) and 24 million in 1965 (21 April to 17 October). It ran a deficit of about $21 million, repaying about 40 cents for each dollar invested. The city rededicated Flushing Meadows–Corona Park on 3 June 1967. Left standing were the Unisphere, the Singer Bowl (later Louis Armstrong Stadium, now the site of the U.S. Tennis Center), the Port Authority Heliport (now Terrace on the Park), the Hall of Science, and the New York State Pavilion (designed by Philip Johnson, and abandoned for decades), the Federal Pavilion (abandoned, then finally demolished), and various statuary and a time capsule. The Aquacade became a public pool named for Gertrude Ederle, but the parks department closed the pool and allowed it to decay; it was demolished in 1996. The Panorama of New York City in the Queens Museum is periodically updated.

Jeffrey A. Kroessler



World Trade Center. Complex of seven buildings in lower Manhattan, including two 110-story skyscrapers (the twin towers), constructed by the Port Authority of New York and New Jersey. The two towers collapsed and the other buildings were damaged or destroyed in the terrorist attacks of 11 September 2001 (9/11) (see September 11).

The complex was built as part of a massive urban renewal project of the Port Authority. Planning for a world trade center began in the late 1950s, when David Rockefeller and other business leaders sought ways to revitalize the downtown area. In 1958 they proposed the creation of a "world trade and financial center," and the Port Authority joined forces with them in 1961. The Port Authority's interest was based in part on the desire to enhance the region's role in world trade and to commit large sums to nonrail projects, making the agency less vulnerable to demands that it take control of the money-losing commuter railroads in the region. New York State and New Jersey approved the trade center with the stipulation that the Port Authority take control of the Hudson and Manhattan (H&M) Railroad and operate that bankrupt but crucial bi-state commuter line. In the spring of 1962 the port agency was committed both to constructing the trade center and to modernizing the old commuter line, now renamed the Port Authority Trans-Hudson Corporation (PATH). Progress on the trade center was delayed because of lawsuits brought by private realty interests that did not want competition for tenants from a large governmental office building, and by some of the 325 merchants who would be displaced from the site.

In 1962 the Port Authority engaged Minoru Yamasaki as its architect. The first building opened in 1970, but the towers and the plaza were not completed until 1976; the last building was completed in 1988. As construction went forward, projected costs rose—from an initial $355 million to $600 million in 1967, to $800 million in the 1970s; when the last building was completed in 1988, total costs were more than $1 billion. During construction, five streets were closed, 164 buildings demolished, and 1.2 million cubic feet (34,000

World Trade Center, 1973

The "Survivors' Staircase," World Trade Center, 11 September 2008

cubic meters) of earth removed and used for landfill that eventually created 23.5 acres (9.5 hectares) for Battery Park City.

The World Trade Center (WTC) site occupied 16 acres (6.5 hectares) near the Hudson River, bounded to the north by Vesey Street, to the east by Church Street, to the south by Liberty Street, and to the west by West Street. When finished, it included 10 million square feet (929,000 square meters) of usable space, surpassing the Pentagon as the largest office complex on earth, and it had its own zip code, 10048. The complex rose above an enormous underground shopping concourse and was best known for its two towers, which displaced the Empire State Building as the world's tallest building. For more than two decades the WTC towers were the dominant structures associated with Manhattan's image as a forest of skyscrapers. A public observation deck on the 107th floor of the South Tower was a popular tourist attraction and afforded a magnificent view of the New York City skyline and the surrounding harbor. Each tower, which featured load-bearing steel walls rather than the steel-cage construction typical of modern skyscrapers, had an area of 4 million square feet (371,600 square meters), a height of 1250 feet (381 meters), and a base length of 400 feet (122 meters). They transformed the skyline of the city, especially at night when they were lit from within. The smaller buildings of the complex surrounded an enormous plaza modeled after St. Mark's Square in Venice.

The complex was often criticized as architecturally unimaginative, although unlike many postwar "glass boxes," the towers gave the impression of being metallic sculptures that glistened and floated weightlessly over the tip of Manhattan; because of narrow windows and projecting metal piers, the glass in the towers disappeared behind aluminum-clad steel. Famous worldwide, the towers were, to many people, not only beautiful but also a defining presence in the city skyline. They attracted a number of daredevils, including Philippe Petit, who in 1974 walked between the two towers on a steel cable (the documentary of this feat, *Man on Wire,* was released in 2008), and George Willig, a mountain climber from Queens, who scaled the South Tower in 1977 in 3.5 hours.

On 26 February 1993 terrorists set off a car bomb in an underground parking garage beneath the center, killing six people. Both towers were closed for several weeks after the explosion. In 1994 the four main suspects in the bombing were convicted on nearly all charges.

Then, on 11 September 2001, two jet aircraft hijacked by members of the terrorist organization Al-Qaeda flew directly into the twin towers, destroying them and killing an estimated 2749 people, including 343 firefighters and 70 police officers, as well as the passengers and crew onboard the two planes. It was the worst terrorist attack ever committed on U.S. soil. By 10:30 a.m., both towers had collapsed.

Later that day, 7 World Trade Center also collapsed. The Marriott Hotel, nearby St. Nicholas Greek Orthodox Church, and 3 World Trade Center were destroyed during the collapse of the towers, and other nearby structures were badly damaged. The remaining three WTC buildings around the plaza were so devastated that they were eventually razed. Although several thousand people managed to escape from the towers before they collapsed, only 21 people were found alive in the rubble. Removal of 1.8 million tons of debris from the area, which came to be called Ground Zero, was not completed until May 30, 2002. (For a full account of the attacks, see September 11.)

Immediately after the attacks the Port Authority of New York and New Jersey and the City and State of New York began taking steps to reconstruct the WTC site and to memorialize the victims. From the beginning, however, the plans for reconstruction were beset by conflict among the parties involved in the process, budget problems, and security concerns. In November 2001 Governor George Pataki, in consultation with Mayor Rudolph Giuliani, created, the Lower Manhattan Development Corporation (LMDC) to plan and coordinate the rebuilding. Its recommendations for future public and private development in lower Manhattan were adopted in July 2002 but met with so much negative reaction from the public that the plans were abandoned. The LMDC then held an international design and planning competition, to which more than 400 teams responded. In December 2002 seven teams of designers exhibited their entries at the World Financial Center. The final choice of design was controversial, but ultimately, in February 2003 Governor Pataki announced that the Studio Daniel Libeskind proposal, called *Memory Foundations,* would provide the basis for a master redevelopment plan. The centerpiece of the plan was to be the 1362-foot-tall (415-meter-tall) "Freedom Tower" with an antenna rising to the symbolic height of 1776 feet (541 meters). This building was redesigned by architect David Childs of Skidmore, Owings and Merrill after a public debate over the issue and later renamed One World Trade Center. In 2006 the building was yet again redesigned in light of New York Police Department concerns about the building's security, creating more construction delays. As of 2010 One World Trade Center had a projected opening date of 2013.

Silverstein Properties became a critical partner in all WTC activities in July 2001, when it became a 99-year leaseholder of buildings 1, 2, 3, 4, and 5 and the retail space in the complex. In what was called the world's richest real estate deal at the time, the lease was worth $3.2 billion. Although Libeskind's master plan was still in place, Silverstein Properties selected its own architects for its buildings. In September 2006 Silverstein announced that Norman Foster, Richard Rogers, and Fumihiko Maki would be the architects for 2, 3, and 4 WTC, respectively. That same year, the Port Authority assumed responsibility for One World Trade Center, which had originally been part of the Silverstein leasehold. Silverstein Properties also completed construction of 7 WTC, a 52-story, 1.6-million-square-foot (148,645-square-meter) office building that opened in May 2006. In June 2007 JPMorgan Chase announced it would erect its investment banking headquarters at 130 Liberty Street, just south of the WTC site where the Deutsche Bank Building had stood.

7 World Trade Center, 2009

Another part of the WTC master plan was a new transportation hub. The first of three temporary PATH railroad stations was opened in November 2003. The Port Authority hired architect Santiago Calatrava to design the new hub, which began construction in September 2005. Work was delayed because of revisions, reengineering, security concerns, and high

costs, and projections in 2010 placed possible completion of this project no earlier than 2014, but possibly later.

The *Memory Foundations* plan also provided for memorial and cultural buildings and open spaces dedicated to those killed in the 1993 and 2001 terrorist attacks. In June 2003 the LMDC invited interested parties to submit ideas for the 600,000 square feet (55,742 square meters) available for the projects. By September more than 110 responses had been received, and four institutions were selected in June 2004 to be part of a performing arts center; by 2010 the Joyce International Dance Theater was the only arts group in consideration. The plans from the architects originally chosen for this—Frank Gehry and the Norwegian firm Snøhetta—were dropped after concerns were raised by 9/11 families and their supporters. The museum was then redesigned by New York City architectural firm Davis Brody Bond. The performing arts center, which is under the jurisdiction of the City of New York, was given $50 million in 2010 by the LMDC to build the underground support structure for the 1000-seat theater, but in 2010 the project continued to face budgetary and construction challenges and only infrastructure was complete.

The 9/11 memorial was the subject of an international design competition won by Michael Arad and Peter Walker in 2004. Their design, called *Reflecting Absence,* was significantly altered to reduce construction costs (once estimated at more than $1 billion) and to address security concerns. The outdoor memorial—which will include pools, parapets, and a planted plaza—is part of the National September 11 Memorial and Museum slated for a public dedication on the 10th anniversary of the towers' destruction, 11 September 2011; it is projected that the core and shell of the plaza-level museum pavilion will be finished, but the museum itself will not be open at that time. In late 2012 or 2013 the full pavilion and underground museum are projected to be open.

As of 2010 the WTC site remained largely empty of buildings although construction work continued. Of the above-ground buildings, only One World Trade Center was under construction; Silverstein Properties was planning how to proceed with buildings 2, 3, and 4 given the economic downturn of the time. In March 2010 Silverstein Properties and the Port Authority had developed a framework for how the three building sites might be developed. Although billions of dollars had been spent, it was uncertain if and when all of these buildings would be completed.

World War I. The outbreak of war in Europe in August 1914 sparked an initial economic contraction in the United States as overseas trade diminished. To avert a financial panic, the New York Stock Exchange closed for four and a half months. Ultimately, New York City financial institutions, especially J. P. Morgan, played an instrumental role in financing the war effort of Great Britain and France. One of the lasting legacies of the war would be the rise of the city as the unparalleled financial capital of the world, surpassing London. Similarly, defense orders revived a sluggish economy and much of the trade with European belligerents passed through New York Harbor.

New Yorkers were divided over whether the United States should enter the war against Germany. Much of the city's business and financial elite were prominent supporters of the preparedness movement and pressed President Woodrow Wilson to take a more aggressive stand against German actions. During the summer of 1915 many joined Mayor John Purroy Mitchel in preparing for military service by attending as civilians a summer army training camp established at Plattsburgh, New York, and staffed by army officers. In sharp contrast, strong sentiment existed among the city's large German and Irish populations opposing intervention. They were joined by socialists and many labor leaders who saw the conflict as a struggle between imperialist powers in which workers had no stake. Peace organizations, often attracting the support of Progressive reformers, pressed Woodrow Wilson in 1915 and 1916 to maintain American neutrality and for the United States to act in the role of mediator between the major belligerents.

After Congress declared war in April 1917, many former opponents embraced the war effort, fostering deep divisions in the Socialist Party, the labor movement, and the intellectual community. For instance, Walter Lippmann, founding editor of the *New Republic,* embraced the war, while Randolph Bourne continued to dissent. Emma Goldman and Alexander Berkman delivered a series of speeches in New York City urging young men to avoid the draft and were tried and convicted in federal court for disrupting the war effort. The depth of antiwar sentiment in the city after the U.S. entry into the conflict can be gauged by the tenor of the 1917 municipal election. Mitchel ran a reelection campaign for mayor advocating support of the war effort and accused Tammany's candidate John F. Hylan and socialist Morris Hillquit of disloyalty. Although Hylan had initially opposed the United States' entrance into the war, he ignored the conflict during his campaign, but Hillquit ran on an antiwar platform that opposed conscription and publicly stated his refusal to buy Liberty Bonds. Mitchel suffered a humiliating defeat by Hylan. Meanwhile, the extent of antiwar sentiment was reflected in the strong support for Hillquit, who received 22 percent of the vote.

Federal authorities suppressed many radical organizations, individuals, and publications based in the city, including *The Masses.* The New York Board of Education demanded that teachers abandon antiwar activism and even dismissed several for lukewarm support of the war effort. Government propaganda, employers, public-school teachers, and neighbors often pressured New Yorkers to purchase Liberty Bonds used to finance the war. Columbia University mandated faculty support of the war effort and dismissed several dissenting professors. Anti-German sentiment was reflected by such actions as the banning of all German works from its repertoire by the Metropolitan Opera in the city. Nonetheless, the city was spared the worse excesses of vigilante activity aimed at German Americans, radicals, and antiwar opponents common in other parts of the country. Moreover, the city served as headquarters for a new organization established to fight for dissenters and conscientious objectors, the National Civil Liberties Bureau, which evolved into the American Civil Liberties Union.

Several New York National Guard units compiled distinguished combat records. The 69th New York regiment, renamed the 165th regiment, became part of the 42nd Division and saw action in the Aisne Marine and Meuse Argonne. Father Francis P. Duffy, regimental chaplain for this unit, was an inspirational figure whose wartime service would be commemorated in a public statue erected in Times Square and a Hollywood film, *The Fighting 69th* (1940). The U.S. Army deployed the African American, Harlem-based 15th National Guard regiment to France, where it was renamed the 369th and attached to the French army; the regiment acquired a notable combat record. Most New Yorkers fought as conscripts, and a disproportionate number served with the 77th Infantry Division, one of the first big units deployed to France.

The war led to a reallocation of the city's manufacturing to war production, especially in the case of the garment industry. The demand for labor improved the bargaining power of labor unions, and the war brought substantial growth in recognition, and access to federal officials, for Sidney Hillman and the Amalgamated Clothing Workers of America. Nearly four of five U.S. soldiers were deployed overseas from the Port of New York and nearby Hoboken. Most war material bound for Europe passed through the port,

severely taxing both the railroad network and port facilities.

The announcement of the armistice on 11 November 1918 provoked celebration in all five boroughs. Waves of returning troops passed through the city in 1919, and public officials staged major victory parades for the 77th Division and other returning units. The Hylan administration planned to build a major memorial in Central Park, but instead over the course of the 1920s and 1930s scores of smaller statues, memorial tablets, and memorials were dedicated in all five boroughs. Many returning veterans of World War I joined the newly created American Legion and organized posts throughout the city. Although the legion was conservative in orientation, the Willard Straight Post in Manhattan had a liberal cast that eventually forced a confrontation with the national organization. World War I spawned a new civic holiday, Armistice Day, that was widely observed in the city. For several decades Armistice Day was marked by a brief service suspension of the city's subway system for two minutes on the 11th hour.

World War II. Memories of World War I shaped how New Yorkers responded to the rise of Nazi Germany, fascist Italy, and imperial Japan during the 1930s. Many financial and business elites who had embraced intervention in World War I were disillusioned by the legacy of this conflict and thus opposed the United States' entrance into World War II before the Japanese attack on Pearl Harbor on 7 December 1941. The isolationist America First organization had an active branch within the city, and most New Yorkers of German, Irish, and Italian descent opposed intervention in another European war. The pro-Nazi Bund attracted several thousands adherents in the 1930s and staged a number of public rallies and street demonstrations. Most New Yorkers of German descent did not embrace the Bund, but several mainstream German civic organizations participated in public programs with the Bund in the early 1930s. The continued hostility of the city's Irish community toward Britain dimmed that group's concern over the threat the Nazis posed to the British. Benito Mussolini's fascist regime drew considerable support within New York City's Italian community, and even Mayor Fiorello H. La Guardia, a fierce anti-Nazi throughout his years as mayor, remained relatively silent on fascism, even after Mussolini ordered an invasion of Ethiopia.

The city served as an important center for anti-fascist activity soon after Adolf Hitler came to power in 1933. The Jewish War Veterans and the American Jewish Congress mobilized much of the city's large Jewish community and other anti-Nazi opponents to support a boycott of German goods. In the 1930s the American Community Party made significant headway in enlisting New York City liberals and socialists to support the common front against fascism. The city sent a large contingent to fight with the Abraham Lincoln Brigade during the Spanish Civil War. It also served as a refuge for many German Jewish exiles fleeing the Nazi regime, with many settling in Washington Heights in Manhattan. The New York City–based Rockefeller Foundation played a significant role in aiding German intellectuals in resettling in the United States, and many made the city their home.

Even before the United States entered the war, New Yorkers were conscripted in the nation's first peacetime draft. New York City units of the National Guard were placed in federal service in October 1940, and the 27th Division was eventually deployed to Hawaii in 1942 and later saw combat at Saipan in 1944. The U.S. declaration of war on 8 December 1941 prompted a series of measures by city and federal officials to secure access to key transportation, industrial, and utilities facilities. The city initiated elaborate civil defense plans and dimmed most streetlights—although the city never was attacked from the air. As New York City was a major port, the threat of German submarines to U.S. merchant ships proved significant, especially in 1942. The U.S. Coast Guard took extraordinary measures to secure the harbor from sabotage, and together with the U.S. Navy eventually drove German submarines away from the U.S. coast.

More than one million New Yorkers served in the armed forces during World War II, and the city served as home to several major army, naval, and air bases, including Governors Island, Brooklyn Navy Yard, Fort Hamilton, Fort Totten, and Floyd Bennett Field. At least two-thirds of the personnel, equipment, and supplies destined for the European theater of occupation passed through the Brooklyn docks. As it had during World War I, the city served as a crucial staging area for troops departing overseas. To entertain these servicemen and servicewomen, many civic organizations sponsored special programs. The American Theater Wing organized one of the most distinctive endeavors, the Stage Door Canteen, a free club for Allied soldiers, which provided them with a place to dance, eat, and watch performances staged by the New York theater community.

The transition from a peacetime economy to a wartime footing led to a drop in unemployment. Ultimately, New York City factories, especially those associated with the shipbuilding and garment industries, made a major contribution to the war effort, with military contracts valued at approximately $18.8 billion awarded between June 1940 and September 1945. Membership in unions soared during the war, and the city achieved a full employment economy that sharply reduced the number of individuals receiving relief.

Wartime inflation, especially the price of food and housing, buffeted New York City's poor and working class. New York was one of the last major cities to have the federal Office of Price Administration implement rent control to keep a check on skyrocketing real estate prices. Gasoline rationing as well as limits on automobile production resulted in the city subways carrying a record number of passengers. Although city residents endured food rationing, and many other items were either unavailable or in short supply, the rising wages of most workers sparked a wave of consumer spending in entertainment, restaurants, and the consumer goods that remained available. New York City did not see the exponential population growth experienced by many industrial centers, such as Detroit and Los Angeles, that worsened race relations in those cities. However, despite the leadership of La Guardia and his reputation as an advocate for civil rights, the city did experience a major race riot. In August 1943 an incident of alleged police brutality involving a black serviceman on leave sparked a wave of looting and several deaths in Harlem.

The announcement of the end of the war on 14 August 1945 led to spontaneous celebrations throughout the city. Thousands crowded Times Square, and the New York Stock Exchange closed for two days. New York City served as the port of arrival for many troops returning from overseas, including the 82nd Airborne Division, which was greeted by a giant victory parade in 1946. Many returned veterans used the benefits accorded to them to purchase homes in suburban communities after the war, fostering a mid-century decline in the city's population.

Worldwide Plaza. Building complex that occupies an entire city block bounded by 49th and 50th streets and Eighth and Ninth avenues in Clinton, formerly the site of the third Madison Square Garden (1925–66). It consists of a pinkish beige condominium building (39 stories) and office tower (49 stories), connecting structures, and an underground movie

theater, all designed by David Childs of Skidmore, Owings and Merrill and developed by William Zeckendorf, Jr., at a cost of $650 million. The complex was completed a year after the stock market crash of 1987, adding 1.5 million square feet (139,000 square meters) of office space to an already glutted market. Agents nevertheless succeeded in signing the prestigious advertising firm of Ogilvy and Mather and the law firm of Cravath, Swaine and Moore to long-term leases. Because the city wished to encourage the westward movement of offices from the more crowded central spine of Manhattan, Worldwide Plaza has more floor space than would have been allowed in east midtown.

Kenneth T. Jackson

WPA. See Works Progress Administration.

W. R. Grace and Company. Firm of chemical manufacturers. It began as a firm of guano suppliers in Peru and received its current name when William Russell Grace moved his operations to 110 Wall Street in Manhattan in 1866. The firm expanded by building a diverse network of trade between North America and the western coast of South America. In 1882 the Merchant Line was introduced, offering the first regular transportation by ship between Manhattan and the western coast of South America; renamed the Grace Line after steamships were put into service in 1893, it dominated the route for half a century before being sold in 1969. By the beginning of the twentieth century the firm had many commercial and industrial ventures in Latin America, including railroad construction, sugar processing, rubber extraction, and nitrate mining; on its sugar estate in Paramonga, Peru, it developed a process for producing paper from bagasse, a fibrous residue from the manufacture of sugar. With Pan American Airlines it formed Pan American Grace Airways (Panagra) in 1928, the first international airline to offer flights between the United States and South America. The firm maintained its central operations in Peru until 1945, when under the direction of J. Peter Grace it focused on manufacturing chemicals in the United States. It bought the Dewey Almy Chemical Company and the Davison Chemical Company in 1954, expanded in North America and Europe, and by the 1970s had divested itself of nearly all of its Latin American operations. In 1974 the firm moved to a skyscraper at 41 West 42nd Street designed by Skidmore, Owings and Merrill. The headquarters were moved to Florida in 1991.

Wright, Bruce McMarion (*b* Princeton, N.J., 19 Dec 1918; *d* New York City, 24 March 2005). Judge. He served for 25 years in the civil and criminal courts of Manhattan. Best known for his vigorous defense of the Eighth Amendment, Wright believed that setting bail beyond the economic means of a defendant, or for any reason other than ensuring the defendant's return to court, violated the Constitution. This earned him the enmity of police officers and politicians and the nickname Turn 'Em Loose Bruce, coined by the Patrolmen's Benevolent Association. Wright was also a critic of racism in the judiciary, even criticizing other African American judges for accepting or replicating their white peers' prejudice against minority defendants. Some found his outspokenness unbecoming to his position, but as Wright wrote in his book *Black Robes, White Justice* (1987), "Prejudice must be publicly attacked by all who oppose it, even and especially if one is a judge."

Daniel Levinson Wilk

Wright, Richard (Nathaniel) (*b* near Natchez, Miss., 4 Sept 1908; *d* Paris, 28 Nov 1960). Writer. The son of sharecroppers, he migrated north to Chicago during the Depression, where he worked menial jobs. The self-taught Wright, who showed writing genius from an early age, began contributing to radical literary magazines affiliated with the Communist Party, soon joining the party itself in 1932. He was also hired by the Works Progress Administration's Writers' Project. In 1937 he moved to New York City to 235 West 26th Street and became the Harlem editor of the Communist Party newspaper the *Daily Worker.* There he befriended the writer Ralph Ellison. After writing the *Guide to Harlem* (1937), he drew the public's attention with a collection of novellas, *Uncle Tom's Children* (1938), which depicts an African American man's struggle to live with dignity in the face of racism. His following novel, *Native Son* (1940), tells the story of Bigger Thomas, a young African American man in 1930s Chicago who accidentally kills a white woman. *Native Son* was almost universally acclaimed by critics and became an international best seller—with 215,000 copies sold in its first three weeks—making Wright the first best-selling African American writer in U.S. history.

In 1944 Wright renounced the Communist Party because of its lack of focus on improving the conditions of African Americans and its dogmatic political program. In the following year he published *Black Boy,* an autobiographical novel about growing up in the South. During the early 1940s he lived at 175 Carlton Avenue, Lefferts Place, Washington Place, and his last New York City residence, 13 Charles Street. Shortly after the end of World War II he moved to Paris. There, Wright befriended Jean-Paul Sartre and Albert Camus, and in 1953 he wrote the existentialist novel *The Outsider* (1953). He also published five works of nonfiction, including *White Man, Listen!* (1957); a collection of short stories; and several other novels.

During the McCarthy era the federal government targeted Wright as a communist and revoked his passport, despite his break with and public denunciation of the Communist Party in 1944. In 1960 he fell ill, was admitted to a hospital in Paris, and died shortly after. His ashes reside in the Père Lachaise Cemetery in Paris. *American Hunger,* the continuation of *Black Boy,* was published posthumously in 1977. The Black Power movement of the 1960s sparked a refocus on *Native Son* as powerful social criticism, and today the novel is widely regarded as a classic of American literature.

Anthony Gronowicz

Wright, Theodore S(edgwick) (*b* near New York City, 1797; *d* 25 Nov 1847). Pastor and abolitionist. He received his education at the African Free School and Princeton Theological Seminary, becoming the first black graduate of a divinity school in the United States, and in 1827 he took over as pastor of the First Colored Presbyterian Church (later Shiloh Presbyterian Church). He toured the northern and western states, giving lectures under the auspices of the New England and New York antislavery societies, and became an outspoken critic of the "back-to-Africa" movement, maintaining that it undermined abolitionism and the status of free blacks. He denounced the American Colonization Society (1817) and proclaimed his commitment to abolishing slavery through political means. After helping to form the American Anti-Slavery Society in 1833 he withdrew after disagreeing with a faction devoted to "moral suasion," a policy of attacking slavery by revealing its evils through moral argument; he helped to form the American and Foreign Anti-Slavery Society in 1840 and urged the passage of a federal law abolishing slavery. A member of the Liberty Party, he served on the committee that nominated James G. Birney as a presidential candidate in 1844. Wright was also vice president of the Phoenix Society of New York City (1833), a lyceum for young black men; a director of the New York Vigilance Committee, formed in 1835 to help fugitive slaves and rescue blacks who had been kidnapped and sold in the South; and president of Phoenix High School (1836), a private school for gifted black youths.

Thelma Foote

Wriston, Walter B(igelow) (*b* Appleton, Wis., 3 Aug 1919; *d* New York City, 19 Jan 2006). Banker. After graduating in 1941 from Wesleyan University, Wriston completed a

master's degree at Tufts's Fletcher School of Law and Diplomacy (1942) and then served 38 months in the U.S. Army during World War II. He began work at Citibank in 1946 as a branch auditor. When he went to the foreign division in 1955, Citibank had only 61 overseas offices. After George Moore became bank president in 1959, Wriston was put in charge of foreign offices, with the goal of placing Citibank facilities in promising locations on every continent. By 1969 a network of 578 offices operated in 78 nations. Moore's ambition to transform Citibank into a "global financial services institution" was being realized. Wriston became executive vice president of Citibank in 1960, president and CEO in 1967, and chairman from 1970 until his retirement in 1984.

Wriston constantly prodded his top officers to move women, minorities, and foreigners into top positions. A lifelong advocate of laissez-faire capitalism, he fought against controls restraining the geographic expansion of banks and the scope of permissible financial services. President Jimmy Carter, signing the Depository Institutions, Deregulation and Monetary Control Act of 1980, praised Wriston for being "a leading spokesman for reform" of the financial system. He was hailed for running the most admired bank in the world and recognized as the most influential banker in the world. A 1982 Gallup poll of businessmen rated Wriston the most admired of all business leaders.

Benjamin J. Klebaner

Writers Guild of America, East

[WGAE]. Union formed in 1954 to represent radio, television, and motion picture writers east of the Mississippi River. Among its forerunners were the Authors League of America (1912) and the Screen Writers Guild (1921), which became threatened by the political climate after World War II and the rapid development of television. After intense negotiation and reorganization the Authors League of America divided into two branches in 1954 (the Authors Guild and the Dramatists Guild), and the Writers Guild of America, which was composed of eastern and western divisions, became the union for all other writers. In addition to negotiating contracts with producers, the Writers Guild offers writing fellowships, a script registration service, and various programs for members and the general public. WGAE became affiliated with the AFL–CIO in 1989. In 2006 its membership was nearly 4000. In the early twenty-first century its headquarters were at 555 West 57th Street.

Grai St. Clair Rice

Wurster, Catherine Bauer (*b* Elizabeth, N.J., 11 May 1905; *d* Marin County, Calif., 21 Nov 1964). Reformer. She was active in the late 1920s in the Regional Planning Association of America and became an advocate for improved low-income housing. In several books and articles she argued that governmental subsidies offered a more effective means of financing housing than tax exemptions, which she believed had failed as a source of aid in New York City during the 1920s. A protégée and later mistress of Lewis Mumford, she worked with Senator Robert F. Wagner and leaders of housing and labor organizations in 1936–37 to draft national legislation for public housing; her efforts led to the formation of the U.S. Housing Authority (1937). Wurster taught at Harvard University until 1950 and at the University of California at Berkeley until her accidental death while hiking on a mountain. She wrote *Modern Housing* (1934).

Mark H. Rose

Wurster, Frederick W. (*b* Plymouth, N.C., April 1850; *d* Brooklyn, June 1917). Last mayor of Brooklyn. A businessman, he served from 1896 until the consolidation of New York City in 1898.

Ellen Fletcher

W. W. Norton and Company. Firm of book publishers, formed in 1923 as the People's Institute of Publishing Company by William Warder Norton. It set out to publish books that would appeal to both general and academic readers and became especially well known for its strong lists in psychology (including the works of Sigmund Freud), music, economics, and literature. In 1930 it established its college department, which became one of its most profitable divisions by publishing such standard college texts as *The Norton Anthology of English Literature,* and other "Norton anthologies." Over the years the firm published such widely read titles as *The Ugly American* (1958) by William Lederer and Eugene Burdick, *Present at the Creation* (1969) by Dean Acheson, *Helter Skelter: The True Story of the Manson Murders* (1974) by Vincent Bugliosi, and *The Mismeasure of Man* (1981) by Stephen Jay Gould. Norton is the only major U.S. publisher owned entirely by its employees and one of few to have avoided a takeover by a larger firm. Its offices are at 500 Fifth Avenue, and it publishes as many as 400 books annually.

Eileen K. Cheng

Wyckoff House. Historic house in Brooklyn, on Clarendon Road near Ralph Avenue. It was built about 1652 and may be the oldest house in New York City. The house is named for Pieter Claesen Wyckoff, an indentured servant who in 1637 was taken from the Netherlands to America, where he became a successful farmer and magistrate and one of the wealthiest men in the region. His descendants lived in the house until 1902. Bought by a family foundation in 1961, the house became the first official landmark in New York City in 1965, was donated to the city in 1970, and was restored in 1982. A modest dwelling with pine floors, shingled walls, and a steeply pitched roof, Wyckoff House contains artifacts and furniture representative of colonial life.

Jonathan Kuhn

Wyckoff House

X

Xavier High School. Jesuit school for boys located at 30 West 16th Street in Manhattan, formed in 1847 by John Larkin (1801–58). Initially it occupied the Holy Name Church at Elizabeth and Walker streets. After the church was destroyed by fire in January 1848, the school moved to St. James Church and then to a rented building at 77 Third Avenue. In 1850 it took over its current site and was renamed the College of St. Francis Xavier. For many years the school offered both secondary and college-level courses. In 1913 its college charter was transferred to Brooklyn College, but its college division closed in 1920. In 2004 the first lay headmaster was appointed. In 2008 the school caused some neighborhood controversy in a dispute over real estate air rights in the area behind the school along 15th Street. In the early twenty-first century the school had a student population of about 950.

Gilbert Tauber

Xavier Institute of Industrial Relations. Catholic labor school opened in 1934 at the College of St. Francis Xavier on West 16th Street in Manhattan. The school trained men and women working in several industries in New York City to organize unions free of communist influence. Like many other Catholic labor schools throughout the United States it was directed by members of the Society of Jesus, and it offered classes taught by representatives of labor and business. These classes covered the ethics of labor-management relations, the rights and responsibilities of labor, contract negotiation, the practices of shop stewards, and public speaking; several courses were designed specifically for workers in government and the trades. Philip A. Carey, director of the school from 1940 to 1989, was prominent in business, advised the labor leader Harry Van Arsdale, Jr., and belonged to the War Labor Board (during World War II), the New York State Commission for Human Rights (1963), and the New York State Public Employment Relations Board (from 1968). John M. Corridan, associate director of the school from 1947 to 1957, became known as the city's Waterfront Priest. Xavier Institute closed in 1989.

yachting. See Sailing.

Yale Club. Club formed in 1897 by an active local Yale University alumni association. Its 22-story clubhouse on Vanderbilt Avenue at 44th Street, designed by James Gamble Rogers and completed in 1915, is very close to Grand Central Terminal at the end of the railroad line from the northern subways and from New Haven, Connecticut. It contains the usual complement of dining rooms, library and reading rooms, and sporting and sleeping facilities. All these amenities were shared with the Princeton Club during World War I, when many members were in uniform overseas. In the early twenty-first century the club had about 11,000 members.

James E. Mooney

Yalow, Rosalyn Sussman (*b* New York City, 19 July 1921). Nobel laureate and nuclear physicist. She excelled in chemistry at Walton High School in the Bronx and in physics at Hunter College. She did a teaching assistantship at the University of Illinois, where she was the only female faculty member at the College of Engineering. After completing her PhD and marrying fellow student Aaron Yalow, she returned to New York City in 1945 and began teaching at Hunter College. Yalow joined the Bronx Veterans Administration Hospital full time in 1950, where she did research in radioactivity and endocrinology with Sol Berson; she also worked as a researcher and professor at various medical schools in New York City. She was a developer in the 1950s of the radioimmunoassay, a technique for the precise measurement of biological substances. Yalow was the first female recipient of the Albert Lasker Award, and in 1977 she was the second woman to win the Nobel Prize in physiology or medicine. Yalow makes her home in Riverdale in the Bronx, where she has lived since 1950.

Yankee Stadium. Home of the New York Yankees baseball team, nicknamed "The House That Ruth Built," referring to baseball legend Babe Ruth, who played for the Yankees after 1919. A new stadium opened in 2009, replacing the original, which opened in 1923 under the ownership of Tillinghast L'Hommedieu Huston and Jacob Rupert. Situated at 161st Street and River Avenue in the Bronx, the original stadium had a seating capacity of 67,224. It was the first ballpark to be called a stadium and the first built with a triple deck, at the expense of $675,000 for the land and $2.5 million for the stadium itself, which included a special fortified concrete created by Thomas Edison. The famous facade that circled the stadium was constructed of copper and was unpainted until the 1960s. The first game at the original Yankee Stadium was held on 18 April 1923 against the Boston Red Sox; the Yankees won, 4–1.

The original stadium hosted 37 World Series, numerous boxing events and college football games, four Major League All-Star games (1939, 1960, 1977, and 2008), and three papal masses (including one by Pope Benedict XVI on 20 April 2008). The New York football Giants were also tenants of the stadium from 1956 but left in 1973. Originally, the foul lines were a short 280 feet (85.3 meters) to left field and 295 feet (89.9 meters) to right field. But the distance to center field was deep, 490 feet (149.3 meters), so that the playing area was among the largest in the league. During the stadium's first season 20 inside-the-park home runs were hit, and attempts to hit a baseball out of the stadium remained unattainable (with the possible exception of one hit by Josh Gibson during a Negro Leagues game in 1934). Only Mickey Mantle came close when he hit a home run that rang off the white-fenced facade. In 1928 the stadium went through its first major renovation, extending its third layer of grandstand seating. Lights were added in 1946, and in 1959 it became the first stadium to unveil an electronic scoreboard. Nonetheless, the stadium remained largely unchanged until the 1960s.

The original owners of the New York Yankees and Yankee Stadium, Huston and Rupert, sold both in 1945 for $2.8 million. In 1953 the stadium was acquired by Arnold Johnson, owner of the Kansas City Athletics, for $6.5 million. Johnson then sold the land and adjacent parking lots to the Knights of Columbus for $2.5 million while maintaining his ownership of the stadium itself. In 1955 Johnson sold the controlling interest of only the stadium to John Cox for an undisclosed sum. Cox, an alumnus of Rice University, gave Yankee Stadium to his alma mater in 1962 while the Knights of Columbus maintained ownership of the land. In 1971 the City of New York forced Rice to sell the stadium for $2.5 million via eminent domain, allowing the city to acquire the property as a public place with the intention of modernizing the stadium. The Yankees had complained numerous times to Rice University about the deteriorating condition of the stadium and the need for renovation. By 1972 the city had also acquired the land from the Knights of Columbus and paid the Yankees $24 million for the stadium with an agreement to lease it back after renovation. The Yankees signed a 30-year lease with the city and closed the stadium after the 1973 season to begin a two-year renovation, with costs eventually reaching $100 million. The Yankees played the 1974–75 seasons at neighboring Shea Stadium in Queens, home of the New York Mets.

In 1976 Yankee Stadium reopened with a capacity of 56,866 and slightly altered dimensions, which were shifted in 1985 and 1988 to 318 feet (96.9 meters) to left field, 399 feet (121.6 meters) to left-center, 408 feet (124.4 meters) to center field, 385 feet (117.3 meters) to right-center, and 314 feet (95.7 meters) to right field, where they remained until its final game in 2008. Among the renovations to the original stadium was the relocation of Monument Park, an outdoor museum commemorating famous Yankee ballplayers. The first monuments were placed within the field of play until the 1976 renovation moved them behind the left-center field fence. The monuments honor Yankee legends, including Babe Ruth, Joe DiMaggio, Mickey Mantle, Lou Gehrig, and Yogi Berra, and one non-Yankee, Jackie Robinson. Other changes included the removal of several steel columns that obstructed views, removal of the stadium's original roof and facade, and the lowering of the playing field while increasing the slope of lower stands, which resulted in improved sight lines for fans. The iconic facade was replaced by an exact replica that stretched across the scoreboard and through the outfield. The exterior of the stadium also changed dramatically as three escalator towers were added.

During the 1980s Yankees owner George Steinbrenner began a campaign for a new Yankee Stadium, and in 2001 Mayor Rudolph Giuliani approved a tentative agreement for the construction of a new stadium across the street from the original. Ground was broken on 19 August 2006, the 58th anniversary of Babe Ruth's death; the estimated cost of construction was $1.6 billion, half of which would be paid for by city and state taxpayers as the land remained the property of the City of New York. This price tag made the new stadium the most expensive professional sports venue in the United States. During construction of the new stadium, a worker named Gino Castignoli, a Boston Red Sox fan, buried a replica David Ortiz jersey in the cement of the visitors' dugout as an attempt to reverse the "Curse of the Bambino," a hex allegedly attached to the Boston Red Sox after Babe Ruth was sold to the Yankees. Co-workers reported Castignoli, and he was forced to help remove the jersey in a widely publicized ceremony before the stadium's completion.

The final game at the original Yankee Stadium was played on 21 September 2008, when the Yankees defeated the Baltimore Orioles, 7–3, and failed to make the postseason. Following the game, Yankee captain Derek Jeter delivered an impromptu speech saying goodbye to the Yankee home for the past 85 years.

On 8 November 2008 former Yankees Scott Brosius, David Cone, Jeff Nelson, and Paul O'Neill, members of the 1998 championship team, joined 60 Bronx children in ceremoniously digging up home plate and the pitcher's mound from the original Yankee Stadium and transporting them across the street to the new stadium. Demolition of the old stadium began in March 2009, with plans to complete the process in 2010.

The new stadium opened for its first exhibition game against the Chicago Cubs on 3 April 2009 and hosted its first regular season games to the Cleveland Indians on 16 April. The Yankees won the first game over the Cubs, 7–4, but lost the regular season opener to the Indians, 10–2. During its first season of operation, the new Yankee Stadium developed a reputation as a "hitter's ballpark" while breaking the single-season record for most home runs hit in a stadium with 216. As was true after the opening of the stadium in 1923, the Yankees followed the opening of the new Yankee Stadium with their 27th World Championship, in 2009.

Designed by Populous (HOK Sports), the new Yankee Stadium was intended to closely resemble the original. The exterior facade is constructed of 11,000 pieces of Indiana limestone, granite, and cement, and the interior features a similar white frieze facade that circles the upper level. The dimensions of the new field are identical to those of the old stadium, with the exception of a shortened backstop. Monument Park was also moved and placed behind the center field wall in the new stadium. The new stadium features 59 luxury boxes (compared with 19 in the old stadium), more restrooms, 25 fixed concession stands and 112 movable ones, and restaurants. The new stadium's capacity is significantly reduced, however, seating 52,325 (including standing room), more than 4000 fewer than the previous stadium. The first eight rows of seats in the lower level of the new stadium are called "Legends Suites" and rank among the highest priced tickets in professional sports. The average ticket was more than $500 in 2009, with the highest reaching nearly $3000 for a single seat. Because of the price, the Legends Suites were notoriously difficult to sell during the opening season, and during televised games the empty seats behind home plate were visible to a national audience, a situation that Yankees owner Steinbrenner called "embarrassing."

yellow fever. An acute and often fatal viral infection carried by the mosquito *Aedes aegypti*. It was one of the diseases most feared by New Yorkers in the late eighteenth and early nineteenth centuries. It was brought to American shores chiefly by ships originating from the endemic yellow fever locales of the West Indies and South America.

The first recorded epidemic of yellow fever in New York City was in 1702, followed by more severe ones in 1731, 1742, and 1743. Between 1791 and 1821 yellow fever epidemics plagued the city almost annually; the most severe occurred in 1798. During much of this time most physicians believed the disease to be caused by foul, polluted, or marshy air tainted with the yellow fever miasma. Others blamed the filthy conditions of the streets, tenement districts, and the intemperate poor. Yellow fever epidemics prompted massive clean-up efforts in New York City, with varying degrees of success. During the first decades of the nineteenth century they also inspired the empowerment of the city's Board of Health to order strict quarantine regulations, destroy public nuisances, and force mass evacuations. These strong emergency powers were supported by New Yorkers not only out of fear of a deadly epidemic, but also to protect the economic interests of the busy port.

By 1825 yellow fever was all but eliminated in the northeastern United States, although it continued to plague the ports of the Gulf and the southern Atlantic coast for decades. The occasional case of yellow fever discovered at the Staten Island Quarantine Station would be immediately isolated and methods of disinfection applied to the ship in question. In 1858 the station was destroyed by angry residents living nearby who feared the spread of the disease to their homes; it was rebuilt in the following year. With the discoveries of the Yellow Fever Commission, led by Walter Reed of the U.S. Army during 1898–1900, the mosquito carriage of yellow fever was finally confirmed and better means of prevention were developed.

Howard Markel

Yellow Hook. Name applied to Bay Ridge until 1853.

yellow journalism. A sensational form of journalism. It originated from 1895 in New York City with two competing newspapers, Joseph Pulitzer's *New York World* and William Randolph Hearst's *New York Journal.* The term was inspired by a comic-strip character called "the Yellow Kid" that was published in different and competing versions by the two newspapers. Yellow journalism at the time was characterized by profuse illustrations, entertainment features, and popular "crusades," all devices introduced by Pulitzer and soon adopted by Hearst, who also became known for his bold headlines, disregard for facts, and flamboyant Sunday magazines. Reporters for the newspapers included Richard Harding Davis, Stephen Crane, and Sylvester Scovel; among the editors were Arthur Brisbane and Bradford Merrill. After more than 250 Americans died when the battleship Maine exploded and sank, the *Journal* blamed the Spanish and offered a reward of $50,000 for the arrest of those responsible. The circulation of the *Journal* reached one million on the day the reward was offered, and that of the *World* reached five million a week later when Pulitzer sent a team of divers to search the sunken hull of the ship. The militarist sentiment provoked by the yellow press spread throughout the nation and persuaded President William McKinley to declare war on Spain. During the war, competition between the two newspapers reached a peak, as both dispatched correspondents to Cuba and drew attention to Spanish atrocities. In the twenty-first century the term can still be used to refer to publications that overdramatize the news or are unethical or biased in the way they present the news.

Julian S. Rammelkamp

Yemenis. Immigrants from Yemen who created two communities in New York City, Jewish and Muslim. The majority of Yemeni Jews live in Borough Park, Brooklyn; a small number are in Flatbush. Most are blue-collar workers. There are four Yemeni synagogues, all in Borough Park; the best-known is Congregation Ohel Shalom at 45th Street and 12th Avenue, established in the 1920s. Yemeni Jews began settling in New York City at the beginning of the twentieth century. Immigration was never more than a trickle until 1967, when there was a large influx of Yemenis from Israel. In the early 1990s more Yemeni Jewish families arrived from the greatly reduced Jewish community still living in Yemen.

Yemeni Muslim men began moving to New York City in the late 1960s, and many more came after the first Gulf War. In time they became one of the city's most visible Arab groups, especially around Court Street and Atlantic Avenue in Brooklyn, where they founded Masjid Al-Farouq on Atlantic Avenue, and opened several coffeehouses. In 1972 they founded the now defunct Yemeni American Benevolent Association and the Club of Yemeni Immigrants to provide financial assistance, employment, and housing referrals to new arrivals. Many first-generation Yemenis owned or worked in supermarkets, news-

stands, candy stores, and restaurants on and around Atlantic Avenue; their children became police officers, city workers, teachers, lawyers, and hospital workers. The Almontaser Restaurant on Court Street, among the best known, is one of several restaurants owned by the Almontaser family. The Yemeni American Association (est. 2005) served Yemenis for a time with English classes, counseling, tutoring, and cultural activities; it was one of the founding members of New York's Arab Heritage Week, celebrated each July.

Celebrations in the Muslim Yemeni community center on music and poetry performances by such local artists as Muhammad Ha il. Although the melodies of Muslim and Jewish men are the same, the words are taken from their respective religious traditions; women's music is, however, identical across the two communities. There is little mingling between Yemeni Jews and Muslims day to day, but they occasionally attend each other's cultural events. In the early twenty-first century estimates of the number of Yemenis in the city ranged between 10,000 and 25,000.

Paula Hajar

Yeshiva University

Yeshiva University. Incorporated under the auspices of Orthodox Jews, it began in 1886 as Yeshiva Etz Chaim, a small elementary yeshiva for boys formed by immigrant Orthodox Jews on the Lower East Side who wished to shield students from Americanization by giving them an education in an eastern European tradition. The Rabbi Isaac Elchanan Theological Seminary (RIETS), formed in 1897, provided students with advanced Talmudic training, and by 1903 it graduated the first Orthodox rabbis trained in the United States according to eastern European precepts. During the next decade students complained that RIETS was failing to instill in them the pedagogic and pastoral skills necessary for the modern pulpit and was preparing them inadequately for leading congregations of Jews born to immigrant parents; others who did not plan to become practicing rabbis felt deprived of the education needed in business and the professions. Strikes by students in 1906 and 1908, supported by some local Orthodox Yiddish newspapers, ultimately moved the directors of the school to appoint Bernard Revel as its first permanent president (1915–19, 1923–40). In addition to merging the two schools, upgrading secular studies, and modernizing the rabbinical curriculum he articulated a philosophy that came to be known as Torah Umada, which stressed the value to Orthodox Jews of worldly knowledge; he also oversaw the formation in 1915 of the Talmudical Academy (the first American Orthodox Jewish high school) and the building of a campus for the newly formed Yeshiva College in Washington Heights in 1929. Revel's successor Samuel Belkin (1943–75) focused on practical applications of the same ideas, as the school grew to include several campuses and was incorporated as a university in 1946. Stern College, the first women's college run by Orthodox Jews, was formed in 1954 under his auspices. During a period of expansion in the 1950s the university sought to attract a more diverse student population, and a Jewish studies program was introduced for undergraduates with a limited background in the field. Soon after becoming president in 1976 Norman Lamm made the university financially stable and oversaw the development of the Benjamin N. Cardozo School of Law and the Sy Syms School of Business. He also began to formulate a vision of Torah Umada for a new generation of Orthodox Jews.

By the early twenty-first century Yeshiva University had approximately 7000 students at its four campuses in New York City: in Washington Heights, the undergraduate college for men, the graduate schools of Judaica and social work, and RIETS; in the Morris Park area of the Bronx, the Albert Einstein College of Medicine and the Ferkauf Graduate School of Psychology; in Greenwich Village, the Benjamin N. Cardozo School of Law; and in Murray Hill, the undergraduate colleges for women and the institute for graduate Jewish education. In 2003 Yeshiva inaugurated its first lay president, attorney and Jewish communal leader Richard M. Joel, who continued Yeshiva's long-standing religious-secular educational mission and challenged students to be more actively involved in serving Jewish communities around the United States.

Yiddishe Tageblatt. One of the first Yiddish-language daily newspapers in the world, launched in 1885 by Kasriel H. Sarasohn and published at 185–187 East Broadway. It was politically conservative but did not become affiliated with any political party; it supported Orthodox and Zionist causes in its editorials. In 1928 *Der Yiddishe Tageblatt* merged with *Der Morgen Zhornal.*

Yiddish theater. New York City was the site of the first Yiddish theater production in the United States, a production of Avrom Goldfadn's *Koldunya; or, The Witch* at Turn Hall on the Bowery in 1892. Professional, secular Yiddish-language theater was then an innovation even in eastern Europe, the homeland of most Yiddish-speaking Jews. For this reason many performers and audiences first became acquainted with Yiddish theater on the Lower East Side, which through mass migration was rapidly becoming the largest Yiddish-speaking settlement in the United States, and New York City remained an important center of Yiddish theater for the next century.

A Yiddish theater district developed in Manhattan on and around the Bowery and later on Second Avenue, eventually including the Rumanian Opera House and the Oriental, National, Thalia, Windsor, Grand, People's, and Poole's theaters. By 1914 a typical season was marked by the residence of some 14 companies in the metropolitan area, including Brooklyn and the Bronx. New York City was also the headquarters for troupes touring the United States and eastern Europe and for related businesses: cabarets, sheet-music publishers, record companies, film studios, and radio stations. Streets and cafés in theater districts were thronged and sociable; the Yiddish press printed reviews, editorials, and gossip, and scripts were published for reading and for amateur productions. Theatrical unions organized in the city, beginning with Local 1 of the Hebrew Actors Union in 1887. The Yiddish theater was an important community institution: plays offered entertainment and escape, portrayals of immigrant life, and political forums. Translations of the classics introduced immigrants to world literature; translations of Broadway hits helped them to adjust to a new culture. The wide range of theatrical genres included music-hall revues, costume operettas, domestic melodramas with music, and serious drama influenced by the theatrical avant-garde. Successful performers were leading figures in the community who commanded fierce loyalty. Among the best-known in the early years were the comic actor Sigmund Mogulesko, the romantic baritone Boris Thomashevsky, the dramatic actors Jacob Adler and David Kessler, and the actresses Keni Liptzin, Bertha Kalich, Sara Adler, and Bessie Tomashevsky. Works for the stage were written by such playwrights as Goldfadn, "Professor" Moshe Ish-HaLevi Hurwitz, Joseph Lateiner, and Shomer (Nahum Meyer Shaikevich), and at a high literary level by Sholom Aleichem and Jacob Gordon; these were accompanied by the music of such composers as Alexander Olshanetsky, Joseph Rumshinsky, and Sholem Perlmutter. Almost all the major writers and composers for the Yiddish stages of the world lived for at least part of their lives in New York City.

The Yiddish theater had a sizable effect on the development of the mainstream theater. Such innovations in repertory and technique as naturalism, expressionism, "art theater," and Stanislavskian Method acting were introduced on the Yiddish stage before they reached the English-language stage, and the Yiddish avant-garde was often reviewed in the intellectual English-language press. Although after World War I the Yiddish theater was hurt by a restricted flow of immigration, movement away from the old neighborhoods where theaters were situated, and Americanization, another generation of stars came to prominence: Celia Adler, Jacob Ben-Ami, Joseph Buloff, Pesach Burstein, Bertha Goldstein, Samuel Goldenburg, Jennie Goldstein, Jacob Jacobs, Aaron Lebedev, Mikhel Mihhalesko, Moyshe Oysher, Molly Picon, Ludwig Satz, Rudolph Schildkraut, Maurice Schwartz, Menashe Skulnik, and Herman Yablokoff. There were new popular playwrights such as Z. Libin, H. Kalmanovitch, Max Gabel, William Segal, Anshel Shor, and Isidore Zolatrevsky, and composers such as Sholem Secunda. There was also a new art-theater movement. Theaters in New York City including the Yiddish Art Theatre (1918–50) of Schwartz, the Jewish Art Theatre (1918–20) of Ben-Ami, and the Arbeiter Teater Farband (1925–39) performed ambitious repertory by David Pinski, Peretz Hirschbein, H. Leivick (Leivick Halpern), Osip Dimov (Joseph Perlman), and Sholem Asch. Between 1935 and 1939 the Theatre Project of the Works Progress Administration sponsored several Yiddish troupes, some in New York City.

Adolf Hitler and Joseph Stalin destroyed the Old World sources of Yiddish culture and Yiddish speakers. By 1950 audiences were severely diminished by continuing acculturation, movement to the suburbs, the ascendance of Hebrew over Yiddish, and television. The average age of performers and spectators rose while the number of performances and new scripts each season steadily diminished. The Yiddish theater came to be characterized increasingly by limited runs and by matinees offered for the convenience of the elderly. Nevertheless, into the 1990s almost every season offered at least one musical comedy (generally based in a midtown theater), often a touring company from Israel or elsewhere, and revues in theaters, community centers, and retirement homes around the city. Productions were mounted occasionally by the Yiddish National Theatre (sponsored by the Hebrew Actors Union), as was a new production each year by the semiprofessional company the Folksbiene, the oldest continually performing Yiddish company in the world. Amateur groups continued to give readings and performances, and WEVD broadcast radio programs in Yiddish. The leading performers included Bruce Adler, Mina Bern, Miriam Kressyn, Jack Rechseit, Eleanor Reissa, Symour Rexite, and Mary Soreanu.

In the early twenty-first century an increased interest in ethnicity has fostered new approaches to the Yiddish theater. To make Yiddish productions more widely accessible, simultaneous translation devices are employed, and English is frequently interpolated into dialogue and lyrics. Bilingual shows like *The Golden Land* and *Songs of Paradise* have attracted spectators who speak no Yiddish at all. The traditions of Yiddish theater are sustained by professional and amateur productions (often in translation), film revivals, and academic courses. The Yiddish theater retains a romantic resonance for many American Jews, including those who have never seen it, and has become integrated into their images of their forebears as well as their culture.

Yiddish writing and publishing. New York City became an important center of Yiddish literary and cultural activity in the late nineteenth century. The traditional vernacular of Ashkenazic Jewry, Yiddish served Jewish immigrants as a means of maintaining ties with their central and eastern European heritage. The use of Yiddish also fostered a sense of community among immigrants and their descendants, who forged a distinctive American Yiddish culture. In 1870 the first American Yiddish newspaper was launched in New York (*Di Yidishe Tsaytung*), followed in 1871 by the first periodical (*Di Post*). Newspapers and periodicals published the work of authors such as Jacob Levi Sobol, whose volume of Yiddish and Hebrew verse *Yisroel der alter* (1877) was the first book of Yiddish literature published in the United States. From 1881 to 1914 the mass emigration of eastern European Jews increased the number of Yiddish speakers in the United States and made New York City a major center of Yiddish literary activity; the Yiddish press flourished during this period. By 1915 the city had five major daily newspapers catering to a range of immigrant political and cultural sensibilities: *Forverts*, *Der Morgen Zhornal*, *Der Yiddishe Tageblatt*, *Der Tog*, and *Di Varheyt*. During the 1880s and 1890s the first school of American Yiddish literature emerged, reflecting the national and class consciousness of Jewish immigrants. Working-class poets such as Joseph Bovshover, David Edelstadt, Morris Rosenfeld, and Morris Vinchevsky, who later became known as the "sweatshop poets,"

wrote verses that exhorted working-class Jews to take part in the labor movement. In 1898 Rosenfeld became the first American Yiddish writer to achieve fame outside the immigrant community when a collection of his poems was published in English.

A number of established European Yiddish writers settled in the city during this period, among them Eliakum Zunser, who wrote lyrics in a familiar, vernacular idiom; Shomer (Nahum Meyer Shaikevich), a notoriously prolific author of sensational potboilers; and Abraham Reisin, an author, editor, and cultural activist. Sholem Aleichem visited the city twice in the first two decades of the century but failed to achieve the level of acclaim that he had in eastern Europe. In the first decade of the twentieth century the first modernist school of Yiddish literature emerged. Known as the "Yunge," the group included the poets Mani-Leyb, Moyshe-Leyb Halpern, Reuben Iceland, and Zisha Landau, who in the journals *Yugnt, Literatur,* and *Shriftn* championed a literature of artistic self-consciousness and personal voice. During this period publishers of Yiddish books began to issue a wide range of titles for general audiences. Works of political activism, popular education, trade unionism, literary criticism, and Jewish history and culture were issued by commercial presses (notably the Hebrew Publishing Company) and later by cultural organizations (such as the Workmen's Circle and the Yiddish Cultural Congress).

American secular Yiddish publishing was most extensive between the world wars. Yiddish was an especially important vehicle for leftist writers who united briefly under the name of "Protetpen" in the 1920s. The secular Yiddish school movement generated a body of children's literature in the 1920s and 1930s under such imprints as Farlag Matones, Kinderbukh, and Arbeter-ring. After World War I a group of poets known as the Inzikhistn (introspectivists) emerged under the leadership of A. Leyeles (Aaron Glanz), Yankev Glatshteyn, and N. B. Minkoff. In the journal *Inzikh* the group promoted Yiddish as a cosmopolitan language and presented aesthetically and psychologically expressive, idiosyncratic literature. Major works of world literature were also translated into Yiddish: the translator and poet Yehoash (Solomon Bloomgarten) rendered the entire Hebrew Bible (1937) in a modern, literary style and also translated Longfellow's *Hiawatha* and Omar Khayyám's *Rubáiyát.* Although Yiddish literature reached its greatest heights in the United States in the genre of poetry, during the first half of the twentieth century New York City was also the home of such important critics as Sh. Niger (Samuel Charney), Moses J. Olgin (Novomisky), Kalman Marmor, and playwrights and novelists including Sholem Asch, Jacob Gordon, Peretz Hirschbein, David Ignatoff, H. Leivick (Leivick Halpern), Leon Kobrin, Joseph Opatoshu, L. Shapiro, and Isaac Raboy. Asch's major novels were translated into English, making him the only one of these authors to find a following beyond the Yiddish-reading public.

Yiddish literature and cultural activity were profoundly affected by the genocide of European Jews during World War II. After the war hundreds of collaborative memorial books (or *yizker-bikher*) were published commemorating the Jewish communities that had been destroyed. Secular Yiddish cultural activity declined during the following decades. A noteworthy exception was Isaac Bashevis Singer, who gained a wide readership when his prose works were translated into English. Two major serial publications continued to be printed into the twenty-first century: *Forverts,* which first appeared in 1897 and became a weekly newspaper in 1983, and *Di Zukunft,* a monthly cultural and literary journal first issued by the Socialist Labor Party in 1892.

New York City remains the largest and most important center of Yiddish literature and culture in both the United States and the world. Yiddish culture is increasingly centered in the large community of Hasidim and other observant Jews who settled in the city after World War II. In addition to daily newspapers (*Der Algemeyner Zhurnal* and *Der Yid*) some Hasidic groups publish instructional and devotional literature in Yiddish. Secular books and journals are published by the Central Yiddish Cultural Organization (CYCO), the League for Yiddish, the Workmen's Circle, the YIVO Institute, and Yugntruf (Youth for Yiddish). Important Yiddish reference works published in the city include Yiddish-English dictionaries compiled by Alexander Harkavy (1898–1928) and Uriel Weinreich (1968), a Yiddish thesaurus by Nahum Stutchkoff (1950), and the *Algemeyner entsiklopedye* (begun in the 1940s, never completed).

Jeffrey Shandler

Yidishe Tog. Yiddish-language daily newspaper, launched in 1914 by Judah Magnes, Herman Bernstein, Bernard Semel, and Morris Weinberg and published at 183 East Broadway. Under the slogan "The Newspaper of the Yiddish Intelligentsia" it became known for its fine writing and liberal, nonpartisan politics. Its circulation reached 81,000 in 1916 but declined in later years, despite the absorption of *Die Warheit* in 1919. After years of editorial conflict a six-month strike in 1941 nearly caused the newspaper to cease operations. In 1953 *Der Yidishe Tog* merged with *Der Morgen Zhornal.*

YIVO Institute for Jewish Research [Yidisher visnshaftlekher institut]. Jewish research institute. Founded in 1925 in the Lithuanian city of Vilnius (then in Poland), it opened a branch in New York City at 425 Lafayette Street, which became its headquarters in 1940. YIVO is one of the foremost institutes devoted to the study of the history and culture of Jews in the modern world, especially eastern Europe and the United States. It maintains an archive and a multilingual library that holds the world's largest collection of Yiddish publications. It also offers instruction in Yiddish and graduate-level courses in Jewish studies, issues a number of scholarly publications, and sponsors conferences and public programs. In 1993 YIVO sold its building at Fifth Avenue and 86th Street in Manhattan and in the following year acquired the former headquarters of the American Foundation for the Blind, two four-story neo-Georgian structures on West 16th Street between Fifth and Sixth avenues. In 2000 YIVO celebrated its 75th anniversary with the grand opening of its fifth American home, the Center for Jewish History at the 16th Street location.

Daniel Soyer

YMCA [Young Men's Christian Association]. International, interdenominational Christian organization formed as a prayer group in London in 1844 by George Williams and dedicated to community evangelism and the moral and intellectual development of young men. After spreading through England it opened a branch in Boston in 1851. A YMCA reading room in New York City was established at 659 Broadway in 1852 by George H. Petrie, a merchant who became acquainted with the organization at the Crystal Palace exhibition in London in 1851. Initially the organization focused on street-corner evangelism, missionary efforts, Sunday schools, Bible classes, and relief for the sick and the poor; it also offered temporary boarding facilities. It gradually became more secular as it opened libraries and introduced educational programs. In 1857 the branches in New York City and Brooklyn began offering classes in music, foreign languages, and gymnastics. Membership was denied to African Americans, who were encouraged to organize separate branches; one of the first opened in the city in 1866 (others were opened in Washington, D.C., and Harrisburg, Pennsylvania). Segregation remained the policy of the YMCA until after the Commission on Interracial Co-operation of the YMCA was formed in 1919. The "uptown" branch undertook interracial community work in 1930.

In the twenty-first century the YMCA offers sports, child care, and international programs and operates gymnasiums and residences. It maintains branches in Chinatown, Chelsea,

Harlem, and midtown and on West 63rd Street in Manhattan; on Castle Hill in the Bronx; in Flatbush, Prospect Park–Bay Ridge, Twelve Towns, Bedford–Stuyvesant, Greenpoint, and downtown Brooklyn; in Bayside, Flushing, Long Island City, Highland Park, and central and eastern Queens; and at Broadway and South Shore in Staten Island. The YMCA of Greater New York was located at 5 West 63rd Street in Manhattan. As of 2009 the YMCA had 21 million members nationwide.

Melissa M. Merritt

YM-YWHAs [Young Men's and Young Women's Hebrew Associations]. Name used in New York City for nonsectarian cultural, educational, and recreational centers for adults and children that are known elsewhere in North America as Jewish Community Centers (JCCs). The associations originated in the nineteenth century as social and literary societies, at the same time that Jewish settlement houses such as the Educational Alliance (1889) were promoting Americanization through educational and social activities. The first YMHA in New York City was formed in 1874 and became known as the 92nd Street Y; the first YWHA dates to 1902. By the early twentieth century these associations offered social, religious, educational, and recreational programs for both immigrants and the native-born. A number of YMHAs opened during the early part of the century, followed by several centers formed by the YWHA in 1943–44 in underserved parts of the city: Coney Island, East Flatbush, Canarsie, and Upper Williamsburg in Brooklyn; and East Tremont, Bronx River, and Mosholu in the Bronx. From 1945 to 1957 a successor to the YWHA called the Jewish Association for Neighborhood Centers (JANC) operated these YM-YWHAs, as well as others in Little Neck and Flushing, and the Emanu-El Midtown YM-YWHA (1903).

The Associated YM-YWHAs of Greater New York was formed in 1957 by the Federation of Jewish Philanthropies to build new centers by soliciting Jewish support and funds from throughout the metropolitan area. The new organization absorbed all units of the JANC, the JCC of the Rockaways, the Shorefront YM-YWHA in Brooklyn, and the East Bronx YM-YWHA, and by 1980 it was operating 10 facilities in the city and Westchester County. Because of financial constraints in 1991 it closed the operations in Far Rockaway and Flushing and set up its remaining centers as autonomous units.

Among the independent YM-YWHAs in New York City are the Recreation Rooms and Settlement (1898), the Hebrew Educational Society (Brooklyn, 1899), the Jewish Community House of Bensonhurst (1906), the Riverdale YM-YWHA (1909), Bronx House (1911), the Boro Park YM-YWHA (1912), the YM-YWHA of Washington Heights and Inwood (1916), the JCC of Staten Island (1926), the Central Queens YM-YWHA (1938), and the Sephardic Community Center (Brooklyn, 1981). All continued to offer services in the twenty-first century.

Elinor K. Bernheim and Irving Brodsky, *Jewish Association for Neighborhood Centers: A Final Report, 1942–1958* (New York: Jewish Association for Neighborhood Centers, 1958)

Steven W. Siegel

Yonah Schimmel Knish Bakery. Bakery and restaurant that makes and sells knishes, an eastern European Jewish specialty food made from potatoes, flour, sometimes kasha (buckwheat groats), and various seasonings or flavorings. They are baked in rounds about 4 to 5 inches (10 to 13 centimeters) in diameter and 3 to 4 inches (8 to 10 centimeters) in height. The shop, located at 137 Houston Street on the Lower East Side, was founded in 1910 and is said to be the oldest continuing knish bakery in New York City.

York, Duke of (*b* St. James Palace, England, 14 Oct 1633; *d* St. Germain-en-Laye, France, 6 Sept 1701). Proprietor of New York under English rule, for whom the province was named. He wrote a set of laws (1665) that sanctioned religious toleration but not representative government; in 1683 he allowed the creation of an assembly. On the death of his brother, King Charles II in 1685, he ascended to the English throne as King James II, and New York became a royal rather than a proprietary colony. In 1688 he abolished the assembly when New York became part of the Dominion of New England. He was deposed during the Glorious Revolution (1688–89), after which residents of New York led by Jacob Leisler temporarily overthrew his colonial government (see Leisler's Rebellion).

Cynthia A. Kierner

York College. College of the City University of New York. Established in 1966, it occupies a campus in South Jamaica in Queens. By the early twenty-first century it enrolled nearly 6000 full- and part-time undergraduate students.

Selma Berrol

Yorkville. Neighborhood on the Upper East Side of Manhattan. Originally a rural village centered at 86th Street and Third Avenue, it is now bounded to the north by 96th Street, to the east by the East River, to the south by 72nd Street, and to the west by Central Park. An Indian trail once ran along what later became the Post Road and is now Third Avenue between 83rd and 89th streets. The hamlet arose between the farmlands of Harlem and the settlement of New Amsterdam. Hazzard's roadhouse at 84th Street and the Post Road was the first stop for coaches carrying passengers from the Hell Gate Ferry at the end of 86th Street. The New York and Harlem Rail Road was extended in 1834 to 86th Street and Fourth Avenue (renamed Park Avenue in 1888) and soon after to Harlem. Every half-hour, horse-drawn cars carried passengers for a fare of 12½ cents from Prince Street to the neighborhood. There was a stagecoach terminus at Third Avenue and 86th Street. By 1850 Yorkville was a predominantly German neighborhood that remained 1.5 miles (2.5 kilometers) from the northern edge of the city but was included in the 19th ward, which stretched from 40th to 86th streets. After the Civil War squatters' shacks were replaced by two-story houses for the wealthy, who between the 1880s and 1920s moved to new luxury apartments on Madison, Fifth, and Park avenues. Brownstones and tenements became multifamily dwellings with shops on the ground floor and two apartments on each floor above. The Third Avenue elevated line began service on 30 December 1878 between South Ferry and 129th Street; the Second Avenue elevated line was completed in August 1879. During the next two years the neighborhood became more ethnically diverse. Irish immigrants moved there during a period of growth aided by the construction of the Croton Reservoir, and in 1885 a third of the population was Irish born.

During the early years of the twentieth century the largest groups were Irish, Germans, Hungarians, Jews, Czechs, Slovaks, and Italians; 86th Street, the center of the neighborhood, had shops, restaurants, and bakeries, many of them German. The Irish section was circumscribed by 81st and 85th streets and Lexington and Fifth avenues. Jews lived on Second Avenue, blacks on 79th Street, and Puerto Ricans in the 90s east of Lexington Avenue. Gracie Mansion (1799–1804), near the northern end of Carl Schurz Park, became the mayor's official residence in 1942. After World War II the neighborhood began to lose its ethnic character. The dismantling of the Third Avenue elevated line in 1955 spurred the demolition of many brownstones, and their central and eastern European residents moved to the suburbs. Eventually the character of Yorkville became increasingly changed by gentrification and markedly less European. In the 1980s a *Turnverein*, or German gymnastics society, at 86th Street and Lexington Avenue and Mozart Hall on 86th Street between Second and Third avenues were demolished to make way for expensive high-rise apartment buildings. The 1990s and 2000s continued this trend, with even more high-rises taking the place of Yorkville's low-rise walkups. The Rhinelander mansion at 72nd Street and Madison Avenue, home to the most influential German family in nineteenth-

century Yorkville, was occupied by the Polo Ralph Lauren flagship store in 2010.

Anthony Gronowicz

Young, Art(hur Henry) (*b* Orangeville, Ill., 14 Jan 1866; *d* New York City, 29 Dec 1943). Cartoonist. Brought up in rural Illinois, he studied art with J. H. Vanderpoel at the Art Institute in Chicago, publishing cartoons on the side to help pay his tuition. By 1888 he was in New York City, where he continued his training at the Art Students League with J. Carroll Beckwith and Kenyon Cox. His emerging political consciousness was influenced by Eugene V. Debs, whose local lectures he attended. He published a book of his drawings, *Hell up to Date,* in 1893 and satirized capitalism, militarism, and the middle class in such diverse periodicals as the *Judge, Puck, Collier's,* the *Call,* the *Nation,* William Randolph Hearst's newspaper the *Evening Journal,* and publications of the Industrial Workers of the World. An associate of leading radicals in Greenwich Village, he was an original editor of *The Masses* in 1911 and remained on its board until it ceased publication in 1917. He later published his work in the *Liberator* and the *New Masses.* Young's cartoons were scalding depictions of bloated businessmen attempting to crush the American proletariat. He coined the term "Ashcan School" and wrote *Art Young: His Life and Times* (1939). He lived for many years at 9 East 17th Street.

Jan Seidler Ramirez

Young, Lester "The Prez" Willis (*b* Woodville, Miss., 27 Aug 1909; *d* New York City, 15 March 1959). Jazz saxophonist. He came to New York City from Kansas City in 1936 as a tenor saxophonist with Count Basie's band. Young had a smooth, sparse playing style; he met mixed reviews from critics but proved a strong influence on a cohort of younger saxophonists like Dexter Gordon and Stan Getz. He is also well known for his collaborations and close friendship with Billie Holiday and is responsible for her nickname Lady Day. While in New York City during the first half of the 1940s, Young briefly started his own band and played freelance until rejoining Basie in 1943. In 1946 he began a 12-year gig playing for Jazz at the Philharmonic. In 1957 he delivered one of his finest performances for the landmark television show *The Sound of Jazz*, recorded live from their 59th Street studios; it was a duet with Holiday on her "Fine and Mellow" at a time when both were in declining health.

Rowan Moore Gerety

Young Ireland. Obsolete name of Egbertville.

Young Lords. Radical mainland Puerto Rican organization that emerged in New York City in 1969. It consciously fashioned itself after the Black Panther Party (BPP) and championed the independence of Puerto Rico. The Young Lords called themselves socialists, and their political worldview borrowed from variants of Marxism and third world revolutionary nationalist theories. The group published a bilingual revolutionary newspaper called *Palante.*

In New York City the Young Lords led a series of militant, media-savvy campaigns with a community service aspect akin to the BPP's survival programs, which included a free breakfast program for poor children. The group's aim was to alleviate the most visible manifestations of the new poverty in U.S. cities: chronic unemployment, lack of health care, childhood lead poisoning, poor sanitation, drug addiction, hunger, racism, and police brutality. The organization's most famous campaign was its garbage dumping protests, which forced the city to conduct regular trash collections in East Harlem. A quieter victory was its anti–lead poisoning campaign, which the *Journal of Public Health* deemed instrumental in the passage of anti–lead poisoning legislation in New York City during the early 1970s. At Lincoln Hospital in the Bronx the Young Lords led a dramatic 12-hour occupation of one of the hospital's buildings to protest deplorable conditions. Their actions eventually led to the creation of one of the principal acupuncture drug treatment centers in the western world.

Although commonly associated with New York City activism, the group first emerged in Chicago as a reformed gang. The primary architect of the gang's political conversion was its chairman, Jose Cha Cha Jimenez, who transformed the Young Lords into the BPP's Puerto Rican counterpart. The Chicago Young Lords inspired the formation of sister organizations in other cities, the most influential of which was in New York City where a group of college-educated Puerto Rican radicals established a much more politically sophisticated chapter of the organization that renamed itself the Young Lords Party (YLP). The core founders of the New York City group were affiliated with the City University of New York, State University of New York at Old Westbury, and Columbia University. They include Juan Gonzales, who writes for the *Daily News*; Pablo Guzman, currently of WCBS-TV in New York; Sonia Ivani; Felipe Luciano, a former WNBC-TV New York news anchor; Miguel Melendez; Iris Morales, currently a filmmaker and director of the Union Square Awards; Denise Oliver; Juan Ortiz; and David Perez.

Young Men's and Young Women's Hebrew Associations. See YM-YWHAs.

Young Men's Christian Association. See YMCA.

Yunqué, Edgardo Vega (*b* Ponce, Puerto Rico, 20 May 1936; *d* New York City, 26 Aug 2008). Novelist. He moved to New York City at age 13 in 1949, when his father, a Baptist minister, took over a Spanish-speaking congregation in the South Bronx. He served as a radio operator in the air force, attended New York University, and helped found the Clemente Soto Vélez Cultural Center on the Lower East Side as a home for theater artists, dancers, and visual artists. Yunqué wrote many novels, the most famous of which was *No Matter How Much You Promise to Cook or Pay the Rent You Blew It Cauze Bill Bailey Ain't Never Coming Home Again* (2003). Reflecting the author's own teenage years in a Puerto Rican and Irish neighborhood in the Bronx, it is a tale of two families, one Irish and one Puerto Rican, and their interactions over many decades.

Kenneth T. Jackson

YWCA of the USA. National organization of Young Women's Christian Associations (YWCAs) that had its origins in several independent local associations of the late nineteenth century. Formed in various U.S. cities, these associations were intended to meet the physical, intellectual, and spiritual needs of young women. Although they were often rooted in the religious revivals of the time, by the turn of the twentieth century most had evolved into more secular entities. One of the first associations began in New York City in 1870 as an offshoot of the Ladies' Christian Union and provided young women who moved to the city from rural areas with a variety of services relating to employment, housing, recreation, education, religion, and health, as well as travelers' aid, cafeterias, and free libraries. A local association was formed in Brooklyn in 1888. With the assistance of Grace H. Dodge, in 1906 these urban associations merged with a network of evangelically oriented groups based on college campuses; the new organization set up its national board in New York City and took its current name.

During the early twentieth century the YWCA adopted the principles of the Social Gospel and became active in public affairs. It conducted studies of conditions for working women and stressed leadership training. Programs for African Americans, immigrants, and adolescents were also developed. Edith Terry Bremer (1885–1964) oversaw the association's work in immigrant communities through its international institutes, and after devising an experimental program in Manhattan in 1910 she promoted institutes in other cities and in Brooklyn. In 1915 the YWCA adopted a policy that permitted racial segregation in local associations; Eva del Vakia Bowles (1875–1943), a member of the staff of the national board, oversaw programs for African American women and girls. The YWCA also fostered the development of organizations

such as the National Board of Travelers Aid Societies (1917; later the National Association of Travelers Aid Societies), the National Federation of Business and Professional Women's Clubs (1919), and the United Service Organizations (1941). In 1920 a YWCA opened in Queens. Elizabeth Ross Haynes became the first black member of the national board in 1924. In 1933 Bremer created the National Institute of Immigrant Welfare (the predecessor of the American Council for Nationalities Service), and most international institutes became autonomous. YWCA racial segregation ended in 1946 when the association's national convention voted unanimously to integrate all facilities. In the early twenty-first century there were more than 2.6 million members.

Z

Zabar's. Gourmet delicatessen in Manhattan located at 2245 Broadway at 80th Street. Opened by Louis Zabar in 1939 it gained prominence in the 1960s when his sons Stanley and Saul Zabar were joined in the enterprise by Murray Klein. In the mid-1970s it added kitchenware items. Known for its reasonable prices and extensive choices, the business remained in the family and expanded into adjacent buildings. In the early twenty-first century Zabar's employed more than 250 people and was frequented by more than 35,000 customers a week. Eli Zabar, Louis's youngest son, began a separate franchise of Eli's and E.A.T. in 1973, located on the Upper East Side.

Jessica Montesano

Zagat Survey. Company founded in 1979 by Tim and Nina Zagat that publishes consumer survey–based information in city and nationwide guidebooks. The Zagat annual guides cover hotels, restaurants, shopping, nightlife, and lifestyle; each entry is based on 30-point scales in categories such as service, food, cost, and facilities. In the early twenty-first century the guidebooks continue to be available and widely used. Zagat headquarters are at 4 Columbus Circle.

Jessica Montesano

Zeckendorf, William (*b* Paris, Ill., 1905; *d* New York City, 30 Sept 1976). Real estate developer who led the firm of Webb and Knapp. In 1946 he assembled the land for the site of the United Nations and sold it to the Rockefeller family for $8.5 million. He then became for the next 20 years the city's best-known real estate developer, owing largely to the distinctive designs of his chief architect, I. M. Pei. Zeckendorf focused mostly on large hotels and office buildings and at various times owned the St. Regis Hotel and the Graybar and Chrysler buildings; he also took an active role in urban renewal projects financed by the federal government during the 1950s. With Pei he planned three residential renewal projects in Manhattan: Park West Village, a development covering 23 acres (9 hectares) on the Upper West Side and accommodating 2500 families; Kips Bay Plaza near the United Nations; and Lincoln Towers, a complex of 4000 apartments adjoining Lincoln Center for the Performing Arts. Zeckendorf also built one of the nation's first large suburban shopping centers — Roosevelt Field on Long Island. Zeckendorf's willingness to embark on risky projects took its toll, and in 1965 Webb and Knapp declared bankruptcy. His son William Zeckendorf, Jr., became a prominent developer during the 1980s, building Worldwide Plaza on the former site of Madison Square Garden and Zeckendorf Towers across from Union Square.

Marc A. Weiss

Zenger, John Peter (*b* Germany, 1697; *d* New York City, 28 July 1746). Printer. His work helped establish freedom of the press in the United States. He moved to New York City in 1710 and from 1711 to 1719 worked as an apprentice in William Bradford's printing shop at 81 Pearl Street. After a stint as a journeyman he set up as a printer of works in Dutch and English and lived on Smith Street (now William Street) near Maiden Lane from 1726 until 1734, when he moved to Broad Street. During the early 1730s he became known for criticizing the colonial government in his newspaper the *Weekly Journal.* He published this new paper on behalf of James Alexander and Lewis Morris, two men whose ambitions were being frustrated by the new Governor Cosby. Arrested for seditious libel in 1734, Zenger was imprisoned for almost a year at City Hall before his trial, in which he was defended by Andrew Hamilton after his first two lawyers were disbarred by a pro-Cosby court. Hamilton defended Zenger by arguing that the articles Zenger published criticizing Cosby were not libel if the facts printed in them were indeed true and published for the public good. Found not guilty by the jury, Zenger resumed his printing business and published an account of the trial in the *Journal* and in the pamphlet *A Brief Narrative* (1736), which was widely reprinted in America and abroad. His case set a precedent for the American interpretation of libel and the protection of freedom of speech. Zenger was then appointed public printer for New York and New Jersey. During his imprisonment his wife Anna continued publication of the *Weekly Journal,* only missing one issue, that of the week her husband was arrested. At the end of his life he was plagued by financial problems; his wife and children continued his newspaper.

James E. Mooney

Ziegfeld, Florenz(, Jr.) (*b* Chicago, 15 March 1867; *d* Los Angeles, 22 July 1932). Impresario. He grew up in Chicago and managed vaudeville tours in Europe and the Far West before marrying Billie Burke, while maintaining an intimate relationship with the French actress Anna Held, for whom he produced seven musicals, including *Papa's Wife* (1899) and *Miss Innocence* (1908). When in New York City during the 1890s he usually stayed at the Netherland Hotel (781 Fifth Avenue); after 1907 he had a permanent suite in the Ansonia Apartments (2107 Broadway). He was best known for producing revues designed to "glorify the American girl," including 21 Follies (1907–25, 1927, 1931), *The Century Girl* (1916) and *Miss* (1917) at the Century Theatre, and *Midnight Frolics* (1915–22), which was presented at late-night dinner theaters. He also produced a number of musical comedies in which Eddie Cantor and Marilyn Miller played the leading roles, among them *Sally* (1920), *Whoopee* (1928), and *Show Boat* (1927). Ziegfeld eventually moved to Hollywood to advise Samuel Goldwyn on motion pictures based on the Follies.

Barbara Cohen-Stratyner

Ziegfeld Follies. Extravagant Broadway theater revue from 1907 to 1931 created by impresario Florenz Ziegfeld, Jr. Modeled on the Parisian Folies Bergère, it combined elements of vaudeville, comedy, dance, and musical theater featuring headline performers such as Fanny Brice, Will Rogers, W. C. Fields, Bert Williams, Norma Shearer, Eddie Cantor, Billie Burke (Ziegfeld's wife), and Anna Held (Ziegfeld's lover), who is said to have first proposed the Follies idea to him. For most of their run the Follies were performed at the New Amsterdam Theatre with flamboyant costumes — often made of gauzy chiffon and resplendent feathers — by designer sensation Lady Duff-Gordon and flashy sets by Viennese-trained Joseph Urban. A risqué offshoot of the Follies, the Midnight Frolic, staged at the nightclub venue atop the New Amsterdam, featured scantily dressed beauties parading along Urban's glass runway and revolving stage. Ziegfeld died in 1932 but the Follies and the Frolic were celebrated in the MGM movie *The Great Ziegfeld* (1936), starring William Powell and Myrna Loy.

Peter L. Donhauser

Ziff-Davis. Firm of magazine publishers formed in 1927 by William B. Ziff (1898–1953), who in his early career had established an advertising agency on Park Avenue called W. B. Ziff and Company (1920), and a magazine publisher, E. C. Auld Company (1923), which launched such publications as *Ziff's Magazine* (a humorous periodical later renamed *America's Humor*). The new firm published many titles, including *Modern Bride* and *Car and Driver.* Ziff himself was a popular author whose book *The Coming Battle of Germany* (1942) became a best seller. In the 1980s Ziff-Davis sold many of its existing magazines and entered the business of computer publishing. It became the nation's leader in the field, publishing such magazines

as *PC Magazine, PC Week,* and *Computer Shopper.* In June 1994 the firm put its assets up for sale; these were purchased in October of that year by the investment firm of Forstmann–Little and Company. In 2002 the firm changed ownership and was renamed Ziff Davis Media; it filed for bankruptcy in 2008, from which the company emerged after restructuring.

James Bradley

zoning. The impetus for zoning legislation in New York City came from the Fifth Avenue Association, which about 1900 sought to protect the carriage trade and exclude loft buildings and the garment industry. Others who favored zoning were residents concerned by the size of skyscrapers such as the Equitable Building (120 Broadway) and reformers who wanted to build a well-planned, healthy city by dividing land according to use, controlling the density and configuration of buildings, and providing for adequate light and air. The state legislature gave the city permission in 1914 to adopt a zoning resolution, and the Board of Estimate responded by establishing the Building Heights and Restrictions Commission, which formulated in its final report on 2 June 1916 a zoning plan that was adopted by the board at the end of the year. The plan allowed for a maximum population of 55 million in the city and outlined modifications of its traditional pattern of development: a system of mapped districts of height, area, and use was to control the rate of development; adequate light and air and proper building density were to be maintained by designing new buildings to fit an imaginary envelope determined by the size of their lots and their location on a block; each district was assigned a maximum streetwall height (the height of a building allowed at the street lot line); building setbacks were made to conform to an angle of light plane (later called the sky exposure plane); skyscrapers were allowed by the tower regulation to be of any height as long as they occupied no more than 25 percent of the area of their lots; and yard and building coverage regulations were imposed (specifying the proportion of a lot that could be built up). The guidelines adopted in the city soon became a model for zoning ordinances throughout the nation.

Zoning in New York City changed after World War II, when the *Plan for the Rezoning of New York* (1950) appeared. It drew heavily on European modernist principles of town planning and recommended widely spaced skyscrapers set in large blocks resembling parks (super blocks). Its authors intended to limit the population of the city to about 11 or 12 million by imposing a density control called floor area ratio (FAR), under which the size of a lot and its location determined the size and height of the building that could be erected on it. The regulations set forth in the plan were adopted by the city in 1961, superseding those of 1916. Developers were given incentives to build arcades, plazas, and other open spaces accessible to the public under a plan that became known as tower-in-the-park zoning, of which Co-op City in the Bronx and the office towers on the west side of Sixth Avenue in midtown Manhattan were examples. Within 10 years of its approval by the city this form of zoning had proved inflexible and incompatible with the traditional pattern of attached building in the city. The Planning Commission modified the regulations of 1961 by establishing special districts (35 were created by 1990) as well as a system of special permits, which allowed greater flexibility of design for large-scale developments, especially in midtown Manhattan. In keeping with a traditional public concern for enough daylight in midtown, the Midtown Zoning Regulation of 1982 set a standard for the amount of daylight in new buildings and the public space of the street. The Quality Housing and Contextual Zoning Regulations (1988–90) promoted the construction of housing in keeping with the character of older neighborhoods.

The most important zoning development in the 1990–2010 period was the replacement of manufacturing districts with areas open to residential development. The sharpest changes came in the meatpacking district of Manhattan and the Williamsburg and Greenpoint neighborhoods of Brooklyn, when gritty factories gave way to dense, luxury residential development.

zoos. New York City's five zoos are spread across the boroughs. The Bronx Zoo, by far the largest, the Central Park Zoo, Prospect Park Zoo, and Queens Zoo are all managed by the Wildlife Conservation Society, formerly known as the New York Zoological Society. The Staten Island Zoo is managed by the city.

Zorach [née Thompson], **Marguerite** (*b* Santa Rosa, Calif., 25 Sept 1887; *d* Brooklyn, 27 June 1968). Painter. After marrying the painter and sculptor William Zorach (1912) she took part in the Armory Show (1913) and the Forum Exhibition of Modern American Painters (1916). Her paintings were influenced by European fauvism and cubism and characterized by bold color, expressive brushwork, and simplified form. She was the director of the Society of Independent Artists (1922–24) and the first president of the New York Society of Women Artists (1925) and was also active as a textile artist.

Carol Lowrey

Zorach, William (*b* Jurbarkas, Lithuania, 28 Feb 1887; *d* Bath, Maine, 15 Nov 1966). Sculptor and painter. After living in Paris he moved in 1912 to New York City and settled in Greenwich Village. He and his wife, Marguerite Thompson Zorach, exhibited paintings at the Armory Show in 1913 that were considered wildly modern. In 1917 he took up sculpture and abandoned all painting except watercolors in 1922. Many of his works are large figures of children, animals, lovers, and biblical figures sculpted in granite, marble, onyx, or wood in a primitive style. His *Spirit of the Dance* (1932) was installed at Radio City Music Hall. For

New York City Aquariums, Wildlife Centers, and Zoos

Name	Year Opened	Size (Acres)	Number of Animals

several years Zorach lived with his family at 17 West Ninth Street and kept a studio at 2 West 15th Street; from 1939 both home and studio were at 271 Hicks Street in Brooklyn.

Alana Erickson Coble

Zoroastrians. Members of a Persian religion founded in the sixth century BCE by the prophet Zoroaster. Most of the world's Zoroastrians live in Iran or in India (where they are known as Parsis), and those who emigrate are in general well-educated professionals. In the late nineteenth century a number of Zoroastrian students moved to New York City to study at Columbia University, where in 1895 a professorship in Zoroastrian scriptures was established under A. V. Williams Jackson. Most of the students left the city after their studies, and in 1992 the university discontinued the program. Iranian Zoroastrians established a presence in the city in the 1920s, when the Soroushian family operated a retail carpet business; Philip Lopate's novel *The Rug Merchant* (1987) is loosely based on the family's story. Some Indian Zoroastrians settled in the city after the Immigration Act of 1965, and Iranian Zoroastrians increased in number after the Iranian revolution of 1979. Zoroastrians in New York City have not developed lasting religious institutions, but both Parsi and Iranian Zoroastrians from the metropolitan area support the Zoroastrian Association of Greater New York, also known as the Dar-e-Mehr (path of compassion), in suburban New Rochelle in Westchester County. Maintaining the Zoroastrian tradition in New York City is complicated by small numbers, low birthrates, and long prayer services held in the ancient language of Avestan. Another obstacle to the long-term survival of the religion in New York City is that orthodox Zoroastrians reject converts. In the early twenty-first century fewer than 200,000 Zoroastrians were active worldwide, and fewer than 1000 lived in the New York metropolitan area.

Marc Ferris

Zukofsky, Louis (*b* New York City, 23 Jan 1904; *d* Port Jefferson, N.Y., 12 May 1978). Poet. Born on the Lower East Side, he graduated from Columbia University in 1927. During the Depression he worked for the Works Progress Administration at Columbia University, the radio station WNYC, and the New York Arts Project. He later worked as a freelance editor and substitute high school teacher and taught English at Brooklyn Polytechnic Institute from 1947 until his retirement in 1966. Influenced by Ezra Pound and later by the objectivists, he wrote poetry that was intensely passionate and went unpublished for most of his life. His 800-page epic *"A,"* which begins with a description of a concert at Carnegie Hall and includes many references to the history and life of New York City, took 50 years for him to complete. Zukofsky lived at 135 Willow Street in Brooklyn, spent some time at 77 Seventh Avenue, and moved to Long Island in 1972.

NOTES ON THE CONTRIBUTORS

An asterisk denotes "deceased."

Amanda Aaron (MA New York University) lives and works in New York City.

Susan Aaronson (PhD Johns Hopkins University) is an associate research professor of international affairs at George Washington University in the Elliott School of International Affairs and the School of Business. She has authored books on trade, investment, business, and human rights.

Elaine S. Abelson (PhD New York University) is an associate professor in history and urban studies as well as a senior lecturer to graduate faculty at The New School.

Alan David Aberbach (PhD University of Florida) is a former professor and current director of the Seniors Program at Simon Fraser University's Harbour Centre Campus in Vancouver. He is the author of several books, including *The Ideas of Richard Wagner: An Examination and Analysis*, 2nd edn. (2003).

Joan Acocella (PhD Rutgers University) is a dance critic and staff writer for the *New Yorker*. She is the recipient of a Guggenheim Fellowship.

Arthur G. Adams is the founding president of the Hudson River Maritime Center in Kingston, New York, and the vice president of the Steamer Alexander Hamilton Society. He is an editor of *The Hudson River in Literature: An Anthology* (1988) and a coauthor of *Railroad Ferries of the Hudson* (1987).

Melvin L. Adelman (PhD University of Illinois) teaches at Ohio State University specializing in the history of American sports.

Norma Adler (JD Northeastern University) has edited and written for numerous dance and theater publications.

Emery E. Adoradio (JD American University; MA History, New York University) is the senior attorney for the Complex Crimes Unit in the Hennepin County Attorney's Office, Minneapolis. Previously he was the executive director of the Police Corruption Commission in New York City and an assistant district attorney in the New York County District Attorney's Office for 10 years.

Rohit T. Aggarwala (PhD Columbia University) is a former special assistant at the Federal Railroad Administration in Washington, D.C. He is currently the director of the New York City Mayor's Office of Long-Term Planning and Sustainability.

Irving Lewis Allen (PhD University of Iowa) is a professor emeritus of sociology at the University of Connecticut, Storrs. He is the author of *The City in Slang: New York Life and Popular Speech* (1995) and *Unkind Words: Ethnic Labeling from Redskin to WASP* (1990).

Jane Allen is a former program officer at the IRI Research Institute in Stamford, Connecticut.

Cathy Alexander is an independent historian.

Eric Wm. Allison (BA Columbia College) is a former professor at the Pratt Institute and a resident of Brooklyn.

Marc D. Angel (PhD Yeshiva University) is rabbi emeritus of the Congregation Shearith Israel, the historically Spanish and Portuguese synagogue of New York City. He is also the former president of the Rabbinical Council of America and the founder of the board of Sephardic House. His books include *The Rhythms of Jewish Living: A Sephardic Approach* (1989).

INDEX

Page references to encyclopedia articles are in **boldface.** *References to illustrations are in italic. Neighborhoods are identified by borough with the two-letter abbreviations BX (Bronx), BK (Brooklyn), MN (Manhattan), QN (Queens), and SI (Staten Island). Numbered streets are alphabetized as if they were written out. An alphabetical index of the various tables of detailed historical information about the city is included here as the entry "City information tables." Page references to tables appear in* ***bold italic.***
